The assassination of President William McKinley, and the ascension of Vice President Theodore Roosevelt to the Presidency ushered in an era of reform in American History known as the Progressive Era. From 1901 through the end of Wilson's Presidency, reform minded Presidents, Congressmen, Federal Judges, and State and Local officials attempted to bring "hope and change" to America. In a sense the era represented a Constitutional Crisis in American History. Reformers like Teddy Roosevelt believed Constitutional Reform was necessary. Some of the most important Amendments to the US. Constitution were ratified during this period, the Sixteenth, Seventeenth, Eighteenth, and Nineteenth amendments. Activist Judges broadly construed the Constitution to allow Federal and State governments to expand their powers in order to check the power and influence of Big business, and to conserve America's natural resources for future generations. Democratic President Woodrow Wilson even saw America's involvement in the Great War as an opportunity to reform the international order so that WWI would be "the war to end all wars," and the war that would "make the world safe for democracy." However, by 1920 the reform fever that had gripped the country had subsided. Warren G. Harding, the new Republican President, coined a new word. He described his presidency as "a return to normalcy." Normalcy meant the opposite of Progressivism, a return to business as usual. Calvin Coolidge, Harding's successor, contended that "the business of America was business." Harding, Coolidge, and Hoover restored Republican Hegemony over National politics. America's concern was prosperity. The roaring twenties were full swing. Still America was changing dramatically. For instance during the Nineteen Twenties the Culture Wars of began. America's old cultural guard combated the demons of modernity, urbanization, and immigration. America could never return to Normalcy. The Great Depression ensured that. By the end of Hoover's presidency desperate citizens were crying out for help from a new generation of reformers led by another politician named Roosevelt.
Attributes: Liberal

HIST 3220 Genocide & Ethnic Conflict (4 Credits)
This study will examine the concept of genocide from different global perspectives. Students will investigate the buildup and patterns that emerge in genocides all over the world.
Attributes: Other World Civilization Gn Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3222 The Liberal Ascendancy (4 Credits)
In 1932 Franklin Delano Roosevelt's triumph in the Presidential Election heralded the end of one long era in American History and the beginning of another. From the election of Abraham Lincoln until Roosevelt's victory over Hoover, the Republican Party had dominated American politics. Roosevelt's victory led to the Democratic Party's dominance until the election of Richard Nixon in 1968. This study will give the student the opportunity to examine in depth the origins, course, character, and legacy of the Democratic Triumph in American Politics.
Attributes: Liberal

HIST 3225 German Nationalism 1800-Present (4 Credits)
Students will gain a broad understanding of the various paths along which German identity might have developed, as well as how Germanness has been shaped by key events and trends. A key facet of understanding German nationalism is that Germans have defined themselves and membership in their national community differently at different times, and usually have had competing definitions (each supported by different groups) at the same time. The question: Who is a German? has been incredibly complicated. Understanding German nationalism will give the student great insight into some of the most important and tragic events in human history. Prerequisites: An introductory level course in European history is strongly recommended.
Attributes: Liberal

HIST 3227 Federalists and Jeffersonians (4 Credits)
The purpose of this study is to give the student the opportunity to examine in depth the history of the Early American Republic from the inauguration of George Washington as President until the inauguration of James Monroe as President. Special attention will be paid to the origins of the American Political Party system; the political, economic, and military policies pursued by the two parties, and their influence on the course of American History.
Attributes: Liberal

HIST 3230 Health & Wellness in American History (4 Credits)
This course explores the history of American medicine, disease, health, and wellness. Approaches to the treatment of various illnesses over time will be the main focus of the course. After reading and reviewing a series of collaborative readings, students will complete a detailed research project about a particular disease or condition and its treatment over time. Students must possess advanced college level research and writing skills to succeed in this course.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3232 The Great War 1914-1918 (4 Credits)
Through this study, the student will investigate the major historical topics concerning WWI, including; the origins of the War; the factors behind the Allied victory in the war; the legacy of the war; the nature of total war; the origins and impact of American involvement in the war; the experience of trench warfare; etc.
Attributes: Liberal

HIST 3237 History of the American Presidency (4 Credits)
This course is part of the Civil War Residency. This study will examine the development of the American Presidency from its creation until the present. Topics covered will include: the ideological and experiential roots of the Presidency; the creation of the Presidency; Federalist, Jeffersonian, and Jacksonian conceptions of the Presidency; the President at war; the President in the industrial age; Watergate as a Constitutional crisis; the role of the executive bureaucracy; and the President and Foreign Policy.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3240 Historic Preservation (4 Credits)
This study will examine the theories and methods of historic preservation in architecture. The course will consider the methods used when preserving a building, as well as the methods and theories involved in listing a building on the National Register of Historic Places.
Attributes: Liberal

HIST 3242 American Religious History II (4 Credits)
This course is part of the Civil War History Residency. Through this study the student shall explore the relationship between religion; and politics, economics, society, and culture in the formation of American history from the Civil War to the present. In other words, the student will investigate how Religion has influenced American political, cultural, social, and economic history, and how in turn cultural, social, political, and economic factors have shaped American religion. Topics covered will include, countervailing trends in American religious history, Religion and the Confederacy's defeat, The Social Gospel movement, Protestant Progressivism, Church State relations, the Culture Wars, and the new Religious pluralism.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3245 Historiography & Methods (4 Credits)
This study introduces 'historiography,' which can be described as 'the history of the history.' Historiography asks how historians have explained events or themes in history over time or how they have identified certain individuals or groups as historical subjects. It asks how world views and/or ideologies impact the interpretation or re-interpretation of previously viewed sources, and how access to new sources or new questions or new methodologies impact historical interpretations. This course was previously HIS-244444 Historiography: Researching and Writing About History.
Attributes: Liberal

HIST 3250 History of American Popular Culture (4 Credits)
This course explores American popular culture from the minstrel shows of the nineteenth century to YouTube of the present. Topics include popular music, radio, television, film, popular literature including comics, the Internet and many other things. Students will read scholarship about American popular culture and write scholarly essays. Students will also be invited to use media other than written essays for their final projects.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3255 History of American Sexuality (4 Credits)
This course covers American sexuality from colonial times to the present. Students will consider topics like sexual interactions between Native American and Europeans during the conquest of the New World, regulation of sexuality in the colonies, gender and sex reform in the nineteenth century, race and sexuality, love and intimacy from the nineteenth century to the present, homosexuality, transsexuality, intersexuality and many other issues.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3257 Late Medieval Europe (4 Credits)
This study is an exploration of Europe between 1000-1500 C.E. Topics will include: the political, social, economic, religious and military history of this period. This course will also look at the daily lives of those who lived during the period including women, Jews, heretics, non-Christians and other marginalized people. Students will study the development of the distinctive features of the history, institutions, economy, society, and culture of Western Civilization. They will also consider the development of Western Civilization to other regions of the world.
Attributes: Liberal

HIST 3260 History of Christianity (4 Credits)
The Christian Population of the World as of 2022 stands at over 2.5 billion people. Christianity's phenomenal growth as a small religious sect in Western Asia to the largest Religion on Earth. Today most Christians live in Earth's Southern Hemisphere. The Growth of Christianity is a global phenomenon. This study examines the history of Christianity from the time of Jesus of Nazareth to the present. The study will both focus on the development of Christian thought and on the influence of Christianity on the intellectual, cultural, political, and economic history of the World. Students will consider topics like Cultural Antecedents; 1st Century Palestine; The Graeco-Roman World; The Life and Teachings of Jesus Christ; Paul and the Spread of Christianity; The Church Fathers; Creeds and Councils; Roman Catholicism in the Middle Ages; Scholasticism; The Renaissance and the Reformation; The Counter Reformation; Pietism and Revival; The Enlightenment; Christianity in the Modern World; The Church and the Challenges of the 21st Century, etc. Prerequisites: Western Civilization, World History, or the History of World Religions recommended.
Attributes: Western Civilization Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3262 The Hudson River and its Valley: Advanced (4 Credits)
In this course, we will examine American History from the discovery of the Hudson River by Europeans to the present day by studying the river, its valley, and the places directly connected to that large swathe of New York State. We will see how far and wide its impact stretched as we learn how to think about the disciplines of History and the Arts; understand their many connections; and to understand why history and art are so important to civilization. We will study the notion of local history and its connections to state, national, and international history, as well as how the Hudson River Valley influenced and was influenced by the arts of literature, painting, architecture, sculpture, and music. Materials assigned for the course will cover the diverse groups living in the region. The course culminates in a research project as an essay, photographic essay, or short documentary.
Attributes: American History Gen Ed, *The Arts Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3265 History of Global Governance (4 Credits)
This study explores global governance bodies associated with the League of Nations (1919-1945), and (primarily) the United Nations (1945 – 2010), as they have responded to global economic, social and political issues. The study covers the theoretical foundations of global governance as well as the practical roles and real-world impact of intergovernmental bodies, their agencies, treaties and conventions on global populations from 1919 – 2010s. This study is designed to provide learning in Historical, Comparative and Theoretical perspectives for students seeking degrees in the Social Science Area of Study; or to provide learning in Theoretical and Philosophical Concepts and Historical and Comparative Concepts for students seeking degrees in the Public Affairs Area of Study. It covers the development of distinctive features of the history and institutions of Western Civilization and relates these developments of Western Civilization to other regions of the world across the 20th century and into the 21st century.
Attributes: Western Civilization Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3267 Racism, Civil War, & Reconstruction (4 Credits)
Sections of this course will focus on the Reconstruction, the period of history immediately following the U.S. Civil War. While sections might differ in focus or conceptual frame, each will cover the historical narrative of the era, as well as the causes leading up to the Civil War and the longer term effects of Reconstruction. Upon consultation with their mentor, students may take more than one section of this course.
Attributes: Liberal

HIST 3272 History of American Families and Children: Advanced (4 Credits)
Students will explore important events in the history of American families and children from the pre-colonial era through the 21st Century. The diversity in family life that we see today is the result of changes in the way we make a living and the rise of the American value of self-actualization that has taken place over the past 300 years. We will explore the social developments and the 20th century challenges of economic collapse and world wars to understand the shifts in values and expectations that have accompanied this transition.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3275 History of the Byzantine Empire (4 Credits)
What was the Byzantine Empire and why is it important in the 21st century? The student will investigate these questions through the reading of primary sources in English translation and secondary sources, in addition to art, music and other resources available on the internet. The learner will consider the development of the Eastern Church and its troubled relationship with the Latin Church in the West. Contact with Western Europe, the Muslim world and the structure of the Byzantine state and society will also be considered. This study meets the Historical Studies Guidelines for an understanding of the diversity of sources that record and interpret the past, the ability to analyze and interpret historical resources and perspectives and the ability to think critically and communicate effectively. Prerequisites: Western Civilization I is desirable but not required.
Attributes: Liberal

HIST 3277 French Revolution (4 Credits)
Students will examine the French Revolution, including the major social, economic and political causes of dissatisfaction with the Old Regime system. Students will explore distinctions among the groups that made up the initial pro-revolutionary coalition. Students will explore the moderate phase that culminated in the Constitution of 1791 and the Declaration of the Rights of Man and the Citizen, the shift to the radical phase (focusing on Robespierre and The Terror), the period of reaction leading to Napoleon's rise to power, and his years as head of state. Highly Recommended (not required): An introductory-level course in European history.
Attributes: Liberal

HIST 3280 History of the Medieval Church (4 Credits)
This study will trace the origins of the Latin Church in the West from its origins to the Reformation. The student will explore the history of the early Church to the most powerful spiritual and political force in medieval Europe. This study will also consider the Church's role in the spiritual, political, social and cultural development of Europe. This study addresses the Area of Study Guidelines in regards to an understanding of historical processes and events that have shaped social change and contemporary human problems, an understanding of the linkage between history and other disciplines, and the development of research skills and knowledge of citation forms used by professional historians. Prerequisites: Western Civilization I is helpful but not required.
Attributes: Liberal

HIST 3282 Europe in the Global Age: 1950-present (4 Credits)
The student will gain an understanding of the major developments in European history during the Cold War and the post-Cold War eras. Topics will include economic, political, social, and cultural history, with particular attention paid to: decolonization as it affected Europe, the development of the European Union, the consequences of the fall of the Soviet Union, challenges posed by increased immigration into Europe, the resurgence of anti-democratic politics in the 21st century, and the broad impact of globalization on Europe throughout the decades. Highly Recommended (not required): An introductory level course in modern Western Civilization.
Attributes: Liberal

HIST 3285 History of the Western Mind (4 Credits)
One might define the West as a way of thinking about life. At present, Western ideas transcend geographical bounds and have found hospitable abodes in the East as well as in the West. Therefore, it is legitimate to talk about the Westernization of the world. Through this course, students will examine the development of the Western world view from the time of Moses and Thales to the 18th Century Enlightenment. Specifically, students will consider the contributions made by the Greeks, the Romans, and the Hebrews to the Western mind, and how the tension between humanism and theism have helped shape our thoughts even today. Recommended: Western Civilization I or World History I
Attributes: Western Civilization Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3286 History of Western Architecture: Advanced (4 Credits)
The History of Western Architecture examines architecture, history, and the artistic/creative processes in order to understand their many connections. To that end, we will learn how to think about the discipline of History, the creative process, and how to understand why architecture and history are so important to civilization.
Attributes: Liberal

HIST 3295 History of US Prisons (4 Credits)
This study explores historical and contemporary topics and issues related to prisons and prison systems within the United States from Colonial times until the present day. The prison system and diverse prison populations in the United States is examined from a variety of perspectives and contexts including (but not limited to): The development of U.S. prison systems over time; Institutional and policy developments, reforms, discourses, and debates; Major events and people within U.S. prison history (escapes, 'riots', etc.,); Prisons and prisoners within American Popular Culture; Prison Cultures; Issues related to diverse prison populations (gender, race, age, class, sexual orientation, religion, etc.,); and Prisoners' rights; Numerous social, economic and political circumstances leading up to and during America's involvement in World War I, World War II, the Vietnam War and related interventions including Cambodia and Laos and their effects on the prison system; America's interventions in South and Central America during the Reagan era and their relationships to the prison system; Some of the ways in the which the United States' relationship changed with the rest of the world after the events of September 11, 2001.
Attributes: American History Gen Ed, Liberal

HIST 3305 Imperial Russia (4 Credits)
This study will explore the main issues confronting Imperial Russia in its attempts to develop a unified and defensible state, a viable agricultural and industrial economy, and a stable social and cultural structure. Students should be able to describe the problems of urban vs. rural growth, the problems and strengths of the autocracy, the organization of economic life, and the adaptation of cultural values to secular goals. They should be able to compare and contrast the development of Russian institutions with those of Western Europe in the same period, i.e. from the early modern era through the First World War. Prerequisites: An introductory course in European history is strongly recommended.
Attributes: Liberal

HIST 3315 Jews of Habsburg Austria: 1670-1918 (4 Credits)
The student will examine the history of Jews in the Habsburg Austrian Monarchy from 1670 to 1918, gaining an understanding of the major events of this history. Of particular interest will be the innovative and tolerant policies towards Jews of Joseph II, the spreading of the Haskalah (Jewish Enlightenment), questions of assimilation and acculturation, the effects of the revolutions of 1848, the Ausgleich (Compromise) of 1867 that granted autonomy to Hungary, the First World War, the cultural contributions to Jews to culture in Vienna, Prague, Budapest, and other areas, and broader movements of nationalism (both Jewish and non-Jewish). Prerequisites: An introductory level course in European history is strongly recommended.
Attributes: Liberal

HIST 3320 Jews of Russia Poland Ukraine: 1772-1917 (4 Credits)
Students will examine the history of the Jews in the Russian Empire from 1772 through 1917. They will move through the major events of this history, examining the impact of the Russian takeover of Polish and Ukrainian lands with significant Jewish populations broadly, as well as specific developments including the Haskalah (Jewish Enlightenment), assimilation and acculturation, urbanization, industrialization, Zionism/ Jewish nationalism, Socialism/Bundism, and political developments such as the Polish uprisings in Russia in 1830 and 1863, the abolition of serfdom in mid-century, the Revolution of 1905, the First World War and the Revolutions of 1917. Prerequisites: An introductory level course in European history is strongly recommended.
Attributes: Liberal

HIST 3323 History of Ukraine (4 Credits)
The student will gain an understanding of the major developments in Ukrainian history over the past two millennia, with a focus on recent decades. Topics will include economic, political, social, religious, and cultural history, with particular attention paid to: the historical development of a Ukrainian national consciousness along with competing identities on the territory of Ukraine, antisemitic violence committed by Ukrainians as well as by other governments in Ukraine, the development of Ukrainian institutions—including the Cossacks, the division of Ukrainian lands among more powerful neighbors, including Poland-Lithuania, Austria-Hungary, and Russia, the period of Soviet domination, the reestablishment of an independent Ukraine at the end of the Cold War, and the present-day Russian invasion. Prerequisites: An introductory level course in Western Civilization II is strongly recommended.
Attributes: Liberal

HIST 3325 Jews & Germans: 1770-1933 (4 Credits)
Students will consider the relationship of Jews to German society from 1770-1933. They will discuss the impact of Enlightenment ideas and economic development on Jewish attempts to assimilate, the forms this assimilation took, the roots of racial antisemitism of the late 19th and 20th centuries, and Jewish responses to it including alternatives to assimilation such as Zionism. Students will analyze the position of Jews in German society in Weimar period and the rising tide of antisemitism in Germany, examining this relationship in order to understand the historical background of the Holocaust as well as that relationship in its own right. Prerequisites: An introductory level course in European history is strongly recommended.
Attributes: Liberal

HIST 3330 Latin America in the Contemporary World (4 Credits)
This course explores Latin America's social history and U.S.-Latin American relations from 1821 to the present. Students will examine historical, cultural, ethnic, economic, social, and political themes, as well as issues of migration and foreign relations in the Caribbean, Central America, Mexico, and South America. Prerequisites: Introductory coursework in world history from 1800 to the present is recommended This course was previously HIS-243154 .
Attributes: Other World Civilization Gn Ed, Humanities Gen Ed, Liberal

HIST 3331 Jamaica: History, Culture, and People (4 Credits)
This is an interdisciplinary undergraduate seminar, which seeks to provide students with an introduction into Jamaica's socio-political history. This seminar will examine a selection of materials drawn from literary texts, films and music, alongside historical and sociological accounts, in an effort to comprehend the socio-political energies and tension underpinning the construction of the Jamaican identity and experience from the point of colonial contact to the through to the present. The course is organized thematically but it proceeds in chronological order to focus on the major socio-political, economic and cultural period of change in the Jamaican society and the wider Caribbean region. The larger conceptualized issues which this seminar will address include different forms of colonialism and the ways in which contemporary identities have responded to such historical constructs. It will be particularly concerned with examining the complex web of relationships between creativity and cultural production and showing how literature and music for example can provide alternative perspectives on matters such as history, race, culture and national identity.
Attributes: Other World Civilization Gn Ed, Liberal

HIST 3340 Middle East (4 Credits)
This multidisciplinary course explores the historic origins of current political conflicts and social conditions in the Middle East. Students will examine the geography of the region and its peoples, religions, cultures, ethnicity and civilizations, Western expansion and influence in the region, the rise of nationalism, and the impacts of the West in the region. Contemporary politics, the development of nation-states, and the themes of tradition, change, and revolution also will be discussed. Prior study in history, religion, sociology, anthropology, or politics is recommended. This course was previously HIS-243414 The Middle East.
Cross-listed with CUST 3340.
Attributes: Other World Civilization Gn Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3345 Modern American History (4 Credits)
Modern American History is a survey course, which covers events in American history from Reconstruction in the south in 1877 through the present. Students will examine various political, social and cultural themes in this course, including Reconstruction, western settlement and the frontier, industrialization, immigration, American imperialism and world power, the Progressive movement, WW I, the Roaring Twenties, the Depression, the New Deal, WW II, the Cold War and Nuclear Age, the 1950s, Civil Rights, the 1960s, Vietnam, and the resurgence of conservatism in the 1980s. Critical reading skills and the ability to analyze and evaluate primary and secondary historical sources and produce written interpretations will be emphasized. Understanding the historic roots of contemporary crises is becoming all the more important as we enter the third decade of what has become an increasingly politically volatile 21st century. To do so, students will identify a current issue early in the semester and perform extensive research on its historic roots. This project will culminate in a research paper of approximately 4,000 words due at the end of the semester. The project is aimed at satisfying the SUNY general education guidelines for U.S. History and Civic Engagement by giving you the capability to: demonstrate understanding of United States' society and/or history, including the diversity of individuals and communities that make up the nation; explore the role of individual participation in U.S. communities and government; and apply historical and contemporary evidence to draw, support, or verify conclusions. Some introductory level coursework in U.S. History is recommended but not required for this course. Critical reading skills and the ability to analyze and evaluate primary and secondary historical sources and produce written interpretations will be emphasized. This course was previously HIS-243214 Modern American History.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3350 Modern China (4 Credits)
This study explores the modernization of China's culture, social relations, economy and politics during the 19th, 20th and 21st centuries. Students may investigate topics such as the collapse of China's imperial order in the face of alien invasion and internal rebellions; political, cultural and economic revolutions inspired by Western models; the history and evolution of the leadership of the Chinese Communist Party leadership of China since 1949; contemporary controversies regarding expanding democracy and human rights; etc. Prerequisites: Introductory level coursework in modern world history of Pacific Asia history is recommended. This course was previously HIS-243324 .
Cross-listed with CUST 3350.
Attributes: Other World Civilization Gn Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3353 Chinese Military History, 1500 BCE to the Present, Advanced (4 Credits)
In this course, students will survey the military history of China, from approximately 1500 BCE to the present. While every aspect of Chinese history will not be discussed in depth, students will examine various political, social, and cultural themes in this study, some in great detail. The Course will also include a discussion of the Chinese Way of War vs. the Western Way of War. Other Topics Covered include "Continuity and Conflict in Chinese Military History," The Influence of the Northern Frontier on the Character of Chinese Military History," The Taiping Rebellion," The Classic Chinese Military Authors," "Warlordism" "The Nationalist Army to 1949," "The Sino-Japanese Conflict, 1931-1945," "The Peoples' Liberation Army," "Chinese Conflicts1949 to the Present." Etc. Critical reading skills and the ability to analyze and evaluate primary and secondary historical sources and produce written interpretations will be emphasized. Prerequisites: NA. Corequisites: NA.
Attributes: *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3354 Japanese Military History, 500 ACE to the Present, Advanced (4 Credits)
In this course, students will survey the military history of Japan, from approximately 500 ACE to the present. While every aspect of Japanese history will not be discussed in depth, students will examine various political, social, and cultural themes in this study, some in great detail. The course will also include a discussion of the Japanese Way of War vs. the Western Way of War. Other topics covered include: "The evolution of tactics, weapons, and strategy in early Japanese History," The Influence of the Bushido Code on Japanese Military History," "Zen Buddhism and Japanese Military Culture" "The Rise and Fall of Imperial Japan, 1853-1945," "The First Sino-Japanese War," The Russo-Japanese War," "The Sino-Japanese Conflict, 1931-1945," "The Rape of Nanking," "Japanese War Crimes in World War II," "The Reemergence of Japanese Military Power, 1945-Present," Etc. Critical reading skills and the ability to analyze and evaluate primary and secondary historical sources and produce written interpretations will be emphasized. Prerequisites: NA. Corequisites: NA.
Attributes: *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3355 Modern Russia (4 Credits)
Students will focus on the development and eventual decline of the Soviet Union, from the fall of the Czarist system, which came shortly after the Tsarist system, to the creation of the Commonwealth of Independent States, the development of the Bolshevik movement and its seizure of power, the nature of the Revolution of 1917, Stalin's dictatorship and the purges and the impact on World War II and the Cold war, the postwar struggle between reformers and the status quo, and the nature of the recent effort to democratize Russian politics and the society, and the reimposition of centralized state control will be considered.
Attributes: Liberal

HIST 3360 Multiculturalism & Its Critics (4 Credits)
Students will examine the topic of multiculturalism in American society over the past few decades in order to gain a broad understanding of what multiculturalism is, how it developed and why, and what it means for a whole host of issues in American society from national, racial and cultural identity to education and social studies curricula to affirmative action policies and much more. Students will examine the writings of multicultural thinkers and critics of multiculturalism to explore all sides of the debate, from a variety of ethnic and racial perspectives. Prerequisites: An introductory level course in American history is strongly recommended.
Attributes: Liberal

HIST 3365 Museum Studies: Curriculum Design (4 Credits)
This advanced study on curriculum design addresses the insight and skills needed as a professional educator in a museum environment working with all age groups. It prepares the museum educator for the development of educational programs while addressing diverse museums as well as alternative learning sites. Current trends in museum education are addressed to include integrated and interdisciplinary learning; meeting the teachers' needs; the challenges in relation to the changing landscape/role of the museum professional; issues of diversity; and collaborative learning. A theory into practice component is included to provide students with the opportunity to create curricula that applies to permanent collections and/or temporary exhibitions at area museums.
Attributes: Liberal

HIST 3370 Nationalism in Modern Europe (4 Credits)
During this course, students will examine the issues surrounding ethnic, religious, cultural, national and other related forms of identity in modern Europe. Students will discuss basic theories of how national identities develop and different categories of nationalism/national identity. They will engage in critical thinking about and gain a better understanding about the issues surrounding ethnic, religious, cultural, national and other related forms of identity. Prior to taking this course an introductory level course in European history is strongly recommended.
Attributes: Liberal

HIST 3375 Native American Histories & Cultures: Advanced (4 Credits)
The purpose of this study is to examine the role of Native Americans in American history and the distinctive features of the history, institutions, economy, society, and culture of Native American Indian Nations. Issues of social justice, race, class, and gender will be emphasized as students engage with primary and secondary sources written by and about this diverse population of Americans. The research component in this course will allow students to intensively explore an area of particular interest in depth and develop higher level research and learning skills.
Attributes: Other World Civilization Gn Ed, *Diversity Gen Ed, Liberal

HIST 3380 Nature in American History (4 Credits)
This course explores the history of changing relationships between American culture and its environment, as that relationship has been manifest physically as well as conceptually. Students will gain familiarity with the main eras and episodes of American history as they relate to American culture's grounding in nature: the European encounter with a (supposedly) virgin wilderness; the rapid exploitation of resources that accompanied westward and industrial expansion; the closing of the frontier and the development of resource conservationism; continued industrialization of the nature-culture relationship through nearly a century of war; the modern tension between economics and a concern for ecological health and balance. This course was previously HIS-243544 Nature in American History.
Cross-listed with CUST 3380.
Attributes: American History Gen Ed, Liberal

HIST 3382 History of New York City (4 Credits)
The student will gain an understanding of the broad themes in the history of New York City. The student will examine the economic, cultural and political forces that have transformed what was once a small settlement on the lower tip of Manhattan into the metropolis that exists today.
Attributes: Liberal

HIST 3385 New York State History (4 Credits)
New York State's history encompasses a wide range of people and places. In this course, students will consider the overall history of the state through the lens of a particular time period or place. From the Indigenous Peoples who were here before European contact to the multitude of ethnic groups who immigrated to New York and the enslaved and later freed peoples brought to the state, the people who have called the state home are of particular interest in this course. So, too, are the ways in which New York's history has been part of the larger story of the American past and the ways in which New Yorkers have participated in their communities, through their votes, their protests, and their very lives.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3390 News Sense: Producing & Consuming in the 21st Century (4 Credits)
This advanced writing and research course offers students an opportunity to become more informed about contemporary issues, problems, controversies, and questions and topics of national and international significance from a historical perspective. Students will draw The New York Times online as well as other online sources, print publications and radio and television broadcast news. Prerequisites: 6 credits in college level history courses. This course was previously HIS-243504 News Sense: Consuming and Producing in the 21st Century.
Attributes: Liberal

HIST 3395 Oral History: Foundation Memory & Debate (4 Credits)
Since the mid-twentieth century, oral history has established itself as an important method of historical scholarship, practiced not only within a variety of historical fields yet also within other disciplines that comprise the humanities and social sciences. This study reflects on the origins and usage of oral history. Students will explore its historiography; the methodologies of oral history expressed within the critical debates - the paradox of memory, interpretation, objectives in oral history, etc.; oral history as a tool of empowerment/advocacy; oral narratives as performance, and oral history in relation to contemporary care strategies.
Attributes: Liberal

HIST 3400 Pirates & Privateers (4 Credits)
This course explores the world of Atlantic piracy, and the infamous pirates and privateers whose stories inform our modern, romanticized view of pirates. Students will be introduced to the dreaded Jolly Roger as well as swashbuckling figures such as Blackbeard and the unnamed, one-legged pirate who was likely the model for Long John Silver in Treasure Island. Sailors escaped from horrible working conditions on merchant and naval ships by becoming pirates. In doing so, they created a more equitable reality aboard their own ships, electing their officers, dividing their booty among the crewmembers fairly, and creating a new social order. Through examining both the myth and reality of being a pirate, the course looks at the world that pirates called their home. The role of pirates in the construction of empires in the Early Modern Era will be addressed, and the popular depiction of pirates versus the historical reality will be investigated.
Attributes: Liberal

HIST 3405 Public History & Museums (4 Credits)
This study will look at the field of Public History and consider how exhibition is used within the field. Students will consider the wide variety of Public History work undertaken by history professionals, as well as the manner in which those projects may be presented both through innovative (e.g. digital and virtual) and more traditional means. The study will also probe the intersection of Public History and exhibition.
Attributes: Liberal

HIST 3410 Public History: A Shared Conversation with the Past (4 Credits)
Public History engages the public in a dialogue with the past and present in a variety of venues. In this course, students will explore the concepts and practices of the field, examining Public History as critical consumers, participating in the production of Public History, and exploring the theory and practice of Public History. Prerequisites: Experience with research projects is recommended This course was previously HIS-243434 .
Attributes: Humanities Gen Ed, Liberal

HIST 3415 Renaissance & Reformation: Origin & Impacts (4 Credits)
This course introduces students to the main themes and personalities of the Renaissance and Reformation periods of Western culture. Students will consider the medieval precursors to the Italian Renaissance; examine the art, literature and philosophy of the Renaissance itself, humanism, and the debates in Christendom surrounding the Protestant Reformation. The course satisfies the Western Civilization general education requirement through its study of the history, institutions, society, and culture of the Renaissance and Reformation periods, and/or the Humanities requirement through its study of conventions and methods associated with the Humanities. Please note that students cannot use the course to satisfy both requirements. Prerequisites: Introductory coursework in world history is recommended This course was previously HIS-244344 Renaissance and Reformation: Origins and Impacts.
Attributes: Western Civilization Gen Ed, Liberal

HIST 3420 Revolutionary America: Advanced (4 Credits)
Students will examine the origins, events and major personalities of the American Revolution, in the period from 1763-1789. Topics to be considered within the course include the development of the American colonies, the reasons for the break with Great Britain, the course and character of the revolution, as well as the philosophical and political debate over the Constitution. Students will gain a better understanding of the major political, intellectual, social, economic, and cultural trends of the revolutionary period in American history, with a focus on the Revolution itself and the subsequent creation of a new constitutional system of government. .
Attributes: Liberal

HIST 3440 American Ethnic History (4 Credits)
This course offers a study of the histories of the diversity of individuals and communities that make up U.S. society. Students will examine U.S. history in the context of native, captive, and immigrant ethnic groups and their interactions with one another. Ethnic history serves as a vehicle for revealing the complexities of political, economic, social and cultural issues. Students will analyze such issues and the civic engagement of individuals and communities across time, inter- and intra-ethnic interactions, and space. This course was previously HIS-243234 American Ethnic History.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3445 Topics in American History (4 Credits)
The purpose of this study is to allow students to focus on a special topic within the larger field of American History. In consultation with his/her mentor and the course instructor, the student will help to focus the study and its objectives.
Attributes: Liberal

HIST 3450 Topics in European History (4 Credits)
The purpose of this study is to allow students to focus on a special topic within the larger field of European History. In consultation with his/her mentor and the course instructor, the student will help to focus the study and its objectives.
Attributes: Liberal

HIST 3455 Topics in Historical Studies (4 Credits)
The purpose of this study is to allow students to focus on a special topic with the larger field of Historical Studies. Students will read and analyze both primary and secondary scholarly writings from historians who write with differing cultural, historical, sociological, political, and philosophical frameworks.
Attributes: Liberal

HIST 3460 Topics in Other World Civilizations (4 Credits)
The purpose of this study is to allow students to focus on a special topic within the larger field of Other World Civilizations. In consultation with his/her mentor and the course instructor, the student will help to focus the study and its objectives. Students are expected to meet the requirements of the Western Other World Civilizations general education component within the work of the course.
Attributes: Other World Civilization Gn Ed, Liberal

HIST 3465 Topics in the Ancient World (4 Credits)
This course will consider civilization in the Ancient World by allowing students and faculty to explore in detail a particular facet of the ancient world. The specific content of the course varies, but every iteration of this course will emphasize the careful use of sources and methods as are employed in the study of ancient history.
Attributes: Liberal

HIST 3470 Topics in Western Civilization (4 Credits)
The purpose of this study is to allow students to focus on a special topic within the larger field of European History. In consultation with his/her mentor and the course instructor, the student will help to focus the study and its objectives.
Attributes: Liberal

HIST 3475 Topics in Women in Western Civilization (4 Credits)
Topics in Women in Western Civilization allows students and faculty to explore in greater depth a particular aspect of the history of women in Western Civilization. The specific content of the course varies, but every iteration of this course will emphasize the careful use of sources and methods as are employed the study of women's history.
Attributes: Liberal

HIST 3480 Topics in World History (4 Credits)
The purpose of this study is to allow students to focus on a special topic within the larger field of World History. In consultation with his/her mentor and the course instructor, the student will help to focus the study and its objectives. Students are expected to meet the requirements of the Other World Civilizations general education component within the work of the course.
Attributes: Other World Civilization Gn Ed, Liberal

HIST 3485 The Atlantic World (4 Credits)
This study explores the history of the Atlantic World during the Colonial Period. Through exploration and the search for wealth, Europeans encountered vastly different cultures both on the American continent and in the transportation of slaves from Africa. Indigenous cultures in the Americas were altered or destroyed by European contact and the competition between European empires seeking to control the New World. Africans found themselves swept up in the clash of cultures as they were transported to America to provide labor for the colonists' economic endeavors. Students will explore the social, cultural, environmental, and economic implications of this interaction of cultures.
Attributes: American History Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3490 The Enlightenment (4 Credits)
Study the 18th century Enlightenment that changed the perception of the universe, rocked the thrones of Europe, shook the roots of religious heterodoxy and gave new dimensions to philosophy, literature and the arts. Read classic studies by Enlightenment scholars and analyze the influences of the Enlightenment upon the development of the United States policy and the role of women in Europe and beyond. Develop a set of personal conclusions and assess the contemporary meaning of the Enlightenment. This course was previously HIS-224054 The Enlightenment.
Attributes: Humanities Gen Ed, Western Civilization Gen Ed, Liberal

HIST 3495 The Great Depression & the New Deal (4 Credits)
During this course the student will focus on the economic crisis of the United States during the 1930s and the political response to it. Students will examine the impact of the depression on American society in terms of social disruption, economic growth, and political development, as well as the subjective impact of the crash and depression, the political demands placed on the federal government for relief and reconstruction, their success and/or failure as public policies and the reasons for the growth of the labor movement and its political orientation. Prerequisites: An introductory level course in American history is strongly recommended.
Attributes: Liberal

HIST 3500 History of Warfare in Western World (4 Credits)
In this course, offered as part of the Civil War History Residency, students will survey the history of warfare in Western Civilization, beginning with the origins of organized warfare in the Ancient Middle East through the recent Gulf Wars, as part of this Civil War Residency course. They will examine in depth the military operations of the Civil War as the prototype of modern wars in the West.
Attributes: Western Civilization Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3510 The Reformation (4 Credits)
The student will examine the history of the Reformation, including the teachings of Martin Luther, John Calvin, and other key Reformation theologians. Students will consider the reasons why, by the early sixteenth century, Europeans were receptive to a challenge to the Roman Catholic Church, the political and social circumstances of the time, the impact of the Reformation both on high politics as well as religious institutions, and the belief systems of ordinary Europeans. Prerequisites: An introductory level course in European history is strongly recommended.
Attributes: Liberal

HIST 3515 The Silk Road (4 Credits)
The Silk Road conjures exotic images of camel caravans, the smell of spices and lure of distant places. This study will investigate the origins of silk road trade routes, the states that developed in Central Asia as a result of these routes and the movements of people, trade goods, technology, ideas, beliefs and even epidemic disease. Prerequisites: A previous course in Pre-modern East Asia or World History is strongly recommended but not required.
Attributes: Other World Civilization Gn Ed, Liberal

HIST 3520 Topics in History of American Politics (4 Credits)
Sections under this title might include: American Foreign Policy, 1939 to present; History of American Political Thought I: 1763-1876; History of Political Thought II: 1890-present; History of American Foreign Policy; History of American Political Parties; American Government; American Politics, 1974-2008; Barack Obama and His Presidency; Federalists and Jeffersonians; The American Presidency; The Evangelical Right in American Politics and Culture; Understanding the U.S. Constitution; The Tea Party in American Politics; Historical Biography: Theodore Roosevelt. This course will consider the history of the U.S. politics and government. Each section of the study will focus on a different component of that history. After discussion with their advisors, students may complete more than one of the sections listed under this title.
Attributes: American History Gen Ed, Liberal

HIST 3525 History of Race in the United States (4 Credits)
Sections under this title might include: Race and Gender in U.S. Media; Race and Representation in U.S. History and Culture. This course will consider the history of race and representation of race in U.S. history and culture. Each section of the study will focus on a different component of that complex history. After discussion with their advisors, students may complete more than one of the sections listed under this title.
Attributes: American History Gen Ed, Liberal

HIST 3530 The Civil War (4 Credits)
Sections of this course will focus on the United States Civil War. Although each section might take into account a different perspective or use a different conceptual frame, each course will cover the basic historical narrative of the Civil War, including factors that led to the war and results of the war. Upon consultation with their mentor, students may take more than one version of this course.
Attributes: Liberal

HIST 3535 World War II (4 Credits)
hrough this study, the student will investigate the major historical problems related to the history of WWII, including the origins of the War, the Hitler enigma, the factors behind the Allied victory in the war; The relationship between the emergence of the new feminism in America and the War effort; the origins of the Cold War; the Germany First strategy; the wisdom of the Mediterranean Campaign; the wisdom of the decision to drop the Atomic Bomb, etc.
Attributes: Liberal

HIST 3550 Global U.S. History (4 Credits)
This course places the United States in the historic, political, cultural, and social currents of the world. It invites students to explore the historic processes that have shaped some key themes and dynamics of U.S. history from both internal and external points of view. We will view the United States less as an independent entity and more as a part of a world community. Such a perspective creates an opportunity to deepen the basic narrative of the American experience by internationalizing it, while also helping us understand how such aspects of U.S. society as churches, small businesses, neighborhoods, cultural communities, and mass media might be forces in shaping world politics. We will make the movements of people in and through the Americas, the stories of how the United States came to be 50 states (and some territories), and the precarious role of early 21st century world leadership the central themes of the study. Students are encouraged to bring to this course a curiosity about America's historic place in the world, a desire to strengthen Historical Studies research and writing skills, and a willingness to think outside the box. This course was previously HIS-243394 .
Attributes: American History Gen Ed, Liberal

HIST 3555 US History in the Middle East (4 Credits)
This course examines the relationship between the United States and Middle East, defined for the purposes of this study as all the land from North Africa to the Arabian Peninsula and Turkey (MENA). Students will consider the important events, forces, people, and policies that have shaped that relationship, as well as the ways in which the relationship reflects the evolution of the American society, economy, domestic politics, and foreign relations. Prerequisites: Introduction to Psychology and/or Sociology, Macroeconomics, and a decided interest in issues that inform the historic engagement of the U.S. in the Middle East.
Attributes: American History Gen Ed, Liberal

HIST 3570 Women in the Middle East (4 Credits)
This study examines and compares the diverse histories of women in the modern Middle East. Students will investigate topics such as women and: Islamic religious traditions; family life and traditional cultural institutions; work life and economic institutions; legal status and political institutions; relation to Western and Islamic feminism; etc. This course provides an historical perspective on contemporary social, political and gender relationships in the Middle East. Prerequisites: Previous study in modern world history, OR women's history, OR women's studies.
Attributes: Other World Civilization Gn Ed, *World Hist & Glb Awnss Gen Ed, Liberal

HIST 3575 World History I: Through 1715 (4 Credits)
In this course, students will explore important events in the history of World Societies through 1715. The course will cover how political, economic and cultural aspects of history in the non-western world have been shaped by changing ideas and concepts. Students will be introduced to the families, foods, workplaces, religions, and diversions of peoples of the past through lively, descriptive writing and extensive primary sources that give voice to a wide range of individuals. This course will examine various political, social and cultural themes, some in great detail.
Attributes: Other World Civilization Gn Ed, Liberal

HIST 3585 World News in Historical Perspective (3 Credits)
This course examines the role and impact of international and domestic media on political developments in Europe. It explores the perspectives of various European audiences and the role of historical circumstances and media in shaping those perspectives. Students will consider the ways in which the media can shape public opinion and how its perspective may be influenced by dominant political/economic theories and ideologies. Comparisons with the U.S. perspective will be considered when relevant. Prerequisites: U.S. History II and courses in the social sciences, including economics.
Attributes: Liberal

HIST 3590 Hip Hop America: The Evolution of a Cultural Movement (4 Credits)
How do history and Hip Hop connect? This course explores that question through a study of how the historical and contemporary societal factors that shaped the growth and evolution of Hip Hop in the U.S. informed and were informed by individual and group racial, class, and gender identities. The course begins with a look at the 1970s boroughs of New York City, where Hip Hop emerged, and then journeys across New York City and the United States, exploring how the beats and breaks of the Bronx evolved into both an artistic genre as well as a political and cultural movement. We will study 1) the complex networks of social structures in the 1970's Bronx that enabled the emergence of Hip Hop within dynamics of power, privilege, oppression, and opportunity; 2) the 1980's growth of the genre through the commercialization of rap; 3) the early 21st century uses of Hip Hop as a vehicle for political organizing, education, community outreach, and entrepreneurialism in cities across the U.S.; 4) the challenge of balancing the political potential of Hip Hop against the commercial context of popular arts; and 5) the harnessing of Hip Hop as a vehicle for personal uplift and empowerment alongside actions for social justice. This course was previously HIS-243554 Hip-Hop America: The Evolution of a Cultural Movement.
Attributes: American History Gen Ed, *Diversity Gen Ed, Liberal

HIST 3605 Madness in American History (4 Credits)
This study is based on the idea that we can understand American history through the history of mental illness, and that we can understand the history of mental illness by understanding American history. Theories of mental illness, its diagnosis and treatment, and social attitudes toward it intersect with the history of institutions, science, gender roles, views about the family and social ideals in the US. As we explore these topics, we will arrive at a greater understanding of how mental illness can reflect larger cultural issues. Students will explore both the historical development of theories of mental illness, and the debates concerning diagnosis and treatment. In order to understand the context of these developments, students will study American history from the late 1800s to the present.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3610 Ethnic Conflict in Global Perspective (4 Credits)
Study selected ethnic conflicts among the 5000 ethnic groups found in about 170 nation-states. Focus on past and contemporary conflicts between and among ethnic groups and between ethnic groups and the state. Specific case studies will vary from term to term, but students can count on discussing the global context of ethnic conflict from the Americas to Europe to Asia and beyond. Students will do academic research on an ethnic conflict of their choice ranging from the Native American Genocide to the World War II Holocaust to contemporary and ongoing conflicts of today. This course was previously HIS-243854 Ethnic Conflict in Global Perspective.
Attributes: Liberal

HIST 3625 History of American Technology: 1650 - Present (4 Credits)
Students should be able to describe the evolution of technology in the United States, its origins and its impact on American society. The issues to be examined will include the following: the economy of Native American life, the nature of the colonial economy, the birth of American independence, the industrial revolution, the development of the culture of liberty and free trade, the tension between free and slave labor systems of production, the impact of the Civil War, the industrial system and the rise of the corporation, the history of American agriculture, the political response to industrialization, the birth of a war-time economy, the impact of the Great Depression, the development of telecommunication systems, the automobile and its impact on American life, the rise of the aircraft industry, biotechnology, nanotechnology, and robotics.
Attributes: American History Gen Ed, Liberal

HIST 3630 The Civil Rights Movement (4 Credits)
The student will examine the political and social climate, with a particular of focus on racial issues, in the United States during the three decades following the Second World War. The student will gain a thorough knowledge of the movement that organized to push for the enactment of civil rights, divisions within that movement, as well as forces that opposed the goals of the movement. The student will gain a familiarity with the lives and careers of Rosa Parks, Martin Luther King, Malcolm X, Bayard Rustin, A. Philip Randolph among others, and with such organizations as the NAACP, CORE, the Urban League, and Black Muslim organizations.
Attributes: Liberal

HIST 3635 Foundations in American History: Advanced (4 Credits)
Foundations of American History is an advanced level survey course which covers important events in American history from the pre-colonial era through the Civil War and the end of Reconstruction in the south in 1877. Students will examine various political, social and cultural themes in this course, including pre-colonial America, European conquest, colonial development, the American Revolution, the U.S. Constitution, the Early National Period, the Jacksonian Era, the Age of Reform, nationalism, expansionism, immigration, reform, regional development, causes and effects of the Civil War, and Reconstruction. Critical reading skills and the ability to analyze and evaluate primary and secondary historical sources and produce written interpretations will be emphasized.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3640 Western Civilization I: Advanced (4 Credits)
This study explores the ideas and institutions that arose from the ancient and medieval worlds, e.g. philosophy, law, and Christianity, that lay the foundations of western society. In addition, the study examines the development of the west in the context of world affairs. Finally, this study provides students with an introduction to the meaning of history and aspects of the historical process.
Attributes: Western Civilization Gen Ed, Liberal

HIST 3650 Civil War History (4 Credits)
The purpose of this study is to give students the opportunity to survey the history of Antebellum slavery, the Civil War and the Reconstruction era, and introduce them to the major historical problems of the American Civil War and Reconstruction era. These include the causes of the war; the character of Antebellum American slavery; the causes behind the Confederacy's defeat; the Lincoln enigma; and the character and legacy of Reconstruction, within the context of the broad sweep of American history from the Colonial period through the Reconstruction era. Civil War History is offered in conjunction with the Civil War History Residency.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3655 Adirondack History (4 Credits)
This study will examine the history of the Adirondacks through the lens of a critical paradox: how can humans preserve our natural beauty while allowing public access to these places? The study will first investigate the pull factors and industries of the Adirondacks and the effects on the conservation movements. Students will read William H.H. Murray's writings and explore historical promotional images of the Adirondacks. This class will first investigate the pull factors and industries of the Adirondacks, and the effects on the conservation movements. Students will examine the future of conservation, tourism, and the role of gender, class, and race in the Adirondacks.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3665 Long Island History: Advanced (4 Credits)
In this study, students will examine the rich history and political, social, economic and cultural development of Long Island from the prehistoric period, through the colonial era and up to the present day. Students will explore topics in Long Island history including the environment and ecology of Long Island, an examination of the indigenous peoples, the settlements of the colonial era, the events of the American revolution, the development of commerce and transportation in the 18th through the 20th centuries, whaling and other maritime industries, antebellum Long Island, the Civil War, post War development, Gold Coast Long Island, World War I, Prohibition, suburban development, World War II and post-war Long Island, offering an overview of the changes in life and culture of the past several centuries.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3670 Barack Obama & His Presidency (4 Credits)
The student will study the presidency of Barack Obama and the United States as a society from 2009 to the present. The student will gain an understanding of Barack Obama's approach to governance and his political/ideological beliefs, along with the intellectual and cultural context out of which Obama developed those beliefs. There will be a particular focus on Obama's conception of ethnic/racial identity as well as American national identity and how these ideas inform his broader worldview. The student will also gain an understanding of the major political, social, cultural, and economic issues of the time period under study.
Attributes: Liberal

HIST 3675 History of America in the 1960s Era (4 Credits)
The student will examine American society during the turbulent 1960s. The student will gain a broad understanding of the time period, including political, social, cultural, and economic developments. The student will examine, among other topics, the Civil Rights movement, the Vietnam War and protests against it, the counter-culture, the rise of conservatism, urban violence, the women's movement, and the split within the liberal movement over Vietnam.
Attributes: Liberal

HIST 3680 History of American Foreign Policy: 1939 - Present (4 Credits)
During the course of this contract the student will examine the development of American foreign policy during the 20th century, with particular emphasis on the changing perceptions of America's role in world politics.
Attributes: Liberal

HIST 3685 History of American Politics: 1974-2008 (4 Credits)
The student will study American politics, with a particular focus on national politics (the presidency and Congress), from 1974 to 2008. The student will gain an understanding of developments in American politics and society during the presidencies of Gerald Ford, Jimmy Carter, Ronald Reagan, George H.W. Bush, Bill Clinton, and George W. Bush. This will include analyses of both domestic and international issues. The student will focus on the rise of conservative fortunes under Reagan, as well the pushback from progressive forces that propelled the Clinton presidency. The student will also gain some understanding of the major social, cultural, and economic issues of the time period under study.
Attributes: Liberal

HIST 3690 History of Antisemitism (4 Credits)
The student will examine the history of antisemitism in recent centuries. The student will gain a broad understanding of the various forms antisemitism has taken from medieval times up to the present day. Students will pay particular attention to last two hundred years in this history, and will focus on, among other topics, the shift in mid-late nineteenth century Europe from religious antisemitism to 'racial' antisemitism, the antisemitic ideology of Nazism, and the relationship between the founding/existence of Israel and contemporary antisemitism.
Attributes: Liberal

HIST 3695 History of Educational Technology (4 Credits)
This study will examine the relationship between technology and education in the United States from the late 19th century through modern times. We will explore how technology has transformed the concept of a classroom, and led to the rise and prevalence of online and blended study. There will be an emphasis on the historical, social, cultural, and ethical issues surrounding use of technology in education, and the study will introduce and explore key concepts of eLearning theory.
Attributes: Liberal

HIST 3705 History of the US Navy (4 Credits)
This study examines the history of the United States Navy from the Revolutionary War through the Spanish American War within the broad context of American History. Topics that will be covered by this study will include, the Navy's contribution to the American Revolutionary War effort, Barbary Terror, The Navy and the Debate over the Constitution of 1787, The philosophical and policy differences between the Federalists and the Jeffersonians, The War of 1812, the Age of Gunboat Diplomacy and the extension of the American Commercial Empire, the Mexican-American War, The Efficacy of the Union Blockade, The Commercial Raiders of the Confederacy, Alfred Thayer Mahan and the movement to expand America's Navy, and the Spanish American War. Advanced Level Reading, Writing, and Research Skills emphasized.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 3710 Jews in US History: 1654-present (4 Credits)
This student will examine the history of Jews in the United States of America from 1654 to roughly the present day. This student will examine the history of Jews in the United States of America from 1654 to roughly the present day. The student will gain an understanding of the major events of this history, with a focus on comprehending the changing nature of Jewish immigration-as the population changed from being predominantly Western European very early on to Central European by the mid-19th century and, after 1880, to East European. The student will gain an understanding of the matters of identity and assimilation for American Jews, both in terms of religious observance and cultural practices.
Attributes: Liberal

HIST 3715 Movin' on Up: Class in America in the Movies (4 Credits)
The purpose is to study the issue of socio-economic class in American society, in part by examining how it is portrayed in films. The student will gain a better understanding of the following: how class structures affect the social and economic lives of Americans, how class differences affect educational opportunities, what barriers prevent social mobility (i.e., mobility between classes), and what factors encourage social mobility, how race, gender, culture, and other forms of identity interact with class to affect the lives of Americans in various classes, and how Americans incorporate their class into their overall identity. This course, in studying the issue of socio-economic class in the U.S., will address social justice issues, including race, class, and gender, as well as explore matters of intersectionality so that students gain an understanding of how overlapping forms of identity-based discrimination interact with one another.
Attributes: *Diversity Gen Ed, Liberal

HIST 3720 The Holocaust (4 Credits)
The student will study the Holocaust in order to gain some insight into the reasons--historical, cultural, institutional, political--why human beings committed these atrocities against other human beings, as well as the mechanism by which the perpetrators carried them out. The student will also study the broader history of modern Germany to put the Holocaust in context .
Attributes: Liberal

HIST 3725 The Evangelical Right in American Politics and Culture (4 Credits)
The student will gain an understanding of various ways to conceive of the Evangelical/Christian Right, identify contemporary groups as well as their agendas, and explore the movement's role in elections and policy making. Students will also explore how the emergence of the movement has contributed to political conflict (even within the Republican Party)? What major policy changes can be attributed to a good degree to the influence of the movement? What is the movement's agenda? How has the Christian Right affected elections? What are the theological implications of the politicization of Evangelicalism? What effect has the movement's ideology has on societal perceptions of morality and "family values?"
Attributes: Liberal

HIST 3730 The Tea Party in American Politics (4 Credits)
The student will gain an understanding of the Tea Party as a political movement in American politics, including the context out of which it arose in the months after the election of Barack Obama to the presidency. Students will gain an understanding of the relationship between the Tea Party and earlier movements on the right, and between the Tea Party movement and the Republican Party. The student will also gain an understanding of the broad trends within American politics since 2008.
Attributes: Liberal

HIST 3735 Asian American History (4 Credits)
The Asian American History explores American history through the lens of the many Asian immigrant groups who have entered and settled in the United States since the nineteenth century. Students will examine the histories of various groups of Asians in the United States alongside governmental policies, economics, politics, religion, and cultural similarities and differences that have contributed to the shaping of Asian America. In addition to participating in discussion forums and writing short essays, students who take Asian American Experience will be asked to examine a special topic and develop a final project on that topic. 1. Identify and discuss how various political, social and cultural themes in Asian American history complicate the basic narrative of American history. 2. Analyze how Asian American experiences in the United States mirror America's evolving relationship with the rest of the world. 3. Dissect political, economic, social, and cultural aspects of American history, with an emphasis on diversity in American society. 4. Illustrate how common institutions in American society have affected Asian Americans and their relationship with others. 5. Evaluate primary and secondary historical sources for the purpose of producing original research and writing on Asian Americans.
Attributes: American History Gen Ed, Liberal

HIST 3996 Special Topics in HIST (3-4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HIST 3998 Individualized Studies in Historical Studies (HIST) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Historical Studies (HIST). Please contact your mentor/advisor for more details.

HIST 4005 Mad Men Mad Women: History of Women in the Twentieth Century (4 Credits)
This course will examine the history of women using the visual narrative of AMC's Emmy Award-winning show, Mad Men. The backdrop – a fictional Madison Avenue advertising firm in March 1960 – on its surface seems to be a story of the "mad men." Yet, a central focus of the show is the evolution of women's lives in this dynamic period of American history. We will examine the transformation of the lives of women examining primary and secondary source materials. Some of these themes include women in prewar and postwar America, "the problem with no name", women's changing landscape in the workplace and the home, the sexual revolution, and the rise of feminism and women's activism. Students will examine roles of gender, class and race through the course readings, our main texts, and the television series. As a class we will connect historical themes to contemporary themes and movements.
Attributes: American History Gen Ed, Arts Gen Ed, *The Arts Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 4006 History of Conservative Talk Radio, Media, and U.S. Politics (4 Credits)
The course will examine how conservative media has developed over the past three decades in the U.S., with a focus on talk radio. Students will analyze the type of rhetoric employed, in particular that relating to race, ethnicity, culture, religion, national identity, and immigration, as well as demographic change more broadly. They will study how this rhetoric has affected political campaigns and elected officials, as well how it has affected the way the broader media covers related issues. Students will explore the relationship between the conservative media, talk radio in particular, and individual conservative politicians as well as the Republican Party as an institution. Students will gain an understanding of how recent trends in conservative politics, in particular as it relates to what some have termed white identity politics or white racial anxiety, have been influenced by the issues driven by talk radio. An introductory level course in recent U.S. history and/or politics is strongly recommended
Attributes: Liberal

HIST 4010 Rock and Roll History (4 Credits)
We will examine American history through the lens of rock and roll. Students will study the development and transformation of rock and roll from early blues to the present day. We will analyze how rock and roll became a tool for civic engagement and social movements in the United States. We will explore themes in rock and roll, and trace ideas in the music to expressions of American diversity. As a class we will explore rock and roll's influence, politically, socially and economically. Through listening, reading, viewing and writing, students will draw and verify conclusions. Students will be required to analyze primary and secondary documents, music and videos from the different time periods and connect the historical themes to the present day.
Attributes: American History Gen Ed, Arts Gen Ed, *The Arts Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

HIST 4012 History of the Beatles (4 Credits)
This course will delve into the cultural, political, and historical significance and impact of the iconic band, the Beatles. Beginning with World War II, we will trace the Beatles' journey to the present day. Through this exploration, we will analyze the phenomenon of Beatlemania and what sets the Beatles apart as a band that transcends generations. Students will also examine the Beatles' influence on gender roles, civil rights, psychedelia, feminism, women's rights, political issues, and the generation gap. Additionally, we will study the development of their albums, recording technology, and the art of rock music. Through active listening and critical analysis, students will gain a deeper understanding of the Beatles' music and its role as a lens for understanding history.
Attributes: Liberal

HIST 4015 Multiethnic Empire: Habsburg Austria -1740-1918 (4 Credits)
This study will examine the history of the Hapsburg Monarchy from 1740 until its demise in 1918, including the following: the state-building, reform-minded reigns of Maria Theresa and Joseph II, the rivalry with Prussia over domination of Germany, the challenge of the French Revolution and the retreat under Franz I from the Enlightenment-based policies of Joseph II and Leopold II, the reactionary period dominated by Metternich from 1809 through 1848, the revolutions of 1848, the neo-absolutism of the 1850s, the period of constitutional experimentation leading to the 1867 Ausgleich, and the period leading up to and including the First World War, concluding with a discussion of why Austria-Hungary dissolved in 1918. Furthermore, students will focus on the so-called nationalities question throughout the period as well as on the attempts to develop an Austrian state patriotism or civic Austrian identity by various thinkers. Prerequisites: An introductory level course in European history is strongly recommended.
Attributes: Liberal

HIST 4020 Senior Thesis I: Research (4 Credits)
This study introduces students to the work and craft of historians. As part of a two-semester sequence, this study provides the foundation for a capstone study or final project that integrates a historical studies degree. The outcome of this two-semester project is either a research paper of approximately 25-30 pages that is based on primary sources as well as secondary sources following the guidelines for a historical journal article, with a complete bibliography following correct citation style. Or, the outcome is an audio-visual project that is based on primary sources as well as secondary sources and results in a 20-25-minute presentation, with a complete bibliography following correct citation style. During this term, students will decide what they want to know, find out what has been done already on their research topic, consider possible end products, conduct background research, conduct primary research, keep complete records of citation information and keep clear and relevant notes on sources to be used in the final project. Prerequisites: Available to Empire State College Historical Studies majors only.
Attributes: Liberal

HIST 4025 Senior Thesis II: Writing & Presentation (4 Credits)
During this course, students will complete primary and secondary research based on the historical topic and research question(s) developed during Senior Thesis I. Students will write the senior thesis report and present findings in a summary oral presentation for peers in the history profession Prerequisites: Available to Empire State College Historical Studies majors only. Senior Thesis I is strongly recommended.
Attributes: Liberal

HIST 4030 Topics in War & Peace (4 Credits)
Sections under this title might include: The French Revolution; The First World War; The History of the Second World War. This course examines the causes of war and the conditions under which the international community establishes peace among nations. Students will explore the major theoretical approaches explaining war and peace, interactions between the major actors in the international system, causal paths that lead to either war or peace, and the empirical support that the discipline offers to understanding the phenomenon, as it relates to a specific conflict or time period. After consultation with their advisor, students may complete more than one of the sections listed under this title.
Attributes: Liberal

HIST 4035 War & Peace (4 Credits)
This course examines the literature on the causes of war and the conditions under which the international community establishes peace among nations. It includes major theoretical approaches explaining war and peace, interactions between the major actors in the international system, causal paths that lead to either war or peace, and the empirical support that the discipline offers to understanding the phenomenon. Prerequisites: U.S. History, European and/or Diplomatic History.
Attributes: Liberal

HIST 4040 African American History: Advanced Research (4 Credits)
The student will explore the history of Americans of African descent over the last four centuries. Through reading Franklin and other works the student will develop a solid understanding of slavery, both its origins as well as the course and ideology of slavery through the Civil War, the period of Reconstruction and the development of the Jim Crow segregationist system, the impact of industrialization and black migration from the South to the North in the early twentieth century, the movement for equality for African Americans starting with Frederick Douglass, W.E.B. Dubois, and Booker T. Washington through the Civil Rights movement of the 1950s and 60s, including an understanding of the ideas of Martin Luther King and Malcolm X (before and after his visit to Mecca) among others, as well as issues of the past thirty years including the question of ethnic/racial and civic/national identity for black Americans.
Attributes: Liberal

HIST 4050 Historical Studies Internship (4 Credits)
The internship is an opportunity for a student to apply the theories and methods of Historical Studies to a real-world experience. Students should work with their mentor and with the Career Services division of the Office of Collegewide Student Affairs to find an internships that meets their specific needs and fits within their degree programs. An internship may only be completed with the approval of the student's mentor. .

HIST 4122 Contemporary Issues in US Immigration (4 Credits)
The student will examine immigration in the contemporary United States. The student will gain a broad understanding of the economic, social, cultural and identity-related issues faced by immigrants in contemporary America.
Attributes: Liberal

HIST 4127 Gender and the Cold War (4 Credits)
The 1950s was a decade of conformity, typified by the rise of suburbia, the man in a gray flannel suit, as well as an underlying dissatisfaction with gender roles – simply, blandness. Invasion of the Body Snatchers, the 1956 film directed by Don Siegel and based on Jack Finney's novel of the same name, presents a statement with regard to collective paranoia – a fear of conformity, conspiracy, and constraint. Yet if we consider this film as a social commentary, then we must look at how it reflected upon a growing concern of Americans over the respect for authority and rigid gender roles. The rise of contemporary feminism threatened a patriarchal system by loosening traditional restraints on women. Opponents of female reform, in turn, invoked domestic ideology to return women to the home. They feared women, who easily slid from a nurturing influence to emasculating power. We will explore the issues that shaped Siegel's film through its viewing and via a select body of readings that span the disciplines of history, anthropology, literature, and film studies, resulting in a robust discussion on gender, sexuality, and yes fear, within the mid-twentieth century.
Attributes: American History Gen Ed, Liberal

HIST 4132 The Japanese-American Internment in World War II (2 Credits)
his study will investigate the internment of more than 110,000 persons of Japanese descent, including more than 70,000 people who were American citizens, during World War II.
Attributes: Liberal

HIST 4998 Individualized Studies in Historical Studies (HIST) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Historical Studies (HIST). Please contact your mentor/advisor for more details.

HLAD: Health Administration (Undergraduate)

HLAD 1998 Individualized Studies in Health Administration (HLAD) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Healthcare Services (HLAD)

HLAD 2010 The United States Health Systems (4 Credits)
This course will study the origins, changes, and current status of the major programs that provide for the delivery, financing, and regulation of healthcare services in the public and private sectors of the United States. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Service Delivery. This course is part of the BS in Public Health program.

HLAD 2998 Individualized Studies in Health Administration (HLAD) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Health Administration (HLAD). Registration for this class must be approved by the student's mentor.

HLAD 3005 Community Health (4 Credits)
This course will explore the community health needs of various ethnic and cultural population groups along with the cultural, social, political and economic factors involved in the access and utilization of healthcare systems by diverse groups of people in the United States. Factors that influence the epidemiological measures of morbidity and mortality will also be included. This course is aligned with the Community and Human Services Area of Study guidelines for Diversity and Knowledge of Service Delivery. This course is part of the BS in Public Health program.
Attributes: Liberal

HLAD 3015 Comparative Health Systems (4 Credits)
This course will study the major healthcare models around the world. The historical development of these models will be determined, and the societal values and other factors underlying countries' choice of healthcare systems and policies will be examined. Note: This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery and Diversity. This course is part of the BS in Public Health program.
Attributes: Liberal

HLAD 3020 Cultural Competency in Health Care (4 Credits)
This course will examine both analytical and practical approaches to cultural competency in health care. Concepts, models, frameworks, and communication that occur in cross-cultural health situations will be discussed and the concepts applied in interventions and programs. This course is aligned with the Community and Human Services Area of Study guidelines for Diversity and Skills & Application. This course was previously CHS-253134 Cultural Competency in Health Care.
Attributes: Liberal

HLAD 3025 Economic Issues in Health Care (4 Credits)
Healthcare economics uses the tools of microeconomic analysis to examine markets in the health sector including physician markets, hospital markets, pharmaceutical markets and health insurance markets. Students learn about managed care, and other types of health insurance, explore the effects of insurance on behavior, investigate reimbursement systems including new reimbursement models like value-based and bundled payments, and discuss factors that influence market outcomes in the healthcare sector including uncertainty, information asymmetries, and externalities. Current trends and issues facing the healthcare industry such as rising expenditures and new technologies are also investigated in this course. This course is aligned with the Community and Human Services guidelines for Knowledge of Service Delivery and Skills & Application. Prerequisites: Microeconomics (ECON 2020), or significant experience in the health sector.
Attributes: Liberal

HLAD 3035 Community Health Education and Communication (4 Credits)
This course will examine the practical and theoretical aspects of health communication. Students will learn about common terms and concepts in health communication, as well as recent trends and best practices in this area. The process of planning health communications will also be explored. This course is part of the BS in Public Health program. Highly Recommended (not required): It is suggested that, prior to taking this course, students have knowledge from an introductory management course, such as Principles of Management (MGMT_1005) or equivalent, and/or an introductory health or human services course, such as duction to Human Services (HUSV_2035), or equivalent. Advanced-level reading, writing, and critical thinking skills are required. T Note: This course aligns with the Community and Human Services area of study guidelines for Skills.
Attributes: Liberal

HLAD 3040 Health Disparities (4 Credits)
This study explores disparities and inequalities in health outcomes (i.e., morbidity, mortality) and health care access across multiple social categories. These outcomes reflect complex interactions between biological, environmental, and social contexts. Students will be asked to think critically about social determinants of health and how this knowledge can be applied to real life situations (e.g., disasters, chronic diseases). This course aligns with the Community and Human Services area of study guidelines for Knowledge of Service Delivery, Skills & Application, and Diversity. This course is part of the BS in Public Health program.
Attributes: Liberal

HLAD 3045 Healthcare Ethics (4 Credits)
This course will study important ethical issues facing the providers, payers, and consumers of healthcare services. This course aligns with the Community and Human Services area of study guidelines for Ethics. This course is part of the BS in Public Health program.
Attributes: Liberal

HLAD 3050 Healthcare Management (4 Credits)

In this course the student will look at managerial functions in the United States healthcare system. Topics such as legal and ethical requirements, technology, organizational relationships, and leadership may be explored. It is recommended that The United States Health Systems or a similar course should be taken prior to enrolling in this course. This course is aligned with the Community and Human Services area of study guidelines for Skills & Application and Ethics. This course was previously CHS-253304 Health Care Management.

HLAD 3055 Managed Care (4 Credits)

This course addresses the development of the managed care system of healthcare delivery. It will examine the service delivery systems, effects on stakeholders and the business components that comprise managed care and affect the quality of healthcare in the United States. Note: This course is aligned to the Community Human Services Area of Study guidelines for Knowledge of Service Delivery Human Behavior and Skills & Application. This course was previously CHS-253754 Managed Care.

HLAD 3122 Principles of Public Health (4 Credits)

Public health works to protect and improve the health of communities. This study will examine the components of the public health system, the relationships among public health components, and key issues for public health professionals. This course meets the Human Services Area of Study guidelines for Knowledge of Service Delivery and Skills & Application. This course is part of the BS in Public Health program.
Attributes: Liberal

HLAD 3127 Infections and Epidemics: Biocultural Perspectives (4 Credits)

This study examines infections and epidemics from an interdisciplinary perspective, which draws upon community health, medical anthropology, evolutionary medicine, epidemiology, and other approaches. Learning activities will examine biological and cultural factors responsible for changing risk patterns, the epidemiologic transition associated with industrialization, and the rise of antibiotic and viral resistance. Students will have opportunities to explore individual, local and global links between infections and inequalities and to consider the impact of sociocultural, environmental, and political changes on disease patterns, along with other topics of interest to the student, such as specific diseases, epidemics or therapies, old and new. This course meets the Community and Human Service Area of Study Guidelines for Knowledge of Service Delivery. This course is part of the BS in Public Health program.
Attributes: Liberal

HLAD 3996 Special Topics in HLAD (4 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HLAD 3997 Special Topics in HLAD (4 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

HLAD 3998 Individualized Studies in Health Administration (HLAD) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Health Administration (HLAD). Registration for this class must be approved by the student's mentor.

HLAD 4015 Healthcare Policy (4 Credits)

This course will provide an overview of the United States healthcare policy process, including an analysis of the political, institutional, cultural and economic environments in which health policy is formed and modified over time. This course aligns with the Community and Human Services area of study guidelines for Knowledge of Service Delivery and Skills & Application. This course is part of the BS in Public Health program.

HLAD 4020 Leadership in Healthcare (4 Credits)

This course provides an overview of the conceptual and theoretical aspects of leadership within the context of the healthcare delivery system. Students in the course will examine different models of leadership and develop an understanding of the key differences between leadership and management. Selected leadership theories will be analyzed with an emphasis on implications for culture, quality, patient safety, and human resource management in a variety of healthcare settings. This course aligns with the Community and Human Services area of study guidelines for Knowledge of Service Delivery and Skills & Application. Prior to taking this course, students should have completed prior coursework on or have prior knowledge of the United States Health Care System. Prerequisites: This course was previously CHS-254134 Leadership in Health Care.
Attributes: Liberal

HLAD 4030 Understanding Medical Marijuana: Multidisciplinary Perspectives (4 Credits)

Students will gain a multidisciplinary understanding of medical marijuana through a survey course addressing the following topics: the ethnobotanical origins of cannabis as a medicine; the historical and cultural context of marijuana in the United States; history and debates surrounding the legalization and criminalization of marijuana; scientific evidence and debates regarding the use of medical marijuana; human service practice with medical cannabis clients and their caregivers. This course aligns with the Community and Human Services area of study guidelines for Skills & Application. This course was previously CHS-253284 Understanding Medical Marijuana.
Attributes: Liberal

HLAD 4996 Special Topics in Health Administration (1-8 Credits)

HLAD 4998 Individualized Studies in Health Administration (HLAD) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Health Administration (HLAD). Registration for this class must be approved by the student's mentor.

HLHS: Health Care Services (Undergraduate)

HLHS 1023 Introduction to Community & Public Health (4 Credits)

This course provides a population perspective on the determinants of health and disease and the tools available to protect and promote the health of the community. Options for intervention are explored including use of the public health system, the health care system, and society wide systems such as laws and taxation. Students will learn to apply frameworks for thinking about the issues of population health and gain an understanding about public health practice. This course meets the Community and Human Service area of study guidelines for Knowledge of Service Delivery.
Attributes: Liberal

HLHS 1998 Individualized Studies in Healthcare Services (HLHS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Healthcare Services (HLHS). Registration for this class must be approved by the student's mentor.

HLHS 2006 Women's Health & Social Transformation (4 Credits)
The course focuses on women's health, past and present. The psychological, physiological, social, and cultural barriers to women's healthcare services will be explored. Students will explore the role of societal level forces and community level factors that influence women's health. This study meets the Community and Human Services area of study guidelines for Knowledge of Service Delivery.
Attributes: Liberal

HLHS 2013 Culture, Illness, and Healing (4 Credits)
Jobs in health care and other sectors frequently call for health professionals with knowledge of and experience with "cultural diversity". Yet, the meanings of culture, face, and what constitutes a cultural group debated and contested across disciplines. How might understandings of culture as it is lived sharpen our insights? What does culture have to do with health, race, ethnicity, gender, socioeconomic position, and standings of living? How do people define and experience health, illness, and healing in diverse cultural groups, vulnerable communities, villages, families, and individuals in and beyond clinical settings? Why does it matter? This course meets the Community and Human Services Area of Study guidelines for Diversity.
Attributes: Liberal

HLHS 2017 Introduction to Global Health (4 Credits)
In this course, students will learn about the effects and interrelatedness of social elements in an environment on global community health and burden of disease. Topics may include the complex social, economic, political, environmental, and biological factors that structure the origins, consequences, and possible treatments of global health problems. Students will explore health assessment methods and intervention strategies. This course meets the Community and Human Services Area of Study Guidelines for Knowledge of Service Delivery.
Attributes: Liberal

HLHS 2996 Special Topics in HLHS (1-8 Credits)
Attributes: Liberal

HLHS 2998 Individualized Studies in Healthcare Services (HLHS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Healthcare Services (HLHS). Registration for this class must be approved by the student's mentor.

HLHS 3010 Creativity & Healing (4 Credits)
This study examines the relationship between the creative arts and healing for students interested in working with individuals and groups. Journaling, creative writing, movement, and drama therapy will be considered. This course aligns with the Community and Human Services area of study guidelines for Skills & Application.
Attributes: Liberal

HLHS 3011 Vulnerable Populations: Health & Social Justice (4 Credits)
The reasons for health disparities are varied. This course explores the characteristics of vulnerable populations such as ethnicity, socioeconomic status, urban or rural residence, undocumented immigrants, people with disabilities or chronic conditions, to understand how social forces puts members of these groups at risk for adverse health outcomes. This course meets the Community and Human Services area of study guidelines for Knowledge of Service Delivery and Diversity.
Attributes: Liberal

HLHS 3015 Grief & Loss (3-4 Credits)
This course explores the processes of grief and loss. The course will focus on theories and research on the grieving process, as well as the roles of ritual, faith, and remembrance in grieving; cultural factors that contribute to reactions to loss; determining when grief becomes dysfunctional; and effective strategies for intervening with an individual who has experienced a significant loss. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Human Behavior and Skills & Application. This course was previously CHS-254044 Grief and Loss. Prerequisites: Introduction to Psychology (PSYC 1005) or Introduction to Human Services (LABR 1165), or equivalent.
Attributes: Liberal

HLHS 3020 Healing Through Music (4 Credits)
The study examines music as a spiritual, healing force. Certain music therapy models are evidence-based practices with measurable impacts on brain functioning. The use of music in working with underserved populations will be explored as a therapeutic modality in the treatment of individuals, groups, and communities. This course aligns with the Community and Human Services area of study guidelines for Skills & Application.
Attributes: Liberal

HLHS 3030 Understanding Forgiveness and Healing in the Human Services (4 Credits)
This study will examine the role of forgiveness in human relationships and the interventions human service professionals can use to support those in the healing process. Contextual factors related to forgiveness and healing within human services practice will be explored. This course aligns with the Community and Human Services area of study guidelines for Skills & Application.
Attributes: Liberal

HLHS 3127 Patient Engagement in Today's Healthcare System (4 Credits)
People actively involved in their health and healthcare tend to have better outcomes – and some evidence suggests, lower costs. This course will examine the advantages of patients being actively engaged in their care, as well as the tools, techniques, and the role of technology that are available to enable this activity. The perspectives of both providers and patients will be examined. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Service Delivery and Skills & Application.
Attributes: Liberal

HLHS 3132 U.S. Healthcare: Structure & Financing (4 Credits)
This course provides a detailed discussion of the complex United States healthcare system, its varied components, its diverse forms and systems for reimbursement, and the changes occurring as a result of new technological and delivery system alternatives, as well as innovative reimbursement models on the effects of service delivery. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Service Delivery.

HLHS 3200 Person Centered Planning and Tools (4 Credits)

Person-Centered Planning is a strength-based approach that focuses on the person's individualized needs, goals, and values. Person-centered planning centers all discussions, decision-making, and development of plans/goals based on the person's desires and goals and provides the human service professional tools to gather pertinent information to guide the person to achieve a higher level of self-sufficiency and success. This study will explore person-centered planning in the health and human services setting with a focus on self-reflective practice and recognition of the challenges and opportunities present in implementing person-centered approaches. Students will develop the necessary skills to assist diverse populations. Person-centered planning focuses on any of the following: assessment, goal setting, problem solving, identifying strengths and weaknesses, identifying natural supports, and achieving self-sufficiency.

Attributes: Liberal

HLHS 3500 Issues in Correctional Healthcare (4 Credits)

Issues in Correctional Health Care aims to educate students from a variety of disciplines to respond to current health issues within jails and correctional systems. Students will learn about the complexities of health for people in prison and will gain understanding and skills in order to apply inter-disciplinary approaches to prison health. This course is aligned with the Community and Human Services guidelines for Skills & Application.

Attributes: Liberal

HLHS 3996 Special Topics in HLHS (4 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

Attributes: Liberal

HLHS 3997 Special Topics in HLHS (4 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

Attributes: Liberal

HLHS 3998 Individualized Studies in Healthcare Services (HLHS) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Healthcare Services (HLHS). Registration for this class must be approved by the student's mentor.

HLHS 4010 Exploring Happiness (4 Credits)

This course will research and examine different theories of happiness from diverse perspectives. Topics may include: how happiness is impacted by various internal and external factors, and strategies for assessment and intervention in human service settings. This course aligns with the Community and Human Services area of study guidelines for Knowledge of Human Behavior and Skills & Application.

Attributes: Liberal

HLHS 4018 Motivational Interviewing (4 Credits)

Motivational Interviewing is a counseling/therapeutic technique developed to assist people struggling to make behavioral changes. It is a person-centered and empowering intervention, typically organized around Prochaska and DiClemente's Stages of Change Model which will be a focus of this course. Students will learn how these techniques look in practice and how they would be used by licensed professionals in helping diverse populations across diverse settings. This course addresses the human service guidelines knowledge of human behavior and skills.

Attributes: Liberal

HLHS 4127 Women and the Business of Healthcare (4 Credits)

This course will examine the diverse experiences and roles of women as recipients and providers of health care, using interdisciplinary and multidisciplinary perspectives (anthropology, health economics, health management and policy, public health, sociology), and emphasizing the US context, while considering multicultural and global issues. This course is aligned with the Community and Human Services Area of Study Guidelines for Diversity and Knowledge of Service Delivery.

HLHS 4998 Individualized Studies in Healthcare Services (HLHS) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Healthcare Services (HLHS). Registration for this class must be approved by the student's mentor.

HRMS:Human Resource Management (Undergraduate)

HRMS 1998 Individualized Studies in Human Resources Management (HRMS) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Human Resources Management (HRMS). Registration for this class must be approved by the student's mentor.

HRMS 2998 Individualized Studies in Human Resources Management (HRMS) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Human Resources Management (HRMS). Registration for this class must be approved by the student's mentor.

HRMS 3005 Compensation & Benefits (4 Credits)

To maximize organizational performance, managers need to address key components in the successful retention and motivation of all staff. One primary component is the design of a total rewards program to ensure alignment with business objectives, motivate individual / team / business unit performance and successfully compete with outside forces to recruit talent. This course will provide the underlying concepts so that students will understand the many factors that need to be addressed to ensure an effective total compensation and benefits program. Students completing this course will have an understanding of the complexities of reward systems, along with an appreciation of the key factors necessary to ensure their successful implementation in any organizational setting. Prerequisite (must complete before registering): Human Resource Management (HRMS 3015), or equivalent This course was previously BME-213754 Compensation.

HRMS 3010 Diversity in the Workplace (4 Credits)

This course will examine the issues, challenges, and opportunities presented by diversity in the workplace. Issues related to employee diversity, in terms of gender, race/ethnicity, career development, and cultural background are emphasized. The objective is to broaden student's perspectives about the dynamics of diversity and to help them work more effectively in diverse workplace environments. Diversity is a workplace characteristic; inclusion is a workplace value. The course examines ways in which the organization benefits from an environment that values, welcomes and includes all employees. Prerequisite (must complete before registering): Principles of Management (MGMT_1005), or equivalent Note: Management knowledge acquired through workplace or other types of organizational experiences may fulfill the prerequisite. This course was previously BME-213164 Diversity in the Workplace.

Attributes: Liberal

HRMS 3015 Human Resource Management (4 Credits)
Students will examine the human resource management function and related activities. The course focuses on the strategic importance of this function for effective management and organizational success. Students will analyze the relationships among organizational strategies and HR policies/procedures. Topics include: job analysis and design, recruitment and selection, compensation and motivation, training and development, employee rights and discipline, and labor-management relations. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent This course was previously BME-213504 Human Resource Management and Development.

HRMS 3020 Human Resources Information System (4 Credits)
The practice of Human Resource Management has evolved from one of being purely administrative and transactional to one of significant strategic importance and transformational value to organizations. Human Resource Information Systems combines human resources practices with information technology to effectively support organizations in pursuit of their objectives. Human Resource Information Systems are used for automating repetitive, administrative tasks; creating, delivering and tracking activities associated with the major HR practices and are essential tools for supporting decision making in the management of an organization's talent. This course was previously BME-213504 Human Resource Management and Development. Prerequisites: Principles of Management (MGMT 1005) or equivalent.

HRMS 3025 International Human Resources Management (4 Credits)
This course examines the human resource function within organizations operating in multiple countries. Students learn how global corporations manage, develop, staff, reward and motivate employees from a range of different national contexts. The implications of the internationalization process for the HRM activities, practices and policies of multinational organizations are analyzed, especially expatriate management. The student will also examine how organizations that operate across international boundaries manage the different stresses of the drive for integration (being coherent across the world) and differentiation (being adaptive to local environments). Prerequisite (must complete before registering): Human Resource Management (HRMS 3015) This course was previously BME-213874 International Human Resource Management.

HRMS 3030 Labor Management Relations for Business (4 Credits)
This study explores the nature, determinants and socioeconomic impact of collective bargaining and labor-management relations in the United States. Some of the topics students will explore include the historical development of the labor movement, union structure and administration, the collective bargaining process, the settlement of labor-management disputes, and administration of the contract. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent This course was previously BME-213654 Labor/Management Relations.

HRMS 3035 LGBTQ Workplace Issues (4 Credits)
LGBTQ issues in the workplace have become multi-faceted, complex, dynamic, and increasingly important for leaders, Human Resource professionals, employees, managers and supervisors. Students will acquire a framework to understand how LGBTQ issues are human rights issues and how LGBTQ inclusion is a positive and strategic dimension of good organizational leadership and design. Students will learn about organizational heterosexism and homophobia, how it impacts the workplace, and how to create safe and inclusive environments for LGBTQ people. Students will acquire a framework to understand global issues related to LGBT rights in the workplace. This course should be listed in HRM and in GNS (Gender Studies). If you have already completed the 2 credit Selected Topics: LGBT Issues in the Workplace, you cannot take the 4-credit LGBTQ Workplace Issues course. There is substantial overlap between these two courses and students cannot include both in their degree plans. This course was previously BME 213714 LGBT Workplace Issues. Prerequisites: Foundation knowledge in human resources management and/or organizational behavior through courses/studies or experience..
Attributes: Liberal

HRMS 3040 Staffing the Organization (4 Credits)
This course will focus on the infrastructure, processes, and strategies for recruiting and selecting employees to meet the needs of an organization. Students will learn about the importance of staffing planning and become acquainted with models for conducting staffing planning. They will acquire knowledge about the legal and economic context of recruitment and selection and how to improve a manager's effectiveness in recruiting candidates. Students will learn about the benefits and drawbacks of internal versus external recruitment and selection; contemporary strategies for attracting candidates who have the necessary knowledge, skills, abilities and other qualifications needed; and how to create and extend job offers. Prerequisite (must complete before registering): Human Resource Management (HRMS 3015), or equivalent This course was previously BME-213854 Staffing the Organization.

HRMS 3043 Training & Development (4 Credits)
Training refers to a planned effort by an organization to facilitate employees' learning of job-related competencies. There are several forces that influence training including economic cycles, globalization, the organization's business strategy, changing demographics, diversity of the workforce, talent management, customer service and quality emphasis, new technology, and high-performance work systems. Training programs often focus on organization entry and socialization of new employees and on improving job competencies for individual and groups of employees. Development refers to formal education, interpersonal relationships, job experiences, and assessments of personalities and abilities that help employees to perform effectively in their current or future job and organization. Topics to be covered in the course include needs assessment, learning theories and program design, transfer of training, and training evaluation, the development planning process, models for career management, career management systems, the roles of employees, managers, and employers in the career management process. Notes: Students who have already taken Training & Development (HRMS 3050) independent study or online course should not enroll in this course. This course was previously BME-213704 The Learning Organization. Prerequisites: Human Resource Management HRMS 3015.

HRMS 3110 Public Sector Labor Relations (4 Credits)

In this course, students will examine public sector labor relations and the key similarities and differences between private sector and public sector labor relations. Students will study the historical development of public sector labor relations to better understand the current environment in which it exists. Students will analyze the connections among culture, law, work environment, economics, politics, and personalities and how these factors enhance and/or impeding public sector labor relations. Students will have the opportunity to examine these issues in particular sectors such as health care, education, and the protective services. Finally, students will assess and discuss the positive and negative ramifications of changes in labor relations for public sector workers, unions, and the employers with whom they interact. Notes: This course is offered online. HRMS 3110 is cross listed with LABR 3110. This course was previously BME-213664.
Cross-listed with LABR 3110.

HRMS 3996 Special Topics in HRMS (4 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HRMS 3998 Individualized Studies in Human Resources Management (HRMS) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Human Resources Management (HRMS). Registration for this class must be approved by the student's mentor.

HRMS 4005 Alternative Dispute Resolution in the Workplace (4 Credits)

This course provides an in-depth analysis of the current status of dispute resolution in labor-management relations. The course covers the traditional methods of resolving conflicts arising under the labor agreement including the grievance process and arbitration. Students will also examine dispute resolution methods in non-unionized organizations including mediation, arbitration, non-binding evaluation, and other mixed and hybrid methods. Legal, historical, and economic viewpoints are considered. Topics include an examination of the grievance procedure; the role of each step in the grievance process; the subjects of disputes, particularly in labor arbitration; the role of third party neutrals, and evidence and procedure in presenting and deciding grievances. Course topics also include methods such as mediation, arbitration and hybrid methods often found in non-unionized organizations. Prerequisite (must complete before registering): Labor Mgmt Relations for Busn (HRMS 3030), or equivalent Notes: This course is also listed as Alternative Dispute Resolution (HRMS 4005). Students should not enroll in both Alternative Dispute Resolution (HRMS 4005) and DR in the Workplace (LABR 4005). This course was previously BME-214654 Dispute Resolution in the Workplace.

HRMS 4010 Employment & Labor Law (4 Credits)

This course focuses on the legal issues associated with employment-related actions and decisions. It covers both common and statutory law, including the regulation of labor-management relations under the National Labor Relations Act, as amended, the Railway Labor Act, and employment discrimination laws dealing with race, gender, religion, national origin, age, disability and affinity orientation. Students will also examine the employment-at-will doctrine, wrongful discharge, affirmative action, legal issues impacting employee performance, the right to privacy and other protections from employer intrusions and law governing health and safety, and income security. This course was previously BME-214874 Employment and Labor Law. Prerequisites: Human Resource Management HRMS 3015.

HRMS 4015 Organization Development & Change (4 Credits)

In this course, students will examine theories and applications associated with organization development and change with specific focus on improving organizational effectiveness. Topics include managing the challenges of planned and unplanned change, changing organizational culture with an understanding of ethical and value considerations,the role of the organization development practitioner; processes associated with organization change, employee empowerment, developing high performance teams and high performing systems, learning organizations, organizational transformation and an exploration of the trends and future of organizations. This course can serve as a capstone for students concentrating in Management and Human Resource Management with a focus on organization/workforce development. Prerequisites: Organizational Behavior (or equivalent) is required. Recommended courses/studies include Human Resource Management, Training and Development and/or Managerial Leadership (or equivalent). Students should have advanced-level critical thinking, writing and reading skills. Should be listed in both HRM and MGT. If this course is being considered as a capstone course, the assumption is that students are in their last enrollment and have successfully completed most of the BM&E requisite courses. This course was previously BME-214314 Organization Development and Change.

HRMS 4020 Strategic Human Resource Management (4 Credits)

Strategic Human Resource Management provides students with a critical understanding of the theories, principles, historical trends, current issues and practices relevant to human resource management strategy in organizations. By exploring the shifting of roles from administrator to strategic business advisor and partner, students will understand the unique strategic positioning of contemporary human resource management and the opportunities and advantages that a well- designed human resource management system presents for an organization and its stakeholders. This course can serve as a capstone for the Human Resource Management concentration. Prerequisites (must complete before registering): Staffing the Organization (HRMS 3040) and Compensation & Benefits (HRMS 3005), and an additional specialized course in an HRM topic such as labor-management relations, training and development or employment/labor law. Notes: A student may have acquired knowledge of one or more of the prerequisite courses through professional experience. This is a capstone course in HRM. This course was previously BME-214504 Strategic Human Resource Management.

HRMS 4998 Individualized Studies in Human Resources Management (HRMS) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Human Resources Management (HRMS). Registration for this class must be approved by the student's mentor.

HSCI: Health Science (Undergraduate)

HSCI 1010 Introduction to Epidemiology (4 Credits)

This course is designed to provide an exploration of the basic principles of epidemiology. Students will learn how to identify and describe problems, formulate research hypotheses, select appropriate research study designs, and apply the results to prevent and control disease and health-related events. They will also acquire a solid foundation of basic causal theory for identifying determinants of adverse health-related states or events and will gain a better understanding of the biological principles underlying the natural causes of disease.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

HSCI 1200 Medical Terminology (4 Credits)

In this course, students develop a working knowledge of the language of medicine. Students acquire word-building strategies by learning prefixes, suffixes, roots, and abbreviations. By relating terms to body systems and medical specialties, students identify proper use of words in a medical environment. Knowledge of medical terminology enhances the student's ability to communicate in health care settings, whether in the role of health care professional, patient, or advocate.
Attributes: Liberal

HSCI 1998 Individualized Studies in Health Science (HSCI) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Health Science (HSCI). Registration for this class must be approved by the student's mentor.

HSCI 2998 Individualized Studies in Health Science (HSCI) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Health Science (HSCI). Registration for this class must be approved by the student's mentor.

HSCI 3200 Health Informatics (4 Credits)

The improved use of data and communication of information is a vital component to improving health care and public health. Health informatics is the integration of information systems into the health fields, such as health care, public health and health services. The course will explore the concepts of health care informatics, health information management, the types of data and use of data. Topics that will be introduced include implementation and use of systems as well as organizational dynamics. Consideration of ethical issues and the implication of regulatory requirements related to the use of health information and information systems will be included in the course. This course was previously SMT-273124 Health Informatics. Prerequisites: The United States Health Systems (HLAD 2010) or equivalent.
Attributes: Liberal

HSCI 3998 Individualized Studies in Health Science (HSCI) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Health Science (HSCI). Registration for this class must be approved by the student's mentor.

HSCI 4200 Epidemiology (4 Credits)

Epidemiology is the examination of disease and health conditions from a population perspective. This course will review concepts of epidemiology as applied to public health. Students will learn how to apply principles of epidemiology to assess, evaluate, and solve public health issues. This course is part of the BS in Public Health program. Prerequisites: Statistics (MATH 1065) or Statistics for the Social Sciences (SOSC 2010), Biology I with Lab (BIOL 1200), and Biology II with Lab (BIOL 1201) or equivalents.
Attributes: Liberal

HSCI 4998 Individualized Studies in Health Science (HSCI) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Health Science (HSCI). Registration for this class must be approved by the student's mentor.

HUDV:Human Development (Undergraduate)

HUDV 1005 Child Development: Introductory (4 Credits)

In this course the student will examine a variety of theoretical viewpoints on child developmental process, as well as current research and studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors, the growing body of knowledge about how children learn language and develop cognitive and social skills, and a discussion of prominent theorists in the field. Please note: Students should not enroll in this course and the advanced level of the same course title as there is significant redundancy in the content of courses.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 1010 Child & Adolescent Development: Introductory (4 Credits)

In this course the student will examine a variety of theoretical viewpoints on child and adolescent developmental process, as well as current research and studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors, the growing body of knowledge about how children learn language and develop cognitive and social skills, and a discussion of prominent theorists in the field. Please note: Students should not enroll in this course and the advanced level of the same course title, as there is significant redundancy in the content of courses.
Attributes: Liberal

HUDV 1015 Human Development: Introductory (4 Credits)

In this course the student will examine a variety of theoretical viewpoints on human developmental process, as well as current research and studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors, the growing body of knowledge about how children learn language and develop cognitive and social skills, and a discussion of prominent theorists in the field. Additionally lifespan theories like Erikson and Levinson may be emphasized, and focus on stages of adult development will be included, in addition to death and dying potentially being covered. Please note: Students should not enroll in this course and the advanced level of the same course title as there is significant redundancy in the content of courses.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 1996 Special Topics in HUDV (2-4 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HUDV 1998 Individualized Studies in Human Development (HUDV) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Human Development (HUDV). Please contact your mentor/advisor for more details.

HUDV 2005 Adolescent Development: Introductory (4 Credits)
In this course the student will examine a variety of theoretical viewpoints on adolescent developmental process, as well as current research and studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors, the growing body of knowledge about how adolescents learn and adapt language and develop cognitive and social skills, and a discussion of prominent theorists in the field. Please note: Students should not enroll in this course and the advanced level of the same course title, as there is significant redundancy in the content of courses.
Attributes: Liberal

HUDV 2010 Gerontology (4 Credits)
This course provides a broad overview of the multidisciplinary field of gerontology, with an emphasis on key psychological, biological, and sociological aspects of age, aging, and older adults. The diversity of experience within the older population, including normal effects of aging and the potential major problems and diseases associated with aging, will be discussed. Topics may also include: personal and societal attitudes and beliefs about aging, what it means to age successfully, myths and stereotypes of aging, the prevalence and effects of ageism, cultural influences on the experience of older adults, stress and coping in later life, and career opportunities in gerontology.
Attributes: Liberal

HUDV 2015 Adult Development: Introductory (4 Credits)
In this course the student will examine a variety of theoretical viewpoints on adult developmental process, as well as current research and studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors and a discussion of prominent theorists in the field. Lifespan theories like Erikson and Levinson may be emphasized, and focus on stages of adult development will be included, in addition to death and dying being covered. Please note: Students should not enroll in this course and the advanced level of the same course title, as there is significant redundancy in the content of developmental courses. This course was previously HDV-283204 .
Attributes: Liberal

HUDV 2020 Adult Development & Aging: Introductory (4 Credits)
In this course the student will examine a variety of theoretical viewpoints on adult developmental process in addition to considering the process of aging and current issues in gerontology. Topics may include: current research and studies of the principal topics of developmental psychology; the impact on development of the continuing interaction between genetic and environmental factors; prominent theorists in the field, such as Erikson, Levinson, and Kubler-Ross. Please note: Students should not enroll in this course and the advanced level of the same course title, as there is significant redundancy in the content of courses.
Attributes: Liberal

HUDV 2025 Infant/Toddler Development: Introductory (4 Credits)
This course helps the student understand what constitutes normal development during pre-birth, infancy, and toddlerhood. The student will examine various biological, environmental, and cultural influences on development and become familiar with prominent theories of development within the first three years of life. Please note: Students should not enroll in this course and the advanced level of the same course title as there is significant redundancy in the content of courses.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 2035 Attachment in Early Childhood: Introductory (4 Credits)
This course will focus on attachment within multiple contexts, such as historical, cultural, familial, personal, and age-related. Students will examine continuity and separation, focusing on early childhood, and the factors that contribute to shaping the attachment relationship. Topics may include attachment theory, assessment of attachment, research strategies, limitations, and implications of attachment. This course was previously HDV-281124. While not required, it would be helpful if students have taken Human Development, Infant/Toddler Development, or Child Development, or the equivalent of one of these courses.
Attributes: Liberal

HUDV 2998 Individualized Studies in Human Development (HUDV) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Human Development (HUDV). Please contact your mentor/advisor for more details.

HUDV 3000 Careers in Psychology and Human Development (2 Credits)
Are you considering a professional career in psychology or human development? Perhaps you#know exactly what kind of job#you want to pursue but are unsure of options available to you, both in terms of career and graduate study.#This course is designed to help students gain a better understanding of the diverse career options and graduate study opportunities in psychology and human development.#The course will focus on both traditional and emerging career paths, equipping students with practical knowledge and skills necessary to make informed decisions about their current and future course of studies and occupational strategies in these areas. This course meets 2 advanced level educational planning credits.
Attributes: Liberal

HUDV 3005 Adult Development: Advanced (4 Credits)
In this advanced level course the student will examine a variety of theoretical viewpoints on adult developmental process, as well as empirical research of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors and a discussion of prominent theorists in the field. Lifespan theories like Erikson and Levinson may be emphasized, and focus on stages of adult development will be included, in addition to death and dying being covered. This course was previously HDV-283204 Adult Development While not required, it would be helpful for students to have taken Introduction to Psychology, Human Development, or an equivalent course. Please note: Students should not enroll in this course and the introductory level of the same course title, as there is significant redundancy in the content of courses.
Attributes: Liberal

HUDV 3010 Adult Development & Aging: Advanced (4 Credits)
This course investigates a relatively new and growing discipline built upon theories and data from a number of major social sciences. Research shows that age is an important aspect of human diversity that is often overlooked when considering "adults" as a single category. Students will study how changing age-related experiences in personal and family relationships, career development, community involvement, work engagement, retirement, impending death, and a search for life's meaning have cognitive, emotional, social, and biological consequences upon the individual. Besides exploring a variety of "smaller" theories students are also exposed to Bronfenbrenner's larger view of development as the result of external ("ecological") factors as contrasted with Erikson's focus upon development as a progression of predictable psychosocial challenges. While not required, it might be helpful for students to have taken Introduction to Psychology, Human Development, or an equivalent course. Please note: Students should not enroll in this course and the introductory level of the same course title as there is significant redundancy in the content of the courses.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 3015 Child Development: Advanced (4 Credits)
In this advanced level course the student will examine a variety of theoretical viewpoints on child developmental process, as well as current research and studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors, the growing body of knowledge about how children learn language and develop cognitive and social skills, and a discussion of prominent theorists in the field. Please note: Students should not enroll in this course and the introductory level of the same course title as there is significant redundancy in the content of courses.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 3020 Child & Adolescent Development: Advanced (4 Credits)
In this advanced course the student will examine a variety of theoretical viewpoints on child and adolescent developmental process, as well as current empirical studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors, the growing body of knowledge about how children and adolescents learn language and develop cognitive and social skills, and a discussion of prominent theorists in the field. Please note: Students should not enroll in this course and the introductory level of the same course title, as there is significant redundancy in the content of courses. While not required, it might be helpful if students have taken Introduction to Psychology, Human Development, or an equivalent course.
Attributes: Liberal

HUDV 3025 Human Development: Advanced (4 Credits)
In this course the student will apply advanced level learning to a variety of theoretical viewpoints on human developmental process, as well as current research and studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors, the growing body of knowledge about how children learn language and develop cognitive and social skills, and a discussion of prominent theorists in the field. Additionally lifespan theories like Erikson and Levinson may be emphasized, and focus on stages of adult development will be included, in addition to death and dying potentially being covered. Please note: Students should not enroll in this course and the introductory level of the same course title as there is significant redundancy in the content of courses.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 3030 Infant/Toddler Development: Advanced (4 Credits)
This course helps the student gain an advanced level understanding of of what constitutes normal development during pre-birth, infancy, and toddlerhood. The student will examine various biological, environmental, and cultural influences on development and become familiar with prominent theories of development within the first three years of life. Please note: Students should not enroll in this course and the introductory level of the same course title as there is significant redundancy in the content of courses.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 3035 Attachment Across the Lifespan (3-4 Credits)
The student will engage in the study of principles of classical attachment theory (e.g., Ainsworth, Bowlby), adult attachment theory (e.g., Feeney, Hazan, Shaver), and Parasocial Attachment Theory (e.g., Giles, Stever). An advanced understanding of the concept of attachment as 'proximity seeking for the purpose of safe haven and felt security' at all stages of the lifespan will be the emphasis in this course. While it is not required, it might be helpful if students took Introduction to Psychology, any human development survey course, or equivalent. This course was previously HDV-283124 .
Attributes: Liberal

HUDV 3045 Death & Dying (4 Credits)
This course explores death and dying throughout the life span, including topics such as stage theories of grief, attitudes toward death and dying, considerations for families of the dying, and discussions about ways to do therapy with dying patients and their families. Prerequisites: Introduction to Psychology, Introduction to Human Services, or Theories of Counseling or equivalent.
Attributes: Liberal

HUDV 3050 Development of Wisdom & Spirituality (4 Credits)
This course looks at the development of wisdom and spirituality, including how they manifest through behaviors and attitudes, from a lifespan development perspective. Topics may include the application of developmental theory to spiritual development; perspectives of spirituality and wisdom from different cultural perspectives; brain science and research as applied to continued development in older age; and the social phenomenon of 'wisdom' as understood through research, observation, and analysis of self and others. While it is not required, it might be helpful if students took Human Development or an equivalent course. This course was previously HDV-284314 Development of Wisdom and Spirituality.
Attributes: Liberal

HUDV 3055 Developmental Neurobiology: A Lifespan View (2 Credits)
This course looks at the interaction between the development of internal (neurological) and external (behavior) processes across the lifespan. Topics may include how brain development and the environment interact, how the brain changes throughout development, and how the brain and behavior are related at different points throughout the lifespan. The study will include how the development of the neurological system reflects individual variation in development at different stages in the lifecycle. While not required, it might be helpful if students had Human Development, Human Biology, or equivalent courses. Students taking this course should not enroll in the 4 cr. version. This course was previously HDV-283112.
Attributes: Liberal

HUDV 3056 Developmental Neurobiology: A Lifespan View (4 Credits)
This course enables students to connect behavioral neuroscience language and concepts to practical applications relevant to their everyday work in professional and personal settings with people of all ages, from pre-natal development through old age. The course starts with an understanding of the neuron, the basic unit of communication across the brain, and ends with an understanding of complex brain systems from both structural and functional perspectives across the human lifespan. At each stage in the lifespan, interactions between natural neural/brain processes and key environmental influences most relevant to healthy development will be discussed. This course expands upon similar content covered in the 2cr version: HUDV 3055. Therefore, students taking this course should not enroll in the 2cr version, HUDV 3055. HUDV-1015 Human Development: Introduction or HUDV-3025 Human Development: Advanced, or the equivalent are prerequisites or corequisites for this course. Background in human biology and/or anatomy and physiology would be helpful. Prerequisites: HUDV-1015 Human Development: Introduction or HUDV-3025 Human Development: Advanced, or the equivalent .
Attributes: Liberal

HUDV 3057 Cognitive Development (4 Credits)
In this course, students examine research and theories concerning the development of cognitive capacities from infancy through adolescence. Current research is addressed on the development of our perception, attention, and memory processes through adolescence, as well as social interactions related to age-related differences in cognition. In addition, the contributions of foundational theorists in cognition are highlighted, both as contributors to cognitive theory and also as advocates for social justice in particular times and places. These theorists may include Piaget, Luria, Vygotsky, Montessori, Dewey, and Freire. Students will have opportunities to explore impacts of cognitive development through course case studies and through their own experiences.
Attributes: Liberal

HUDV 3060 Early Childhood Development (4 Credits)
This course focuses on the theories and research pertaining to early childhood development from conception through age eight. The study will examine biological aspects of development and how environmental factors (culture, heritage, socioeconomic level, personal health and safety, nutrition, past or present abusive or dangerous environment, factors in the home, school, and community) can impact a child's readiness to learn. Through course content and informal observation of children, students will explore the interconnectedness among all developmental domains (physical, cognitive, social-emotional, creative, language, and literacy) and the implication for educational settings. Prerequisites: HUDV 1005 or equivalent (SUNY Transfer Pathway).
Attributes: *Social Sciences Gen Ed, Liberal

HUDV 3065 Human Exceptionalities (4 Credits)
This course focuses on exceptionalities (differences) in human development, including theories and cultural perspectives on what is judged as normal and different. Topics may include how development is affected by specific disability/giftedness (including physical/health issues, emotional/behavioral/communication problems, and intellectual and developmental disabilities); the development of children with giftedness and gifted children with disabilities; and research in the study of childhood developmental exceptionality. While it is not required, it might be helpful if students have Human Development, Child Development, or an equivalent course. This course was previously HDV-283224 .
Attributes: Liberal

HUDV 3066 Developmental Psychopathology (4 Credits)
This course covers the major disorders of cognitive, emotional, social, and behavioral functioning in children and adolescents, with an emphasis on the developmental connections between these disorders and stages of child development. Focus will be on symptoms and theoretically- and empirically-informed ideas about causes of psychological disorders in children and adolescents. Additionally, major methods of assessment and recommended prevention and treatment efforts for these disorders will be considered. While it is not required, it might be helpful if students have Introduction to Psychology, Child Development, or an equivalent course. This course was previously PSYC 3060 and HDV-284234.
Attributes: Liberal

HUDV 3070 Human Motivation (4 Credits)
In this course the student will examine a variety of theoretical viewpoints on human motivation, as well as empirical development of contemporary approaches to human motivation. Topics covered in this student may include: Intrinsic motivation, historical background of motivational psychology, the interface of motivation theory and productivity, reward systems, goal theory and goal-setting, and applying motivational principles. Concepts such as the need for safety, belonging, self-esteem, and self-actualization may also be explored. Prerequisites: Introduction to Psychology, Human Development, or equivalent.
Attributes: Liberal

HUDV 3075 Western Civilization & Human Development (4 Credits)
This course focuses on how major ideas and cultural trends in Western Civilization have shaped the contemporary study of human development and related fields. Specifically, issues related to definitions in human nature and development will be explored in relation to major cultural, philosophical, and thought developments in Western Civilization, from early Greek and Hebrew ideas through modern Western ideas. Topics may include the inherent goodness of human nature, the influence of nature versus nurture on human development, and how continuous and deterministic development is. While it is not required, it might be helpful if students have taken Human Development or an equivalent course. This course was previously HDV-283374 Western Civilization and Human Development.
Attributes: Western Civilization Gen Ed, Liberal

HUDV 3080 Adolescent Development: Advanced (4 Credits)
In this advanced course the student will examine a variety of theoretical viewpoints on adolescent developmental process, as well as current empirical research studies of the principal topics of developmental psychology. Topics covered in this study may include: the impact on development of the continuing interaction between genetic and environmental factors, the growing body of knowledge about how adolescents learn and adapt language and develop cognitive and social skills, and a critical examination of prominent theorists in the field. Please note: Students should not enroll in this course and the introductory level of the same course title, as there is significant redundancy in the content of courses. This course was previously HDV-283174.
Attributes: Liberal

HUDV 3085 Research Methods for Lifespan Development (4 Credits)
This advanced level course focuses on the variety of methods employed in researching human development, including both longitudinal, developmental research and research on specific age groups within the lifespan. The scientific method of conducting developmental research in the social sciences is explored, including reviewing literature, posing research questions and hypotheses, and analyzing data. Topics may include the recruitment and planning in developmental research; attrition of research participants in longitudinal research; ethics in research development; and challenges and methodological issues posed in researching different age groups throughout the lifespan. While it is not required, it might be helpful if students have taken Child Development, Human Development, or an equivalent course. This course was previously HDV-284244. Prerequisites: HUDV 1015 Human Development: Introductory OR HUDV 3025 Human Development: Advanced OR equivalent.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 3996 Special Topics in HUDV (2-4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HUDV 3998 Individualized Studies in Human Development (HUDV) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Human Development (HUDV). Please contact your mentor/advisor for more details.

HUDV 4010 Development of Gender Identity (4 Credits)
This advanced level course covers personal and cultural aspects related to how individuals develop their gender identity. Topics may include personal, cultural, and other meanings of gender; the interaction between biology and socialization in the development of gender; how gender influences and is influenced by relationships with others and environmental contexts, such as school and work; variation in the definition and understanding of gender across cultures and across history; psychosexual disorders; and gender biases in research, interpersonal interactions, and society in general. While it is not required, it might be helpful if students have Introduction to Psychology, Human Development, Child Development, or an equivalent course.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 4030 Human Ecological Systems: Developmental Perspectives (4 Credits)
This 4-credit, upper level, liberal arts course meets the following college learning goals: active learning; social responsibility; breadth and depth of knowledge; communication; and critical thinking and problem solving. Students make use of the Bronfenbrenner model for Ecology of Human Development, the organizing principle for Cornell University's Human Development program, as a system and method for understanding Human Development. This enables them to consider interactions of influences and impacts of different levels of one's environment in a systemic and scientific way. The course addresses academic needs of students in the social and behavioral sciences, most specifically those in Human Development, Psychology, Community/Human Services, and Educational Studies – as well as students in the natural sciences working to understand the impact of human interacting in the natural environment. To be successful in this course, students should have prior knowledge of lifespan human development, as presented in HUDV 1015 Human Development: Introductory, or HUDV 3025 Human Development: Advanced. Foundational course(s) in social and/or behavioral sciences and/or Interdisciplinary Studies, such as Human Development, Psychology, Educational Studies, Sociology, etc.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

HUDV 4090 Research Practicum in Psychology and Human Development (2-8 Credits)
Under the supervision of a faculty member, students gain practical hands-on experience participating in various research activities pertaining to the collection, analysis, and dissemination of data. Course may be repeated for credit. Before taking this course, students are required to have approval of appropriate PSYC/HUDV faculty member, and have completed at least one prior course in research methodologies, such as SOSC 3025: Social Science Research Methods, HUDV 3085: Research Methods for Lifespan Development, or an equivalent course. This research opportunity meets the SUNY Applied Learning Initiative expectations. This course is cross-listed as HUDV 4090. Prerequisites: SOSC 3025: Social Science Research Methods, HUDV 3085: Research Methods for Lifespan Development, or an equivalent course.
Attributes: Liberal

HUDV 4160 Internship in Psychology and Human Development (2-8 Credits)
The internship is an opportunity for a student to apply the theories and methods of their field to a real-world experience. The internship often serves as a learning opportunity for a future career in a relevant field and a gateway to further delineate professional goals and expectations. Students should work independently, with their mentor, and with career services well in advance of the internship term to find an internship opportunity that meets their specific needs and fits within their degree program and college level appropriateness. An internship may only be completed with the approval of the student's mentor. Course may be repeated for credit. This course is cross-listed as PSYC 4160.

HUDV 4998 Individualized Studies in Human Development (HUDV) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Human Development (HUDV). Please contact your mentor/advisor for more details.

HUSV: Community & Human Services (Undergraduate)

HUSV 1996 Special Topics in HUSV (1-4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HUSV 1998 Individualized Studies in Community & Human Services (HUSV) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Community & Human Services (HUSV). Registration for this class must be approved by the student's mentor.

HUSV 2005 Women in Helping Professions (4 Credits)
The purpose of this study is to develop an understanding of the helping professions and the contributions of women in this field. Students will learn about the pioneers in professional helping, their contributions, and ways of working together. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery.
Attributes: Liberal

HUSV 2007 Exploring the Professions: Careers in Human Services (2 Credits)
This 2 credit, course is designed to expose students to the breadth of careers in the field of human services. Students can explore careers associated with different levels of education, from an associate's degree through doctoral level training with a focus on the benefits and limitations of each. Students will research how academic interests and/or prior learning fit into potential careers in the field of human services. With an overview of the field, students will be able to define what types of skills, knowledge and ethical underpinnings are necessary to provide services. This course is aligned with the Community and Human Services Area of Study guideline for Knowledge of Service Delivery.
Attributes: Liberal

HUSV 2010 Case Management (4 Credits)
The purpose of this study is to gain an understanding of case management models, including the varying roles, processes, and skills utilized by case managers. The study will examine the process of case management, which includes engagement, assessment, planning, implementation, and termination. This study will examine diverse cultural and racial values and influences in case management. This course is aligned with the Community and Human Services area of study guidelines for Skills & Application. This course is aligned with the BS in Addiction Studies program guidelines for Skills, Assessment & Education, Ethics, and Application & Integration. This course was previously CHS-252114 Case Management.

HUSV 2020 Crisis Intervention: Theory & Practice (4 Credits)
This study surveys the major theories, evidence based practices, concepts of crisis intervention assessment and intervention. Students will demonstrate crisis intervention skills and illustrate ethical, legal, and cultural considerations. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application. This course is aligned with the BS in Addiction Studies program guidelines for Skills, Assessment & Education, Ethics, and Application & Integration. This course was previously CHS-252154 Crisis Intervention.
Attributes: Liberal

HUSV 2025 Helping & Counseling Skills (4 Credits)
In this study, students will acquire an understanding of the core counseling and helping skills needed to work effectively in the human services field. Students will learn to be self-reflective helpers, understand diversity and how we are affected by difference, power, and privilege, and recognize the central role of ethics in counseling. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application. This course is aligned with the BS in Addiction Studies program guidelines for Skills, Assessment & Education, Ethics, and Application & Integration. This course was previously CHS-252134 Interviewing Skills and Techniques.

HUSV 2035 Introduction to Human Services (4 Credits)
This course provides students with an overview of the field of human services. The student will examine the roles and responsibilities of human service professionals. The study will explore the organizational structures and range of services in the field. The foundational knowledge of the field, introduction to basic skills, and strategies used will be introduced. Ethical principles and the core values necessary for working in the field of human services will be explored. Students will reflect on the broader social influences that impact roles within the field of human services. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery, Skills & Application, and Ethics. This course is aligned with the BS in Addiction Studies program guidelines for Skills, Ethics, and Application & Integration. This course was previously CHS-252094 Introduction to Human Services.
Attributes: Liberal

HUSV 2040 Recareering into Human Services (4 Credits)
This study is intended to provide an understanding of how our careers play a central role in shaping self-concept, family life as well as environmental and cultural conditions. More specifically, adults contemplating a career change realize the importance of looking at a variety of factors such as personal values, economic necessity, interest, skills, and life circumstances, such as caregiving and one's ability to relocate. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery.

HUSV 2045 The Call to Service (4 Credits)
Many people in the helping professions say they are called to their work and feel a deep satisfaction about helping. Others are not sure why they want to "do social work". In this study we will explore the question, "Do I have to be called to service in order to help?" The expectation is this study will guide students into a framework for understanding the motivation of helpers, and will serve as a source of comfort and power when undertaking future study. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery.

HUSV 2500 Wellness Practice with Older Adults: A Foundation (4 Credits)
Adults over the age of 80 are the fastest growing demographic today, more so than at any other time in history. What does wellness look like for older adults across physical, spiritual, social, intellectual, financial, vocational, environmental, and emotional dimensions? What does wellness feel like in later life? We will identify biases and perceptions about wellness and what it "should" look like. What are the challenges to living well, and what are the ways that human service professionals can promote wellbeing in later life? We will explore skills related to engagement, goal setting, and social well-being in human service practice with older adults. We will examine barriers, needs and opportunities for older adults in local communities to engage in wellness-promoting activities. We will consider how the COVID-19 pandemic has exposed painful realities about the inequities in aging and wellness for older adults. This course aligns with the Community and Human Services Area of Study Guidelines for Knowledge of Human Behavior and Skills and Application.
Attributes: Liberal

HUSV 2997 Special Topics in HUSV (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

HUSV 2998 Individualized Studies in Community & Human Services (HUSV) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Community & Human Services (HUSV). Registration for this class must be approved by the student's mentor.

HUSV 3005 Advocacy in Human Services (4 Credits)
Advocacy in Human Services explores the definitions and the nature of advocacy as a process and strategy for change. The student will examine case, cause, administrative and legislative advocacy approaches while considering historical perspectives. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application. This course is aligned with the BS in Addiction Studies program guidelines for Assessment & Education and Application & Integration.
Attributes: Liberal

HUSV 3010 Animals Society and Human Services (4 Credits)
This course explores the history and psychology of human relationships with animals. The student will learn about the relationship between people and animals by discussing domestication, socialization, religion, culture, farming, research, and pets. Students learn about the difference between animal-assisted activities, therapy and education (AAA/T/E), working animals, and assistance animals. Social movements and organizations concerned with animal rights and animal protection will be analyzed. The connections between non-human animal oppression, exploitation, and the oppression of specific aggregates of human animals (particularly racial and ethnic minorities, women, and the poor) will be explored. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application.
Attributes: Liberal

HUSV 3015 Delivering Human Services (4 Credits)
This study focuses on models, methods, and structures for developing and delivering human services in a variety of settings. Factors such as context, potential gaps, and barriers to access as well as the varying roles and activities of human service professionals will also be examined. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery and Skills & Application. This course was previously CHS-253114 Delivering Human Services: Consumers.
Attributes: Liberal

HUSV 3020 Documentation in Human Services (4 Credits)
This study will engage students in understanding the purpose, principles, guidelines, and expectations of documentation in a variety of human service settings. Cogent documentation of services, interventions, and client progress directly correlate to effective practice. Students will develop valid documentation strategies through working with case material drawn from a variety of settings. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application. This course is aligned with the BS in Addiction Studies program guidelines for Skills. This course was previously CHS-253164 Documentation in Human Services.

HUSV 3022 Crisis Intervention II: Counseling Skills and Models (4 Credits)
This study builds on the knowledge gained from Crisis Intervention I: Theory and Practice, with a focus on applying theories and interventions. Students will analyze specific interventions that may include time-limited cognitive behavior therapy, Mitchell Debriefing Model/Critical Incident Stress Management, Eye Movement and Desensitization Reprocessing, trauma-informed crisis intervention, and client-centered, long-term treatment action plans and referral systems. Specifically, students will compare methods, models and interventions and apply them to working with vulnerable and diverse populations during crisis. This course examines how crisis people respond to crises, as well as the evidence-based practices currently used in the field. The student must have completed HUSV 2020 Crisis Intervention I prior to taking this course. This course is aligned with the Community and Human Services Area of Study guidelines for Skills and Application. Prerequisites: HUSV 2020.
Attributes: Liberal

HUSV 3025 Funding & Human Service Organizations (4 Credits)
Students will learn how to develop and manage the financial resources of human service agencies and programs. Students will explore various methods of budgeting and accountability structures, funding streams, grant opportunities, and fundraising in the human services field. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application. This course was previously CHS-254184 Funding and Human Service Organizations.

HUSV 3030 Group Work (4 Credits)
The focus of the study is to utilize group work skills to serve diverse populations. Students will explore the history, context, types, developmental phases, ethical questions, and relevant theories of group work. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application. This course is aligned with the BS in Addiction Studies program guidelines for Skills, Assessment & Education, and Application & Integration. This course was previously CHS-253204 Group Work Practices.
Attributes: Liberal

HUSV 3035 History of US Social Welfare Policy (4 Credits)
This study examines the history of social welfare policy in the United States, with an emphasis on social reform, social inequality, social control, disenfranchisement, and the relationship between power, policy and practice. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery and Diversity.
Attributes: Liberal

HUSV 3040 Human Services Management (4 Credits)
This course will provide students the fundamentals of human service management in profit and not-for-profit organizations. Principles of management skills will be explored. Students will formulate an understanding of cultural competence within the organization. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery and Skills & Application. This course was previously CHS-253144 Human Service Management.
Attributes: Liberal

HUSV 3045 Outreach & Marketing in Human Service Organizations (4 Credits)
Students in this study will apply the principles of marketing including marketing strategy and the marketing mix (product, place, price, and promotion) to a nonprofit setting. Students will focus on the marketing of services, customer service, development of marketing strategies, and sales to targeted markets for diverse populations within human service settings. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery and Skills & Application.
Attributes: Liberal

HUSV 3050 Personal Coaching (4 Credits)
Students will learn to support and challenge employees, children, colleagues, and themselves to reach potential using the techniques and theories of personal coaching. Students will assess how staff development processes can be changed using the skills of personal coaching. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application.
Attributes: Liberal

HUSV 3055 Powerful Questions (4 Credits)
A powerful question is thought-provoking and stimulates curiosity in the listener while encouraging conversation, new perspectives, and additional questions. Powerful questions and their answers can demonstrate an inquisitive nature, reveal creativity and enhance self-reflection, engagement, and learning and reveal how to create change. In this study, students will identify several types of questions and how they can enhance an experience and help reach consensus or influence outcomes. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application.
Attributes: Liberal

HUSV 3065 Spirituality in the Helping Relationship (4 Credits)
This study will educate students about integrating spirituality into helping relationships. The application of spirituality-focused intervention strategies will be examined. Students will learn about the challenges of introducing spirituality in practice settings, when appropriate. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application.
Attributes: Liberal

HUSV 3068 Social Welfare Policy (4 Credits)
The purpose of this study is to gain a working knowledge of social welfare policies in the United States focusing on both the historical and current context. Emphasis will be placed on connecting policy with practice. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery. This course is part of the BS in Public Health program. Prerequisites: Intro to Human Services is recommended.
Attributes: Liberal

HUSV 3070 Supervision in Human Services (4 Credits)
This study will cover definitions of supervision; organizational and workgroup culture; facilitating groups and teams; inclusive recruitment and screening of employees; designing and conducting employee performance appraisal; and value-based principles and laws guiding personnel management. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application.
Attributes: Liberal

HUSV 3122 Conflict Management & Resolution in Human Services (4 Credits)
The student will explore theories related to conflict, mediation, and negotiation and how they may be applied to the human service setting. The student will learn specific approaches for one-on-one helping situations as well as strategies for understanding and managing conflict in the organizational setting. The student will consider their own conflict style and learn how to assess conflict. This course is aligned with the Community and Human Services area of study guidelines for Skills & Application.
Attributes: Liberal

HUSV 3127 Coping with Life Challenges (4 Credits)
This study will be organized around various challenges that people face in life. Coping skills will be explored for a variety of situations. Topics in coping may include depression, loneliness, shyness, rejection, anxiety, anger, conflicts in close relationships, loss, aging, pain, illness and maintaining health, and/or injury and trauma. This course is aligned with the Community and Human Services area of study guidelines for Skills & Application.
Attributes: Liberal

HUSV 3132 War on Poverty: Implications and Perspectives for Human Service Professionals (4 Credits)
The study will examine the complexities of poverty in America and how it may impact power, privilege, and oppression in human service institutions. The "framework" of poverty and how it impacts home, school, community, and work will be examined. Finally, the study will examine how poverty effects human service interventions for individuals, families, professionals, and communities. This course aligns with the Community and Human Services area of study guidelines for Knowledge of Service Delivery.
Attributes: Liberal

HUSV 3142 Disaster Mental Health Theory & Practice (4 Credits)
This course will focus on psychological and physiological impacts disasters and major crises have on individuals, families, emergency workers, and communities. Students will understand post-traumatic stress, disaster related anxiety and depression, signs and symptoms of mental health distress and interventions. Critical Incident Stress Management, resiliency-based interventions, crisis interventions, debriefing, and cognitive behavior therapy will be examined. This study aligns with the Community and Human Services area of study guidelines for Knowledge of Service Delivery and Skills & Application.
Attributes: Liberal

HUSV 3147 Human Services in Disaster (4 Credits)
This course will explore the complex nature of human service delivery before, during and after disasters and major crises. Preparedness, response, and recovery will be the primary focus, though mitigation will be touched upon. Among the areas studied will be: volunteer and donations management, public health and mental health, shelter and mass care, employment, housing and transportation, and disability and aging issues. Students will learn emergency management frameworks, associated FEMA emergency support functions, and coordination of services during and after disasters. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Service Delivery and Skills & Application.
Attributes: Liberal

HUSV 3995 Special Topics in HS (2-8 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HUSV 3996 Special Topics in HUSV (2-6 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HUSV 3997 Special Topics in HS (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

HUSV 3998 Individualized Studies in Community & Human Services (HUSV) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Community & Human Services (HUSV). Registration for this class must be approved by the student's mentor.

HUSV 4005 Bereavement Counseling (4 Credits)
This course will provide students with an overview of the knowledge, skills, and interventions commonly used in bereavement counseling. Topics may include: applying interventions for loss across a lifecycle; intervention strategies for special populations; and approaches to support sudden loss and crisis situations. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application.

HUSV 4010 Community Organizing (4 Credits)
Community organizing is a mode of practice that includes models of locality development, social planning, and social action through which the community is "mobilized" and empowered to deal with its issues and problems, and to resolve them to its satisfaction. This study will cover the theory, purpose, and techniques of community organizing and their application in the field of human services. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application. This course was previously CHS-253124 Community Organizing.
Attributes: Liberal

HUSV 4015 Contemporary Issues in Human Services (4 Credits)
The purpose of this study is to introduce the student to current trends and pertinent issues in the field of human services. It will look at relevant topics with special emphasis on diversity issues and special populations. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Service Delivery.
Attributes: Liberal

HUSV 4020 Diversity in Human Services (4 Credits)
The purpose of this study is to help students develop self-awareness about their perceptions and biases, and how these may impact their work within the helping professions. Students will explore identities, roles, and intersectionality with focused attention to race, class, gender, sexual orientation, religion, socioeconomic status, ability, and other attributes. Students also will analyze historical and current influences of power, privilege, oppression, and other differentials that overlap and influence practice and policies within human service organizations with an aim of evaluating systemic injustices and structural inequities in access for clients and within human service organizations. Students will formulate solutions and recommendations for inclusive and equitable access to services, social justice for clients, and culturally sensitive practices as they pertain to human service systems. This course is aligned with the Community and Human Services Area of Study guidelines for Diversity. This course is aligned with the BS in Addiction Studies program guidelines for Diversity.
Attributes: *Diversity Gen Ed, Liberal

HUSV 4023 Stigma & Mental Illness (4 Credits)
This study integrates an overview of the assessment and diagnosis in mental health. Focus on how the diagnosis, assessment, culture, the history of mental illness, and other factors promote stigma towards individuals and their families who live with mental illness will be examined. Topics may include: policy initiatives, treatment options, power and privilege, and cultural beliefs related to mental illness.
Attributes: Liberal

HUSV 4025 Understanding Holistic Healing in Human Services (4 Credits)
This study explores a variety of alternative treatment modalities including Reiki, Healing Touch, meditation, hypnosis, yoga, and biofeedback that may be utilized in the human services setting. The challenges of introducing alternative modalities in traditional settings such as hospitals, schools, churches, public and community-based agencies will also be examined. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application.
Attributes: Liberal

HUSV 4030 Human Service Ethics (4 Credits)
The purpose of this study is to survey codified professional, legal, and ethical issues in community and human services. This course is aligned with the Community and Human Services Area of Study guidelines for Ethics. This course is aligned with the BS in Addiction Studies program guidelines for Ethics. This course was previously CHS-254124 Human Service Ethics
Attributes: Liberal

HUSV 4035 Internship in Human Services (4 Credits)
The internship in Human Services is designed to give students practical experience in the field prior to graduation. The internship often serves as a learning opportunity for a future career in a Human Service related field and a gateway to further delineate career goals and expectations. Students will be able to apply knowledge and skills learned in courses in real-world situations, such as the role of the helper and expectations of the field. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application.

HUSV 4040 Program Evaluation (4 Credits)
Program evaluation is one mechanism for establishing accountability in many human service organizations. This study will provide an overview of the skills, approaches, and methods utilized to plan and evaluate programs offered in human services. This course is aligned with the Community and Human Services Area of Study guidelines for Skills & Application. This course was previously CHS-263544 Human Services Planning.

HUSV 4045 Secondary Trauma in Human Service Workers (4 Credits)
This study will introduce students to the concepts of secondary traumatic stress, vicarious traumatization, countertransference, and burnout. The aim of the study is to help them assess their own vulnerabilities to secondary traumatic stress. The importance of self-awareness, supervision, and work-home balance will be integral to this study. This course is aligned with the Community and Human Services Area of Study guidelines for Knowledge of Human Behavior.
Attributes: Liberal

HUSV 4050 Social Policy Analysis (4 Credits)
This course will provide an overview of the United States social and public policy process, including an analysis of the political, institutional, cultural, and economic environments in which policy is formed and modified over time. The focus of this study is to enable the student to critically examine various perspectives in how they relate to human services policy. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Service Delivery and Skills & Application. This course is part of the BS in Public Health program. Students enrolling in this course should have completed the equivalent of three years of college studies and possess a solid upper-level background in human services or public administration concepts, theories and practices. An entry-level course in American Government or Public Policy and/or individual review of the US system of government is recommended, but not required.
Attributes: Liberal

HUSV 4065 Social Justice and Human Services (4 Credits)
This course provides a multidisciplinary overview of social justice and diversity undercurrents in the human services field, drawing on insights from law, political science, history, sociology, social psychology, and economics. This course introduces past and persisting inequities and disparities in service delivery, as well as historical and current examples of community action, advocacy, and activism across helping professions. Learners will gain knowledge of social justice theoretical frameworks, advocacy strategies, and research related to access, equity, diversity, and belonging in the development and delivery of human services. This course will explore power differentials across race, class, gender, sexual orientation, socioeconomic status, religion, ability, and how these forces overlap, and effect change in human service environments. Students will assess their own perceptions and biases, while considering how this influences their social justice efforts within their community and across helping professions. Prerequisites: Introduction to Human Services or Human Service field experience.
Attributes: *Diversity Gen Ed, Liberal

HUSV 4132 Refugees and Displaced Populations (4 Credits)
This course will take a close look at refugees and displaced populations around the world and specifically examine policies, rights, programs, and psychoeducational and therapeutic interventions in various contexts including camp settings, urban environments, and resettlement. Students will understand the difference between refugees, immigrants, victims of trafficking, asylees, and internally displaced people. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Service Delivery, Diversity, and Skills & Application.
Attributes: Liberal

HUSV 4152 Counseling Lesbian Gay Bisexual Transgender and Queer Populations (4 Credits)
This study will address issues related to counseling gay, lesbian, bisexual, transgender, and queer clients. These include issues of sexual identity development, coming out, homophobia and heterosexism, family and relationship issues, multicultural issues, youth, aging, spirituality, HIV/AIDS, and substance use. Students will acquire an understanding of various counseling skills needed to work effectively with the LGBTQ population. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Human Behavior and Skills & Application.
Attributes: Liberal

HUSV 4157 Health and Wellness for Human Service Professionals (4 Credits)
This study will explore health and wellness for human service professionals including but not limited to physical, emotional, spiritual, financial, and social dimensions. Current topics in research related to health and wellness will be examined. This course is aligned with the Community and Human Services area of study guidelines for Knowledge of Human Behavior and Skills & Application.
Attributes: Liberal

HUSV 4162 Human Services with Special Populations (4 Credits)
This study will focus on delivering human services to various cultural groups including: the disabled, ethnic minorities, the aged, LGBTQ clients, and others. This study is designed to increase student's self-awarenes, culture-specific knowledge, and provide models, frameworks, and techniques to help increase skills in working with clients from different diverse backgrounds. This course is aligned with the Community and Human Services area of study guidelines for Skills & Application and Diversity.
Attributes: Liberal

HUSV 4996 Special Topics in HUSV (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

HUSV 4998 Individualized Studies in Community & Human Services (HUSV) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Community & Human Services (HUSV). Registration for this class must be approved by the student's mentor.

INDG: Indigenous Studies (Undergraduate)

INDG 1998 Individualized Studies in Indigenous Studies (INDG) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Indigenous Studies (INDG). Please contact your mentor/advisor for more details.

INDG 2005 Introduction to Global Indigenous Knowledge & Thought (4 Credits)

This course introduces students to Indigenous philosophies, community paradigms, and teachings. Taking a global perspective, this course pays particular attention to Indigenous cultures in the Americas, Oceania (e.g. Australia or New Zealand), and Africa. Look at Indigenous cultures as the living homes of knowledge that may allow us to create a more sustainable and just world for everyone. The foundations of Indigenous Knowledge include origin and other traditional stories which carry worldviews, cosmology, and philosophy. By the end of this course, students will see how worldviews shape concepts of family, community, and governance. Students will learn about traditional modes of knowledge sharing, as well as selected Indigenous perspectives on plants and astronomy. Through these elements, students will become aware of the cultural and spiritual factors that shape Indigenous Knowledge and ways of knowing. The foundations of Indigenous Knowledge include origin and other traditional stories which carry worldviews, cosmology, and philosophy. We will see how worldviews shape concepts of family, community, and governance. We will learn about traditional modes of knowledge sharing, as well as selected Indigenous perspectives on plants and astronomy. Through these elements, students will become aware of the cultural and spiritual factors that shape Indigenous Knowledge and ways of knowing.

Attributes: Other World Civilization Gn Ed, Liberal

INDG 2010 Introduction to Native American Studies (4 Credits)

This course introduces students to the various native cultures occupying North and South America. Topics may include discussion about recent findings in historical and anthropological literature; the development of indigenous visual and material culture(s) over time and space; and the overall results of European/indigenous contact. By the completion of this study, students will have a better understanding of indigenous cultures occupying the pre- and post-European Contact Americas.

Attributes: Liberal

INDG 2998 Individualized Studies in Indigenous Studies (INDG) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Indigenous Studies (INDG). Please contact your mentor/advisor for more details.

INDG 3005 Anishinaabe Studies: History Culture & the Environment (4 Credits)

Anishinaabe peoples lived in the Northeast and migrated west about 1500 years ago when it was prophesied this would preserve their culture. They searched till they found manoomin, lake rice, "the food that grows on water." Today manoomin is central to complicated struggles over genome rights, treaty rights, pollution form mining, and other issues. Students learn about Anishinaabe culture to contextualize these issues in historical events that demonstrate continuity and transformation. Students consider Indigenous responses to contemporary concerns about food, water, and energy and work to understand them as a nexus of spiritual, political, and ecological challenges to human sustenance on Earth. The course will culminate in research on Native concerns in students' own locales. Students will consider how to mindfully contribute to conversations and activities and appropriately engage in issues that affect us all as they are being addressed by Native communities.

Attributes: Other World Civilization Gn Ed, Liberal

INDG 3010 Contextualizing Indigenous Peoples: A Global Perspective (4 Credits)

This course addresses issues Indigenous peoples face and have faced as a result of changing power dynamics in the US and abroad. Students will learn to distinguish and theorize core differences between colonizer and Indigenous approaches to knowledge. We will engage in critical thinking about colonialism and its impacts on Indigenous peoples, the maintenance and dissemination of their knowledge, and the development of Indigenous academic knowledge by both insiders and outsiders. We will examine contentious questions between ways of knowing, such as those arising between origins stories and contemporary science, and oral traditions and written histories. We will look at how Indigenous people practice survivance on physical, cultural, and political fronts (epidemic diseases, health strategies; religious oppression, resilience and transformation; sovereignty and treaty violations, land reclamation; and who determines Native identity) in a variety of interactions, from armed to artistic resistance, in response to colonial empires and contemporary powers. We will outline today's key legal issues and ecological concerns, including human rights and biopiracy.

Attributes: Liberal

INDG 3015 First Peoples of North America (4 Credits)

The history of the First People of North America from first contact with Europeans to the present includes dislocation, cultural disruption and assimilation, fragmented communities, individual lives and pursuits, as well as transformation, resilience, resurgence, and continuity. Using voices of North America's indigenous peoples, this course surveys the histories, environments, cultures, and activities of American Indian nations and communities, on and off reservations. Students will learn about the history and cultures of the First Peoples and explore cultural diversity in relationship to geographies. We will learn how historical circumstances and cultural differences influenced relationships between the First Peoples and Europeans; examine the history of relationships between First Nations and the United States government and political system; and address tensions between acculturation and resistance, and the resulting social, cultural, and political climate in modern times. This course was previously HIS-243134.

Attributes: Other World Civilization Gn Ed, Liberal

INDG 3020 Living History: Little Bighorn from a Cheyenne Perspective (4 Credits)
In 1876, Cheyenne, Lakota, and Arapaho won the Battle of Little Bighorn, also known as Custer's Last Stand. After the battle, Cheyenne women took fabric from slain soldiers' Army coats and made a dress. It holds special meaning since one of Custer's strategies was to capture women, children, disabled, and elderly and use them as hostages/human shields. The dress was handed down from woman to woman and resides at the Northwest Indian Museum in Washington. It was presented at Little Bighorn Battlefield on the 140th anniversary of the battle by Cheyenne tribal member Cliff Eaglefeathers. Rather than the military engagement, we focus on peoples' experiences of battle sites as locales that continue to breathe living history. This interdisciplinary study draws from History, Psychology, Archaeology, and Indigenous Studies to address Little Bighorn as an ongoing part of Cheyenne culture and includes on-site videos with Mr. Eaglefeathers and Cheyenne Elders. This course was previously HIS-244314.
Attributes: American History Gen Ed, Liberal, Partial Other World Civ Gen Ed

INDG 3025 Writing the Indigenous Knowledge PLA (2 Credits)
The purpose of the study is to allow students the opportunity to formulate, define, critique, and articulate their PLA documents related to Indigenous Knowledge for submission to Empire State College (e.g., native groups can include peoples of Native North and South America, Africa, Oceania, Asia, European, and others.) As a major component of this study, students will be expected to: refine and/or develop their writing skills as applied to the individual CBE/PLA essays and articulate their prior learning related to Indigenous subject areas. This course alone cannot substitute an elective in the Indigenous Knowledge Certificate. You MUST be awarded 2 or more PLA credits to replace the elective requirement in the Indigenous Knowledge Certificate.
Attributes: Liberal

INDG 3998 Individualized Studies in Indigenous Studies (INDG) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Indigenous Studies (INDG). Please contact your mentor/advisor for more details.

INDG 4010 Native American Plants: Decolonizing Indigenous Knowledge (4 Credits)
Western botanical knowledge tends to be stand-alone and based on a scientific view of the plant as an object of study. Indigenous botanical knowledge is woven throughout the fabric of culture and considers the plant itself as an Elder. We will address the differences between these pathways in terms of cultural factors such as gender, social structure, and food distribution, and in terms of environmental factors such as ecological integrity and biocultural diversity. Discussions and assignments will be based on academic reading, transcriptions of oral histories conveyed by indigenous elders, and interactions with plants. Students will consider relationships between indigenous prophecies, traditional plant knowledge, and contemporary ecological challenges and apply their learning in study of a self-selected Native American plant in cultural context. Communications skills will be developed via a series of related projects, written, oral, and video.
Attributes: Basic Communication Gen Ed, Other World Civilization Gn Ed, Liberal

INDG 4015 Native American Women's Studies (4 Credits)
This study addresses a specific sub-field in Native American Studies and Women's and Gender Studies. It addresses Native women's history and concerns from Native women's perspectives and examines ways they survive and resist. We examine fictional, historical, and intergenerational stories that illuminate women's and girls' experiences, and apply activists' analyses of contemporary problems in order to contextualize these voices. By examining differences between how women position themselves in Native American Studies and how Native Americans position themselves in Women's Studies, we analyze paradigmatic differences between a Euro-American focus on gender and class in patriarchy, and a Native American focus arising from egalitarian or matriarchal cultures. We will identify Native American women's responses to a complex of concerns such as racism and colonialism through different nations as well as a range of activist strategies, from literary to agricultural to political and research Native women's concerns in students' own locales. Prerequisites: Solid writing skills
Attributes: Liberal

INDG 4025 Roots & Routes of African Diaspora Resistance (4 Credits)
African Diaspora religions such as Voodoo and Santeria are featured in horror films. Why do some people find it so scary? What historical dynamics generated fearful misrepresentations? What do race and gender have to do with it? Global implications of power and privilege and cultural issues such as stereotyping all play roles as we dismantle the terror factor around African religions and consider what that fear obscures. The scope of this course is broad, moving from West Africa, through slavery, and throughout the Americas. It achieves focus, depth, and specificity by following one cultural strand, culminating with texts produced by members of that culture. Using a rich mix of history, the arts, and cultural studies, we study Yoruba influence on American resistance to racism and sexism. Deeper relevance is self-selected by the student as you research any related topic, from religious diversity to arts to political situations. Prerequisites: Solid writing skills *The three tracks of this course overlap. No more than ONE of these three should be included in a degree program. This course was previously CUL-224124 Roots and Routes of African Diaspora Resistance: Arts.
Attributes: Liberal

INDG 4998 Individualized Studies in Indigenous Studies (INDG) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Indigenous Studies (INDG). Please contact your mentor/advisor for more details.

INFS: Information Systems (Undergraduate)

INFS 1001 Computer Applications for Presentations (2 Credits)
Computer Applications for Presentations study is designed to educate students to use computers effectively for business and personal applications. Its problem-solving feature prepares the student to analyze data, to develop critical thinking, and to discover effective solutions in real-life situations and in business problems. Students would gain competence in learning new software packages--a critical skill for future employment in this world of changing software. The study includes general concepts of office suite and concentrates on the learning of word processing and presentation graphics applications. Basic familiarity with computers is helpful, but no previous study of computers is assumed. This course requires an IBM compatible computer (Apple machines are not supported). Students must have access to the Microsoft Office Suite for use in the course. If students have already taken INFS 1000 Computer Applications or equivalent, they should not register for Computer Applications for Presentations.
Cross-listed with INFS 1000.

INFS 1002 Computer Applications for Data Processing (2 Credits)
Computer Applications for Data Processing study is designed to educate students to use computers effectively for business and personal applications. Its problem-solving feature prepares the student to analyze data, to develop critical thinking, and to discover effective solutions in real-life situations and in business problems. Students would gain competence in learning new software packages--a critical skill for future employment in this world of changing software. The study includes general concepts of office suite and concentrates on the learning of spreadsheets and database applications. Basic familiarity with computers is helpful, but no previous study of computers is assumed. This course requires an IBM compatible computer (Apple machines are not supported). Students must have access to the Microsoft Office Suite for use in the course. If students have already taken INFS 1000 Computer Applications or equivalent, they should not register for Computer Applications for Data Processing
Cross-listed with INFS 1000.

INFS 1998 Individualized Studies in Information Systems (INFS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Information Systems (INFS). Registration for this class must be approved by the student's mentor.

INFS 2000 Exploring the Disciplines: Information Systems: Introductory (2 Credits)
Through this course, students will be exposed to the discipline of information systems and its major areas of professional application. Students will use resources such as articles (print and online), databases and each other to gain a broader perspective of this discipline. Notes: This course is open to all students. Students should not include this course twice in their degree program. This course can only be taken once, either at the lower level, or at the upper level. This course can be used towards Educational Planning. Students taking this course for educational planning credit should obtain mentor/advisor permission. This course was previously EDU-232172, Exploring the Disciplines: Information Systems.
Attributes: Liberal

INFS 2005 Computer Information Systems (4 Credits)
In this study students will learn the fundamental concepts of computer structure and function, and the wide range of applications in data and information processing. Students will also gain an overview of both hardware and software. The course includes personal computers as well as large computer systems and explores aspects of systems analysis and design, data and file organization, decision-support systems, telecommunications and computers in society. Note: This course has a required video component. This course was previously SMT-272954, Computer Information Systems.

INFS 2010 Introduction to Data Management Tools (4 Credits)
Computer software provides powerful tools for organizing, managing, displaying and analyzing information. Numerous jobs in business, human services and other fields require the ability to use spreadsheets or databases. Students will learn to use spreadsheet and database software to address information management and data analysis problems. This course uses a case study approach to gain experience in organizing and displaying information, in writing arithmetic and logical expressions, and in analyzing data. Highly Recommended (not required): An introductory-level college mathematics study and the ability to use MS Windows and a word processor. Some experience with Excel would be helpful.

INFS 2998 Individualized Studies in Information Systems (INFS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Information Systems (INFS). Registration for this class must be approved by the student's mentor.

INFS 3000 Exploring the Disciplines: Information Systems: Advanced (2 Credits)
Through this course, students will be exposed to the discipline of information systems and its major areas of professional application. Students will use resources such as articles (print and online), databases and each other to gain a broader perspective of this discipline. Notes: This course is open to all students. Students should not include this course twice in their degree program. This course can only be taken once, either at the lower level, or at the upper level. This course can be used towards Educational Planning. Students taking this course for educational planning credit should obtain mentor/advisor permission. This course was previously EDU-233172 Exploring the Disciplines: Information Systems.
Attributes: Liberal

INFS 3005 Computer Business Applications (4 Credits)
The objectives of this study are to provide student with advanced knowledge and problem solving skills with computer business applications. The study presents coverage of major software applications, and helps students using proficiently: a computer operating system and file management tools; Internet browsing and e-communications utilities; office applications (MS Office 365, or 2013/2010) - word processing, spreadsheets, using database system functions, and presentation software utilities, integrating Word, Excel, Access, and PowerPoint documents and Web applications. Assumptions about surrounding courses: Students should have an understanding of computers, networks, along with a fundamental understanding of computer use in an organizational environment.

INFS 3010 Database Systems (4 Credits)
This course covers the design and development of databases that support the activities of an organization. Data modeling and the implementation of data models will be a major component of the course, with students studying normalization and formal modeling conventions. The model will be implemented using SQL. Metadata is also covered as well as some aspects of database administration. Prerequisites (must complete before registering): A basic understanding of databases such as that covered by Introduction to Data Management Tools (INFS 2010), Introduction to Database Design (CSCI 1015), or equivalent database knowledge. Assumptions about surrounding courses: Knowledge of systems analysis and design is helpful but not required. A background in logic such as that gained in Discrete Mathematics is helpful but not required. Notes: Some sections of this course will use an Oracle DBMS and/or modeling tools such as Microsoft Visio. This course was previously SMT-273984 Database Systems.

INFS 3998 Individualized Studies in Information Systems (INFS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Information Systems (INFS). Registration for this class must be approved by the student's mentor.

INFS 4998 Individualized Studies in Information Systems (INFS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Information Systems (INFS). Registration for this class must be approved by the student's mentor.

INFT: Information Technology (Undergraduate)

INFT 1005 Introduction to Web Publishing (4 Credits)
Students will learn current HTML and CSS and acquire the knowledge needed to create and mount a web page. Students will explore topics in communication (audience, purpose, content development and copyright), design (style, layout, human factors in computing and accessibility) and technology (use of web development tools). Through readings, comparative review of web sites, and reflective writing and discussion, students will develop concepts of what makes an effective web site. As an integrating project, each student will plan and create a website as a final project. Notes: Students must have regular access to a personal computer with access to the web, a text editor, and a web browser. HTML and CSS are "markup" languages, not programming languages; this course does not satisfy the criterion for "programming" in any of the guidelines. This course was previously SMT-271354 Introduction to Web Publishing with HTML.

INFT 1998 Individualized Studies in Information Technology (INFT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Information Technology (INFT). Registration for this class must be approved by the student's mentor.

INFT 2005 Green Computing (4 Credits)
This study explores new initiatives in the federal/state governments and business organizations to make the IT industry environmentally friendly. Compliance requirements and rules for capping or exchanging "carbon credits" for controlling emissions and waste increase as laws and regulations change. Customers increasingly prefer to do business with "greener" companies related to electrical use, cooling systems, server virtualization, cloud computing, utility computing, and IT waste management. Assumptions about surrounding courses: Students should have taken basic IT courses to provide understanding of computer system components.

INFT 2010 Introduction to Web Publishing with Adobe Dreamweaver Creative Cloud (4 Credits)
In this study, students will gain hands-on experience with Adobe Dreamweaver Creative Cloud and learn how to use that web authoring and editing software application to design, develop, publish, and manage user-centered web sites in compliance with today's usability principles and accessibility standards. Students will learn how to style web pages with Cascading Style Sheets and add design elements to web pages using Adobe Dreamweaver Creative Cloud. Students will also create responsive web sites supporting different Internet-enabled devices from personal computers to tablets and smartphones with the help of Adobe Dreamweaver Creative Cloud. Prerequisite (must complete before registering): Introduction to Web Publishing or equivalent Notes/Comments: Students must also have regular access to a personal computer connected to the Internet and have Adobe Dreamweaver Creative Cloud and a web browser on it.

INFT 2015 Introduction to Business Analytics with Microsoft Excel (4 Credits)
In this study students will learn about data storage paradigms and analytical methods used to support decision making at various organizational levels. Theoretical discussion will compare types of data, information, visualizations for operational and strategic decision making. The impacts of data interpretation and visual perception are examined as impacts on objectivity in decision making. Through hands-on labs, students will convert spreadsheet and relational data into information and graphical abstractions to solve operational level problems. Assumptions about surrounding courses: Students should have a basic understanding of computer applications.

INFT 2020 Introduction to Digital Crime & Digital Terrorism (4 Credits)
This study focuses on the technical aspects of digital crime, and the behavioral and social aspects of computer hackers, virus writers, terrorists and other offenders. Using real life examples and case studies students will discuss the history, development, extent and types of digital crime and digital terrorism as well as current legislation and law enforcement practices designed to prevent, investigate and prosecute these crimes. Hands-on familiarity with the computer is required. Students will not receive credit for both INFT 2020 Intro to Dig Crime & Terrorism and INFT 3010 Adv Digital Crime & Terrorism.
Cross-listed with INFT 3010.
Attributes: Liberal

INFT 2025 Introduction to Cybersecurity (4 Credits)
This course will provide a comprehensive exploration of security challenges and countermeasure strategies within the information systems environment. The course will integrate industry standards and practices, concentrating specifically on the aspects of availability, vulnerability, integrity, and confidentiality within information systems. Students will engage in real world applications of topics covered in the course. Assumptions about surrounding courses: Students should have an understanding of networks, either from a previous course or through experiential learning. Prerequisites: None. Corequisites: None.

INFT 2998 Individualized Studies in Information Technology (INFT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Information Technology (INFT). Registration for this class must be approved by the student's mentor.

INFT 3000 Academic Planning / Technology and Society (4 Credits)
The primary objective of this advanced course is the student to explore the area of study selecting a concentration in which s/he is interested and fits with personal and professional goals. S/he will reflect on learning that has taken place prior to coming to SUNY Empire State College. In consultation with the mentor, s/he will develop research paper on specific topic in Technology and Society using recommended textbooks, articles and databases to gain some broader perspectives on the current technology and social development. In consultation with the mentor, the student will develop a degree program following the ESC and SUNY requirements.
Attributes: Liberal

INFT 3005 Data Analytics (4 Credits)
Theory of data driven decision making is put into practice by leveraging data to create strategic level business intelligence. Relational data is analyzed in an experiential environment for execution and interpretation of querying and decision making procedures, visualizations of information summaries, and decision validation for strategic level decision making. Students learn to combine industry experience, context, and intuition with analytical outcomes. Prerequisite: (must complete before registering): Introduction to Business Analytics with Microsoft Excel or equivalent

INFT 3010 Advanced Digital Crime & Digital Terrorism (4 Credits)
This study focuses on the technical aspects of digital crime, and the behavioral and social aspects of computer hackers, virus writers, terrorists and other offenders. Using real life examples, case studies and projects, students will analyze in depth the history, development, extent and types of digital crime and digital terrorism. They will evaluate current legislation and law enforcement practices designed to prevent, investigate and prosecute these crimes. Hands-on familiarity with the computer is required. Students will not receive credit for both INFT 2020 Intro to Dig Crime & Terrorism and INFT 3010 Adv Digital Crime & Terrorism.
Cross-listed with INFT 2020.
Attributes: Liberal

INFT 3015 Communications Technology Convergence (4 Credits)
The current technological mantra for businesses is convergence of communication systems. Legacy communication systems, such as voice, data and video networks of today, are being converged into a single network. This course will examine the history, business aspects and operation of current legacy systems with a strong focus on the drivers of network convergence and the emerging manifestations of convergence. This course will include a case study and many other activities that will provide the student with a realistic view of current trends and the ability to extrapolate this trend into the future. Prerequisite (must complete before registering): Introduction to Networks or equivalent Assumptions about surrounding courses: Familiarity with the core concepts of networking, including awareness of the existence of protocols; an understanding of hardware such as routers and hubs and switches, common operating systems, basic systems and network security. This knowledge can be gained through the listed prerequisite course or through professional experience. This course was previously SMT-273334 Communications Technology Convergence.

INFT 3020 Cyber Crime & Computer Forensics (3-4 Credits)
Computer forensics is one of the fastest growing areas in computer security and law enforcement. Virtually every criminal investigation requires that any computer related to the investigation is seized and searched. Studies have shown that about 93 percent of human recording of words, images, sounds, etc. is in digital format, making computer storage a gold mine for investigators. The expertise for conducting investigations requires knowledge ranging from disk structure, file formats, commercial software to investigation techniques and expert testimony. This course will provide an introduction to the field. Assumptions about surrounding courses: It is recommended, but not required, that students have familiarity with criminal investigations, trial procedure and the legal system, such as that gained in law enforcement or from a course such as Introduction to Law and the Legal System or Introduction to Criminal Justice. Notes/Comments: Some textbooks include forensics software. Students should consult with their instructor before they decide to install the software. This course was previously SMT-273614 Cyber Crime and Computer Forensics.

INFT 3025 Data Communications & Networks (4 Credits)
The purpose of this course is to provide the student with an in-depth exposure to the theoretical concepts, protocols, standards, topologies, design and problem solving techniques of data communications and computer networks. The course provides comprehensive coverage of network systems and infrastructure and helps students in planning, analyzing and implementing data communications LAN, MAN, WAN, and SDN technologies; switching, routing, and performance assessment; on-line applications and services in Internet / Extranets / Intranets; data security and computer networks management techniques. Assumptions about surrounding courses: Students should have an understanding of computers, database applications, along with a fundamental understanding of computer use in an organizational environment. This course was previously SMT-273304 Data Communications and Networking.

INFT 3030 Human-Computer Interaction (3-4 Credits)
Human-Computer Interaction (HCI) is concerned with interactions between human activities and the computational systems that support them. Because it deals with people as well as computational systems, HCI demands the consideration of cultural, social, organizational, cognitive and perceptual issues. A key component is the understanding and the advocacy of the user. Design in this domain must be interaction-focused and human-centered, and must draw upon knowledge areas of user and task analysis, human factors, accessibility standards, and cognitive psychology. Consequently, it draws on a variety of disciplinary traditions, including psychology, ergonomics, computer science, graphic and product design, anthropology and engineering. Prerequisites (must complete before registering): Computer Programming I or equivalent; Statistics Assumptions about surrounding courses: Familiarity with organizing data in spreadsheets and using spreadsheet functions. This course was previously SMT-273484 Human-Computer Interaction.
Attributes: Liberal

INFT 3035 Project Management (4 Credits)
Project management requires a combination of understanding the project life cycle, organizational, behavioral, and management concerns, and project management tools. This course provides students with at least an introduction to all of these in a comprehensive, non-fragmented way, and gives them the foundation to further develop their abilities. Students will acquire project management knowledge that can be helpful in thinking about, understanding, discussing, and managing projects. This course can be individualized to explore particular contexts. For study groups and independent studies, the student should check with the mentor/instructor to ensure that the student's preferred specialty offering is available in the course section. For the online course, existing context options include predesigned tracks with reading lists include construction, government, health care, IS/IT, manufacturing, non-profit, and multinational, and the student can work with the instructor to arrange for other contexts. Prerequisites: Management Principles; Organizational Behavior Notes/Comments: Students can only take one of the project management courses: INFT 3035 Project Management, MGIS 4015 Project Management in IT/IS, or MGMT 4030 Project Management for Business. Assumptions about surrounding courses: Management Principles (or equivalent experience in management), Organizational Behavior (or significant experience in management) This course was previously SMT-273454 Project Management.

INFT 3040 Social Media Management (4 Credits)
In this study, students will learn about different social media technologies and explore the role of such technologies in helping organizations support not only their day-to-day business operations, but also management-level strategic decisions. They will learn about how to govern organizations to help them become truly social and effectively connect with today's social customers. Students will also gain an in-depth understanding of a series of transformations that need to take place in organizations including establishing new positions, empowering existing employees, and forming cross-functional teams to help those organizations successfully build, maintain, and improve their presence on social platforms. Assumptions about surrounding courses: Students should have an understanding of basic management principles.

INFT 3045 Social, Professional & Ethical Issues in Computing (3,4 Credits)
The global use of computers, communications, information systems, and information technology continues to rise with new applications and technologies developing rapidly. As the pace of change accelerates, new opportunities, challenges, tensions, and complexities arise between what can be done and what should be done. Understanding the social, legal, and ethical issues and the frameworks available for assessing them is important for everyone but especially for those who work with these systems. This course will examine the interaction of these technologies and society and the roles and responsibilities of professionals in the field. This course will include topics such as intellectual property, privacy, security, accessibility, and reliability. Assumptions about surrounding courses: Advanced-level critical reading, thinking, and writing skills. This course was previously SMT 273404 Social/Professional Issues in IT/IS.
Attributes: Liberal

INFT 3050 Systems Analysis & Design (3-4 Credits)
The focus of this course is to enable the IT professional to use the appropriate logical and design processes to develop useful and useable business information systems. The course will incorporate general systems theory and development methodologies, and may use business case studies to explore the implementation of these concepts. This course is appropriate for IT professionals seeking to supplement or upgrade their skill sets and students with an information systems background but with no systems analysis and design expertise. Assumptions about surrounding courses: Some programming experience. Work in some aspect of information systems or an introductory information systems course. Students will be expected to install and use Microsoft Visio on their computers. While this course includes user interface design, it does not cover sufficient material to address Human-Computer Interaction. This course was previously SMT-273224 Systems Analysis and Design.
Attributes: Liberal

INFT 3055 Technology for Digital Marketing (4 Credits)
This study is designed to educate students about the technical side of digital marketing and to think about it strategically, bringing together marketing, sales and operations functions. The study will show how to implement a more iterative, measurable, and repeatable approach to digital marketing, how to integrate the full strategic toolkit: social media, pay-per-click, Google AdWords, SEO, site usability, Google Analytics, audience analysis, CRM, lead generation, site navigation optimization, and more. This provides different knowledge than courses in internet marketing. Assumptions about surrounding courses: Advanced-level computer skills are required. Plus, advanced-level reading, writing, and critical thinking skills are required. Recommended courses: Principles of Marketing and Internet Marketing or equivalent knowledge.

INFT 3060 Topics in Web Design (4 Credits)
The purpose of this course is to further develop one or more areas of web design based on industry standards. Topics are usability and accessibility plus one additional topic such as information architecture or responsive design. Students who take Topics in Web Design should already have a foundation in web publishing. Prerequisite (must complete before registering): Introduction to Web Publishing or equivalent Assumptions about surrounding courses: This course does not overlap with Web Systems Development.

INFT 3065 Web Systems Development (3-4 Credits)
This course explores content management and the implementation of an enterprise web system. Students will learn about the fundamental technologies enabling database-driven dynamic web sites. The course addresses content design, management, and presentation as well as various design issues involving accessibility and usability. This course is particularly suited for current information systems professionals, managers with an information systems background, and advanced students in a computer related program who wish to increase their understanding of web systems technologies. Prerequisite (must complete before registering): Introduction to Web Publishing or equivalent Assumptions about surrounding courses: Students should have a solid foundation in programming skills and practices. They should also have a familiarity with the HTML markup language and the CSS stylesheet language. A familiarity with database systems and the special-purpose programming language SQL would also be helpful. This course was previously SMT-273254 Web Systems Development.

INFT 3070 Intermediate Python (3 Credits)
This course aims to establish solid knowledge of the Object-Oriented Programming (OOP) paradigm and its use in Python. Key topics include object-oriented concepts such as classes, objects, data abstraction, methods, inheritance, and polymorphism. These concepts are applied to practical applications on complex topics such as algorithmic problems, GUI applications, simple games, etc. In addition, design principles and patterns are examined to design large scale, maintainable Object-Oriented Systems.

INFT 3996 Special Topics in Information Technology (3-4 Credits)
This course is a special topics course in information technology.
Attributes: Liberal

INFT 3997 Special Topics in INFT (1-8 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Cross-listed with CSCI 3900.

INFT 3998 Individualized Studies in Information Technology (INFT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Information Technology (INFT). Registration for this class must be approved by the student's mentor.

INFT 4005 Business Continuity Planning & Disaster Recovery (4 Credits)
Organizations must plan for contingencies. Business continuity planning and disaster recovery must start long before a catastrophe strikes. Electronic/digital processes are ubiquitous and at the core of many business functions, so no longer is restoration of a centralized data center sufficient. While the work is often rooted in IT, the entire organization must be considered. Thus, it is important to learn to analyze organizations; identify risk and impact; understand complexity; identify mission-critical systems; communicate the need for planning; create, test and implement business continuity plans; and conduct disaster avoidance. Prerequisites: Management Principles or equivalent Assumptions about surrounding courses: Familiarity with the functions of management including planning, organizing, staffing, leading, and controlling (such as one should gain through the listed prerequisite course or through professional experience). Students must also have the ability to do academic research using the college library, evaluate material, and effectively communicate ideas in an academic format (such as one should develop through lower- level college studies). This course was previously SMT-274604 Business Continuity Planning and Disaster Recovery.

INFT 4010 Data Analytics & Data Mining (4 Credits)
In this study students contrast relational and multidimensional data storage paradigms used for data warehouses and enterprise level predictive analytics. Extraction, transfer and loading of data, and meta-data lineage are also examined. Data mining and dashboard tools are infused into experiential learning through practical business problem solving. Students will learn the value of predictive analytics and data-driven decision making at the strategic enterprise level. Prerequisite (must complete before registering): Statistics (MATH 1065)

INFT 4015 Information Assurance (4 Credits)
This course focuses on the managerial aspects of information security and assurance. Topics covered include access control models, information security governance, and information security program assessment and metrics. Coverage on the foundational and technical components of information security is included to reinforce key concepts. The course includes up-to-date information on changes in the field, such as national and international laws and international standards like the ISO 27000 series. The course covers topics such as Introduction to the Management of Information Security, Planning for Security and Contingencies, Information Security, Security Management, Risk Management, and Law and Ethics. Prerequisites: Data Communications and Networks or equivalent; Database Systems or equivalent; Web Systems Development or equivalent Highly Recommended (not required): An understanding of data communications and computer network models (such as one would gain in an upper-level networking study), database systems and database administration concepts (such as one would gain in a database study), and web technologies and related applications (such as one would gain in a web systems study). This course was previously SMT-273494 Information Assurance.

INFT 4020 Technology in Mathematics Education (4 Credits)
This study is designed to gain competence in selection, analysis, evaluation, testing, adoption and utilization of various instructional technologies in mathematics education. Application of new technologies to teaching and learning will be emphasized along with performance-based activities in instructional design. This study will provide the student with an understanding of learning models and the impact technology can have toward enhancing and enriching the learning process. The use of technology tools for solving a variety of problems, evaluating student performance, and implementing blended learning systems will also be explored.

INFT 4024 IT Senior Project Proposal (2 Credits)
The senior project proposal is part one of a two-part capstone experience in which the student prepares a proposal for the senior project and engages in educational planning. Educational planning includes the preparation of a rationale essay articulating how the program of study for the bachelor's degree meets the student's educational and career goals. Prior to taking this course, students should take, Effective College Writing or Reason & Argument, Database Systems, any networking course, and any programming course. This course is taken by final year students, ideally during the semester preceding the final semester. *The course is only available to International Education Students.*
Attributes: Liberal

INFT 4025 IT Senior Project (3 Credits)
Senior Project is a capstone, applied learning experience. This course emphasizes the application of modern engineering approaches to software construction and the main objective is the development of an original, industry-strength software-intensive product by each student. Students work closely with the instructor on a topic of their choice to connect theory with practice and demonstrate their ability to integrate and apply the learning they have acquired over the course of their studies and experience. The topic of the project should give the chance to the student to apply learning from several different concentration courses, including those being taken during the same term. During the semester students will report on their project's progress by giving presentations and submitting deliverables related to the project. At the end of the semester each student will give a presentation of the project and its conclusions. *Currently, this course is only offered through the College's Center for International Education.

INFT 4996 SpTo: Special Topics in INFT (1-8 Credits)

INFT 4997 Special Topics in INFT (1-8 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

INFT 4998 Individualized Studies in Information Technology (INFT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Information Technology (INFT). Registration for this class must be approved by the student's mentor.

INMS: Interdisciplinary Multidisciplinary Studies (Undergraduate)

INMS 1005 Exploring Interdisciplinary & Multidisciplinary Studies (2 Credits)
This study is designed to introduce you to the fields of Interdisciplinary and Multidisciplinary Studies. It can be part of Educational Planning or a stand-alone course. You will learn how to frame and address complex questions that cannot be answered by any one single discipline. It can either be through a multidisciplinary approach (comparison of two or more academic disciplines' approaches), or through an interdisciplinary approach (integration of two or more academic disciplines).

INMS 1996 Special Topics in Interd/Multi (2-8 Credits)

INMS 1997 Special Topics in INMS (2-8 Credits)

INMS 1998 Individualized Studies in Interdisciplinary Multidisciplinary Studies (INMS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Interdisciplinary Multidisciplinary Studies (INMS). Please contact your mentor/advisor for more details.

INMS 2010 Introduction to Mental Health (4 Credits)
This course will provide an overview of mental health theories and concepts as well as their practical applications in improving holistic wellbeing. This course will draw from various academic disciplines in order to provide a holistic understanding of mental health. Specifically, it will draw from psychology, mental health counseling, social work, and human development by covering topics such as Mindfulness-based Cognitive Behavioral Therapy (MBCT), Acceptance and Commitment Therapy (ACT), self-compassion, self-love, locus of control, the empowerment model, and the various stages of human development. Additionally, the field of neurobiology will be incorporated into the course by examining trauma's impact on the body, mindfulness, and executive functioning. Prerequisites: none. Corequisites: none.
Attributes: Liberal

INMS 2996 Special Topics in Interd/Multi (1-8 Credits)

INMS 2998 Individualized Studies in Interdisciplinary Multidisciplinary Studies (INMS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Interdisciplinary Multidisciplinary Studies (INMS). Please contact your mentor/advisor for more details.

INMS 3000 Meditation and Mindfulness (4 Credits)
The purpose of this course is to facilitate comprehensive understanding of meditation and mindfulness practices. This course will explore scientific, theoretical, and practical aspects of meditation along with some traditional meditation practices. In addition, students will examine interdisciplinary and multicultural ways of understanding the mind and human consciousness. This course also examines the history and philosophy of meditation, and the research for how and why these practices can enhance well-being, self-care skills, and genuine compassion for others. Prerequisites: none. Corequisites: none.
Attributes: Liberal

INMS 3020 International Field Study (1-4 Credits)
International programs, with faculty from throughout the College, will occasionally organize courses that include a field study with travel to an international location. The topics of the course and countries visited will vary. All courses will last for a full term, using the online platform along with synchronous virtual meetings both before and after the trip. The field study portion lasts for 1-2 weeks, partially through the term. The purpose of these courses is to provide students important insights about international issues related to the topic being studied, as well as insight into the country(ies) and culture(s) visited. Typical field studies include presentations at major multinational organizations, site visits to relevant facilities, and the opportunity to experience culture through visits to major historic sites and museums. These experiences include scheduled day-to-day interactions with guest speakers, industry professionals, university professors, and fellow students. Prerequisites (must complete before registering): Depending upon the topic, there may be some prerequisite coursework required. Notes: Students must have a valid passport and health insurance with international coverage (short term plans are available), as well as be physically able to endure the rigors of travel. There will be travel costs in addition to tuition.
Attributes: Liberal

INMS 3035 Stories & Creative Leadership (4 Credits)
Learn about stories and their implications for leadership in diverse fields. Case studies include business, human services, political science, nursing, cultural leaders, and community activists. This rich mix of approaches allows students to understand how 'stories' will be received in a wide range of potential leadership situations. Students will learn about story structures, and how the skillful creation and articulation of stories is a fundamental part of the leader's vocation. Students will learn to assess how leaders utilize storytelling to frame issues, and how they update personal, political, community, and corporate stories to open opportunities in the face of change. Related courses may be disciplinary rather than interdisciplinary or multidisciplinary; for example: leadership courses specific to nursing, political science, or business. This course was previously CUL-223024 Stories and Creative Leadership.
Attributes: Humanities Gen Ed, Liberal

INMS 3040 The African American Experience (4 Credits)
Along with a survey of African American history, we will introduce a variety of examples and voices to include diverse African American experiences and perspectives. We also introduce the interdisciplinary method that is at the heart of the field. You will learn about several disciplines - history, social science, Black feminism, and cultural studies-that have contributed to Africana Studies. Working between them, you will gain a multi-faceted sense of selected topics that can point you towards an overview of African American history and culture and help shape your own additional studies. Prerequisites: Recommended: A United States history course and United States government course. This course partially meets the General Education requirement in American History for all students, but fully meets the General Education requirement in American History for students scoring 85 or above on the New York State Regents exam in United States History and Government. This course was previously HIS-243124 The African American Experience.
Attributes: Liberal, Partial American Hist Gen Ed

INMS 3045 The Reel World (4 Credits)
In this course we will critically assess the historical, cultural, and artistic development of cinema around the globe, through a close analysis of a range of international films, movements, and traditions. Specific attention will be paid to the national cinemas of a range of countries across the world, which may include the continents of the Americas, Africa, Europe, Oceania, and Asia.
Attributes: Other World Civilization Gn Ed, Liberal

INMS 3055 Women as Healers (4 Credits)
This study examines women's roles and experiences as healers using a cross-cultural and interdisciplinary perspective. The study is grounded in ethnographic, biographical, historical, and journalistic accounts. Women have played a central role in healing and care-giving in all human societies and throughout history, often being subject to different expectations, challenges, and dangers compared to their male counterparts. From birth to the end-of-life, from home remedies to homeopathy, from shamans to surgeons, women's healing knowledge and skills have made a significant impact on their families, communities, and their own destinies, as well as being a means of empowerment and social action.
Attributes: Liberal

INMS 3056 Work and Mindfulness (2 Credits)
This study draws upon bio-psycho-social insights from anthropology, human development, integrative medicine, and psychology, to explore applications, benefits and theories that pertain to mindfulness methodologies in relation to work environments and the workplace.
Attributes: Liberal

INMS 3996 Special Topics in INMS (1-8 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

INMS 3997 Special topics in INMS (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

INMS 3998 Individualized Studies in Interdisciplinary Multidisciplinary Studies (INMS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Interdisciplinary Multidisciplinary Studies (INMS). Please contact your mentor/advisor for more details.

INMS 4010 Internship in Interdisciplinary/Multidisciplinary Studies (4 Credits)
This advanced-level course examines and integrates regular on-going formal learning activities with related work experience during the normal semester period. The main purpose of this applied learning activity is to engage students in a professional setting pertinent to her/his concentration and career goals. The internship provides the unique opportunity, therefore, to combine theory with practice.

INMS 4015 Roots & Routes of African Diaspora Resistance: Arts; History; Humanities (4 Credits)
Why are African Diaspora religions featured in horror films? 'Case studies' focused through one culture will dismantle the terror factor to reveal African tenets that inspire people to freedom. We'll look at how historical construction of racist and sexist stereotypes and stereotypical constructions of history are perpetuated by contemporary media, how Yoruba thought and practices disrupt these stereotypes, and their global implications for power and privilege. Students will share research about resistance via philosophy and religion (Humanities), cultural expressions (Arts); politics, rebellions, and revolutions (History). Related courses may be disciplinary rather than interdisciplinary or multidisciplinary; for example: Africana Studies or Women's, Gender, and Sexuality Studies approached through the arts or history, etc. Or they may approach a component or thread in the course, such as critical race theory in a Social Science course such as Thinking About Race, Class, and Gender; gender theory in Introduction to WGSS; or political science in Power and Privilege. The three tracks of this course overlap. Only one should be included in a degree program. This course was previously CUL-224124 Roots and Routes of African Diaspora Resistance: Arts.
Attributes: Liberal

INMS 4020 Senior Project (2-6 Credits)
Senior Project is a capstone, applied learning experience. Students work closely with the instructor on a topic of their choice to connect theory with practice and demonstrate their ability to integrate and apply the learning they have acquired over the course of their studies and experience. Depending upon the size and scope of the project, the work may be completed in one or two terms, and for differing amounts of credit. If completed in two terms, typically the first term is used for planning and research, and the second term for the final development or implementation of the project. Students should consult with their mentor and the instructor before enrolling to determine the number of credits and time needed. Prerequisites: As a capstone course, students should enroll in Senior Project during their final year of study. All lower level concentration courses should be complete, as well as at least two advanced level concentration courses or their equivalent. Corequisites: Additional concentration courses may be taken concurrently Students will be expected to apply learning from all concentration courses, including those being taken during the same term. key, however ANY student interested in doing a final capstone project on a topic related to one of these countries or regions, or with an international theme, is welcome to request the opportunity to work with one of the international faculty in these programs. This course may be taken for 2 to 6 credits over one or two terms. *This course will be used as part or all of the Educational Planning credit.*

INMS 4025 Topics in Interdisciplinary & Multidisciplinary Studies (4 Credits)
In this course, students will have the opportunity to explore a specific topic within the scholarship of interdisciplinary and multidisciplinary studies. Topics may be drawn from fields such as Africana Studies, American Studies, Classics Studies, Environmental Studies, Ethnic Studies, Gender Studies, Global Studies, Indigenous Studies, Latin American Studies, Lesbian, Gay, Bisexual and Transgender Studies, Museum Studies, Religious Studies, Urban Studies, Women's Studies, presented by diverse instructors around the college. The course offers upper level understanding of concepts and methods that construct studies as interdisciplinary or multidisciplinary, and the opportunity to apply that understanding in independent research.
Attributes: Liberal

INMS 4030 Women Health & Globalization (4 Credits)
This study focuses on the experiences, statuses and roles of women in 'the new global village,' focusing in particular on the impact of globalization, modernization, industrialization, urbanization, and contemporary social changes upon women's lives and their health. From the new fertility technologies to the growing demand for international nannies, women are at the center of new trends and flows of people and resources. Women are migrants, surrogate wombs, teachers, nurses, artists, mothers, and sometimes soldiers, pilots or surgeons, as well as being those who usually care for children and family members during illness. Women form the majority of elders in aging societies. They are especially vulnerable during times of conflict or disaster, or as international refugees. Students will write reflective journal essays on films/readings and a final research paper or project on a topic selected by the student. This course is part of the BS in Public Health program.
Attributes: Liberal

INMS 4996 Special Topics in INMS (2-8 Credits)

INMS 4998 Individualized Studies in Interdisciplinary Multidisciplinary Studies (INMS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Interdisciplinary Multidisciplinary Studies (INMS). Please contact your mentor/advisor for more details.

ITAL: Italian (Undergraduate)

ITAL 1005 Italian I (4 Credits)
Italian I is designed for students who have no previous Italian instruction. The course focuses on enabling students to communicate effectively in elementary Italian, and introduces students to the cultures of Italy. All language skills will be practiced: listening, speaking, reading and writing. Students will be exposed to authentic Italian material from films, songs and websites. Students should be available for oral practices at least twice a week. Synchronous practices will take place between 7:30-9:00 pm (ET), unless advised otherwise. Special accommodations will be made for army students. This is the first course in the sequence of 2 (Italian 1 and Italian 2) This course was previously CUL 221224 Italian 1.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

ITAL 1007 Italian: Language & Culture (4 Credits)
This course is designed for students who have no previous instruction in Italian. You will develop language proficiency on a basic level, but the emphasis is on culture and history of Italy, it's different regions, cuisine and traditions. All language skills will be practiced: listening, speaking, reading and writing. The course does not overlap with Italian 1. You will be required to practice speaking and listening skills weekly in real time over the Internet with the instructor. You should be available for 45 minutes for oral practices scheduled between 7:30-9:00 PM EST at least once a week. Special accommodations will be made for Army students
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

ITAL 1010 Italian II (4 Credits)
This course is designed to be a continuation of Italian I. Students will build on their introductory studies in Italian language and culture. They will learn functional grammar, vocabulary and cultural concepts that apply to many different practical real-life situations. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations. All language skills will be practiced: listening, speaking, reading and writing. Students will be required to weekly practice speaking and listening skills in real time. Synchronous practices will take place between 7:30-9:00 pm (ET), unless advised otherwise. Special accommodations will be made for army students. This course was previously CUL 221424 Italian 2. Prerequisites: Italian 1 or equivalent completion of Italian 1.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

ITAL 4998 Individualized Studies in Italian (ITAL) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Italian (ITAL). Please contact your mentor/advisor for more details.

LABR: Labor Studies (Undergraduate)

LABR 1010 Class Race & Gender for Workers (4 Credits)
Our identity is influenced by how we look at ourselves-as men and women, as working or middle class, as white or black or some other racial and/or ethnic mix, as a citizen or an 'illegal' immigrant. It is also shaped by the way society perceives us, puts us into certain groups. Indeed, since they often build off existing patterns of economic, social and political inequality, these broader social perceptions shape our opportunities for a full life. This course explores the interaction between our individual lives and broader historical process and structural patterns. In doing so, students delve into the 'problem of solidarity.' Unionists know that solidarity is the basis for strength. However, it is not something that can be taken for granted. It is an imaginative process, an active intellectual struggle, in which working men and women of all backgrounds discover and re-discover common ground. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. Schoolfor Labor Studies in New York City. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability.
Attributes: Social Science Gen Ed, *Diversity Gen Ed, *Social Sciences Gen Ed, Liberal

LABR 1020 Global Civilizations: Workers' Perspectives (4 Credits)
This course offers an introductory but also systematic study of world history. Too often, world history is told as if each society or nation-state or region functioned as a discrete political, economic and cultural unit, its success or failure over time determined by some inherent strength or weakness. In this class the goal is to explore different perspectives. We will examine how environmental circumstances may have given some societies advantages that others lacked. Students also will also study the hows and whys of the rise and fall of regional civilizations by paying close attention to the connections-created by trade, conquest, and the exploitation of nature and human labor-between these civilizations. It is only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability.
Attributes: Other World Civilization Gn Ed, *World Hist & Glb Awnss Gen Ed, Liberal

LABR 1035 Labor & Public Affairs (4 Credits)
This course is designed to help students develop their research, written and oral communication skills as they learn about current economic, political and social issues important for working people. The guiding context for this course is how the winners in our economic system have come to thoroughly dominate our politics, exacerbating both the economic gap between the wealthy and the rest, and the political gap between what the majority of the public-the working and middle classes-want from their political system and what they actually get. As we read though the texts and articles, we will discuss the main themes, understand the arguments, and grasp the empirical evidence presented in preparation for student's choosing a topic and presenting it to their peers. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. Prerequisites: None Corequisites: None This course is offered as part of union partnership programs and is open to non-partnership students subject to availability.
Attributes: Social Science Gen Ed, Liberal

LABR 1040 Economics for Workers (4 Credits)
This course provides students with the tools that are necessary for understanding the economy in general and the economic conditions of an industry such as the construction industry. What is economic efficiency and when is a particular market, either a labor market or the market for a specific product, efficient? Is it true that everything depends upon 'supply and demand'? If so, how are supply and demand determined? How are prices, wages and profits determined? Why is full employment not ever permanent? The course also provides the tools required to analyze the proper role of the government and the effect of its finances on the economy. The effects of labor laws (e.g., minimum wage, unemployment insurance, and 'right to work' laws), the provision of governmental services (e.g., public transportation, schools, infrastructure), and of full-employment policies on the economy in general and on the conditions of workers and management in the construction in industry in particular are examined. The issues involved with taxation by the different levels of government are also explored. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class through the college's Harry J. Van Arsdale Jr. School of Labor Studies in New York City.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

LABR 1050 Literature & Society for Workers (4 Credits)
'Literature and Society for Workers' provides an opportunity to read novels, poems, and plays about the experiences of working people, and the dramatic situations that their work can create for them. The texts discussed in this course are chosen for the unique stories they tell about individuals attempting to improve their own living situations, and the challenges they face from friends, enemies and the social structures around them. It allows students to consider the struggles of (primarily) fictional characters and the efforts required to bring resolution to their personal challenges. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School of Labor Studies in New York City. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LABR 1055 Art & Social Practice for Paraprofessionals (4 Credits)
Social Practice describes a conversation between the arts and the social sciences and an engagement in the creative process in ways that are relevant to students' lives as workers and citizens. People who are a part of this conversation can be practitioners educated in, inspired by, or who adopt methods, ideas and attitudes from conventional and historical art forms. They then use these artistic approaches to address major questions in social life or to affect it in a variety of ways. This first practitioner makes an art out of being social. Or, secondly, it can describe practitioners who are educated in, inspired by, or who adopt methods, ideas and attitudes from the social sciences. Thus, Social Practice is an experiment, which could begin with asking a series of questions. These questions are answered in many different ways, using our thoughts, our actions and a variety of materials. Prerequisites: None Corequisites: None This course is offered as part of union partnership programs and is open to non-partnership students subject to availability.
Attributes: Arts Gen Ed, Liberal

LABR 1065 College Reading for Workers (4 Credits)
This course is designed to build students' reading ability, confidence and fluency--to help them get through texts that are challenging or boring, to help them read more quickly, and to learn strategies to help them read with the analytic eye that instructors expect. All reading texts are labor-centric, providing students with the opportunity to think about, reflect on, and discuss the values of trade unionists. The meaning of labor and work will be explored through texts that challenge students in a variety of ways. Students will become adept at reading labor texts in order to prepare them for ensuing labor courses. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Humanities Gen Ed, Liberal

LABR 1070 College Writing for Workers (4 Credits)
This course provides students with the opportunity to spend a semester working intensively on their writing and writing process, while reflecting on the values of being a trade unionist. Students will use writing as a meaning-making tool, by engaging in all stages of the writing process as they critically consider a variety of texts that address what it means to take pride in one's work, as well as the worth of being a skilled craftsperson. In reading, writing, discussion and research assignments, students will be engaged in reflecting critically on how work is represented and understood in the course readings. While there is a fair amount of reading to be done in this class, this is primarily a course that supports and extends students abilities to express themselves in writing. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class through the college's Harry J. Van Arsdale Jr. School of Labor Studies in New York City.
Attributes: Basic Communication Gen Ed, *Communication Gen Ed-Oral, *Communication Gen Ed-Written, Liberal

LABR 1105 Workers/Artists (4 Credits)
This study and workshop is primarily concerned with the evolution of contemporary forms of representation through various mediums with particular focus on themes relevant to the worker. The study of art works in a variety of media that engage subject matter such as economic inclusion, environmental justice, and gender and racial equality in intersection with Labor will culminate in the creation of the student's own creative project(s). The mediums will be explored as powerful tools of communication as well as vehicles for personal and collective worker expression. The option of special focus on one principal medium in depth may exist, both as on object of study and as a creative process to employ in one's own final art project and maybe offered in concert with the expertise of the instructor. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class through the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

LABR 1123 Labor Relations in Public Education (3 Credits)
This course provides an overview of the rise of collective bargaining in public education, primarily in New York City and New York State, but also nationally. It focuses; in particular, on the effect unionization and collective bargaining have on students, teachers, administrators and school systems. In addition to examining existing models of unionization, students also consider alternative forms of work organization and "stakeholder relations" in schools, which proponents claim will encourage continued improvement in the schools and be increasingly relevant to the emerging 'knowledge economy'.

LABR 1150 History of Public Education (4 Credits)
This course provides an overview of the struggle for public education in the United States from the 18th century to the present. This struggle has been the means by which new groups – wage earners, slaves, women, immigrants and others–pursued and won inclusion into an expanded (and still expanding) body of citizens in the US. By insisting upon and gaining access to public education, they helped secure their own claims to equality and created new opportunities for advancement for themselves and their descendants. The nature and effect of these struggles, the education opportunities created and lost, as well as the challenges we face educating the next generation of citizens, are central concerns of this course.
Attributes: Liberal

LABR 1167 Labor and the Economy for Paraprofessionals (3 Credits)
This course covers the basics of economics. Some of the topics explored are: What is economic efficiency and how can it be enhanced?; How are wages and profits determined; What is the role of government and what is the efficient level of taxes? Implications for education and education policy are explored throughout. The course is designed for students with an interest, though not#necessarily a background, in economics. It does not use mathematics,#although some basic arithmetic will come into play. The aim of the course is to give the#student a thorough understanding of the key concepts and theories of different schools of economics and to better understand how these concepts relate specifically to their lives and the lives of their family members. In each case, the history of economic thought will be traced, along with the historical#context of the ideas involved.
Attributes: Social Science Gen Ed, Liberal

LABR 1996 Special Topics in Labr (2-8 Credits)

LABR 1997 Speical topics in LABR (2-8 Credits)

LABR 1998 Individualized Studies in Labor (LABR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Labor (LABR). Please contact your mentor/advisor for more details.

LABR 2010 US History: Workers' Perspectives (4 Credits)
The course introduces students to examine American history through the struggles and victories of American workers. The American Revolution, the Civil War, Immigration and the Creation of the Working Class and the post-World War II era are the four key sections in history that will be examined. Working with primary documents, scholarly articles, and handouts, students explore the consequences and contested meaning of key episodes paying special attention to the role of working people in the development of the relative prosperity of the economy and the democratic inspiration of the country's governing institutions. Students will also gain an understanding of how US workers and their institutions fit in with broader shifts in the national and international political economy. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

LABR 2998 Individualized Studies in Labor (LABR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Labor (LABR). Please contact your mentor/advisor for more details.

LABR 3005 Collective Bargaining (4 Credits)
In the Collective Bargaining course, we will study the roles of all of the participants in the proceedings- both union and management, and the roles of those in authority they are responsible to, the bargaining committee's responsibility to their constituents, and what kind of effect those constituents can have on the outcome of bargaining. Among the topics that will be explored will be the law as it effects the bargaining process, the duty to bargain, different tactics in bargaining, impasses, strike, and lockouts, management rights, union rights and responsibilities, costing out of contracts, the mediation and arbitration processes, dispute resolution procedure, basic labor law, and the history of labor unions in this country. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. Prerequisites: None Corequisites: None This course is offered as part of union partnership programs and is open to non-partnership students subject to availability.
Attributes: Social Science Gen Ed, Liberal

LABR 3010 Contemporary Labor Issues: Immigration (4 Credits)
This course examines the social and political phenomena of migration and borders, tracing how they impact workers, labor markets, and the policy discussions that aim to address the issue of immigration. Using the tools of social science and critical analysis, we will analyze the global dynamics of migration, as well as the economics and cultural politics of undocumented immigration in the US. We will place these issues in historical and contemporary context, looking at both the evolution of immigration controls, how they are experienced by migrants, and how the US Labor Movement has responded. This will allow the class to move toward a framework that sees the limited rights & inadequate labor protections of the undocumented as the root issues. The class will also assess recent literature that presents possible solutions, and explores whether such proposals hold the potential to break away from the current deadlock and transform a system that enables exploitation. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

LABR 3020 Development of the Labor Movement (4 Credits)
The American Labor Movement was directly or partially responsible for enormous changes in American society in the twentieth century. Unions raised the wages, improved the living standards and increased the opportunities for millions of workers from diverse backgrounds and communities across the country. While the overall record is far from perfect, many unions supported the Civil Rights movement and other social justice causes, struggled to protect workers in the face of sweeping changes in the national and international political economy, and encouraged individuals to participate actively in the civic and political life of the nation. Indeed, to study the US labor movement is not just to study union organizing, collective bargaining, and labor legislation. It is to study how it has impacted the way workers lived their lives, and how it has shaped the role a diverse working class has played in the making of American society and American democracy. Students will analyze the history of Labor in NYC as a particular example. This course is offered in-person at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

LABR 3022 Leadership Development in Labor Organizations (4 Credits)
Effective, successful leaders make a difference in any context and leadership in labor is no exception. Yet the nature of leading organizations of workers is especially challenging. Leaders of unions are responsible for running organizations that are structured horizontally and vertically. By definition, unions function best when they are both democratic and decisive. Furthermore, labor leaders must contend in the modern-day political economy of global capitalism. In particular, workers in the United States who are engaged in concerted activity to form a union of their own choosing are confronted by corporate anti-union sentiment that is unmatched among the so-called industrialized western democracies. If you couple this with our nation's systems of discrimination—historical racism, social inequities, and class divisions—the context for labor leadership to flourish is daunting. This class will consider this context, case studies of effective union leadership, and the core competencies and skills of democratic and decisive union leadership.
Attributes: Liberal

LABR 3025 Diversity in the Workplace: Union Perspectives (4 Credits)
The dynamics and makeup of our workplaces, communities, industry, and unions are rapidly changing. Drawing from fiction, published reports, scholarly journals, guest speakers, discussions and films, this class will analyze the historical and societal forces that drive the cultural dynamics of race, gender, orientation, nationality and power at work. How are the identities constructed through these dynamics expressed at the workplace, in your union, and your community? What are the costs of a workplace culture that defines who is 'in' and who is 'out'? What have unions done to respond to changing social dynamics of an increasingly diverse workforce and what are the bedrock principles of solidarity leading us forward? It is offered face to at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. It is also offered online.
Attributes: Social Science Gen Ed, *Diversity Gen Ed, Liberal

LABR 3027 Labor by the Numbers (4 Credits)
The course will give the student basic knowledge of descriptive and inferential statistics as well as knowledge of the main concepts of economics. The student will learn how to use this knowledge to evaluate both empirical and qualitative economic arguments. In addition, the student will gain a critical understanding of the way that social and news media transmit messages and analyses that affect our opinions, our decisions and the choices we make. Thus the student will be able to choose policies that will support the kind of society they envision for themselves and their families. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is only offered in-class through the college's Harry J. Van Arsdale Jr. School of Labor Studies in New York City.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

LABR 3035 Educational Planning for Labor Studies (4 Credits)
The purpose of Educational Planning for Labor Studies is for each student to design and complete a degree program that will 1) fulfill the College's degree requirements, and, 2) allow the choosing of degree-related courses of interest. Students have the option of choosing to pursue a bachelor's degree in labor studies or enroll in the 20-credit program. Students will develop their educational plans in the context of investigating trade unions as collective organizations, fundamental to a democratic society. The course asks students to consider and discuss the challenges working people and union members face in today's economy and the role of the critical/intellectual 'skills' that one acquires through a liberal arts based college education in meeting these challenges. Within this context, the course asks students to consider and discuss the purpose and role of a college education - particularly for working people and union members. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Liberal

LABR 3040 Estimating in the Construction Industry (4 Credits)
It is often said that 'Cost estimating is an art, not a science' - and that there is legitimate disagreement as to what constitutes reasonable costs even when plans, specifications, site, and labor and material costs are identical for all bidders. This course introduces students to estimating for the general construction trades, as well as to the review of construction procedures and trade practices. Students examine management techniques from the standpoint of bid preparation, take-off, and bid submissions. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. Prerequisites: .

LABR 3042 Labor, Education, and Social Progress (4 Credits)
This class will examine texts from the field of the philosophy of education as they relate to different groups of working people in different circumstances and social structures. The readings will examine the role of workers' education in organized labor, a college prison program, and in a reconceptualization of the content of "blue-collar" work. All education, of course, promotes personal growth and transformation; however, we will evaluate the more philosophical idea that worker's education, rooted in the working class experience, struggles, and values is essential for imagining and achieving the kind of society we desire for ourselves and our families -- indeed, for a more robust labor movement and a more democratic society.
Attributes: Humanities Gen Ed, Liberal

LABR 3047 Occupations Safety & Health & the Environment (4 Credits)
This course enables students to gain an understanding of the hazardous conditions that workers face on the job, various occupational safety and health regulations, and the relationship between the workplace and the environment, particularly climate change. Thousands of workers die each year while working; communities are effected by toxins leaking into the air and into water supplies and changing our overall climate. Workers on the job face bullying, inappropriate behavior and other types of discrimination that create unsafe working environments. Are current local, state and federal laws adequate for protecting workers, their families and our communities? What are some solutions for making our working conditions and our communities safer and what role can trade unions play? This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Liberal

LABR 3050 Issues in Public Art: Representation of Workers (4 Credits)
This study is primarily concerned with contemporary public art primarily in New York City with some focus on works made for the worker and/or a working class consciousness either through studying the work of others or by the creation of the student's own creative project. The assigned readings and presentations introduce the complex relationship between aesthetics and the development and life of the city in public art, and its ever-changing relationship with architecture and urban planning. Students will consider issues such as the importance of the role of art and artists in society, how public art addresses-- or is addressed-- by issues of race, class, and gender. We shall also study the hierarchical relationships between craft and art and how the student's own electricians trade might be considered or reconsidered. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. Prerequisites: .
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

LABR 3058 Labor Organizing: Theories and Strategies (4 Credits)
Organizing is the central activity necessary for building and maintaining strong unions, yet there are many differences of opinion in the labor movement regarding the best ways to go about organizing, and whether enough organizing is happening. In this course, students will examine some of different schools of thought around organizing, the strategies and tactics union organizers often use, the complex relationship between organizing and labor law, newer/alternative models of organizing, and some high-profile organizing successes.
Attributes: Liberal

LABR 3060 Labor Law (4 Credits)
This course will provide a thorough overview of the laws governing labor and employment relations with an emphasis on private sector unions. the purpose of the course is to (a) familiarize students with an array of laws affecting the workplace and worker rights, and (b) develop your understanding of how these legal concepts are practiced in the real world. the goal of the course is to provide students with a basic understanding of the relevant laws as well as the necessary legal skills to work effectively as an employee and union member.
Attributes: Social Science Gen Ed, Liberal

LABR 3065 Union Leadership & Administration (4 Credits)
Today the power of unions is challenged by growing inequality, globalization, emerging technologies as well as changes in the law and in the structure of industries and work. These developments have spawned demands for stronger, more visionary leadership in unions. Drawing on a variety of social science and historic research, this course applies leadership and organizational theories to a union context in order to examine and analyze the leadership models, practices, and approaches we find in contemporary unions that lead to successful democratic unions. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. Prerequisites: .
Attributes: Liberal

LABR 3072 United States Labor History (4 Credits)
This course examines the roles of workers and their organizations from colonial American times to the present. The goals are to develop informed and critical analyses of these historical developments and to draw conclusions about them in ways that make sense to the student. Students will critically examine and discuss labor as a form of economic, political, and social expression; will learn how to identify, understand, and appreciate labor traditions in their historical, critical, and socio-cultural contexts; and will learn to differentiate economic, political, social, and organizational traditions. The course will also consider the manner in which both unionized and non-unionized work developed. This will include discussing how gender, race, and ethnicity have influenced workers in America. Course activities require students to observe, discuss and write about labor from critical and analytical perspectives, including cultural, historical, sociological, political, and philosophical frameworks. This course is offered online. This course was previously LAB-263704 United States Labor History.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

LABR 3075 Labor Relations in Construction (4 Credits)
This course examines the development of workplace relations in the building trades from both a union and nonunion perspective. It familiarizes the student with an array of laws affecting the construction workplace, as well as the jurisdictional issues that frame the obligations of labor unions in the building trades and shape the realities they face. Students will also examine the complexities of labor-management cooperation on the job, the process of negotiations between labor and management, and the impact of labor organizing. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Liberal

LABR 3080 Labor & Politics (4 Credits)
In this course, students will explore the role of Labor in the political process of the U.S. both historically and what's happening today. Students will be required to engage in and work with a campaign - for a candidate running for either local or national office, or a campaign for a referendum question. Topics covered in the course will include: the presidential electoral process, the issues and arguments in this campaign cycle, what should Labor seek from candidates, the relationship between the Democrats and Labor, the role of volunteerism in a campaign, and how campaigns fit into the future of the Labor Movement Labor in this country. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Social Science Gen Ed, Liberal

LABR 3085 Labor & the Global Workplace (4 Credits)
Globalization' is a term that we hear or read about almost everyday in the media. Some say globalization is inevitable and good for the economy and should be encouraged; others say globalization is detrimental to society and must be controlled. 'Labor and the Global Workplace' will explore a variety of basic questions that surround this debate: What exactly is globalization? What are the causes of globalization? Is globalization beneficial or detrimental for working people? How do we see the future of globalization? What should labor's response be to globalization? Prerequisites: None Corequisites: None This course is offered as part of union partnership programs and is open to non-partnership students subject to availability.
Attributes: Social Science Gen Ed, Liberal

LABR 3090 Labor & the Sociological Imagination (4 Credits)
In this course we will explore social scientific perspectives on historical and contemporary class relations in the US, with a focus on the role of the labor movement. The foundational text is C.W. Mills' classic from 1959, The Sociological Imagination, which still resonates as a call for a publicly engaged social science. In addition to Mills, the class will examine case studies from sociology, historical sociology and labor history, which will provide further methodological and theoretical guidance for empirically sound approaches to class analysis that situates workers and worker organizations in historical and/or contemporary power relations.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

LABR 3095 Our World Trade Centers (4 Credits)
The course focuses on the planning and building of two generations of the World Trade Center: the original twin towers and the new Freedom Tower complex. How did these extraordinary feats of engineering and construction grow out of Lower Manhattan, once a great port and epicenter of global finance? And what can these towers - built on a site where natural forces and human conflict repeatedly intersect - tell us about the history and possible futures of the city our labor makes real? It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Social Science Gen Ed, Liberal

LABR 3100 Principles of Trade Unionism (4 Credits)
This course is not simply an introduction into how unions work and the benefits they bring to working people. While these matters will be covered, the heart of the course will be an in depth and critical exploration, using important concepts and methods of social sciences, of the foundational principles of trade unionism. A few of these come easily to mind: solidarity; an honest day's pay for an honest day's work; the right to collectively bargain over terms and conditions of work. Other "principles" can be more complicated, extending beyond a particular group of workers and workplaces to more general economic, political, and cultural realms: unions as institutions of broad class solidarity and collective power, engaged in a struggle for a just and democratic society. Too often these days, unions are cast as a special interest group, out only for themselves. This course will shift that narrative by re-discovering the labor movement as a social movement. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. Prerequisites: .
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

LABR 3105 Project Management for Construction (4 Credits)
Project management is the overall planning, co-ordination and control of a project from inception to completion aimed at meeting a client's requirements in order to produce a functionally and financially viable project that will be completed on time within authorized cost and to the required quality standards. Project management is the process by which a project is brought to a successful conclusion. The purpose of project management is to manage and to ensure the most efficient way of utilization of limited resources (budget, time, labor, material, etc.) such that the output would be maximized. Construction project management (CPM) is project management that applies to the construction sector. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. Prerequisites: .

LABR 3110 Public Sector Labor Relations (4 Credits)
In this course, students will examine public sector labor relations and the key similarities and differences between private sector and public sector labor relations. Students will study the historical development of public sector labor relations to better understand the current environment in which it exists. Students will analyze the connections among culture, law, work environment, economics, politics, and personalities and how these factors enhance and/or impeding public sector labor relations. Students will have the opportunity to examine these issues in particular sectors such as health care, education, and the protective services. Finally, students will assess and discuss the positive and negative ramifications of changes in labor relations for public sector workers, unions, and the employers with whom they interact. Prerequisites: None Corequisites: None This course is offered online. This course was previously BME-213664. LABR 3110 is cross listed with HRMS 3110. Cross-listed with HRMS 3110.

LABR 3120 The Political Economy of New York City: Workers' Perspectives (4 Credits)
This course examines New York City's economy and the role of politics in directing its growth and distributing its rewards. Its hinge is the Fiscal Crisis of 1975, an event that marked a dramatic shift in the way city government planned for economic growth, interacted with the private sector, and served the people of New York. More specifically, course readings, brief lectures and class discussions will focus on the forces that have shaped life in the city before, during, and after the Fiscal Crisis: the labor movement; public sector institutions; the real estate industry; a widening gap between rich and poor; the privatization of public services. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

LABR 3122 Educational Planning for Labor Studies (5 Credits)
The purpose of Educational Planning for Labor Studies is for each student to design and complete a degree program that will 1) fulfill the College's degree requirements, and, 2) allow the choosing of degree-related courses of interest. Students have the option of choosing to pursue a bachelor's degree in labor studies or enroll in the 20-credit program. Students will develop their educational plans in the context of investigating trade unions as collective organizations, fundamental to a democratic society. The course asks students to consider and discuss the challenges working people and union members face in today's economy and the role of the critical/intellectual "skills" that one acquires through a liberal arts based college education in meeting these challenges. Within this context, the course asks students to read critically, conduct research, and present persuasive written and oral arguments about the purpose and role of a college education - particularly for working people and union members. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Social Science Gen Ed, Liberal

LABR 3125 Theories of the Labor Movement (4 Credits)
The objective of this course is to understand the origin, nature, and future of the U.S. labor movement through different theoretical lenses and comparative approaches. The course analyzes the role played by trade unions in American society and explores the historical and institutional factors that have shaped the U.S. labor movement. The course also introduces contemporary debates on the economic and political challenges facing American trade unions and the potential solutions to revive the labor movement. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City. Prerequisites: .
Attributes: Liberal

LABR 3127 Labor and the Middle East (4 Credits)
This course will offer a unique perspective on the history of the Modern Middle East. Most overviews of the region focus on a narrative of religious or cultural conflict, while leaving out or marginalizing processes of political and economic development, including the complex role played by labor and the working classes of the region. Here students will critically assess the political, economic and cultural history of the modern Middle East. And by placing labor at the center of that history, students will gain an appreciation for what connects their own experience as trade unionists and workers with that of the unionists and workers of the Middle East. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class at the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Other World Civilization Gn Ed, Liberal

LABR 3130 Women, the Economy & the Trades (4 Credits)
The US has been suffering from a crisis of inequality for almost four decades and it affects all aspects of working people's lives – the kinds of jobs we hold, how much we earn, how many hours we work, and even how our family's function. All workers experience this economic reality in different ways; women, and especially women and men of color, face particular hurdles. While some workers have made tremendous economic strides most working people are still struggling. We need to have an accurate understanding of women's economic and political realities, and how they interact with structures and ideologies of class and race, to envision the kind of society we want for our families and the policies needed to achieve this vision. With a focus on women in the building trades, this course will explore 1) the location of women (and men) in the economy, 2) the historical context of working women's social movements, 3) the experiences of women in the building trades -- why they sought access and their impact on the trades, tradesmen and social policies, 3) the evolutionary role of construction unions in promoting diversity, equity and inclusion, and 4) the reforms and responses needed to address the economic and work-life needs of working women and all working people. The course will examine why work-life needs should not be viewed as individual and personal problems of workers – women, and men -- but folded into a wider economic context addressed by social policies.
Attributes: Social Science Gen Ed, *Diversity Gen Ed, Liberal

LABR 3133 Struggles & Victories Workers in America: A Four Section Survey of US History from 1776 to Present (4 Credits)
The course introduces students to examine American history through the struggles and victories of American workers. The American Revolution, the Civil War, the New Deal and the post-World War II era are the four key turning periods in history that will be examined. Working with primary documents, scholarly articles, and handouts, students explore the consequences and contested meaning of key episodes paying special attention to the role of working people in the development of the relative prosperity of the economy and the democratic inspiration of the country's governing institutions.
Attributes: American History Gen Ed, Liberal

LABR 3135 Working-class Themes in Literature (4 Credits)
Participants in this class examine the ways that the working class has (and hasn't) been portrayed in literary works. In particular, students read literary texts that illustrate and explore working-class characters and problems, such as the relationship of the working class to society at large. In addition to exposing students to conventions of a range of literary forms, the class also allows participants to analyze how the working-class has (and hasn't) been portrayed in literature, and to assess how literature can contribute to the effort to build solidarity and to imagine a society that is better for workers. This course is only offered in-person at the college's Harry J. Van Arsdale, Jr. School of Labor Studies in New York City.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LABR 3140 Writing Labor's Story (4 Credits)
This course provides students with the opportunity to spend a semester working intensively on their writing and writing process. In it, each participant will produce a publishable piece of non-fiction writing about labor grounded in their own experience and in well-researched information. Our semester's work will consist of reading, writing, research and oral presentations that contribute to the drafting and revision of these individual projects, which will reflect critically not only on how work and the labor movements is understood in participants' own lives but also represented and understood in the course readings. While there is a fair amount of reading to be done in this class, this is primarily a course that supports and extends students abilities to express themselves in writing.
Attributes: Basic Communication Gen Ed, *Communication Gen Ed-Oral, *Communication Gen Ed-Written, Liberal

LABR 3150 Labor on Film (4 Credits)
How do the mediums of TV and film frame workers? One goal is for these students to achieve a deeper and wider critical understanding of the history of the labor movement through film, and what some of the key figures in that movement and what other labor and worker rights activists are doing here in the US and around the world through this medium to both grow and maintain existing labor rights. The other chief goal would be to build a greater sense among the students as to their place in the ongoing union movement while gaining an understanding of the language of film and tools related to the medium that they can then put to use in creating their own media concerning the value of being in a union with their coworkers and colleagues-and possibly beyond. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class through the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

LABR 3151 Labor, Climate Change, and the Just Transition (4 Credits)
This course examines climate change, the science behind it, and both the challenges and opportunities it poses to working people, especially workers in the energy sector and building trades. Students will learn to demonstrate scientific reasoning related to climate change, apply scientific knowledge to the complex social and economic facets of climate change as it affects working people, and analyze the concept of a "just transition" and the debates around it. This course fulfills students' Natural Science general education requirement.
Attributes: *Natural Science Gen Ed, Liberal

LABR 3155 Global History: Workers Beyond the West (4 Credits)
This course exposes students to scholarly accounts of the rise of industrialization, globally considered, and its impact on work, politics, and the environment, as they research and develop a perspective on current labor issues in non-Western cultures. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class through the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Other World Civilization Gn Ed, Humanities Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

LABR 3160 Public Art as Social Practice: Labor & Cultural Organizing (4 Credits)
"Social Practice" art or socially engaged art, focuses more on the social and political relations that may be catalyzed by art--or a critical intervention that might be enacted--than on an art object itself. Much of contemporary practice involves the creation and presentation of the work that is often an ongoing collaboration or movement building with specific communities. After gaining a grounding in these practices particularly where they intersect with race, class and gender, the student will take up further study of this work in relation to labor perspectives --- towards the development of a social practice/social justice art proposal/endeavor within their own labor community. This course is offered as part of union partnership programs and is open to non-partnership students subject to availability. It is also only offered in-class through the college's Harry J. Van Arsdale Jr. School for Labor Studies in New York City.
Attributes: Arts Gen Ed, *Diversity Gen Ed, *The Arts Gen Ed, Liberal

LABR 3998 Individualized Studies in Labor (LABR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Labor (LABR). Please contact your mentor/advisor for more details.

LABR 4015 The Labor Movement: Ideas and Institutions (4 Credits)
Explore the origins, purposes, methods and future of the labor movement. Students will learn about the historical beginnings of the United States labor movement. Topics include the Knights of Labor and the American Federation of Labor, alternatives to business unionism, including industrial and craft unionism, Marxism, anarcho-syndicalism and the New Left. Students will also examine labor as a social reform movement within capitalism. Through discussion and written assignments, students will apply the theories to actual case studies of workplace and union development. This course is relevant to students interested in studying labor studies, labor relations and human resource management. Students pursuing degrees in business, history, policy studies, political science and philosophy will also find this course pertinent. Prerequisites: None Corequisites: None This course is offered online. This course was previously LAB-263154 The Labor Movement: Ideas and Institutions.
Attributes: Liberal

LABR 4996 Special Topics in LABR (2-6 Credits)

LABR 4998 Individualized Studies in Labor (LABR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Labor (LABR). Please contact your mentor/advisor for more details.

LATN: Latin (Undergraduate)

LATN 1998 Individualized Studies in Latin (LATN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Latin (LATN). Please contact your mentor/advisor for more details.

LATN 2998 Individualized Studies in Latin (LATN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Latin (LATN). Please contact your mentor/advisor for more details.

LATN 3998 Individualized Studies in Latin (LATN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Latin (LATN). Please contact your mentor/advisor for more details.

LATN 4998 Individualized Studies in Latin (LATN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Latin (LATN). Please contact your mentor/advisor for more details.

LEST: Legal Studies (Undergraduate)

LEST 1005 Introduction to Law & the Legal System (4 Credits)
This course introduces students to the structures, purposes and jurisdiction of state and federal courts and the roles of lawyers, lay persons, judges and jurors in civil, criminal, administrative and alternative justice systems. Rudimentary skills in briefing cases and legal research and analysis will be developed. This course was previously CHS-261102 Introduction to Law and the Legal System.
Attributes: Liberal

LEST 1996 Special Topics in LEST (3,4 Credits)

LEST 1998 Individualized Studies in Legal Studies (LEST) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Legal Studies (LEST). Please contact your mentor/advisor for more details.

LEST 2998 Individualized Studies in Legal Studies (LEST) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Legal Studies (LEST). Please contact your mentor/advisor for more details.

LEST 3015 Mental Health & The Law (4 Credits)
This course provides a broad overview of legal and policy issues related to the intersection of mental health/illness issues and the law. We will examine the difference between the civil and criminal law aspects of the experiences of those with mental health concerns. In particular, we will examine how the rights of those with mental illness (including incarcerated men and women) are defined in the law and are protected, or not, in action. Students will examine case law and policies which define the power of the civil and criminal law to both protect and to intervene in various situations regarding the individuals with mental illness. This course was previously CHS-264514 Mental Health and the Law.
Attributes: Liberal

LEST 3998 Individualized Studies in Legal Studies (LEST) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Legal Studies (LEST). Please contact your mentor/advisor for more details.

LEST 4005 Constitutional Law I: Institutional Powers & Constraints (4 Credits)
The U.S. Supreme Court interprets and resolves constitutional law disputes using very particular theories which have evolved over time. In this course, students learn legal analysis, using Constitutional Law as both case study and context. Students learn how to understand U.S. Supreme Court decisions using these theories of constitutional analysis. Emphasis is on analyzing and evaluating constitutional theories presented in cases addressing: separations of powers, federalism, and individual liberties (substantive due process and equal protection). The course begins with an in depth understanding of the circumstances surrounding the Declaration of Independence and the ratification of the Constitution. This discussion forms the basis of understanding for the rest of the course.
Attributes: Liberal

LEST 4010 Constitutional Law II: Civil Rights & Civil Liberties (4 Credits)
This study examines the rights and liberties provided by the U.S. Constitution, focusing on the Bill of Rights. Students examine major cases defining, expanding, and/or shrinking the protections afforded by the Bill of Rights with specific attention to the first, second, fourth, fifth, and fourteenth amendments. Methods of judicial interpretation are explored as is the social context within which the disputes arose. Constitutional Law. Prior to taking this course, Students should have completed at least one prior study where they learned about briefing judicial decisions.
Attributes: Liberal

LEST 4998 Individualized Studies in Legal Studies (LEST) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Legal Studies (LEST). Please contact your mentor/advisor for more details.

LING: Linguistics (Undergraduate)

LING 1005 Introduction to Linguistics (4 Credits)
In this course, students will be taught to think like linguists as they learn how human language is acquired, how it evolves and changes over time, how it is structured, and how it is used in everyday communication. This course was previously CUL-221254 .
Attributes: Humanities Gen Ed, Liberal

LING 1998 Individualized Studies in Linguistics (LING) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Linguistics (LING). Please contact your mentor/advisor for more details.

LING 2998 Individualized Studies in Linguistics (LING) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Linguistics (LING). Please contact your mentor/advisor for more details.

LING 3005 Introduction to Pragmatics (4 Credits)
Pragmatics is the study of language as action and of the social contexts in which linguistic action takes place. In this course a student will study four theoretical approaches to pragmatics: the communicative and cooperative principles, speech act theory and conversational analysis. Examining practical applications of pragmatics and exploring the reasons for miscommunication will be central to the course. Such topics as literary pragmatics and pragmatics across cultures will be also addressed. Prerequisites: Introduction to Linguistics This is course is an elective, and it is not a part of a sequence; it is highly recommended for students interested in linguistics.
Attributes: Liberal

LING 3010 The English Language (4 Credits)
In this course students will become familiar with the historical influences that brought about the development of the English language. Along the way students will learn how to analyze the structure of the language. Students will examine the morphology, phonology, and orthography of the language and assess the varieties of English found in today's global environment. The influence of social interaction, identity, ethnicity and class will also be examined. Prerequisites: College Writing; a foreign language study or equivalent knowledge in a language other than English Students interested in this study will generally be those pursuing a concentration in English, Language Arts, Literature and/or Creative Writing.
Attributes: Liberal

LING 3020 Language & Culture (4 Credits)
This course explores an intertwined relationship between language and culture. It is designed to help students become familiar with the theory and research related to issues such as the ways in which language behavior reflects diverse cultural patterns; the role of language in the processes through which children and adolescents become members of particular groups in society; and the relationship between class, race, gender. This course was previously CUL-224364 Language and Culture. Prerequisites: Advanced writing skills.
Cross-listed with ANTH 3022.
Attributes: Humanities Gen Ed, Liberal

LING 3998 Individualized Studies in Linguistics (LING) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Linguistics (LING). Please contact your mentor/advisor for more details.

LING 4010 Second Language Acquisition (4 Credits)
This course will introduce the student to the field of second language acquisition, which as a discipline focuses on the many problems associated with three general questions: How do humans learn additional languages after they have learned their first? What factors contribute to the variability observed in rates and outcomes of second language learning? What does it take to attain advanced language and literacy competencies in a language other that the mother tongue? In addressing these questions, we will investigate a number of topics which can be grouped in three categories: Universal features of the L2 learner and the L2 learning process that determine the nature and route of acquisition; individual influences related to differential rate of acquisition and ultimate success in L2; and social dimensions that influence L2 learning. Prerequisites: Introduction to Linguistics is highly desirable This is course is an elective, and it is not a part of a sequence; it is highly recommended for students interested in applied linguistics and study of languages. Introduction to Linguistics is highly recommended.
Attributes: Liberal

LING 4030 Foreign Language Pedagogy (4 Credits)
This course provides an overview of foreign language teaching strategies based upon theory, practicum, and creativity. Such aspects of language teaching as developing auditory comprehension and oral production; reading and writing, as well as cultural competency will be addressed. We will also analyze the impact of culture; heritage, socioeconomic level, and educational background on language and literacy development as well as human development processes and variations.
Attributes: Liberal

LING 4998 Individualized Studies in Linguistics (LING) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Linguistics (LING). Please contact your mentor/advisor for more details.

LITR: Literature (Undergraduate)

LITR 1005 Introduction to Literature (4 Credits)
The course offers a critical introduction to various genres of literature (a diverse selection of short stories, poems, plays, novels) as well as an introduction to critical reading methods. The course aims to enhance a student's appreciation and understanding of major types of literature; to develop critical approaches to thinking, reading, and writing about literary works; and to cultivate an understanding of the relationship between literary texts and their contexts. To foster the development of critical views about literature, students will be expected to read, discuss, and write about a variety of literary works.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 1007 Introduction to Literature: Maritime Literature (4 Credits)
The course offers a critical introduction to various genres of literature (a diverse selection of short stories, poems, plays, novels) as well as an introduction to critical reading methods. The course aims to enhance a student's appreciation and understanding of major types of literature; to develop critical approaches to thinking, reading, reading and writing about literary works; and to cultivate an understanding of the relationship between literary texts and their contexts. To foster the development of critical views about literature, students will be expected to read, discuss, and write about a variety of literary works. This course will focus on Maritime Literature.
Attributes: *Humanities Gen Ed, Liberal

LITR 1998 Individualized Studies in Literature (LITR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Literature (LITR). Please contact your mentor/advisor for more details.

LITR 2006 African American Literature: Intro (4 Credits)
The purpose of this course is to introduce influential texts produced by African American thinkers, novelists, poets, dramatists and essayists from the eighteenth century to the present. Investigation of these texts allows the student to discover the major aesthetic, intellectual, and political concerns of these writers and their contexts, including oppressive systems like American chattel slavery and Jim Crow legislation. How African American writers explore intersections of race, class, and gender in their works is a particular focus of this course.
Attributes: *Diversity Gen Ed, *Humanities Gen Ed, Liberal

LITR 2010 American Literature to 1865 (4 Credits)
This course offers an introduction to the development of literary styles and genres from initial European contact with the Americas through the Civil War. The course will examine texts within their historical, political, and social contexts. Readings will reflect the diverse cultural traditions within American literature and will cover a variety of genres (e.g., transcripted oral stories, autobiographies, poems, sermons, letters, pamphlets, short fiction, etc.).
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 2015 American Literature 1865-Present (4 Credits)
This course will introduce students to literary styles and genres from the Civil War through the present, looking at a variety of texts in their social, historical, and cultural contexts.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 2020 An Introduction to The Modern Short Story (4 Credits)
This course will introduce students to major short stories and novellas of the 20th century and the literary devices and techniques the authors of these works employ. Along with following the chronological development of this genre, students will explore themes within these stories, and how these themes converge with social, historical and political movements of the time period. Students will also be exposed to methods of literary interpretation and ways to effectively argue their findings in writing.
Attributes: Humanities Gen Ed, Liberal

LITR 2025 Banned Books: Introduction (4 Credits)
This course is designed to provide an opportunity for the student to explore literature that has been suppressed, banned, prohibited, or censored based on religious, sexual, social and/or political grounds. Prerequisites: Intro to Lit.
Attributes: Liberal

LITR 2030 Children's Literature: Introductory (3-4 Credits)
This course surveys literature created especially for children. Students will read both broadly and deeply in the genre. Students will learn to read children's literature in the context of literary studies rather than pedagogy, though this course is likely to benefit those who work with children's literature professionally.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 2035 Introduction to Literature: Hamlet (3 Credits)
The course offers a critical introduction to various genres of literature (play, novel, short story, poetry), all related to or derived from Shakespeare's Hamlet, as well as an introduction to critical reading methods. The course aims to enhance a student's appreciation and understanding of these types of literature; to develop critical approaches to thinking, reading, and writing about literary works; and to cultivate an understanding of the relationship between literary texts and their contexts. To foster the development of critical views about literature, students will be expected to read, discuss, and write about the literature read.
Attributes: *Humanities Gen Ed, Liberal, Partial Hum Gen Ed

LITR 2040 World Literature: Introductory (4 Credits)
This course will concentrate on selected works of fiction and poetry in Latin American, African, Asian and Middle Eastern literatures. Students will explore concepts such as migration; issues of race, class, and gender in cultural context; social and political justice; cultural transition and disorientation; and colonialism and imperialism. Additionally, students will be exposed to methods of literary interpretation and ways to effectively argue their findings in writing. This course was previously titled Global Multicultural Literature: Intro. Students who have taken Global Multicultural Literature should not take World Literature.
Attributes: Humanities Gen Ed, *Diversity Gen Ed, *Humanities Gen Ed, Liberal

LITR 2045 Literature of Addiction: Introduction (4 Credits)
This course will provide the student with a basic understanding and appreciation of how poems, fiction, memoirs, essays, and films can be directed to address a variety of issues relevant to substance abuse. It is recommended students take Intro to Literature prior to this course.
Attributes: Humanities Gen Ed, Liberal

LITR 2050 Science Fiction & the Human Dynamic: Introduction (4 Credits)
In this study 20th and 21st century Science Fiction will be explored in several contexts: technical, historic, socio-political, and as modern fable, dealing with human nature in speculative circumstances and futuristic environments. Prerequisites: Preferably the student will have taken Intro to Literature
Attributes: Humanities Gen Ed, Liberal

LITR 2055 Studies in British Literature (4 Credits)
Iterations of this course will concentrate on one or more of a variety of topics organized, for instance, around a period, genre, major (or minor) author, or critical question. The topic will be studied at the introductory level and provide the basis for continued study in British or other literature at the advanced level.
Attributes: Liberal

LITR 2998 Individualized Studies in Literature (LITR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Literature (LITR). Please contact your mentor/advisor for more details.

LITR 3005 Banned Books: Advanced (4 Credits)
This course is designed to provide an opportunity for the student to explore literature that has been suppressed, banned, prohibited, or censored based on religious, sexual, social and/or political grounds. Prerequisites: Intro to Lit.
Attributes: Humanities Gen Ed, Liberal

LITR 3008 African American Literature: Advanced (4 Credits)
The purpose of this course is to introduce influential texts produced by African American thinkers, novelists, poets, dramatists and essayists from the eighteenth century to the present. Investigation of these texts allows the student to discover the major aesthetic, intellectual, and political concerns of these writers and their contexts, including oppressive systems like American chattel slavery and Jim Crow legislation. How African American writers explore intersections of race, class, and gender in their works is a particular focus of this course. Students taking African American Literature at the advanced level will conduct and integrate scholarly research into their analytical assignments.
Attributes: *Diversity Gen Ed, *Humanities Gen Ed, Liberal

LITR 3010 Children's Literature: Advanced (4 Credits)
This course focuses on children's literature and its current scholarship in the field. Students may examine one or more of the following topics as they pertain to children's literature: the history and chronological development of children's literature as a genre; race, class, gender, sexuality, and other issues of multiculturalism in children's literature; censorship; and adaptations. Students will read, analyze, and discuss children's literature from a variety of relevant perspectives. Students should note that this is a course in literature, not in pedagogy.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3015 Cultural Diversity through Literary Art (4 Credits)
To help the student achieve a useful and important set of insights into various cultures and American sub-cultures by reading and analyzing important short and long fiction of these cultures.
Attributes: Liberal

LITR 3022 Ekphrasis Poetry (4 Credits)
This study examines how poetry can function as an interpretive narrative for visual art.
Attributes: Liberal

LITR 3025 Folktales, Fairy Tales, & Fantasy Literature (4 Credits)
Here be dragons! Stories from an earlier period in our personal and cultural histories are not easily forgotten. This course will explore traditional and contemporary folktales, fairy tales, and fantasy literature, and consider their cultural contexts.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3030 World Literature: Advanced (4 Credits)
This course will concentrate on selected works of fiction and poetry in Latin American, African, Asian and Middle Eastern literatures. Students will explore concepts such as migration; issues of race, class, and gender in cultural context; social and political justice; cultural transition and disorientation; and colonialism and imperialism. Additionally, students will be exposed to methods of literary interpretation and ways to effectively argue their findings in writing. Students taking World Literature at the advanced level will conduct and integrate scholarly research into their analytical assignments. This course was previously titled Global Multicultural Literature: Advanced. Students who have taken Global Multicultural Literature should not take World Literature. Although there are no prerequisites, the student should have a foundational background in writing and literature studies.
Attributes: Humanities Gen Ed, *Diversity Gen Ed, *Humanities Gen Ed, Liberal

LITR 3035 Utopian Literature (4 Credits)
What is an ideal society? What potential for peace and equality do humans possess? In what ways do our contemporary cultures manifest a utopian impulse, if they do? Is the concept of utopia of value? If so, why? This course explores narratives about ideal communities-places where people live without war, hunger, or need. Such narratives use a variety of fictional situations (such as dreams, travel tales, futuristic visions) to present the ideal culture. As with any examination of other cultures (real or fictional), this study will help you examine your own culture, reflect on it from a broader perspective, and develop new insight into your cultural assumptions and values. This course was previously Ideal Worlds: Utopian Literature.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3040 Jane Austen (4 Credits)
While Jane Austen is certainly an important and a famous author, she is much more than that: she is also an icon, an enduring cultural success story, and the center of a cult of personality. In this course, we will examine the work of Austen herself and potentially the work that has been done with her life and her materials, from high culture to pop-culture. The field of Austen studies and critical work in Austen scholarship may be considered.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3046 Poetry (4 Credits)
The purpose of this study is to provide the student with an opportunity to study poetry in English and its role and status in culture.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3050 Literary Theory (4 Credits)
Literary Theory examines the main trends of literary theory of the last century, and asks students to evaluate and critically apply literary theory. The course introduces some of the different strategies of reading and integrates philosophical and social perspectives in the consideration of the questions: what is literature, how is it produced, and what is its purpose? In general, we will: (1) consider selected readings in order to see how they define literary interpretation; (2) consider the limits of each particular approach; and (3) trace the emergence of subsequent theoretical paradigms as responses to what came before. Students cannot take both LITR 3049 and LITR 3050
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3060 Literature of Addiction: Advanced (4 Credits)
The contract will provide the student with a basic understanding and appreciation of how poems, fiction, memoir, and essays can be directed to address a variety of issues relevant to substance abuse and the human dynamic. Prerequisites: Preferably the student will have taken Intro to Literature.
Attributes: Humanities Gen Ed, Liberal

LITR 3075 Literature & the Culture of the Vampire (4 Credits)
The vampire, as an enduring cultural metaphor for sexuality, class struggle, and Imperialism, has inconveniently and consistently refused to die. He (and, more recently, she) eerily transforms to suit history and circumstances: as Nina Auerbach explains, 'every age embraces the vampire it needs.' Iterations of the course might survey some of the most popular incarnations of the vampire in films, on TV, and in literature, both classic and contemporary. We may consider these works in the light of recent critical scholarship which takes them seriously, to help us decide what is at stake for our culture in the figure of the vampire.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3080 Native American Literature (4 Credits)
We will read Native literary theorists who offer concepts such as communal narrative, survivance, gender balance, orality, and cyclical time, in order to understand Native American literature in historical and cultural context. We will consider the ways Native literatures negotiate the historical legacy of power dynamics; for example, colonizing stereotypes, and how Native writers use humor to evoke, play with, and intervene in these stereotypes. Native literatures register tensions between Native and Western cultural qualities and values and we will examine the stakes of these values to address contemporary issues that we face globally. Related courses may be disciplinary rather than interdisciplinary or multidisciplinary; for example: First Peoples of North America (HIS).
Attributes: Arts Gen Ed, Liberal

LITR 3085 New York City in Literature (4 Credits)
This course will introduce the student to the rich tradition of writing about New York City. The city and its dwellers have for centuries been described, celebrated, and criticized by natives, visitors, and settlers, and the world's fascination with the metropolis continues unabated today. Studying diverse genres such as diary entries, memoirs, biographies, journals, poems, lyrics, newspaper articles, essays, letters, speeches, short stories, and novels, the student will gain a new understanding and appreciation of the unique history and culture of the city and its residents. Although there are no prerequisites, the student should have a foundational background in writing and literature studies.
Attributes: Humanities Gen Ed, Liberal

LITR 3090 Science Fiction & the Human Dynamic: Advanced (4 Credits)
In this study 20th and 21st century Science Fiction will be explored in several contexts: technical, historic, socio-political, and as modern fable, dealing with human nature in speculative circumstances and futuristic environments. Prerequisites: Preferably the student will have taken Intro to Literature.
Attributes: Humanities Gen Ed, Liberal

LITR 3095 Shakespeare (4 Credits)
This course focuses on Shakespeare's works and their cultural context. Students will become familiar with several canonical plays. Additional materials may also be covered. Other potential topics of study might include the Elizabethan and Jacobean theatre, the historical/political/cultural contexts of Shakespeare's work, Shakespeare's plays in performance, and the contemporary field of Shakespeare criticism.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3115 The Modern Short Story (4 Credits)
This course will introduce students to major short stories and novellas of the 20th century and the literary devices and techniques the authors of these works employ. Along with following the chronological development of this genre, students will explore themes within these stories, and how these themes converge with social, historical and political movements of the time period. Students will also be exposed to methods of literary interpretation and ways to effectively argue their findings in writing. Although there are no prerequisites, the student should have a foundational background in writing and literature studies.
Attributes: Humanities Gen Ed, Liberal

LITR 3120 The Popular Romance Novel (4 Credits)
This study will function as a survey of the U.S. popular romance genre. The student will become familiar with the formulaic conventions of the romance novel, paying particular attention to the changes that occur in the 1990s and the beginning of the 21st century. An intro-level literature course is recommended.
Attributes: Humanities Gen Ed, Liberal

LITR 3122 Bilingual Experiences in Literature (2 Credits)
In this study, students will read a selection of work written by bilingual and multilingual writers depicting their experiences learning English for the first time. Through these readings students will come to understand the struggles and determination of these vulnerable young learners. Additionally, students will gain theoretical knowledge of how texts are produced and interpreted and gain deeper experience in articulating the concepts, methods, and practices of current literary approaches to texts Prerequisites: a previous course in literature.
Attributes: Liberal, Partial Hum Gen Ed

LITR 3125 Topics in British Literature: Advanced (4 Credits)
Iterations of this course will concentrate on one or more of a variety of topics organized, for instance, around a period, genre, major (or minor) author, or critical question. Students should have the necessary knowledge and skills in critical thinking, reading, and writing to study British literature at an advanced level.
Attributes: Liberal

LITR 3127 The Graphic Novel (4 Credits)
In this study, students will have the opportunity to explore the fascinating world of what pivotal comics figure Will Eisner termed, "Sequential Art" and discover the nuances of storytelling through narrative and pictures. Graphic novels will be examined as a significant and influential part of the literary cannon, a medium that captures both personal odyssey and cultural events while heightening awareness of larger historical, political, and social issues. It is advisable to have taken another literature course previously but not required.
Attributes: Humanities Gen Ed, Liberal

LITR 3130 US Multicultural Fiction (4 Credits)
This course will explore the treatment, meanings, and implications of race, ethnicity, and cultural diversity in U.S. fiction. It may focus on a variety of literature by African American, Asian American, Latina/o/Chicana/o, and Native American writers, and about these communities.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3132 Asian American Writers (4 Credits)
This course introduces students to Asian American fiction and drama, with an emphasis on 20th and 21st century texts. Students explore works of Asian American literature within the political and social contexts of their emergence, such as anti-Chinese exclusion laws, Japanese American internment, the Vietnam War, the Asian American movement, South Asian discrimination post 9/11, and anti-Asian violence during COVID etc. This course is particularly concerned with how Asian American writers address issues of race, class, and gender in their works, as well as how these identity markers intersect with national belonging.
Attributes: *Diversity Gen Ed, *Humanities Gen Ed, Liberal

LITR 3133 American Women Writers (4 Credits)
This study will look at the emergence of women writers in late 19th and 20th century American literature and the conflicts confronting the figure of women in literature. How do women reconcile traditional social roles of wife and mother with their personal desires as women, as intellectuals, and as individuals? How do issues of race, ethnicity, class and sexuality affect women's sense of identity and self-realization? We will explore themes of identity and difference, resistance and transformation, silence and voice, self-definition and social identity in works by multicultural authors.
Attributes: Humanities Gen Ed, Liberal

LITR 3135 U.S. Women's Multicultural Life Writings (4 Credits)
Students will investigate personal narratives, memoirs, and autobiographies by U.S. women selected for their literary excellence in describing their participation in more than one culture within the U.S. The course will focus on how narrative is used to construct meaning, identity and culture. Students must have the ability to do advanced-level work. This course can fulfill either Humanities OR The Arts general education credit (not both). Students choosing Humanities will have the option of focusing more on reading and analysis of life writings, while students choosing The Arts will have the option of focusing more on creating and revising their own work.
Attributes: Humanities Gen Ed, Arts Gen Ed, *Humanities Gen Ed, Liberal

LITR 3141 Modern American Literature (4 Credits)
This study will look at the rise of modern American literature and the 1920s culture of the "Jazz Age." We will look at the post-World War I disillusionment of such writers as Ernest Hemingway, F. Scott Fitzgerald, and T.S. Eliot, the flowering of African-American writing known as the "Harlem Renaissance" and the artistic contributions of jazz writers and performers.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3145 Young Adult Literature (4 Credits)
This course will focus on the interesting, controversial genre of Young Adult literature. While these books often focus on issues of specific interest or relevance to teenagers (more or less), they are often purchased and read by adults. And that is how we will approach these texts: as experienced, thoughtful, reflective readers. This does not mean, of course, that we will not experience the same kind of emotional exhilaration as our younger counterparts. We will read broadly, to help us think about such issues as the ways in which young adults and the challenges facing them are both described in and constructed by this body of literature.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3160 Literature of the Holocaust (4 Credits)
In this course, you will learn about anti-semitism and the underlying causes and impacts that led to and resulted in the German persecution and annihilation of Jews and other "undesirable" people. Despite the horrific circumstances imposed by the German government, the human spirit found expression in artistic efforts in art, music and literature. You will gain an appreciation for the role that the arts, and literature in particular, can play in explaining and understanding the human condition and the ability of people to endure even the most severe hardship. Highly Recommended (not required): At least one study of literature This course was previously CUL-224354 Literature of the Holocaust.
Attributes: Humanities Gen Ed, Liberal

LITR 3172 Mythology (4 Credits)
This course will focus on myths and the study of mythology. Myths, in common parlance, refer both to ancient or traditional stories or story cycles, but also to things which are widely believed but not true. We will consider what is at stake for both of these definitions as we read broadly and deeply. A primary mode of analysis and inquiry for the course will be considering what we see as the cultural work that particular myths are doing.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

LITR 3192 20th Century American Literature (3 Credits)
"Twentieth-century American Literature" encompasses an extraordinarily diverse range of texts, and there are many ways in which its history could be traced and constructed. This course offers one particular route through this vibrant and divergent literary field. We will examine a range of American literature written between the end of the First World War and the dawning of the 21st century. We will look at some major American writers -- F. Scott Fitzgerald, William Faulkner, Willa Cather, Toni Morrison, James Baldwin, and others -- but also consider the evolving path of American literary history in the twentieth century, its relationship to the social upheavals of the times as well as to the aesthetic and generic development of American art and writing. We'll look at novels, short stories, and journalism, and consider the changing fate of these forms in the age of modernism and post-modernism. Some of the fundamental issues of twentieth-century American life (wars in Europe and Vietnam, the civil rights movement, second wave feminism, the triumph of late capitalism, urbanism and its discontents, religion and secularism, etc.) will be explored alongside a wide variety of literary forms and styles: from the modernist novella and the postwar realist novel, through the experimentalism of Native American writing and New Journalism, to genre fiction, theater, and the graphic novel.
Attributes: Liberal

LITR 3207 American Poetry (3 Credits)
This course introduces students to a full range of twentieth-century American Poetry. The emphasis in this course will be on the poets and their poems as well as their impact and poetry's impact on politics/democracy. Students will be introduced to the basics of analyzing poetic form and rhythms, as well as interpretative strategies relevant for understanding an author's individual voice and the ways in which his or her poems engage with U.S. history and ideas of the poet's vocation in society.
Attributes: Humanities Gen Ed, Liberal

LITR 3996 Special Topics in LITR (2-4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

LITR 3997 Special Topics in LITR (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

LITR 3998 Individualized Studies in Literature (LITR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Literature (LITR). Please contact your mentor/advisor for more details.

LITR 4122 Senior Project Proposal (2 Credits)
The student will prepare a proposal for the senior project and engage in educational planning. The senior project facilitates the integration and reflection of knowledge acquired from university learning which is aimed at creating an original culminating work. Educational planning includes the preparation of a rationale essay articulating how the program of study for the bachelor's degree meets the student's educational and career goals. For the senior project proposal, the student will pose a question to be addressed under the guidance of the ESC mentor. The student and mentor will discuss the focus and design of the research question to be developed. The student will identify the appropriate resources needed to address the question and submit the proposal to the mentor. The thesis, based on the proposal submitted for this study, will be carried out the following semester. This course will be used as part of the Educational Planning credit. Prerequisites: As part of a capstone course, students should enroll in Senior Project Proposal during their final year of study. All lower level concentration courses should be complete, as well as at least two advanced level concentration courses or their equivalent.
Attributes: Liberal

LITR 4127 Senior Project Proposal (2 Credits)
The student will prepare a proposal for the senior project and engage in educational planning. The senior project facilitates the integration and reflection of knowledge acquired from university learning which is aimed at creating an original culminating work. Educational planning includes the preparation of a rationale essay articulating how the program of study for the bachelor's degree meets the student's educational and career goals. For the senior project proposal, the student will pose a question to be addressed under the guidance of the ESC mentor. The student and mentor will discuss the focus and design of the research question to be developed. The student will identify the appropriate resources needed to address the question and submit the proposal to the mentor. The thesis, based on the proposal submitted for this study, will be carried out the following semester. This course will be used as part of the Educational Planning credit. Prerequisites: As part of a capstone course, students should enroll in Senior Project Proposal during their final year of study. All lower level concentration courses should be complete, as well as at least two advanced level concentration courses or their equivalent.
Attributes: Liberal

LITR 4150 Senior Project Thesis (3 Credits)
The student will complete the senior project thesis as planned in the proposal phase of this study. The project provides an opportunity to conduct an in-depth examination of a topic of interest related to the study program that emerged from the student's earlier course work, and in this regard will complete educational planning by focusing on the mastery of academic skills, college level writing and presentation, and independent research and critical thinking. The student will be expected to produce a major research paper that meets the standards established during the proposal stage and prepare the final drafts of the rationale essay. This course will be used as part of the Educational Planning credit. Prerequisites: Successful completion of the Senior Project Proposal.
Attributes: Liberal

LITR 4998 Individualized Studies in Literature (LITR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Literature (LITR). Please contact your mentor/advisor for more details.

MATH: Mathematics (Undergraduate)

MATH 1000 College Mathematics (4 Credits)
This course provides students with the opportunity to strengthen college mathematics skills prior to enrollment in more advanced courses. The student will have the opportunity to further develop the skills and confidence needed to be successful in other courses that require college-level quantitative skills, including statistics. Topics include employing quantitative methods to solve problems, determining the reasonableness of results, and recognizing the limits of mathematical methods. Fluency with the use of integers, rational numbers, exponents, expressions, equations, inequalities, inductive and deductive reasoning, algebraic problem solving, graphs, geometry, measurement, and the use of probability and statistics will be furthered. Notes: This course overlaps with algebra. A student should seriously consider which course is appropriate, depending on math background, comfort and goals. This study is appropriate for students who need general education credit in mathematics.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1005 Contemporary Mathematics (4 Credits)
This study explores the exciting world of mathematics through such diverse topics as working with investing models, geometry, characterizing change and statistics. Foundational studies, including algebra, are also included, but not as extensively as in a full algebra course. Note: This study is appropriate for students needing to meet the general education requirement. This course was previously SMT-271954 Contemporary Mathematics.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1010 Discovering Math Across Generations (4 Credits)
Interested in helping children with math? Would you like to convey mathematical concepts through creative home projects? Do you have the numerical skills to understand and communicate quantitative concepts? This course presents mathematics materials for families to learn and enjoy mathematics. An interactive approach helps adults use topics in algebra, geometry, number sense, estimation, logical thinking, probability and statistics with other family members and children. This course is designed for interaction with children between the ages of 6 and 12. Highly Recommended (not required): Since the course is designed around this interaction, access to a child of this age is highly recommended. Notes: This study is appropriate for students who need general education credit in mathematics. This course was previously SMT-271604 Discovering Math Across Generations.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1015 Math for the Inquiring Mind (4 Credits)
The focus of this course is on developing mathematical problem solving as a process of identifying, defining, and understanding a mathematical problem; and then modeling, validating, and documenting its solution. Students will improve and refine problem-solving skills, including analytical and critical thinking, and quantitative reasoning as they apply to real-life mathematical problems. Learners will also use a learning journal throughout the course as a strategy for reflection and self-assessment. The course includes the use of tables, data management and analysis, graphical analysis, and modeling. A spreadsheet (preferably Excel) will be used extensively as a problem-solving tool. Note: This study is appropriate for students who need general education credit in mathematics. This course was previously SMT-271854
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1020 Voter Math (3 Credits)
Voter Math examines the mathematics of elections while building mathematical understanding. Topics include: the use of a spreadsheet; statistical tools; the use of polls and surveys; voting algorithms (methods); fairness criteria; power distribution in voting; and apportionment of seats in legislatures. Through problem solving with Excel, students will gain confidence in the use of basic math skills, such as fractions, decimals, percentages, simple equations and formulas. They will expand their skills to include statistical tools, creation and interpretation of graphs, more advanced use of equations and formulas, calculation of power indices, and various vote tallying methods. Note: This study is appropriate for students who need general education credit in mathematics. For students who need additional support using Excel, a list of available video tutorials will be made available. This course was previously SMT-271203.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1025 Quantitative Reasoning (4 Credits)
This study will develop the ability to interpret and reason with information that involves mathematical ideas and numbers. As students explore issues that directly affect their lives, they will gain an appreciation of mathematics and its importance in a technological world. Topics include statistical reasoning, financial management, mathematical modeling, probability, and geometry. Note: This study is intended for students who need general education credit in mathematics.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1030 Visualizing Mathematics (4 Credits)
Are you a visual learner? This course will give an opportunity to learn mathematics primarily through seeing it. Focus will be on topics in geometry, which are naturally visual, and graphing, which will give an understanding of the visual aspect of algebra. The course will also look at mathematics through art. DVDs and text materials will be used, along with internet resources. Note: This study is appropriate for students who need general education credit in mathematics. This course was previously SMT-271514 Visualizing Mathematics.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1040 Algebra (3,4 Credits)
This study will develop basic algebra concepts and problem solving techniques. The student will develop skills in translating problem situations into their symbolic representations and manipulating those symbols. Major topics include equations, inequalities, problem solving, geometry, graphs, and transformations. Linear, quadratic, polynomial, exponential, and logarithmic functions will be studied. Note: This study is appropriate for students who need general education credit in mathematics. Prerequisite: Understanding of arithmetic essentials. This course was previously SMT-271104 Algebra.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1050 Mathematics for Business (4 Credits)
Mathematics for Business presents math skills and knowledge that can be applied in solving financial problems. The core topics include business finance, trade and cash discounts, markup and markdown, business statistics, wages and payroll, simple interest and simple discount, compound interest, future value, and present value, mortgages, sinking funds, and amortization, depreciation, inventory, insurance, business insurance, life insurance, annuities, taxes, stocks and bonds. Students will also gain an understanding of financial instruments and terminology used in business finance. This serves as a foundation for further studies in business, management, accounting, and finance. Students will gain skills to manage personal finance. Note: This study is appropriate for students who need general education credit in mathematics.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1055 Mathematics for Elementary Teachers (4 Credits)
This course is intended for students who are interested in teaching at the elementary school level. Elementary mathematics material will be presented from a variety of perspectives so that the student will be more able to address the broad range of learning aptitudes that he/she will encounter in their future students. Topics will include a development of binary algorithms, properties of the real number system as applied to different mathematical systems, systems of numeration, functions and equivalence relations and solving algebraic equations and number theory.
Attributes: Liberal

MATH 1060 Introduction to Statistics (3 Credits)
The student will study introductory statistics in order to be able to interpret, evaluate, and use statistical information and methods. The student will work standard problems in statistical analysis involving measures of central tendency, measures of dispersion, confidence intervals, hypothesis testing, and correlation and regression. The student will also interpret the results of statistical analysis and present and evaluate statistical information in graphical form. Note: This course can be paired with Statistics II. It should not be taken with Statistics (4 credits), since there is considerable overlap.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1065 Statistics (3-4 Credits)
The focus of this course is on the application and use of statistics, rather than the detailed complexity of the underlying mathematics. Students will study and apply the fundamental concepts and methods of data analysis, including both descriptive and inferential statistics, including arranging data, tables and graphs, measures of central tendency and dispersion, regression analysis, correlation, sampling, confidence intervals, and hypothesis testing. The student will make use of technology-based tools (Excel, StatCrunch, etc.) to assist in summarizing, interpreting, and communicating with data. Notes: This study is appropriate for students who need general education credit in mathematics. Algebra would provide a good background for statistics, although the minimum entering skills would be arithmetic essentials (fractions, decimals, ratios) and graphing. This course was previously SMT-272384 Statistics: An Activity Based Approach.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1100 Introduction to Discrete Mathematics (4 Credits)
This course is designed to develop mathematical thinking at an abstract level, starting from a modest background in mathematical algorithmic knowledge. It includes the basic ideas of logic, proofs and mathematical induction; set theory; an understanding of the concept of function in set theoretic terms; equivalence relations and graphs. Notes: Recommended for students who lack the math background for an advanced level study of this subject. This study is appropriate for students who need general education credit in mathematics. Prerequisites: MATH 1040 Algebra.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1110 Geometry (4 Credits)
This course covers the important principles and real-world applications of geometry. Topics covered include line and angle relationships, parallel lines, triangles, quadrilaterals, similar triangles, circles, locus and concurrence, areas of polygons and circles, surfaces and solids, and analytic geometry. Notes: This study is designed for students who wish to expand their learning in geometry, including non-Euclidian geometry. This study is appropriate for students who need general education credit in mathematics.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1122 Math for Paraprofessionals (3 Credits)
In this course, paraprofessionals will study elementary concepts of sets, numeration systems, number theory, and properties of the natural numbers, integers, rational, and real number systems. There will be an emphasis on problem solving and critical thinking pertaining to understanding and explaining the concepts. All readings and learning activities for the study are taken from the Mathematics For Elementary Teachers by Michelle Manes: Creative Commons. (http://pressbooks-dev.oer.hawaii.edu/math111/)
Attributes: Mathematics Gen Ed

MATH 1140 Precalculus (4 Credits)
Students learn the foundational concepts needed to prepare for further studies in mathematics and its applications. Topics covered will include: precise and correct usage of mathematical terminology, sets, functions and their inverses, rational functions, linear, quadratic, cubic and quartic equations, trigonometry, exponential and logarithmic functions, complex numbers, graphing, and solving word problems. Other topics may include the introduction of conic sections, polar coordinates and parametric equations. The primary audience for this study consists of students who are planning further studies in Mathematics, related fields, IS/IT, or Business. Knowledge in Algebra (MATH 1040) or equivalent is required.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1145 Introduction to Calculus (3 Credits)
In this study, students will apply the basic principles of calculus, including limits, slopes, and tangents. In addition, students will begin to explore derivatives and integrals. Notes: This study is intended to be a one-term introduction to calculus for students who do not need to complete two or three terms in calculus. It will prepare the student for further study in technology, science, or mathematical applications in other fields. This study is appropriate for students who need general education credit in mathematics. This course is meant as a stand-alone and will not be sufficient preparation for Calculus 2. If you are preparing for the Calculus sequence, (Calculus 1, 2, 3), you should not take this course. Prerequisites: MATH 1040 Algebra.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1150 Calculus for Business (4 Credits)
Calculus for Business is a study of functions, limits and derivatives. It is designed to improve understanding of the way that variables such as supply and demand interact with each other. Business applications include the study of marginal rates for profit and revenue using derivatives, and the use of exponents and logarithms in the calculation of compound interest. Integration is viewed as a summation over continuous time or space. Notes: This study is appropriate for students who need general education credit in mathematics. Calculus for Business and Calculus I cannot both be taken for credit. Student should have a current knowledge of Algebra prior to taking this course.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 1998 Individualized Studies in Mathematics (MATH) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Mathematics (MATH). Registration for this class must be approved by the student's mentor.

MATH 2005 History of Mathematics: Introductory (4 Credits)
This interdisciplinary course offers an introduction to the development of mathematics from antiquity to the present. Moving beyond an outline of the development of mathematical ideas in Europe and its colonies, students will also study mathematical developments in other cultures, including the ancient Mesopotamian, Chinese, Indian and Egyptian civilizations. Emphasis will be placed on mathematical developments in broader historical and cultural context. Students will discuss points of view concerning selected core controversies in mathematics, research and write about the contributions of individuals or cultural groups to the development of mathematics, and solve a variety of mathematical problems of historical interest. Note: This study is appropriate for students who need general education credit in mathematics. This course was previously SMT-272904 History of Mathematics.
Attributes: Mathematics Gen Ed, Other World Civilization Gn Ed, *Mathematics Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

MATH 2010 Introduction to Proof & Logic (4 Credits)
Logic, the science of cogent inference, is at the foundation of all mathematical reasoning. Moreover, logic is an essential underpinning for many other fields which rely on analytical reasoning. This multidisciplinary study offers an introduction to formal logic and methods of proof. A particular emphasis will be placed on clear exposition in proof-writing, strategies in the construction of mathematical proofs, and critical reflection on proof composition and methodology. Highly Recommended (not required): Prior to enrolling in this course, a student should have a working knowledge of mathematical notation and terminology. At least two semesters of undergraduate mathematics is strongly recommended, with one of these being at a minimum Precalculus or higher. Notes: This study is intended to facilitate the transition to studies in advanced-level undergraduate mathematics. This course was previously SMT-272164 Introduction to Proof and Logic.
Attributes: Liberal

MATH 2015 Mathematics for Game Programmers (4 Credits)
Mathematics for Game Programmers develops math skills and knowledge needed to be applied to game programming. The core topics include points and lines, parabolas, circles and spheres, trigonometric functions, vector operations, matrix operations, and transformations. The study serves as a good foundation for further study in computer programming. This study is appropriate for students who need general education credit in mathematics. Prerequisites: MATH 1040 Algebra.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 2065 Statistics II (3 Credits)
In this study, students will continue the exploration of statistics in order to be able to interpret, evaluate, and use statistical information and methods. The student will briefly review introductory statistics. Then, the student will solve problems using statistical analysis involving hypothesis testing, multiple regression, applications of the Chi-Square distribution, and analysis of variance (ANOVA). The student will also be able to interpret the results of statistical analysis and be able to present and evaluate statistical information. This study is appropriate for students who need general education credit in mathematics. Prerequisites: Introduction to Statistics MATH 1060 or Statistics MATH 1065.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 2140 Calculus I (4 Credits)
Topics found in Calculus I include solving problems pertaining to functions, limits, continuity, derivatives, implicit differentiation, related rates, maxima and minima. Students also begin to study definite integrals with applications to area and volumes of revolution. Note: This is the first in a three-course Calculus sequence. Knowledge of Precalculus (MATH 1140) or equivalent is required.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 2141 Calculus II (4 Credits)
In Calculus II, students will study techniques and applications of integration, elementary transcendental functions, polar coordinates, parametric equations, infinite sequences and series, vector functions, and curves in space. Prerequisite (must complete before registering): Calculus I Notes: This is the second course in a three-course sequence. There may be some variation in topics covered. This course was previously SMT-272144 Calculus 2.
Attributes: Liberal

MATH 2998 Individualized Studies in Mathematics (MATH) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Mathematics (MATH). Registration for this class must be approved by the student's mentor.

MATH 3000 Exploring the Disciplines: Thinking Mathematically (2 Credits)
Use this course in conjunction with educational planning to both learn more about what a degree in mathematics means, as well as experience the world of theoretical mathematics. Students also explore the use of Maple software. Ideally, this is taken before or concurrently with any advanced level math course. Prerequisites: Some math background is needed, but actual content will vary. This course was previously EDU-233032. This course may be used to fulfill educational planning credit with mentor approval.
Attributes: Liberal

MATH 3005 History of Mathematics: Advanced (4 Credits)
This interdisciplinary course offers an advanced-level introduction to the development of mathematics from antiquity to the present. Moving beyond the development of mathematical ideas in Europe and its colonies, students will also study mathematical developments in other cultures, including the ancient Mesopotamian, Chinese, Indian and Egyptian civilizations. Students will propose a course theme in accordance with their particular interests around which to build their principal research and writing assignments. Students will be encouraged to identify significant mathematical developments, to analyze key ideas, contributors and events that made these possible, and to discuss implications for mathematics in the 21st century. Prerequisite (must complete before registering): Precalculus Highly Recommended (not required): This advanced-level study presumes that the student has already achieved upper-level standing with fluency in college reading, writing, research and critical thinking. This study also presumes that the student has excellent knowledge of college level mathematics through Precalculus. Notes: This study is appropriate for students who need general education credit in mathematics. There is an introductory version of this course (MATH 2005) in which students who may not yet be prepared for advanced-level studies are encouraged to enroll. This course was previously SMT-273904 History of Mathematics.
Attributes: Mathematics Gen Ed, Other World Civilization Gn Ed, *Mathematics Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

MATH 3010 Linear Algebra (4 Credits)
This study examines linear equations, matrices, and determinants. This foundational knowledge leads to a detailed study of real vector spaces, including linear independence, basis, dimension, and orthogonality. Following an exploration of eigenvalues and eigenvectors, the study will culminate in an exploration of linear transformations, which are the multidimensional generalization of the familiar linear functions. Prerequisite (must complete before registering): Calculus III This course was previously SMT-273014.
Attributes: Liberal

MATH 3015 Discrete Mathematics (4 Credits)
This course explores the precise foundational mathematical concepts that underlie much of computer science and advanced studies in mathematics. Topics include formal symbolic logic, an introduction to deductive proof, set theory, relations, functions, partial orders, induction, recursion, principles of counting, algorithms, complexity, and introductory concepts in graph theory. Prerequisites (must complete before registering): Excellent algebraic skills and working knowledge of mathematical notation and terminology. Highly Recommended (not required): At least two semesters of undergraduate mathematics, with one of these being at a minimum Pre-Calculus or higher. Note: Students who wish to concentrate in mathematics, applied mathematics, or related fields such as computer science, information systems, or information technology are most likely to take this course. This course was previously SMT-273104.
Attributes: Liberal

MATH 3020 Graph Theory (4 Credits)
Topics covered in this course include: graphs as models, paths, cycles, directed graphs, trees, spanning trees, matchings (including stable matchings, the stable marriage problem and the medical school residency matching program), network flows, and graph coloring (including scheduling applications). Students will explore theoretical network models, such as random graphs, small world models and scale-free networks, as well as networked datasets from social, infrastructure and information networks, the role of strong and weak ties, triadic closure, and centrality measures, as well as the fragility of networked systems and contagious process on networks of various topologies. Prerequisites: Discrete Math Foundations of mathematics and mathematical proof: logic, methods of proof (both inductive and deductive), sets, relations and functions. This knowledge may be obtained from a course such as Discrete Mathematics, for example. This course was previously SMT-273244.
Attributes: Liberal

MATH 3025 Math Modeling (4 Credits)
Mathematical Modeling looks at the world in a numerical way to gain a better understanding of how things work and interrelate. The focus of this course will be on patterns of growth. There are countless examples that will allow the course to include new or newsworthy problems each term. When will an outbreak of a disease become an epidemic? Which investment strategies give the best return? When does a species, such as the spotted owl of the great Northwest, decline to a point that it is doomed to extinction? When is a problem too big to be solved by a computer? Prerequisites: Calculus I, Statistics Calculus II recommended prior to enrolling in Math Modeling. This course was previously SMT-273504.
Attributes: Liberal

MATH 3040 Calculus III (4 Credits)
This is the third in a three-course Calculus sequence. Topics found in Calculus III include functions of several variables, partial derivatives, directional derivatives, maxima and minima of functions of several variables, line integrals, surface integrals, divergence, curl, Green's Theorem, Stokes' Theorem, and applications of double and triple integrals. Prerequisite (must complete before registering): Calculus II Note: Since this course is part of a sequence, the content of Calculus III may differ depending on what was offered in Calculus II. If at all possible, a sequence that follows the same book is the preferred approach. This course was previously SMT-273144 Calculus 3.
Attributes: Liberal

MATH 3045 Mathematical Proofs (4 Credits)
Advanced mathematics requires creativity in analyzing why theorems are correct, reading their proofs, and creating proofs for additional theorems. This study is designed to provide the tools to analyze proofs and to present the advanced concepts in accord with mathematical conventions. The study includes sentential logic, logic of quantifiers, proof strategies, biconditionals, existence and uniqueness proofs, relations, functions and inductive proofs. This study is appropriate for students who need general education credit in mathematics. Prerequisites: Discrete Math MATH 3015.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 3050 Applied Probability & Statistics (4 Credits)
This study provides the mathematical foundations of both statistics and probability. Topics include: review of descriptive and basic inferential statistics and basic probability, random variables, probability distributions (Poisson distribution, normal distribution, geometric distribution, the negative binomial distribution and the gamma distribution) parameter estimation, goodness of fit tests, regression analysis and basic quality control methods. Note: This study is appropriate for students who need general education credit in mathematics.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 3055 Numerical Methods (4 Credits)
This course explores develops a variety of skills involving mathematical preliminaries and error analysis, direct methods for solving linear systems, interpolation and polynomial approximation, numerical integration and differentiation, and solutions of equations of one variable. This course is highly computational and many of the concepts require a deeper understanding of the theory presented. Prerequisites: Calculus II Familiarity with linear algebra and programming recommended. This course was previously SMT-273344.
Attributes: Liberal

MATH 3060 Mathematical Statistics (4 Credits)
In this upper level calculus-based probability and statistics course, students will study topics including descriptive statistics, probability models and related concepts and applications, statistical estimation, and hypothesis testing. Prerequisites (must complete before registering): Calculus II This course was previously SMT-273114.
Attributes: Liberal

MATH 3065 Ordinary Differential Equations (4 Credits)
This upper-level course provides an exploration of the theory, solution, and application of ordinary differential equations. Concepts learned include methods of solving first-order differential equations, higher-order differential equations, modeling with first-order and higher-order differential equations, series solution of linear equations, systems of linear first order differential equations, and numerical solutions of ordinary differential equations. Students will apply differential equations in physics, biology, and economics. Prerequisite (must complete before registering): Calculus III This course was previously SMT-274104.
Attributes: Liberal

MATH 3998 Individualized Studies in Mathematics (MATH) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Mathematics (MATH). Registration for this class must be approved by the student's mentor.

MATH 4005 Number Theory (4 Credits)
In this upper-level mathematics course students will apply the concepts of number theory. This will take place through numerical calculations, reading and writing of proofs, and discussion. Students will explore the properties of integers and their applications, including topics in the history of number representation systems, divisibility, prime numbers, linear Diophantine equations, Fermat's last theorem, cryptology, and public key encryption. Prerequisites (must complete before registering): Intro to Proof and Logic Note: Foundation in reading and writing of proofs is necessary. This course was previously SMT-274314.
Attributes: Liberal

MATH 4010 Abstract Algebra I: Group Theory (4 Credits)
In this upper level study, students explore the theory and applications of the algebraic structures known as groups. In addition, group theory will be used to develop the skill in proofs and abstraction that are essential to further study of higher mathematics. Topics covered in this course include: an introduction to the abstract idea of a group; example groups; subgroups and cyclic subgroups; permutations and Cayley's Theorem; cosets, normal groups and their relationship to homomorphisms; and Lagrange's Theorem. Prerequisites: It is assumed that students are acquainted with logic and the construction of proofs, usually from having completed a study in at least two out of three of the following topics: Discrete Math, Proofs, and Linear Algebra. Relevant topics from those courses are logic, proofs, if and only if proofs, proof by induction, equivalence relations, properties of functions such as one to one and onto, and matrix operations. These topics will be used extensively. This course was previously SMT-274404 Abstract Algebra 1: Group Theory.
Attributes: Liberal

MATH 4011 Abstract Algebra II (4 Credits)
This study focuses on rings, integral domains and fields. It is designed to expand knowledge of the building of theoretical structures based on axioms, and to build an understanding of how these constructs are more general versions of algebra learned earlier. Prerequisites: Abstract Algebra I.
Attributes: Liberal

MATH 4020 Quantitative Methods for Management (4 Credits)
Explore quantitative methods and techniques for decision support in a management environment, using mathematical models. The course includes formal project management tools and techniques, such as linear programming; use of time series analysis for forecasting; applications of regression analysis in management; and aspects of decision theory and simple modeling. Complete a final project, applying one or more of these techniques in an area of interest. Notes: Excel spreadsheet software is used extensively in course assignments. This course meets the quantitative guideline in BME degrees. This course was previously SMT-214104 Quantitative Methods for Management.
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

MATH 4025 Complex Variables (4 Credits)
The theory of complex variables is elegant and rich in applications. Also known as Complex Analysis, this is primarily a proof-based study of functions of a single complex variable. Complex variables enjoy a wide range of applications, which appear in engineering and the physical sciences. Complex Analysis also applies elegantly to other sub-fields of mathematics, such as Number Theory and Partial Differential Equations. Prerequisites: Introduction to Proof and Logic and Calculus III. This course was previously SMT-273314.
Attributes: Liberal

MATH 4030 Real Analysis (4 Credits)
This course is an exploration of the theory of calculus of functions of a single real variable. Students will establish calculus on a rigorous foundation: familiar concepts will be revisited in the context of mathematical proof. Topics include: the real numbers, limits of sequences, completeness, the Monotone Convergence Theorem, the Bolzano-Weierstrass Theorem, the Cauchy Criterion, the Cantor Set, open and closed sets, sequential compactness, limits of functions, continuity, the Intermediate Value Theorem, the derivative, the Mean Value Theorem, the Riemann Integral, and the Fundamental Theorem of Calculus. Prerequisites (must complete before registering): Calculus III and one of the following: Intro to Proof and Logic, Discrete Mathematics or Linear Algebra This course was previously SMT-274344 Real Analysis: The Theory of Calculus.
Attributes: Liberal

MATH 4998 Individualized Studies in Mathematics (MATH) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Mathematics (MATH). Registration for this class must be approved by the student's mentor.

MGIS: Management Info Syst (Undergraduate)

MGIS 1998 Individualized Studies in Management Information Systems (MGIS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Management Information Systems (MGIS). Registration for this class must be approved by the student's mentor.

MGIS 2000 The Internet of Things (IoT) Essentials (4 Credits)
The course focuses on the next evolution of the Internet - Internet of Things (IoT). Along with Web of Things (WoT), Web 3.0 and Machine to Machine (M2M), IoT brings innovative business strategies and technology transformations to the society and to our life. The goal of the course is to look top-down as well as bottom-up, to provide students with an understanding of the IoT and other related technologies. The student will research compare and summarize at a variety of real-world application scenarios of the IoT and diverse implemented applications. This allows students to understand what IoT technologies are used for, and what is required to build appropriate IoT solutions.
Attributes: Liberal

MGIS 2998 Individualized Studies in Management Information Systems (MGIS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Management Information Systems (MGIS). Registration for this class must be approved by the student's mentor.

MGIS 3000 Business Intelligence: Practices, Technologies, Management (4 Credits)
The primary objective of this advanced course is to introduce the students to concepts, practices, and technologies called Business Intelligence, in some circles also referred as Business Analytics. Other objectives are to provide students with details and knowledge in applications of BI, data warehousing, data mining, Web intelligence/Web analytics, knowledge management, predictive analysis, and other practical benefits of business related intelligent systems.
Attributes: Liberal

MGIS 3005 The Business of the Internet of Things (IoT) (4 Credits)
The course focuses on a new emerging topic - the Internet of Things (IoT). Along with Web of Things (WoT), Web 3.0, Human to Machine (H2M), Machine to Machine (M2M), Cloud and Fog computing, the IoT brings innovative transformations in corporate strategies, new business models, to the society and our life. With a case based approach, the course provides students with a comprehensive understanding of the Business of IoT and other related technologies. The student will research, analyze, and justify a variety of real-world IoT applications of connected devices, remote operations, predictive analytics and preventive maintenance based on proven use-cases adopted globally. This will allow students not only to understand what IoT technologies are used for today, but also what is required to plan, and suggest framework for implementing IoT solutions.
Attributes: Liberal

MGIS 3010 Management Information Systems (4 Credits)
In this course, students explore the impact of advances in information technology in the context of organizational decision making and the potential of an effective management information system to contribute to organizational learning, to be a source of competitive advantage, and to assist an organization competing in a global arena. By exploring systems from a managerial and organizational perspective, students will develop the capacity to examine the interactions among people, technology, and processes and recommend solutions to complex business problems. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent. Students should have a basic understanding of computers along with a fundamental understanding of computer use in an organizational environment. In addition, students should have an understanding of basic management principles. This can be gained through a course such as Management Principles or equivalent knowledge through professional experience. This course was previously SMT-273754 Management Information Systems. Cross-listed with BUSN 3122.

MGIS 3996 Special Topics in MGIS (2-8 Credits)
Attributes: Liberal

MGIS 3998 Individualized Studies in Management Information Systems (MGIS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Management Information Systems (MGIS). Registration for this class must be approved by the student's mentor.

MGIS 4005 Information Security & Policy (4 Credits)
This course focuses on comprehensive overview of securing computer operations, information security planning, and managing information security programs. Topics include general security concepts; operational, physical, infrastructure, and wireless security; cryptography and PKI infrastructure; authentication, remote access, IDS, protection mechanisms, and network security; personnel and security; planning for contingency, developing information security policy and programs; identifying, assessing and controlling the risk; security management models and practices; professional ethics, current law, regulations, and important professional organizations related to information security. Assumptions about surrounding courses: Students should have an understanding of computer networks, database systems and database administration concepts, and web technologies and related applications. In addition, students should have an understanding of basic management principles. Notes: Students should select either this course, or Information Assurance as part of their degree program as there is substantial overlap in the course curriculums.
Attributes: Liberal

MGIS 4010 Information Technology for Management (4 Credits)
In this course, students will explore the impact of information technology on the business environment, focusing on how the organizational success and economic opportunities are supported or provided by IT-enabled capabilities. Students will analyze the use of the latest information technologies for achieving managerial goals and strategic business objectives. Students will examine how IT-business strategic alignment, operations, collaboration, performance, productivity, growth and career success are driven by and dependent on IT-capabilities. By exploring emerging information technologies, students will examine the framework -Operating model, Enterprise architecture, IT engagement model- and recommend appropriate IT solutions to complex business problems. Assumptions about surrounding courses: Students should have an understanding of computers along with a fundamental understanding of computer use in an organizational environment. In addition, students should have an understanding of management principles. Notes: Student may select either this course, or Management Information Systems as part of their degree program as there is some overlap in the course curriculums.

MGIS 4015 Project Management in IT / IS (4 Credits)
Although Project Management has been a well-established field for many years, managing information technology projects requires specific knowledge and information that go beyond standard practices. This course provides students with a comprehensive understanding of the project life cycle, organizational, behavioral, management concerns, project management tools, and information technology context in a business environment. Students will learn and practice different suggestions on how good project management and effective use of software applications can help them manage projects, especially information technology projects. Students will have acquired project management knowledge that can be helpful in thinking about, understanding, discussing, and managing IT/IS projects. Prerequisites: Management Principles (or equivalent experience in management); Organizational Behavior (or significant experience in management); core IT/IS courses in computers, programming, networking, and systems analysis and design. Notes/Comments: Students can only take one of the project management courses: MGIS 4015 Project Management in IT/IS, INFT 3035 Project Management, or MGMT 4030 Project Management for Business.

MGIS 4020 IT Strategy and Innovations (4 Credits)
This course provides knowledge and competency-based framework related to Information Technology (IT) strategic planning, digital transformations and innovations. The curriculum is designed for IT/IS professionals to be prepared for strategic planning, innovative IT designing, and suggesting digital driven transformations. The focus of the course is on the role of integrated cloud and mobile solutions in modern organizations, and how IT leaders design and implement IT-dependent strategic initiatives. The course learning activities focus on the impact of IT on operating business models and how IT strategy should be aligned with the business strategy and decision-making practices; the impact of IT architecture to the organizational Socio-Technical System, and the importance of designing and building innovative, reliable and secure operational enterprise systems; the significance of IT leadership and the importance of fostering key IT capability and linking IT values to business metrics. Appropriate as a capstone course for IT/IS students or similar computing discipline concentrations. Recommended for junior- or senior-year students. Prior to taking this course students should have taken Introduction to Computers / Networks or equivalent, familiarity with the core concepts of computers and networking; an understanding of hardware and operating systems, basic applications and security. This knowledge can be gained through the listed prerequisite course(s) or through professional experience.

MGIS 4998 Individualized Studies in Management Information Systems (MGIS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Management Information Systems (MGIS). Registration for this class must be approved by the student's mentor.

MGMT: Management (Undergraduate)

MGMT 1005 Principles of Management (3,4 Credits)
This study is designed to introduce students to basic principles and functions of Management in an organizational setting including decision-making, planning, organizing, staffing, leading and controlling. The roles and functions of managers are examined within the context of organizational structure, cultural diversity, teamwork, ethics and global challenges. This course was previously BME-212314 Management Principles.

MGMT 1020 Introduction to Entrepreneurship (4 Credits)
This course focuses on gaining basic knowledge and skills to analyze entrepreneurial opportunities and problems. The objective of this course is to learn the basic tools needed for launching new ventures and becoming a successful entrepreneur. Major topics include developing a successful business, recognizing opportunities and generating ideas, writing a business plan, developing an effective business model, conducting industry and competitor analysis, assessing new ventures, assessing financial strength and viability, and securing financing or funding. This course was previously BME-212704.

MGMT 1998 Individualized Studies in Management (MGMT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Management (MGMT). Registration for this class must be approved by the student's mentor.

MGMT 2998 Individualized Studies in Management (MGMT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Management (MGMT). Registration for this class must be approved by the student's mentor.

MGMT 3005 Conflict Resolution in Management (4 Credits)
The student will explore conflict, negotiation, and mediation in the organizational setting. Topics included are approaches and strategies for understanding and managing conflict, developing communication skills, and strategies that facilitate conflict resolution. The student will also have the opportunity to develop and assess his/her own conflict communication style. Prerequisite (must complete before registering): Organizational Behavior (MGMT 3060) Corequisite (must be taken concurrently): Principles of Management (MGMT 1005), or equivalent.
Attributes: Liberal

MGMT 3010 Cross Cultural Management (3 Credits)
This advanced level business course is designed to provide an awareness of the challenges and opportunities that are presented when management is conducted across cultural and national boundaries. The core material considers elements of managerial and organizational significance in communication, motivation, teamwork, culture, leadership, structure, change, and human resources. Each of these elements has to be reinterpreted in international and inter -cultural contexts. Issues such as culture, communication, and national difference have to be approached and efforts made to optimize the innovation and changed perspectives provided by inclusion of other cultural dimensions and of diversity in the workplace. Prior courses in Management and/or Business, or similar relevant experience are recommended before taking this course. This course is offered for our International Education program students.
Attributes: Liberal

MGMT 3015 Ethics for a Global Economy (4 Credits)
This course examines the source, development, and exercise of the concepts and principles of right and wrong human behavior at the individual and organizational levels of society. Building upon classical and contemporary ethical theory, students learn how to apply a general-purpose ethical decision-making model to resolve ethical dilemmas. Progressing to the workplace, the acquired analytical skills and generic model are placed in the context of the modern global workplace and applied to challenges presented in case studies on issues including, but not limited to: employee privacy; truth in marketing; discrimination; the environment; sweatshops, etc. Prerequisites (must complete before registering): This course demands advanced level critical thinking and writing skills.
Attributes: Humanities Gen Ed, Liberal

MGMT 3020 International Cross Cultural Management (4 Credits)
The main objective of this study is to understand the management and leadership of successful business relationships between international business participants from different cultures. Topics include: the basics of culture and cultural theory; globalization and culture; problems of cross-cultural communication and negotiation; the impact of cross-cultural differences on business and management performance; working in cross cultural environments and on cross cultural teams; leadership across cultures; international business customs and protocol; and culturally sound strategies for organizational success in the global business context. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent. Highly Recommended (not required): Organizational Behavior (MGMT 3060) or Managerial Leadership or Human Resource Management (HRMS 3015), or equivalents This course was previously BME-213974 International Cross-Cultural Management.

MGMT 3022 New Venture Planning (4 Credits)
One of the most exciting and satisfying activities in business is to start a new venture. This course will provide students the opportunity to explore the entrepreneurial mindset and investigate how innovative and creative concepts can be transformed into a viable business. Student will develop a comprehensive strategy for launching and sustaining a new business venture.

MGMT 3025 Leadership (4 Credits)
This study explores the theory and practice of effective leadership. Some of the topics students will explore include leadership theories, the nature of managing and leading, behavioral indicators of leadership and the complex nature of power and influence within organizations. This course was previously BME-214624 Managerial Leadership.

MGMT 3030 Logistics Management (4 Credits)
The objective of this course is to explore and analyze modern logistics from a managerial perspective. The study focuses on the fundamentals of logistics in light of contemporary global business environments and the latest technological advancements and economic changes that have occurred in logistics. Major topics include inventory management, strategic and financial logistics, logistics and information technology, international logistics, procurement, distribution and warehouse management, and transportation management. Prerequisite (must complete before registering): Principles of Management (MGMT_1005) or Introduction to Business (BUSN 1015) or equivalent.

MGMT 3035 Management Theory (4 Credits)
Management is both a historical and an emergent discipline, which continues to be shaped by the forces of globalization, technology, and diversity. This study will examine the evolution of management theories needed to understand the role of today's manager. Some of the topics students will explore include: the challenges of modern management, decision making, planning and organization strategy, responsibility, authority and delegation, as well as influencing employee competencies and behaviors. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent Highly Recommended (not required): Organizational Behavior (MGMT 3060) or Human Resource Management (HRMS 3015) or equivalents. Students should have advanced-level critical thinking, writing and reading skills. Note: If this course is being considered as a capstone course, the assumption is that students are in their last enrollment and have successfully completed most of the BME requisite courses.
Attributes: Liberal

MGMT 3040 Managing Sustainable Organizations (4 Credits)
This advanced management study, which is open to all students and is also part of the Business and Environmental Sustainability Certificate, focuses on strategic planning and managing sustainable business operations. The student will become acquainted with skills needed to understand the role of management in the context of sustainability, will explore ways to incorporate sustainability strategies through industry analysis, competitive advantage and SWOT analysis. The study also involves mastering leadership concepts such as managing change, organizational culture, and corporate social responsibility. Students will learn strategies to employ as change agents, will create a toolbox of best practices to lead change, and master analytic tools they can use to assess success in creating sustainable organizations. Prerequisite (must complete before registering): Principles of Management (MGMT 1005) or equivalent and Economics and/or Finance or equivalent. Students should not take this course and Sustainable Enterprise Management.

MGMT 3045 Not-For-Profit Management (4 Credits)
The course in not-for-profit management explores the unique nature of these organizations and the management skills required. Concepts and theories applicable to this field, often referred to as the nonprofit sector, will be examined. There is a focus on key organizational and management characteristics, such as the mission, governance, leadership, funding and financial management, organizational dynamics, human resources, strategic management, advocacy, and social entrepreneurship. Included will be the development of an understanding of the challenges of managing an organization that is comprised of a mix of paid staff and volunteers. An exploration of current trends and challenges facing today's not-for-profit organizational managers will be included. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent This course was previously BME-213354 Not-for-Profit Management.

MGMT 3050 Operations Management (4 Credits)
In this course students will learn about the concepts, methodologies, and challenges of operations management. Operations management involves the planning, organizing, leading, and controlling of resources for an organization's transformation of inputs to desired outputs - the production of and delivery of goods and/or services to customers. The student will develop an understanding of the factors that are balanced to optimize the effectiveness of delivering these products and/or services. Quantitative and qualitative analytical methodologies aiding in the manager's decision making process will be explored. Students will study the strategic importance of operations. Topics covered will include process and operations design, capacity, inventory management, forecasting, quality, aggregate and resource planning, just-in-time and lean operations, product design, supply chain, technology utilization and operations in a global context. Prerequisites (must complete before registering): Principles of Management (MGMT 1005) and Statistics (MATH 1065) This course was previously BME-214204 Operations Management.

MGMT 3055 Operations Management (3 Credits)
This course is designed to provide students with an appreciation of the processes and dynamics that surround production in manufacturing and service environments. The course will consider the planning and logistics associated with the manufacturing process and will concentrate on issues such as scheduling, production layouts, capacity, and quality. The core element of the course is to understand the production of goods and services as a dynamic process that is amenable to a thoughtful, relevant, and efficient system of management in areas such as value-added activities, product and process design, quality, capacity and facility, and human resources. Note: Operations Management is an upper-level course that articulates with other functional areas of organizational and business studies. This course is offered for our International Education program students. Prerequisites: Students should have successfully completed Principles of Management (MGMT 1005) and at least one course in Statistics.

MGMT 3060 Organizational Behavior (4 Credits)
This study in organizational behavior (OB) explores the sociological and psychological foundations of behavior in organizations and seeks to understand how the behavior exhibited by individuals and groups affects organizational structures, processes, and ultimately, performance and effectiveness. This study focuses on the core concepts, theories, and methods of human and of organizational behavior. Its main objective is to analyze, understand, and manage the development of complex and multifaceted contemporary organizational behavior. Topics include the changing environment of organization, foundation of individual behavior, motivation, communication, conflict and negotiation, power, politics, organizational justice, leadership, decision making and problem solving, organization culture, and organization change and development. This course meets the understanding people in an organizational context area of study guidelines for students in the business, management and economics area. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent This course was previously BME-214614.

MGMT 3062 Sports Management (4 Credits)
The purpose of this study is to give the student the opportunity to explore management in the sports industry and learn the marketing, labor relations, planning, financing, and other practices and procedures associated with sports management. Topics will include the amateur sports industry, the professional sports industry, and sports industry segments, such as facility management, event management, sales, communication, broadcasting, media, and licensed products. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent.

MGMT 3065 Small Business Management (4 Credits)
This course is taught as a capstone course and is designed for students who wish to own and manage their own business or understand the managerial aspects of a small business. It is a course designed to give the student the appropriate theoretical and applied learning needed to understand the working environment of the typical small business and to provide skills needed to develop a full business plan. Prerequisites (must complete before registering): Marketing Principles (MRKT 1005), Principles of Management (MGMT 1005), Accounting, Economics, Finance, Legal Environment Business I (BUSN 1025), and a broad foundation of business studies at the advanced level. This course was previously BME-214704 Entrepreneurship and Small Business Management.

MGMT 3070 Small Business Management (3 Credits)
This course builds on the student's prior learning in management, marketing, accounting and finance and applies that knowledge to starting and managing a small business (less than 500 employees in the US; less than 250 in the EU). The course deals with small business start-ups, their day-to-day operations, appropriate leadership skills and human resources issues, product development, budgeting, cash flow management, capital purchases, and the effective use of technology. The course will also consider the dynamics of the family business, succession planning, and the process of valuing and selling the business. Highly Recommended (not required): Successful completion in a course in Human Resource Management (HRMS 3015) and/or Organizational Behavior (MGMT 3060). Notes: Small Business Management is an upper-level course that articulates with other functional areas of organizational and business studies, although it is concerned with the unique dynamics of small and medium sized enterprises. This course was previously Entrepreneurship and Small Business Management. This course is offered for our International Education program students. Prerequisites: Students should have successfully completed courses in Principles of Management (MGMT 1005), Marketing Principles (MRKT 1005), Principles of Accounting, and Principles of Finance or equivalents.

MGMT 3072 Management of Healthcare Organizations (4 Credits)
Healthcare management involves complex relationships and control functions in organizations including hospitals, medical groups, long term care facilities, home healthcare agencies, governmental agencies, and healthcare insurers. This course introduces students to the core principles of management. This course also introduces students to the knowledge and skills required to strategically manage the rapidly changing internal and external environment of health care organizations, and to provide students with a foundation in contemporary health care organizational structures and management practices. This course is recommended for students who have prior managerial knowledge or experience in the health care sector.

MGMT 3073 Current Issues in Healthcare Management (4 Credits)
The healthcare field is a rapidly changing one and it is critical for those in healthcare management to stay abreast of these changes. Current Issues in Healthcare Management provides a comprehensive and evaluative look at current issues relevant to health care policy and management. The course addresses key health care components of improving access, ensuring quality and controlling costs through the examination of trends in technology, consumer behavior, reimbursement models, competitive strategies and market dynamics. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent.

MGMT 3074 Information Technology for Healthcare Management (4 Credits)
This course focuses on the new opportunities that arise from Health Information Technology's (HIT) ascendance. With EHRs now widely implemented creating a plethora of healthcare data, and with network enabled medical equipment and devices connected, healthcare leaders must position themselves to leverage these new challenges and opportunities. The course identifies the current applications being used to improve quality of care, enhance patient safety, and re-engineer business and care processes, and addresses key management issues related to security, implementation, and acceptance of technology by multiple stakeholders. The course will address the disruptive nature of emerging technology applications in healthcare and the issues faced by management as technology rapidly evolves. Topics covered will include digital health, electronic medical records, personalized medicine, wireless sensing and remote monitoring, telemedicine, mobile health platforms, Artificial Intelligence, and predictive analytics.

MGMT 3075 Supply Chain Management (4 Credits)
This course is designed to explore and analyze supply chain from a managerial perspective. The study focuses on the objectives and fundamentals of supply chain management in today's dynamic global landscape and the latest technological and economic changes that have recently occurred in the business and supply chain networks. Major topics include designing distribution networks, supply chain performance, designing global supply chain networks, demand forecasting, managing uncertainty in a supply chain, and managing economies of scale in a supply chain. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent Highly Recommended (not required): Project Management (INFT 3035), or equivalent.

MGMT 3080 Supply Chain Management In The Global Context (4 Credits)
The focus of this study is on the global contexts and influence of international trade on supply chains. International supply chains are investigated and dynamics and the impact of international laws and trade are examined. Students will explore other aspects such as building international strategic partnerships across different entities in supply chains, factors impacting supply chain design, procurement and strategic purchasing in the global supply chains, global logistics and transportation management, role of information technology and information sharing in global supply chains, coordination patterns in global supply chains and risk and revenue management. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent Highly Recommended (not required): Previous study in international business Note: Students taking this course may also take Supply Chain Management (MGMT 3075), which sets the foundation for understanding a broader global context. This course was previously BME-214344 Supply Chain Management in the Global Context.

MGMT 3085 Sustainable Enterprise Management (4 Credits)
In this study, the student will develop an in-depth understanding of a sustainable organization and its management. The student will explore how an organization incorporates forward, long-term perspectives in sustainability into its decision making - including environmental, societal and business inter-relationships. This study will allow the student to develop an understanding of key ethical considerations and stakeholder views and impacts. This study will increase the student's awareness of the organization within broader contexts. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent Note: Students who have taken Managing Sustainable Organizations (MGMT 3040) should not take this course.

MGMT 3090 Women in Management (4 Credits)
This study will examine the theories, concepts and research that impact how women develop as managers and leaders within organizations. We will explore the challenges and opportunities women encounter in seeking advancement to management positions and the impact these have on their career choices and progression. We will discuss how organizational members (men and women) can help create a workplace that encourages and promotes talent, regardless of gender. We will examine the context in which women are viewed, evaluated and compensated in the workplace and how gender influences perceptions of women as managers. Topics may include a historical perspective of women in the workplace, comparisons to international countries, pay inequality, gender differences in communication, management and leadership styles, gender biases, and work-life issues. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent Note: This course is relevant to all students who are interested in exploring the roles they can play in advancing women in the workplace. This course was previously BME-213224 Women in Business: Managing and Leading.
Attributes: Liberal

MGMT 3996 Special Topics in MGMT (1-8 Credits)

MGMT 3998 Individualized Studies in Management (MGMT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Management (MGMT). Registration for this class must be approved by the student's mentor.

MGMT 4005 Change Management (4 Credits)
In this course students will learn about what constitutes effective change management including how to develop a change management strategy, establish goals, communicate the organization's vision, and find practical ways to deal with successful change processes. Understanding of management and leadership concepts developed in courses such as Organizational Behavior and Leadership will assist the student in understanding how change impacts managerial function, roles, culture, values, conflict, groups and team development, decision making, motivation, stress and employee satisfaction and retention. Prerequisites (must complete before registering): Principles of Management (MGMT_1005), and Organizational Behavior (MGMT_3060) and Organizational Development and Leadership.

MGMT 4010 Global Strategies (4 Credits)
This course is concerned with the field of business policy and strategic management, as well as understanding a conceptual framework for policy formulation and strategic planning. The course also looks at the development of organizational policy as it applies to finance, marketing, production, operations, and human resources within the broad areas of management and systems. A major goal of this course in the business curriculum is to develop a general business and management point of view in the context of a global business environment. Notes: This is a capstone course for students with concentrations in Business Administration or Management. Students are expected to integrate their knowledge from their prior studies and work experiences in this course. This course is offered for our International Education program students. Prerequisites: Principles of Management (MGMT 1005), Marketing Principles (MRKT 1005), Human Resource Management (HRMS 3015), or Corporate Finance (FSMA 3010), or equivalent.

MGMT 4015 Management of Technology & Innovation (4 Credits)
In this course students will acquire an understanding of issues and complexities involved in the effective management of technology and innovation. Students will develop skills and critical thinking to use in solving problems related to development of effective management of technology and innovation and will examine possible frameworks and methodologies for assessing firm's technological and innovative capabilities from a strategic perspective. Given the global nature of businesses the course will also incorporate topics such as managing international R & D, intellectual property, competitor assessment, and management of new product & process development. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent This course was previously BME-214224 Technology and Innovation Management.

MGMT 4020 Managing the Service Sector Operation (4 Credits)
Industries covered include retail, private practices such as law and healthcare, transportation, entertainment and others. Eighty-five percent of the jobs in the US economy are in the Service Sector. Specifically, the purpose of this course is threefold. First, the content is designed to expand the student's understanding of services as a science. Core to the concept of services is the customer, who, unlike the manufacturing customer, participates in the service delivery. Therefore, the design and execution of the service process with customer's needs and desires is essential. Second, the essence of this study is to teach students how to recognize the working elements of a service operation. Lastly, information technology is a critical component of services. Gaining an understanding of the focus of technology in services will be an underlying theme throughout the course. Prerequisites (must complete before registering): Principles of Management (MGMT 1005), or equivalent and Introductory Accounting I (ACCT 2005), or equivalent This course was previously BME-214234 Managing the Service Sector Operation.

MGMT 4025 Manufacturing Management (4 Credits)
In this course the student will acquire an in-depth understanding of manufacturing management. The study includes exploration of the fundamentals of manufacturing management, resource planning, concepts of lean manufacturing, leadership manufacturing management, synchronous manufacturing, manufacturing resource planning and total productive maintenance. Prerequisite (must complete before registering): Principles of Management (MGMT 1005), or equivalent This course was previously BME-214304 Manufacturing Management.

MGMT 4030 Project Management for Business (4 Credits)
The purpose of this course is to introduce the student to concept of the project management and its characteristics. Project Management is a complex process that includes compilation of budgets, understanding of resources needed (both funding and staffing), performance specifications, and communication planning. Students will learn how to develop a plan and its components, create assessment goals, use measurement tools and diagrams, and manage projects that require cross department communication. Prerequisites: Principles of Management or Equivalent; Accounting, Finance, and HRM or equivalent knowledge. Note: Students can only take one of the project management courses: MGMT 4030 Project Management for Business, INFT 3035 Project Management, or MGIS 4015 Project Management in IT/IS.

MGMT 4035 Strategic Management (3-4 Credits)
This course is a capstone study for Business, Management & Economics students. It introduces the key concepts, tools, and principles of strategy formulation and competitive analysis. It is concerned with managerial decisions and actions that affect the performance and survival of business enterprises. The course is focused on the information, analyses, organizational processes, and skills and business judgment managers must use to devise strategies, position their businesses, define firm boundaries and maximize long-term profits in the face of uncertainty and competition. In studying strategy, the course draws together and builds on all the ideas, concepts, and theories from students' functional courses such as Accounting, Economics, Finance, Marketing, Management, Organizational Behavior, and Statistics. Prerequisites (must complete before registering): All of the core BME courses e.g. Management, Organizational Behavior, Accounting, Economics, Statistics, Marketing, Finance Notes: The assumption is that students enrolling in Strategic Management are in their last enrollment and have successfully completed most of the BME requisite courses.

MGMT 4998 Individualized Studies in Management (MGMT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Management (MGMT). Registration for this class must be approved by the student's mentor.

MRKT: Marketing (Undergraduate)

MRKT 1005 Marketing Principles (4 Credits)
This study provides a basic understanding of the basic concepts, functions, practices, and marketing tools within a company or other organization. Marketing is creating and capturing customer value based on good customer relationships. Therefore, the focus will be on the consumer. Consequently, it is essential to know how to develop and practice the principles of marketing as a social and managerial process whereby individuals and groups obtain what they need and want by creating and exchanging products, services, and values with each other.

MRKT 1998 Individualized Studies in Marketing (MRKT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Marketing (MRKT). Registration for this class must be approved by the student's mentor.

MRKT 2998 Individualized Studies in Marketing (MRKT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Marketing (MRKT). Registration for this class must be approved by the student's mentor.

MRKT 3010 Consumer Behavior (4 Credits)
This course prepares students to analyze consumer purchasing behavior related to the development of marketing mix programs. This study focuses on theories, functions, and concepts of consumer behavior, and they can be applied to marketing management, our roles as consumers, and everyday life. It involves various types of consumers and views of the consumer's influences, such as the internal or psychological or external or anthropological/sociological. Recommended students take Introduction to Psychology (PSYC 1005) or equivalent prior to taking this course. Prerequisites: Marketing Principles (MRKT 1005) or equivalent.
Attributes: Liberal

MRKT 3015 Integrated Marketing Communications (3 Credits)
This course is designed to introduce students to the role of advertising and other promotional mix elements in the integrated marketing communications (IMC) program of an organization. The course allows students to develop an understanding of an integrated marketing process, how companies organize their advertising, and how they set their organizational goals for promotional, customer behavior, and organizational communications. Attention will be given to the IMC tools used in contemporary marketing including advertising, direct marketing, Internet and interactive marketing, sales promotion, publicity and public relations, and personal selling. The course examines how IMC programs are planned, developed, and implemented. It also considers the environments in which advertising and promotion occur and the regulatory, social, and economic factors that affect such programs. Registration in this course requires the successful completion of at least one intermediate course in Advertising, Marketing, Marketing Management, Marketing Research, or Consumer Behavior. Note: Integrated Marketing Communications is designed to provide an upper-level course for those who are interested in the theory and practice of Marketing, Advertising, and/or Consumer Behavior or equivalent knowledge. This course is offered for our International Education program students.

MRKT 3020 International Marketing Strategies (3 Credits)
This course focuses on the realities of developing and implementing marketing strategies in an international setting. It is designed to enhance the strategic, analytical, research, and application skills of participants in international marketing contexts. It evaluates different approaches for analyzing and implementing strategies in the dynamics of the changing environments of international marketing, focusing on the challenges confronted and contemporary knowledge. The course provides students with the appropriate tools and techniques for investigating marketing in international situations and for measuring and evaluating innovation, exporting potential, brand image, service quality, etc. Consideration will be given to the impact of local habits in the marketing of goods and services worldwide and to developing an appreciation of national cultural impact on different marketing approaches. Highly Recommended (not required): a course in International Business or Cross-Cultural Management. Preferably, students should be co-registered in another intermediate course in Marketing, Marketing Management, Marketing Research, or Consumer Behavior or equivalent knowledge. Notes: International Marketing Strategies is an upper-level course that articulates with, and advances knowledge of, many of the issues confronted in marketing, cross-cultural studies, and strategy development and implementation. This course is offered for our International Education program students. Prerequisites: An introductory course in Marketing and preferably Market Management.

MRKT 3025 Digital and Social Media Marketing (4 Credits)
This course reviews strategic and operational and functional aspects of digital and social media marketing. Students will learn about integration of new information and communication technologies with basic principles of marketing. The relationship between firm and consumer in the e-environment will be discussed from the technological, legal, ethical and global perspectives. Students will analyze situations within the workplace, identify specific courses of action, develop goals and objectives, and implement strategies and tactics that support digital and social media marketing objectives. Prerequisites: MRKT 1005 or Equivalent.

MRKT 3030 Marketing Communications: Advertising & Promotion (4 Credits)
This course is designed to develop an understanding of all aspects of integrated marketing communications, including advertising, direct marketing, the Internet, interactive media, sales promotion, public relations, personal selling, social and consumer-driven media, and consumer advertising. It provides details on how to research and evaluate a company's marketing environment and promotional situation within the context of consumer behavior, other variables in the marketing mix and overall corporate's marketing plans, and how to use various promotional tools to develop effective communications strategies and programs. The course can be used to fulfill the marketing communications requirement for a concentration in marketing. Prerequisites: Marketing Principles (MRKT 1005), or equivalent.

MRKT 3040 Marketing for Nonprofit Organizations (4 Credits)
The demand for nonprofit services is continuing to increase; yet the funding for these services is decreasing as the demand increases. Nonprofit organizations are looking to nonprofit marketing to increase their donations and support the services that they offer. This course will focus on the role of nonprofit marketing as part of the overall objectives and strategy of the nonprofit organization. Students will learn how to create a relationship marketing strategy with the organization's donors, volunteers, and funding agencies. The importance of branding and how to build a brand will be discussed for participants in this industry. The elements of the marketing mix for nonprofit organization will be defined including the product mix and the promotion mix; and how they are integrated into the planning process. Finally, this course will look at the evolving role of for-profit products that are being developed to supplement funding for nonprofit organizations. Prerequisite (must complete before registering): Introduction to Marketing or Marketing Principles (MRKT 1005), or equivalent. Notes: This course would be of interest to student who want to work for non-profits and thus could be included with studies such as non-profit management.

MRKT 3045 Marketing Management (4 Credits)
This course focuses on the methods to identify appropriate marketing objectives, the development of marketing strategies designed to meet stated objectives, and the process for the successful implementation of tactics that will drive desired customer action. Concepts to be examined include product planning, market needs, competitive assessment, media planning, market segmentation, goal setting, pricing strategies, budgeting, distribution, promotion, and customer service. In addition, the student will understand the critical factors to consider in developing and evaluating marketing plans by analyzing organizations' marketing efforts across various industries. Prerequisites: Marketing Principles (MRKT 1005) or equivalent.

MRKT 3055 Public Relations (4 Credits)
This study focuses on the essentials of public relations activities. The topics to be covered include understanding public opinion, ethics, Public Relations (PR) research, communication, the role of PR within a corporation, lobbying as PR, public relations writing, dealing effectively with the media and employees, and crisis communication. The course can be used to fulfill the marketing communications requirement for a concentration in marketing. Prerequisites: Marketing Principles (MRKT 1005) or equivalent.
Attributes: Liberal

MRKT 3060 Services Marketing (4 Credits)
This course provides a conceptual framework for the study, understanding and application of the theories of service marketing. A key focus is new service development and implementation into the marketplace. Topics covered include an overall foundation for understanding services marketing; examining customer expectations and building customer relationships; developing standards for services quality; managing and communicating service promises; and understanding the economic impact of service. Prerequisite (must complete before registering): Introduction to Marketing or Marketing Principles (MRKT 1005), or equivalent This course was previously BME-213454 Services Marketing.

MRKT 3996 Special Topics in MRKT (3-4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

MRKT 3998 Individualized Studies in Marketing (MRKT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Marketing (MRKT). Registration for this class must be approved by the student's mentor.

MRKT 4020 Hospitality & Tourism Marketing Management (4 Credits)
The purpose of this course is to develop a strong conceptual framework for the understanding and application of marketing management principles in hospitality and tourism (H&T). Students will develop a critical understanding of tourism and the social, cultural, political, legal, economic, ethical and environmental contexts in which it operates including but not limited to green tourism and eco-tourism and analyze how the economy impacts H&T and sustainability. They become familiar with and analyze the pieces of a marketing plan in relation to H&T industry in a global market and attain the skills needed to manage and market an H&T business. Prerequisites (must complete before registering): Introduction to Marketing or Marketing Principles (MRKT 1005), or equivalent. Notes: Course should be cross-listed in both MKT (Marketing) and MGT (Management). This course was previously BME-214464 Hospitality and Tourism Marketing Management.

MRKT 4025 International Marketing (4 Credits)
This study is to provide an understanding of the marketing function within a company or other organization as it applies to international markets. The course introduces the students to the marketing practices of companies seeking market opportunities outside their home country, and it raises students' awareness of the importance of viewing marketing management strategies from a global perspective. The student will focus on how to practice the principles of marketing as a social and managerial process in the global context. The course can be used to meet the BME guideline "Understanding Organizations Within Broader Contexts". Prerequisites: Marketing Principles (MRKT 1005) or equivalent.
Attributes: Liberal

MRKT 4035 Marketing Research (4 Credits)
This course provides an introduction to marketing research to the students with the skills needed to design market research studies and collect and analyze data that is useful to managers in making decisions. This course examines the role of marketing research in the firm, global and ethical dimensions of research, research design, experimentation, data collection procedures, questionnaire design, sampling, and basic and advanced data analysis. This study will address the intellectual basis and practical knowledge needed to design and complete a marketing research project. The study will require the student to read the textbook and complete various steps associated with a marketing research project. There will be revisions on each of the deliverables throughout the semester. Prerequisites: Marketing Principles (MRKT 1005) and College Level Statistics (MATH 1065) or equivalents.

MRKT 4040 Marketing Strategy (4 Credits)
This course is designed as a capstone for a concentration in marketing. This course offers an all-encompassing foundation for the creation of competitive marketing strategies. In this course, students will analyze real marketing situations and propose sound solutions to marketing problems by designing and implementing market-driven strategies with a clear emphasis on strategic analysis, marketing planning, and implementation. It is strongly recommended that students undertake this study as the last in the concentration. Prerequisites: Marketing Principles (MRKT1005) or equivalent and three advanced level studies in marketing.

MRKT 4045 Sales Management (4 Credits)
This course provides students with an understanding of the principles and techniques necessary to sell a product, service or idea, as well as how to build meaningful customer relationships in both the business-to-consumer and business-to-business segments. Topics covered will include customer need identification, solution-selling strategies, customer relationship management, and effective methods of presentation and follow-up. Recommended before enrolling: Principles of Management (MGMT 1005) or equivalent. Prerequisites: Marketing Principles (MRKT 1005) or equivalent.

MRKT 4050 Career Self-Management and Self-Marketing (4 Credits)
Students will learn how to use contemporary learning theories and fundamental management and marketing concepts to guide their self- and career development. Throughout the course, students will engage in a series of learning activities aimed at developing, documenting, evaluating, peer-reviewing, presenting, and improving their work-related skills. Overall, this course will foster students' self-awareness and help them develop effective strategies for self-improvement and self-promotion. Although this course fully meets the 4-credit educational planning requirement, it does not deal with degree planning. If students have not yet designed their plan of studies in the college, they should contact their mentor to discuss the format they will use to design their degree plan (for example, if needed, students may take a separate Educational Planning course).
Attributes: Liberal

MRKT 4055 Senior Project: Marketing (4 Credits)
Senior Project is a capstone, applied learning experience. Students work closely with the instructor on a topic of their choice to connect theory with practice and demonstrate their ability to integrate and apply the learning they have acquired over the course of their studies and experience. Depending upon the size and scope of the project, the work may be completed in one or two terms, and for differing amounts of credit. If completed in two terms, typically the first term is used for planning and research, and the second term for the final development or implementation of the project. Students should consult with their mentor and the instructor before enrolling to determine the number of credits and time needed. As this is designed a capstone course, students should enroll in Senior Project during their final year of study. All lower-level Marketing courses should be complete, as well as at least two advanced level Marketing courses or their equivalent. The student should have already completed Statistics and either Market Research and/or Consumer Behavior before enrolling in this course. Notes: Additional Marketing courses may be taken concurrently. Students will be expected to apply learning from all concentration courses, including those being taken during the same term. Senior Project is offered through the College's programs in Albania, Lebanon, Prague and Turkey, however ANY student interested in doing a final capstone project on a topic related to one of these countries or regions, or with an international theme, is welcome to request the opportunity to work with one of the international faculty in these programs. This course may be taken for 2 to 6 credits over one or two terms. This course is offered for our International Education program students.

MRKT 4998 Individualized Studies in Marketing (MRKT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Marketing (MRKT). Please contact your mentor/advisor for more details.

MUSC: Music (Undergraduate)

MUSC 1005 Exploring the World of Music (4 Credits)
This introductory course in music appreciation considers how people engage in music-making activities in various cultures. Students will learn to interpret and write about music using terms and concepts from assigned readings, and they will learn to articulate their understanding of particular musical phenomena (pieces, styles, composers or performers, instruments, performance venues, recording technologies, etc.) in social, cultural, and historical contexts. Students will learn to interpret one or more aspects of music-making as artistic or as creative process. Students will have ample opportunity to shape and direct the focus of their learning according to their own interests and purposes. This course was previously ART-221514 Exploring the World of Music.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

MUSC 1010 Introduction to Guitar and Guitar Music (4 Credits)
Introduction to Guitar and Guitar Music is designed to introduce students to the instrument of guitar and the music associated with it from a historical, as well as a practical, perspective. We will also explore the mechanical aspects of guitar construction as it evolved over the centuries by considering various materials such as wood, metal, bone, glue, synthetics, and strings, and we'll look at the building techniques/ tools of luthiers (guitar-builders).
Attributes: Arts Gen Ed, Liberal

MUSC 1020 Western Music History I (4 Credits)
In this course, the student will develop an understanding of Western music in an historical context from antiquity through the late seventeenth century. The student will learn about the elements of music, become knowledgeable about musical works and composers in an historical context, and investigate various musical styles and forms. The study will include listening assignments in conjunction with the readings. The student will acquire a vocabulary for speaking about music, gain an historical understanding of the roles music plays in Western culture and society, and develop an appreciation for music as a discipline and as an art.
Attributes: Humanities Gen Ed, Arts Gen Ed, *The Arts Gen Ed, Liberal

MUSC 1025 Music History II (4 Credits)
In this course, the student will develop an understanding of Western music in an historical context from the early eighteenth century to the end of the twentieth century. The student will learn about the elements of music, become knowledgeable about musical works and composers in an historical context, and investigate various musical styles and forms. The study will include listening assignments in conjunction with the readings. The student will acquire a vocabulary for speaking about music, gain an historical understanding of the roles music plays in Western culture and society, and develop an appreciation for music as a discipline and as an art.
Attributes: Arts Gen Ed, Liberal

MUSC 1998 Individualized Studies in Music (MUSC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Music (MUSC). Please contact your mentor/advisor for more details.

MUSC 2010 Songwriting: Introductory (4 Credits)
This course is a practical investigation of the song writer's craft. Work by master song writers will be analyzed and used as models for student work. The student will develop lyrics and/or music for songs in one or more genres. Students will present their completed songs at the end of the term. Note: Students may take either the introductory or advanced version of this course, but not both.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

MUSC 2998 Individualized Studies in Music (MUSC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Music (MUSC). Please contact your mentor/advisor for more details.

MUSC 3005 Songwriting: Advanced (4 Credits)
This advanced level course is an investigation of the songwriter's craft. Works by master songwriters will be analyzed and used as models for student work. The student will write lyrics and/or compose music for songs in one or more genres. Students will be engaged in the creative process directly while also acquiring a broader understanding of the theory, history, and aesthetic principles of songwriting. Note: Students can take either the introductory or advanced version of this course, but not both.
Attributes: *The Arts Gen Ed, Liberal

MUSC 3010 American Music, American Life (4 Credits)
From disco to country, hip-hop to jazz, classical to gospel, Americans have adopted, adapted, appropriated, developed, and invented many musical traditions, genres, and institutions. In this course, students will sample some of the vast diversity of American music. Each student will also explore in some depth a particular area of American music of their own interest (such as an artist, genre, performance, practice, or issue). Students taking this course should have advanced level reading, writing and research skills. This course was previously ART-223414 American Popular Music in the Twentieth Century.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

MUSC 3020 Children's Music (4 Credits)
This course will explore children's music and its effect on child development, from nursery rhymes to lullabies and story songs. The main objective of this study is for students to discover the joy and benefits of children's participation in music, whether it be singing, clapping, rhyming, or playing an instrument. Students will also engage in developing strategies for sharing music with children, using creativity and child participation.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

MUSC 3035 Popular Music & Social Justice: Advanced (4 Credits)
This course is an exploration of popular music in relation to social movements and cultural change, primarily in the United States, from the early decades of the twentieth century to the present. We will consider the importance of music and song in modern American culture, focusing on songs that have contributed to the development of labor, civil rights, peace, and feminist movements. Students will learn about musical artists who have emerged as voices of opposition, articulating issues of race, class, and gender. Throughout, we will examine the tensions between the music of activism and its production and consumption. (Students should take either the introductory or advanced version of this course but not both.)
Cross-listed with ARTP 3035.
Attributes: American History Gen Ed, Arts Gen Ed, *The Arts Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

MUSC 3045 World Music Across Cultures: Advanced (4 Credits)
This course is an advanced level investigation of topics in world music and culture identified with one or more of the following geographical areas: South America and Mexico, the Caribbean, Asia, the Middle East, Sub-Saharan Africa, Europe, Canada, and the U.S. Prerequisites for advanced level credit include prior training and/or expertise in some aspect of music.
Attributes: Liberal

MUSC 3050 Thinking About Music (4 Credits)
What is music and why does it matter? How and why do different musics matter differently to different people, and powerfully so? How might our own experiences with listening to music or making music inform our understanding of music's relevance to and importance in human life and culture? In this course, students will read, think, and write about music in philosophical ways, with ample opportunity to shape questions, ideas, and arguments in relation to their own musical experiences, interests, and preferences.
Cross-listed with PHIL 3015.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

MUSC 3994 Topics in Music History (4 Credits)
This research-based study in Western Music is for advanced students. Student projects will focus on analyzing and writing about musical works in an historical context. Students should have taken at least one music history study and/or experiential knowledge of Western Music.
Attributes: Liberal

444   MUSE: Museum Studies (Undergraduate)

MUSC 3996 Special Topics in Music (3,4 Credits)
This is a special topics course in music.
Attributes: Liberal

MUSC 3998 Individualized Studies in Music (MUSC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Music (MUSC). Please contact your mentor/advisor for more details.

MUSC 4005 Critical Theory & the End of Noise (4 Credits)
This course investigates cultural theory, philosophy, and aesthetic practices as they pertain to the history of music from the early twentieth century to the present. We will explore works by influential composers in a social and cultural context. The impact of technology on music composition, production, and consumption will be examined. Students should have a background in some aspect of music together with upper-level critical thinking and writing skills.
Attributes: *The Arts Gen Ed, Liberal

MUSC 4010 Topics in Music History (4 Credits)
This research-based study in Western Music is for advanced students. Student projects will focus on analyzing and writing about musical works in an historical context. Prerequisites include at least one music history study and/or experiential knowledge of Western Music.
Attributes: Liberal

MUSC 4998 Individualized Studies in Music (MUSC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Music (MUSC). Please contact your mentor/advisor for more details.

MUSE: Museum Studies (Undergraduate)

MUSE 1998 Individualized Studies in Museum Studies (MUSE) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Museum Studies (MUSE). Please contact your mentor/advisor for more details.

MUSE 2998 Individualized Studies in Museum Studies (MUSE) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Museum Studies (MUSE). Please contact your mentor/advisor for more details.

MUSE 3005 Americans in Art History & Museums (4 Credits)
This course asks students to explore the American experience as it is portrayed in American art and museums. This necessarily includes discussions of the manner in which social, cultural, economic, political, and historic phenomena are created by and represented in American art. As well, a thorough exploration of American art necessitates inquiries of interactions between the history and art of the United States and the history and art of other world cultures.
Attributes: American History Gen Ed, Arts Gen Ed, *The Arts Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

MUSE 3010 Curatorial Practice (4 Credits)
The purpose of this study is to learn the theoretical and practical issues of curatorial work in the field of contemporary visual arts. Students will focus on the research and development of an individual curatorial project, including didactic materials and a curatorial essay. They will share work with a small group, study exhibitions and ideas of a similar nature, and create their own virtual exhibition in a visual format. While based primarily in the visual arts, students from history, science, and other fields are welcome, as the standards for creating an exhibition in visual form are very related. Prerequisites: At least one art history course (the language of visual art permeates this study and students should be familiar with those terms).
Attributes: Liberal

MUSE 3015 Museum Studies (4 Credits)
Museum Studies is both a study of the historical and cultural aspects of museums and museology, as well as a flexible platform for students to engage in the study, research and presentation of a variety of art and objects, ranging from material culture and art history to media. Applying theories, approaches, and examples learned from course materials, students will understand how to design museums or exhibitions. Through curatorial projects, students will select and study the art works or other items for their museum projects, and they will learn about various research and museum activities involved in curating an exhibition. Students should have prior college course or knowledge in art or art history as well as upper-level standing with advanced level academic skills. This course was previously ART-224534 Museum Studies.
Attributes: Arts Gen Ed, Liberal

MUSE 3998 Individualized Studies in Museum Studies (MUSE) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Museum Studies (MUSE). Please contact your mentor/advisor for more details.

MUSE 4998 Individualized Studies in Museum Studies (MUSE) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Museum Studies (MUSE). Please contact your mentor/advisor for more details.

NURS: Nursing

NURS 1005 Spanish for Health Care Professionals (4 Credits)
This course has been designed for students who have had no previous experience with Spanish language and Hispanic cultures. Students will have an opportunity to learn functional grammar, vocabulary and cultural concepts to apply in interactions at work. The major goal of this course is to facilitate better communication between health care providers and the growing Spanish-speaking community in the United States. All language skills will be practiced: listening, speaking, reading and writing. Students will be required to practice weekly speaking and listening skills in real time over the Internet. Synchronous practices will take place between 7:30-9:00 pm (ET), unless advised otherwise. Special accommodations will be made for army students. This course does not overlap with Spanish 1 or Introductory Spanish: Language and Culture This course was previously CUL 221194 Introductory Spanish for Health Care Professionals.
Cross-listed with SPAN 1005.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

Last Generated 10:12 am 10/10/24

NURS 1998 Individualized Studies in Nursing (NURS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Nursing (NURS). Please contact your mentor/advisor for more details.

NURS 2998 Individualized Studies in Nursing (NURS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Nursing (NURS). Please contact your mentor/advisor for more details.

NURS 3005 Transition to Baccalaureate Nursing (4 Credits)
In this course, students and mentors plan a program of study leading to the baccalaureate degree, focused around students' understanding of the nursing profession, as well as their analysis of their own academic and professional skills, experiences, and goals. In this process, students identify concepts and skill sets, as elucidated in the AACN Essentials of Baccalaureate Nursing Education, needed to perform effectively in professional baccalaureate nurse roles. Students will be introduced to the history and future of the profession, the impact of culture within health care systems, and the influence of culture on the role of the professional nurse. Students articulate an understanding of professional values and value-based nursing behaviors. This course satisfies the college's liberal arts and sciences requirements.
Attributes: Liberal

NURS 3010 Health Assessment (4 Credits)
This course focuses on the synthesis of independent and collaborative health assessment information for the registered nurse. Students integrate concepts and theories of biological, psychological and sociocultural knowledge to impact health promotion, health maintenance and illness care. Concepts of prevention, anticipatory guidance and the early detection of risk factors are incorporated into holistic care. The course facilitates the use of evidence in practice, development of critical thinking and advancement of interdisciplinary communication skills, which are vital competencies for the professional nurse. This course was previously NUR-203024.

NURS 3015 Pharmacology (4 Credits)
This course focuses on pharmacology in relation to pathophysiology. Students integrate these concepts to examine the clinical application of medications affecting body systems. Knowledge development, patient safety and evidence-based practice are emphasized throughout course activities. This course was previously NUR-203044

NURS 3020 Nursing Informatics (4 Credits)
This course provides an overview of fundamental nursing informatics concepts and informatics applications in clinical nursing practice, administration, research and education. Philosophical and ethical perspectives on nursing informatics are explored. Nursing informatics competency development is emphasized for the provision of safe, quality, competent nursing care, and to expand the knowledge and wisdom of nursing practice This course is only available to Empire State College nursing program students. This course was previously NUR-203064.

NURS 3025 Nursing Research (4 Credits)
This course is intended to prepare students in understanding nursing research and the research process. The course prepares students at the baccalaureate level to critique, interpret and apply evidence-based research to nursing practice and to select an area in which to apply research methodology. This course satisfies the college's liberal arts and sciences requirements. This course is only available to Empire State College nursing program students. This course was previously NUR-203074.
Attributes: Liberal

NURS 3035 Interdisciplinary Perspectives in Global Health (4 Credits)
This eight-week course is open to both nursing and non-nursing students and will introduce students to the main concepts of the global health field. Students will get an overview of principles and goals of global health, global health issues, burden of disease and cooperating to improve global health. Students will utilize critical reasoning and evidence-based practices to propose and support solutions for public health concerns around the world. This course satisfies the college's liberal arts and sciences requirements. Prerequisites for non-nursing majors: U.S. Health Systems. This course is part of the BS in Public Health program. Important Note: this course was renamed effective the May 2012 term and was formerly offered as Global Health. Students who have successfully completed 203254 should not enroll in this course. This course was previously NUR-203254.
Attributes: Liberal

NURS 3040 Foundations of Palliative Care (4 Credits)
This course provides students the opportunity to examine the palliative care movement. The changing paradigm of longevity, multiple chronic illnesses, and progressive diseases has impacted the perception of quality of life and in turn has altered how death and dying is managed in the United States. Palliative care can be initiated at any stage of an illness with a focus on physiological, psychological, social, and spiritual needs of the patient and offers a continuum of care through death. This course examines the foundations of palliative care services, introduces tools and resources, and discusses ethical issues pertaining to end-of-life dilemmas and advanced care planning. This course was previously NUR-203224.
Attributes: Liberal

NURS 3998 Individualized Studies in Nursing (NURS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Nursing (NURS). Please contact your mentor/advisor for more details.

NURS 4005 Health Care Delivery Systems & Policy (4 Credits)
This course provides an in-depth overview of the United States health care delivery system, including the nurse's role and responsibilities in the legislative process. Specific emphasis on advocacy, professional nursing standards and patient care delivery services including accessibility, equity and affordability are explored. This course satisfies the college's liberal arts and sciences requirements. This course was previously NUR-204034.
Attributes: Liberal

NURS 4010 Leadership and Management (4 Credits)
This course examines theoretical leadership frameworks and management functions in the context of professional nursing practice. Students in the course will explore and analyze fundamental strategies to improve organizational culture and change, quality and safety of care, patient satisfaction, interprofessional dialogue, and budgetary resource issues. This course satisfies the college's liberal arts and sciences requirements. This course is only available to Empire State College nursing program students. This course was previously NUR-204054.
Attributes: Liberal

NURS 4015 Population and Community Health Nursing (4 Credits)
This course takes a determinants of health approach to understand what influences health and health equity in communities and populations. The course builds competencies in population health assessment, problem identification, and planned response. The historical role of nursing in community and public health is reviewed and diverse community practice settings are considered. The course builds capacity to engage a range of nursing roles, from direct care to structural change, to build health equity and improve the health of populations, communities, and individuals. Public health concepts, including environmental health and emergency preparedness, are incorporated in the course content. The course incorporates a community practicum experience. This course satisfies the university's liberal arts and sciences requirements. This course is only available to Empire State University nursing program students. NOTE: Self-registration is not available for the clinical courses. You will be manually registered by the university once all the requirements are completed and approved. This course was previously NUR 204084. Course Prerequisites for NURS 4015 for RN to BSN program: NURS-3005: Transition to Baccalaureate Nursing ; NURS-3010: Health Assessment; NURS-3015: Pharmacology; NURS-3020: Nursing Informatics*; NURS-3025: Nursing Research & Evidence Based Practice* *may be prerequisite or corequisite Course Prerequisites for NURS 4015 for RN to MSN Program: NURS-3005: Transition to Baccalaureate Nursing ; NURS-3010: Health Assessment; NURS-3015: Pharmacology; NURS-4005: Healthcare Delivery Systems & Policy;
Attributes: Liberal

NURS 4020 Baccalaureate Nursing Capstone (5 Credits)
This course integrates advanced critical thinking and decision-making abilities with the application of theoretical frameworks, concepts, models of nursing practice, leadership and management. Students will immerse themselves in a leadership role of the professional nurse in a setting of their choice under the supervision of a clinical preceptor. This course enables the B.S. student to examine and develop the multidimensional competencies needed to become an effective professional nurse leader within health care settings and to be mindful of the contexts for nursing practice in any environment. For this course, the student will select one of four leadership tracks as an area of focus: Administrative, Clinical Practice, Education, or Informatics. This course satisfies the college's liberal arts and sciences requirement. This course is only available to Empire State College nursing program students. NOTE: Self-registration is not available for the clinical courses. You will be manually registered by the college once all the requirements are completed and approved. This course was previously NUR 204095. Prerequisites: All 3000-level nursing classes successfully completed with a C or better; NUR 4015: Community Health Nursing must be successfully completed and your degree program plan must be concurred before taking this course.
Attributes: Liberal

NURS 4998 Individualized Studies in Nursing (NURS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Nursing (NURS). Please contact your mentor/advisor for more details.

NURS 6005 Theoretical Foundations of Nursing Practice (3 Credits)
This course explores the evolution of knowledge development in nursing. Theory is analyzed as a foundation for nursing practice, research, administration and education. Students will discover strategies to facilitate the process of theory development. Course topics include nursing's metaparadigm, philosophy of nursing, philosophy of science, nursing's unique body of knowledge and ways of knowing. Students will synthesize what they have learned about nursing knowledge development to create a personal nursing practice framework. This course was previously NUR-50000.

NURS 6010 Professional Role Development & Ethics (3 Credits)
Students explore bioethics and integrate principles of ethical decision making and professional behaviors into leadership roles. The roles to be identified, critiqued and evaluated are clinician, advocate, educator, researcher, expert, leader, manager, innovator and consultant. Traditional ethical systems and historic perspectives are examined in light of bioethical decision making and contrasted with practice-based ethics. Students learn how to objectively and systematically make and validate bioethical decisions in the nursing and health care environment. Scope of practice legalities and advanced ethical decision making from a practice-based perspective will be introduced and discussed as it relates to various roles and leadership as a master's prepared nurse. This course was previously NUR-50100.

NURS 6015 Nursing Research & Evidence Based Practice (3 Credits)
This course will focus on the knowledge required by nurses to utilize research findings, to provide high-quality health care, initiate change and improve nursing practice. Examination, analyses and evaluation of ethical principles, current literature, research designs and methodologies including quantitative, qualitative perspectives will be discussed. The investigation of scientific inquiry, problem identification, use of theoretical frameworks, ethics, measurement, data collection and analysis and dissemination will be integrated into a research proposal based on a specific health care issue of interest. This course was previously NUR-50200.

NURS 6020 Contemporary Issues in Health Care (3 Credits)
This course explores social, economic, and political trends impacting health care delivery and practice. Policy, management, education, technology, and regulatory perspectives will be included when examining a broad variety of current and emerging challenges facing health professionals at the international, national, regional and local levels. Students will appraise literature and engage in discussions and learning activities to create strategies to support health reform. This course was previously NUR-50400.

NURS 6025 Informatics & Healthcare Technology (3 Credits)
This course covers the evolution and theoretical basis of nursing and healthcare informatics, including concepts of data, information, knowledge and wisdom. The course explores applications in healthcare informatics, the use of technology and implications for clinical practice, administration, education and research. Concepts and application of relational database technology are introduced. Interprofessional issues in healthcare informatics are examined. Students will develop competencies in information management for knowledge-based practice in various healthcare settings to enhance patient care and nursing practice. This course was previously NUR 50300.

NURS 6030 Population Health, Human Diversity, & Social Issues (3 Credits)

This course will advance understanding of population health in the United States and globally from an interprofessional perspective. Students will explore determinants of health and health care disparities using a variety of conceptual frameworks, models and theories. Distributions and patterns of health outcomes across populations will be analyzed. Responsibilities of the master's prepared nurse in addressing health policy issues and employing advocacy strategies to promote optimal health outcomes will be examined. This course was previously NUR 50500.

NURS 6050 Curriculum & Program Development (3 Credits)

Nursing curricula and program development are dynamic and ever changing processes. A nursing program of study is responsive to internal and external stakeholders where individual courses represent an integrative whole curriculum. This graduate level course examines curriculum history in nursing education, development, and future trends. Course activities focus on curriculum design, including the development of an undergraduate or graduate nursing program of study. An in-depth review of professional nursing evaluation and accreditation processes is provided. Dialogue pertaining to curriculum development and evaluation will take place via asynchronous discussions and collaborative learning activities. This course was previously NUR-560000.

NURS 6055 Instructional Design & Teaching with Technology (3 Credits)

Instructional design and teaching with technology can be simplified as how we teach and how we learn. This graduate level course prepares students to apply theoretical concepts of education and learning to teaching in nursing. Course topics will include fundamentals of instructional design, theories of teaching and learning, instructional design models, technology use in education, and learner diversity. Design considerations for technology-based instruction will be addressed in this course. This is a web-enhanced course and learners will be able to adapt course material to a classroom setting. This course was previously NUR-560100.

NURS 6060 Measurement Assessment & Evaluation of Learners & Programs (3 Credits)

Measurement, assessment, and evaluation in nursing education are the focus of this course. Students will learn methods to assess and evaluate learning in multiple ways. Various approaches to program evaluation will be explored as well as legal and ethical issues relevant to assessment and evaluation processes. This course was previously NUR-560200.

NURS 6065 Healthcare Finance and Budgeting (3 Credits)

This course will focus on the influence of financial and economic factors in the delivery of healthcare services. Components of financial management such as budget development for operational and capital budgets, cost analysis, human resource allocation and staffing, and payment systems will be discussed. The role of the nurse leader as a fiscal manager will also be explored. This course was previously NUR-560300.

NURS 6070 Organizational Theory & Human Resource Management (3 Credits)

This is a course designed for nursing administration students to explore, critique, and analyze organizational behavior and human resource management. Using a multidisciplinary approach, students in this course will draw on both the literature and their experience to better understand the value that differing organizational structures and processes have on an organization's performance and outcomes. Students will interpret the political and cultural dynamics inherent to all organizations with an emphasis on strategically managing human relations and leading organizations. A combination of probing discussion questions, case study analysis, and reflective journal writing will be utilized as learning methods in this course. This course was previously NUR-560400.

NURS 6075 Innovative Leadership in Healthcare Organizations (3 Credits)

This course will focus on innovative design and leadership strategies to create and improve healthcare organizations. Within the context of the Patient Protection and Affordable Care Act, the course examines current trends in the design of healthcare systems across the healthcare continuum. The course builds on an understanding of organizational theory and healthcare finance to highlight how best practice leadership strategies can promote sustainable organizations in a dynamic healthcare environment. This course was previously NUR-560500.

NURS 6080 Advanced Pathophysiology, Health and Physical Assessment, and Pharmacology (3 Credits)

This course integrates principles of pathophysiology, health and physical assessment, and pharmacotherapeutics to improve health outcomes across the lifespan. Using a cultural and ethical framework, complex case studies will be analyzed. This course does not satisfy requirements for advanced practice registered nurses.

NURS 6998 Individualized Studies in Nursing (3 Credits)

Students have the opportunity to develop individualized studies with their mentor in Nursing (NURS). Please contact your mentor/advisor for more details.

NURS 7005 Nursing Education Capstone (3 Credits)

This course engages students in didactic and online activities as a culminating program requirement. Together these experiences provide a framework for examining the Nurse Educator role and responsibilities. The student will engage in a 45-hour practicum experience collaborating with nurse faculty in various aspects of the practice environment. Synthesis of curriculum, instructional, and evaluative theories and knowledge is emphasized through learning activities. Focus is placed in the application of teaching and nurse educator competencies. This course was previously NUR-560900.

NURS 7010 Nursing Administration Capstone (3 Credits)

The Nursing Administration Capstone course integrates program objectives, didactic online activities, and an administrative practicum experience as a culminating program requirement. The student will engage with a Nurse Administrator in a 45-hour practicum to explore leadership roles and to complete a meaningful capstone project. Synthesis of course objectives from previously completed coursework is expected, along with a focus on leadership in complex healthcare systems. This course was previously NUR-561000.

PAFF: Public Affairs (Undergraduate)

PAFF 1005 Introduction to Security Studies (4 Credits)
This course introduces students to the field of security studies, which encompassses a wide range of international issues, ideas and theories. #The primary focus of the course relates to larger developments of international security, especially since the end of the Cold War. Students will gain an understanding of the structures, systems, and interrelationships among nations, the development of the distinctive features of at least one international security organization, and the cultural differences between them. Finally, students will gain an appreciation of international sustainability and human security concepts. The course will serve as a foundation for more in-depth studies in the field and provide students with the skills to succeed in advanced level studies in the area.
Attributes: *World Hist & Glb Awnss Gen Ed, Liberal

PAFF 1998 Individualized Studies in Public Affairs (PAFF) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Public Affairs (PAFF). Please contact your mentor/advisor for more details.

PAFF 2005 Introduction to Homeland Security (4 Credits)
Homeland security in the United States became a national priority and a major concern of the American public following the events that transpired on September 11, 2001. #Since that time, significant resources have gone into the prevention of terrorist attacks and the preparation of the U.S. government for life in a vulnerable environment. #Substantial new laws were passed and new legislation continues to be proposed to combat threats and secure the country. #Today, with the rise of foreign and domestic violent extremists, as well as affiliated threats from lone wolf terrorists around the world, legislative and executive leaders are struggling to identify the best response, while courts sort out the legality of their efforts. But homeland security is about more than terrorism. In fact, the vast majority of our daily activities, from trade to travel, touch on homeland security in much more profound ways than terrorism has. In this course, we will focus on the foundations of both homeland security and terrorism in order to develop a more complete understanding of the importance of the changes that have taken place in the last decade. Emphasis will be placed on "friction points" in the homeland security enterprise, such as the tradeoff between security and liberty, border security and economic vitality, and surveillance and privacy, as well as the legal and policy changes that have been undertaken to effectuate new policies and practices of the Executive Branch to promote homeland security.
Attributes: Liberal

PAFF 2122 Introduction to Public Administration (4 Credits)
This course introduces students to the organization, management and influence of public bureaucracies at the federal, state and local levels of government. Topics to be covered include: values and ethics in public service, policy analysis and evaluation, organization theory, decision making, public personnel systems, public unionism and collective bargaining, leadership, communication, theories of budgeting, ecology of public administration and productivity in the public sector. This course was previously CHS-262164. Prerequisites: POLI 2100 or equivalent.
Attributes: Liberal

PAFF 2132 Introduction to Public Policy (4 Credits)
This study is designed to introduce students to substantive public policy issues that shape contemporary public sector debates and decision-making in the U.S. Grounded in multiple theoretical approaches and analytic models, the study develops students' potential to describe, formulate, implement and evaluate public policy. Further, the study will provide students with the opportunity to appreciate the complex organizational and institutional environments in which public policy operates via exploring several policy areas such as criminal justice, health and welfare, civil rights, and homeland security. This course was previously CHS-262204 Introduction to Public Policy.
Attributes: Liberal

PAFF 2998 Individualized Studies in Public Affairs (PAFF) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Public Affairs (PAFF). Please contact your mentor/advisor for more details.

PAFF 3003 Security Implications of Global Climate Change (4 Credits)
Global climate change has been identified as one of the biggest security threats of the 21st century that result in natural disasters, water scarcity, food insecurity, infrastructure risks, and changing migration patterns.
  These consequences have political and economic ramifications that threaten the security of individuals and nation states, and are rising to the top of government initiatives and concerns worldwide.   This course provides students with an opportunity to examine how the environment and its security is an important part of national and global security, and how global climate change is affecting the security of individuals, nation-states and, generally, the world.
Attributes: Liberal

PAFF 3005 Terrorism & Homeland Security (4 Credits)
This course examines the roles and responsibilities of law enforcement and other agencies in managing terrorism, disasters, and homeland security to ensure public safety. Students will have the opportunity to develop an understanding of the changing role of law enforcement in managing mass disasters and terrorism, the impact of disaster and terrorist events on human populations, the control of consequences and perspectives on homeland security. This course was previously CHS-264844 Terrorism and Homeland Security.
Attributes: Liberal

PAFF 3007 Conflict Analysis and Resolution (4 Credits)
This course examines theories of human behavior and social systems as they relate to conflict at the interpersonal, community, and international levels. The course provides a solid foundation of academic thinking about the role of conflict in violent and peaceful social change. At the end of the course, students should be able to think systematically and critically about conflict, and engage in practical application of conflict analysis techniques to a complex social conflict.
Attributes: Liberal

PAFF 3122 Ethics and the Public Sector (4 Credits)
This study is designed to explore Ethics as an applied discipline in public sector practice. The study will provide students with strategic decision-making frameworks for analyzing ethical dilemmas, as well as expose students to a conflict resolution approach to ethics which provides them with methods used to manage value conflicts and help people bridge differences. To this end, this study allows students the opportunity to study major ethical frameworks and relevant applications in the evaluation of competing options and optimal decision-making as experienced in public sector work.
Attributes: Liberal

PAFF 3127 Public Policy (4 Credits)
This study involves the analysis and evaluation of public policy in the United States. Topics include the nature of the cycle of policy creation, implementation and evaluation, the role of the legislative, executive, and judicial branches in the creation of policy, the nature of policy formation, the importance of legislative or judicial intent, the character of bureaucratic decision-making, problems of jurisdiction, questions of personnel development, issues of oversight, the role of policy consumers and advocates, the impact of lobbying and interest groups, the nature of policy evaluation, the importance of policy analysis. Prerequisites: Familiarity with Research Methods in the social sciences or history and/ or at least one introductory course in American Government.
Attributes: Liberal

PAFF 3137 Managing Municipal Government (4 Credits)
This study provides a descriptive analysis of how public administrators manage municipal government. Using examples from the United States, it explores six dimensions of public administration: legal aspects of public management, human resources management, budgeting and public finance, the political dimensions of intergovernmental relations, and ethical considerations. As well as theory, students integrate such practical issues as economic development, housing, culture and recreation, public safety, transportation and waste disposal.
Attributes: Liberal

PAFF 3996 Special Topics in PAFF (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

PAFF 3997 Special Topics in PAFF (2-8 Credits)

PAFF 3998 Individualized Studies in Public Affairs (PAFF) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Public Affairs (PAFF). Please contact your mentor/advisor for more details.

PAFF 4000 International Dimensions of Security (4 Credits)
This course provides students the opportunity to study the multidimensional nature of security from a global perspective. Human, environmental, national, transnational, and trans-cultural (ethnic, sectarian, and religious) aspects of security and how they impact each other throughout the world will be examined. Topics such as the role of the military; causes and consequences of national and transnational conflict; organized crime; human trafficking; diplomatic agreements; the influence of science and technology on climate, energy supplies, the production and access to food, and other threats to human security will be included. Organizing frameworks for this study might include a specific focus on justice as a prerequisite for security, international relations theory, and/or other approaches.
Attributes: Liberal

PAFF 4005 Counterterrorism in a Changing World (4 Credits)
This course focuses on international terrorism since 9/11/01 and explores the social, political, and economic origins and intentions of groups such as Al-Qaeda, its affiliates, and recent permutations. Case studies of key international terror attacks are presented to better understand capabilities, including signature complex, multi-level attacks, lone wolf attacks inspired by social media, and large-scale conflicts overseas. Students will explore U.S. counterterrorism efforts overseas, and counterterrorism collaboration with foreign governments and multinational organizations. Finally, students will evaluate the effectiveness of international counterterrorism strategies since 9/11 and recommend ways to address possible future scenarios. The course is designed as a capstone course; therefore, it is strongly suggested that students have completed one of the following: PAFF 2005 Intro to Homeland Security, SOCI 3065 Perspectives on Terrorism, PAFF 3005 Terrorism and Homeland Security, or have prior experience working in counterterrorism.
Attributes: Liberal

PAFF 4122 Public Budgeting and Finance (4 Credits)
This course examines the theory and practice of obtaining and allocating resources among competing priorities in the public sector, and the relationships among budgeting and other aspects of public finance such as accounting, auditing, management analysis, and program evaluation. This course was previously CHS-263524 Public Finance and Budgeting.
Attributes: Liberal

PAFF 4123 Senior Project Proposal (2 Credits)
The student will prepare a proposal for the senior project and engage in educational planning. The senior project facilitates the integration and reflection of knowledge acquired from university learning which is aimed at creating an original culminating work. Educational planning includes the preparation of a rationale essay articulating how the program of study for the bachelor's degree meets the student's educational and career goals. For the senior project proposal, the student will pose a question to be addressed under the guidance of the ESC mentor. The student and mentor will discuss the focus and design of the research question to be developed. The student will identify the appropriate resources needed to address the question and submit the proposal to the mentor. The thesis, based on the proposal submitted for this study, will be carried out the following semester. This course will be used as part of the Educational Planning credit. Prerequisites: As part of a capstone course, students should enroll in Senior Project Proposal during their final year of study. All lower level concentration courses should be complete, as well as at least two advanced level concentration courses or their equivalent.
Attributes: Liberal

PAFF 4127 Public Administration Capstone (4 Credits)
This course provides an integrated review of the core courses of a student's Public Affairs degree program. It is designed to allow the student to combine and apply fundamental principles learned in Ethics, Legal Environment, Public Finance, and key Public Administration functions such as Human Resources, Planning, Policy-making and Public Policy Analysis. Students will have the opportunity to apply supplemental skills and knowledge gained from studies in research methods, communication, information management and quantitative literacy in order to demonstrate professional competency in the field of Public Administration. This course should be taken in the student's last term of enrollment. The student must have attained learning in all of the Public Affairs program guidelines prior to taking this course. Students should possess an advanced competency in formal, college level analytical writing, be able to examine facts and problems, analyze issues, research remedies, apply theoretical concepts, examine alternatives, and formulate and communicate solutions.

PAFF 4132 Legal & Ethical Foundations of Public Service (4 Credits)
Public sector professionals face a host of challenging issues everyday as they seek to effectively deliver services amidst new and emerging trends in U.S. society. Despite the multi-layered demands placed on the public sector, questions of the legal responsibility of government and the values that anchor or define public administrators' duties persist. This study is designed to examine the underlying legal structure of the U.S. government and its ethical implications for public administration. #Accordingly, the study will consider the formation and implementation of public policy within the nation's constitutional framework and explore how legal and ethical issues have affected decision-making in the public sector.
Attributes: Liberal

PAFF 4150 Senior Project Thesis (3 Credits)
The student will complete the senior project thesis as planned in the proposal phase of this study. The project provides an opportunity to conduct an in-depth examination of a topic of interest related to the study program that emerged from the student's earlier course work, and in this regard will complete educational planning by focusing on the mastery of academic skills, college level writing and presentation, and independent research and critical thinking. The student will be expected to produce a major research paper that meets the standards established during the proposal stage and prepare the final drafts of the rationale essay. This course will be used as part of the Educational Planning credit.
Prerequisites: Successful completion of the Senior Project Proposal
Attributes: Liberal

PAFF 4998 Individualized Studies in Public Affairs (PAFF) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Public Affairs (PAFF). Please contact your mentor/advisor for more details.

PHIL: Philosophy (Undergraduate)

PHIL 1998 Individualized Studies in Philosophy (PHIL) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Philosophy (PHIL). Please contact your mentor/advisor for more details.

PHIL 2005 Introduction to Philosophy (4 Credits)
Learn about some of (primarily Western) philosophy's major concepts, questions, and figures. Examples of such questions might include: Can we distinguish right from wrong? (How?) Does God exist? What is real? Should we consider scientific knowledge to be truth?
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

PHIL 2020 Introduction to Ethics (4 Credits)
Learn about some of the ways that ethicists reason about such topics as 'good and bad' or 'right and wrong' or 'morality' in a range of contexts. NOTE: Students should not take both the 4-credit and the 2-credit courses titled Introduction to Ethics as these overlap.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

PHIL 2996 Special Topics in Philosphy (4 Credits)
This is a course about special topics in philosophy.
Attributes: Liberal

PHIL 2998 Individualized Studies in Philosophy (PHIL) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Philosophy (PHIL). Please contact your mentor/advisor for more details.

PHIL 3015 Thinking About Music (4 Credits)
What is music and why does it matter? How and why do different musics matter differently to different people, and powerfully so? How might our own experiences with listening to music or making music inform our understanding of music's relevance to and importance in human life and culture? In this course, students will read, think, and write about music in philosophical ways, with ample opportunity to shape questions, ideas, and arguments in relation to their own musical experiences, interests, and preferences.
Cross-listed with MUSC 3050.
Attributes: Humanities Gen Ed, *Humanities Gen Ed, Liberal

PHIL 3998 Individualized Studies in Philosophy (PHIL) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Philosophy (PHIL). Please contact your mentor/advisor for more details.

PHIL 4998 Individualized Studies in Philosophy (PHIL) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Philosophy (PHIL). Please contact your mentor/advisor for more details.

PHOT: Photography (Undergraduate)

PHOT 1005 Black Photographers 1840- Present: Intro (4 Credits)
This course examines the ways in which black photographers in various parts of the world use the medium as a way to represent themselves and others throughout the history of photography from the mid 1800's to the present. Students will explore major social and cultural issues that helped shape the perception of the black subject and how black photographers have worked to change perceptions of black subjects through their commercial and fine art photography.
Attributes: Humanities Gen Ed, Arts Gen Ed, *Humanities Gen Ed, *The Arts Gen Ed, Liberal

PHOT 1010 Documentary Photography: Introductory (4 Credits)
The purpose of this course is to examine the history and practice of documentary photography. Students will also learn technical skills for the camera and produce a body of images and text related to this genre. Throughout this course, students will explore and participate in the creative process of photography.
Attributes: Humanities Gen Ed, Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 1015 History of Photography: Introductory (4 Credits)
Students will learn about the history of photography through studying texts and research that covers diverse focal points of interest. Research will include relevant technological, economic, political, and artistic perspectives in relation to how photography documents culture and humanity. Students are encouraged to visit photographic exhibitions at museums and galleries, either virtually or in person.
Attributes: Humanities Gen Ed, Arts Gen Ed, *Humanities Gen Ed, *The Arts Gen Ed, Liberal

PHOT 1020 Issues in Contemporary Photography: Introductory (4 Credits)
What is a photograph? How does the subjective perspective of the photographer shape our perception of the subject of the photograph? This course will examine this question and others like it in the field of photography over the past several decades. Of particular focus will be the ways in which the human figure has been represented as both subject and object, and how this photographic representation can influence our perceptions of the human figure in a wider cultural context on various levels. NOTE: Students may take the introductory or advanced level version of this course but not both.
Attributes: Humanities Gen Ed, Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 1025 Photographic Narratives: Introductory (4 Credits)
How do we use the photographic process to tell stories about ourselves and others? What possibilities do these stories offer for understanding ourselves and others better? This course will guide the student through the creative process inherent in photography of creating a series of images that explore the narrative or documentary genre of photography. Students will explore through text and images, the ways in which photographic language ethically contributes to the shaping of our individual and collective identities as human beings. NOTE: Students can take either the introductory or advanced level of this course but not both.
Attributes: Humanities Gen Ed, Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 1030 Photography from Dusk to Dawn: Introductory (4 Credits)
The city at night can be energetic, threatening, peaceful or mysterious depending on the subjects the photographer chooses to portray. The student in this course will use New York City as a source of inspiration to make or examine images that explore the wonder and excitement of the nocturnal city. The student will explore the work of various photographers from George Brassai in 20th century Paris to Lynn Saville in 21st century New York City that examines the modern city at night through photography. Students will produce a body of photographs of their own that creatively explores this period of time from dusk to dawn. NOTE: Students may take either the introductory or advanced level of this course but not both.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 1040 Photography & The Environment: Introductory (4 Credits)
The ability of photography to document the human impact on the natural environment over the past several decades has created a vast body of images. These images have made us more aware of the danger that this human intrusion has created for future generations. The work of photographers and artists such as Edward Burtynsky, Vik Muniz, and others has shifted the dialogue from one of observation of the consequence of this human impact to a dialog about how damages to the environment can be corrected. NOTE: Students may take either the introductory or advanced level of this course but not both.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 1045 Street Photography: Composing the Urban Landscape: Introductory (4 Credits)
The purpose of this course is to examine the ways in which the urban landscape can influence the making of dynamic, creative photographic images. Students apply the principles, skills, and techniques learned to create a portfolio of images that are a reflection of this knowledge. NOTE: Students can take either the introductory or advanced level of this course but not both.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 1998 Individualized Studies in Photography (PHOT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Photography (PHOT). Please contact your mentor/advisor for more details.

PHOT 2005 Photography Project: Introductory (4 Credits)
Basic knowledge of camera operations and image processing is assumed. Students will propose a substantial, individualized photography project, which they will develop in collaboration with the mentor.
Attributes: Liberal

PHOT 2010 The Photographic Vision (4 Credits)
This course provides a comprehensive introduction to photography as art, craft, profession, and medium of communication. Students will learn the technical aspects of the camera and the communicative and artistic potential of the medium. We will discover how structure, form, composition and special effects contribute to a final work while compiling one's own portfolio of photographs. Students will also view and critique photographs to further develop technique and personal style. Additional topics covered in this course include the history of photography, various genres such as portraiture and photojournalism, and photography as art. Students will also study the works of accomplished professional photographers and explore the consistent elements present in successfully executed photographs. This course was previously ART-222024 The Photographic Vision.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 2015 Introduction to Digital Photography (4 Credits)
This introductory course is designed for students who want to learn how to use a digital camera to capture, edit, and manipulate photographic images. This plan will be implemented by reviewing principles of composition; discussing and practicing various styles of photography; learning to use appropriate digital photographic editing software; and, finally, how to prepare the final images for various means of display, from hard copy printing to digital display. This course is intended for the student who has working knowledge of the basics of either the Windows or Mac operating system and can learn digital editing software. Students must have a basic knowledge of traditional photography (or equivalent experience).
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 2998 Individualized Studies in Photography (PHOT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Photography (PHOT). Please contact your mentor/advisor for more details.

PHOT 3015 History of Photography: Advanced (4 Credits)
Students will learn about the history begin with a quick study of photography through studying texts a comprehensive text, followed by research and research that covers writing on diverse focal points of interest. Research will should include relevant technological, economic, political, and artistic perspectives in relation to how photography documents culture and humanity. perspectives. Students are encouraged to visit, when reasonably possible, photographic exhibitions at museums and galleries, either virtually or in person. galleries. This course was previously ART-223654 Photography: A History.
Attributes: Humanities Gen Ed, Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 3020 Issues in Contemporary Photography: Advanced (4 Credits)
What is a photograph? How does the subjective perspective of the photographer shape our perception of the subject of the photograph? This course will examine this question and others like it in the field of photography over the past several decades. Of particular focus will be the ways in which the human figure has been represented as both subject and object, and how this photographic representation can influence our perceptions of the human figure in the wider cultural context on various levels. NOTE: Students may take the introductory or advanced level version of this course but not both.
Attributes: Humanities Gen Ed, Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 3035 Photography Project: Advanced (4 Credits)
Basic knowledge of camera operations and image processing is assumed. Students will propose a substantial, individualized photography project, which they will develop in collaboration with the mentor.
Attributes: Liberal

PHOT 3055 Advanced Digital Photography (4 Credits)
Digital photography is a study that explores the image as a form of creative problem solving. Elements of basic composition, editorial images, and individualized points of views are among three of the core themes that will be explored during the course. Throughout the term college written critiques of the photographs will support analytical understandings of the visual objectives. As a final project, students create a portfolio that reflects new ways of seeing and interpreting the world around them, which holds the power to transform the everyday. Access to a digital camera and a computer are required for the course. A background in the visual arts is not essential. All photographs will be presented in black and white unless color is required in the assignment or justified by the photography.
Attributes: Liberal

PHOT 3998 Individualized Studies in Photography (PHOT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Photography (PHOT). Please contact your mentor/advisor for more details.

PHOT 4005 Advanced Photography Portfolio (4 Credits)
The purpose of this course is to assist the student in finishing a body of images already in progress by the beginning of the course or to begin a new one. Students will concentrate on developing their own personal artistic voice through the exploration of both text and images by others as well as their own. Prerequisites: Successful completion of introductory photography courses and/or equivalent knowledge and the ability to engage in advanced level photographic work.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 4010 Photography as Cultural History (4 Credits)
The purpose of this course is to provide students with an opportunity to advance their knowledge of the theory and history of documentary photography and photojournalism. Other elements of photography will also be studied, such as light and shadow, form-in-space, narrative content, framing and composition, depth-of-field, and the photographic image as a medium of expression.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

PHOT 4998 Individualized Studies in Photography (PHOT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Photography (PHOT). Please contact your mentor/advisor for more details.

PHYS: Physics (Undergraduate)

PHYS 1000 Conceptual Physics (4 Credits)
This course is designed for students without prior exposure to physics. Students will learn about the major themes of physics: mechanics, electricity, thermodynamics, and waves and sound. Emphasis will be on conceptual understanding of fundamental laws of physics, rather than algebraic manipulation of formulas. Students should be able to manipulate simple algebraic expressions. Prerequisites: College Mathematics (MATH 1000) or Algebra (MATH 1040) or equivalent.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

PHYS 1100 Introductory Astronomy (4 Credits)
Astronomy is perhaps the most observational of all the physical sciences. Astronomers rarely have the opportunity to directly manipulate the objects they study as they lie so far away from us. This course will introduce students to the universe and the principles used to understand the stars and planets. Course topics include: the history of astronomy, methods of observational astronomy, celestial geometry, age and origin of the Solar System, descriptions of the planets, and discussions of the possibility of life on other planets. Students will use and collect data to study the concepts and design their own final experiment. This course was previously SMT-271434 Introductory Astronomy. Prerequisites: Algebra (MATH 1040) or equivalent.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

PHYS 1200 Physics I with Lab (4 Credits)
Physics I with Lab is the first course of the two-term sequence in algebra-based physics. This course serves as an introduction to the basic principles of physics, primarily in the domain of mechanics, the study of the motion of objects. Themes to be explored will include: linear, two-dimensional, and rotational kinematics (motion); linear, two-dimensional, and rotational dynamics (force); models of energy and momentum; gravity; simple harmonic motion; waves and sound; fluids. Students will be performing hands-on experiments in course content areas. This course uses a mandatory hands-on lab kit to provide students an authentic laboratory experience. The kit (in addition to the textbook) will add an additional cost to the Course Materials. See the Learning Contract/Syllabus for specific details. This is an algebra-based physics course. Students taking this course should be comfortable solving algebraic equations. Students who need to strengthen their background in algebra should take Algebra (MATH 1040) before taking this course. This course contains elements which rely on vision and motor skills to complete. If you have a visual or motor impairment and are considering registering for this course, it is recommended that you reach out to Accessibility Resources and Services (Disability.Services@sunyempire.edu) in advance of registration to determine if this course is appropriate and what alternatives may be available.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

PHYS 1201 Physics II with Lab (4 Credits)
Physics II with Lab is the second course of the two-term sequence in general algebra-based physics. This course serves as an introduction to the basic principles of physics, primarily in the domain of electromagnetism, the study of electrical and magnetic systems and phenomena. Additional topics in thermal physics and quantum physics will be explored. Themes to be explored will include: heat and temperature; phases and phase changes; laws of thermodynamics; electric charges, forces, and fields; electric potential; electric current and direct-current circuits; magnetism; electromagnetic waves; geometric optics; physical optics; quantum mechanics; atomic and nuclear physics. Students will be performing hands-on experiments in course content areas. This course uses a mandatory hands-on lab kit to provide students an authentic laboratory experience. The kit (in addition to the textbook) will add an additional cost to the Course Materials. See the Learning Contract/Syllabus for specific details. This is an algebra-based physics course. Students taking this course should be comfortable solving algebraic equations. Students who need to strengthen their background in algebra should take Algebra (MATH 1040) before taking this course. This course contains elements which rely on vision and motor skills to complete. If you have a visual or motor impairment and are considering registering for this course, it is recommended that you reach out to Accessibility Resources and Services (Disability.Services@sunyempire.edu) in advance of registration to determine if this course is appropriate and what alternatives may be available. Prerequisites: Physics I with Lab (PHYS 1200) or equivalent.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

PHYS 1210 Physics I: Lecture (3 Credits)
Physics I is the first course of a two-term sequence in general Physics for science concentrations. This three-credit course covers the lecture and not the laboratory component of the sequence, which is offered as a separate course. Students will explore mechanics, using an algebra-based framework, to study the motion of objects. Topics covered will include linear, two-dimensional, and rotational kinematics (motion); linear, two-dimensional, and rotational dynamics (force); models of energy and momentum; gravity; simple harmonic motion; waves and sound; fluids. Students will be performing hands-on experiments in course content areas. This course uses a mandatory hands-on lab kit to provide students an authentic laboratory experience. The kit (in addition to the textbook) will add an additional cost to the Course Materials. See the Learning Contract/Syllabus for specific details. This is an algebra-based physics course. Students taking this course should be comfortable solving algebraic equations. Students who need to strengthen their background in algebra should take Algebra (MATH 1040) before taking this course.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

PHYS 1211 Physics I: Laboratory (1 Credits)
This is a one-credit laboratory course that supports the Physics I course. Students will learn basic knowledge of the general principles of Physics through laboratory exercises. Students will practice laboratory techniques using laboratory equipment. This course uses a mandatory hands-on lab kit to provide students an authentic laboratory experience. The kit (in addition to the textbook) will add an additional cost to the Course Materials. See the Learning Contract/Syllabus for specific details. This is an algebra-based physics course. Students taking this course should be comfortable solving algebraic equations. Students who need to strengthen their background in algebra should take Algebra (MATH 1040) before taking this course. This course contains elements which rely on vision and motor skills to complete. If you have a visual or motor impairment and are considering registering for this course, it is recommended that you reach out to Accessibility Resources and Services (Disability.Services@sunyempire.edu) in advance of registration to determine if this course is appropriate and what alternatives may be available. Corequisites: Physics I (PHYS 1210) or equivalent.
Attributes: Liberal

PHYS 1212 Physics II: Lecture (3 Credits)
Physics II is the second course of a two-term sequence in general Physics for science concentrations. This three-credit course covers the lecture and not the laboratory component of the sequence, which is offered as a separate course. Students will explore electromagnetism, thermal physics, and quantum physics using an algebra-based framework. Topics covered will include heat and temperature; phases and phase changes; laws of thermodynamics; electric charges, forces, and fields; electric potential; electric current and direct-current circuits; magnetism; electromagnetic waves; geometric optics; physical optics; quantum physics; atomic and nuclear physics. This is an algebra-based physics course. Students taking this course should be comfortable solving algebraic equations. Students who need to strengthen their background in algebra should take Algebra (MATH 1040) before taking this course. Prerequisites: Physics I (PHYS 1210) or equivalent.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

PHYS 1213 Physics II: Laboratory (1 Credits)
This is a one-credit laboratory course that supports the Physics II course. Students will learn basic knowledge of the general principles of Physics through laboratory exercises. Students will practice laboratory techniques using laboratory equipment. This course uses a mandatory hands-on lab kit to provide students an authentic laboratory experience. The kit (in addition to the textbook) will add an additional cost to the Course Materials. See the Learning Contract/Syllabus for specific details. This is an algebra-based physics course. Students taking this course should be comfortable solving algebraic equations. Students who need to strengthen their background in algebra should take Algebra (MATH 1040) before taking this course. This course contains elements which rely on vision and motor skills to complete. If you have a visual or motor impairment and are considering registering for this course, it is recommended that you reach out to Accessibility Resources and Services (Disability.Services@sunyempire.edu) in advance of registration to determine if this course is appropriate and what alternatives may be available. Prerequisites: Physics I (PHYS 1210) and Physics II (PHYS 1212) or equivalents. Corequisites: Physics II (PHYS 1212) or equivalent.
Attributes: Liberal

PHYS 1998 Individualized Studies in Physics (PHYS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Physics (PHYS). Registration for this class must be approved by the student's mentor.

PHYS 2998 Individualized Studies in Physics (PHYS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Physics (PHYS). Registration for this class must be approved by the student's mentor.

PHYS 3998 Individualized Studies in Physics (PHYS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Physics (PHYS). Registration for this class must be approved by the student's mentor.

PHYS 4998 Individualized Studies in Physics (PHYS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Physics (PHYS). Registration for this class must be approved by the student's mentor.

POLI: Political Science (Undergraduate)

POLI 1005 Introduction to Political Science (4 Credits)
Students will be introduced to the methods and basic principles of political science. This course will cover the major subfields of political science: national government, comparative politics, international relations, and political theory.
Attributes: *Social Sciences Gen Ed, Liberal

POLI 1996 Special Topics in POLI (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

POLI 1998 Individualized Studies in Political Science (POLI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Political Science (POLI). Please contact your mentor/advisor for more details.

POLI 2005 New York State & Local Government (4 Credits)
New York State and Local Government is an introductory level course that explores the political system of New York State and the diverse and complex relationships between the state government and the various municipalities. The course examines the extraordinary history of New York government and the interaction between the branches of government and the state agencies that deliver services and programs to citizens of the state. The course examines the policy process and the influence of federalism on state and local governments. This course was previously SOC-262224 New York State and Local Government.
Attributes: Liberal

POLI 2010 The U.S. Political System (4 Credits)
This course explores the principles, institutions and processes of U.S. government and politics and the methods political scientists use to study them. Topics, such as the following, will be addressed: the structure and operation of U.S. government and political systems; a recognition of the avenues available to individuals and groups for effective political involvement; an appreciation of the role of the media in influencing politics and public policy; detailed comprehension of key decision making and implementing political institutions with particular attention to the budgetary process. This course was previously POLI 3100/SOC-261204 The American Political System
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

POLI 2013 Race in United States Politics (4 Credits)
The student will examine the issue of race in contemporary US politics. Students will examine issues relating to white supremacy/white nationalism, immigration and demographic/cultural change, and how racial resentments connect to economic issues, among others. Students will explore how these issues affect electoral politics, campaigns, and how office-holders govern. We will learn how politicians and partisan media use these issues to move public opinion, and how mainstream media cover these issues. This course is cross listed with HIST 2013. Cross-listed with HIST 2013.
Attributes: Liberal

POLI 2100 Politics and Military Strategy#in Western Civilization (4 Credits)
This course will examine the evolution of politics and military strategy in the history of Western civilization by engaging with classic texts and contemporary political and strategic thinking. Students will be asked to study how politics and strategy intersect with other distinctive features of the history, institutions, economy, society, and culture of Western civilization. The course will relate the development of this particular Western intellectual tradition to other regions of the world.
Attributes: Western Civilization Gen Ed, Liberal

POLI 2998 Individualized Studies in Political Science (POLI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Political Science (POLI). Please contact your mentor/advisor for more details.

POLI 3005 America's Founding Ideas (4 Credits)
The founding of the United States of America is one of the defining events of world history, and the political ideas of the founding generation continue to be invoked all manner of political debate. But questions about the founding generation remain: How did the American founding generation understand terms like 'liberty', 'democracy', and 'freedom'? How did diverse individuals and communities interpret the ideas associated with the American founding? What were the intellectual and historical contexts that made the founding possible? Students in this course will read primary and secondary texts, and apply contemporary and historical evidence, to gain a fuller appreciation of the complexity of the founding period and U.S.'s founding ideas in order to better understand some of today's political contests, challenges, and ideas.
Attributes: American History Gen Ed, *US History & Civ Engmt Gen Ed, Liberal

POLI 3020 Comparative Politics (4 Credits)
Comparative Politics is the study of domestic political systems around the world. Specifically, students will consider various approaches to the comparative study of political systems, institutions, forms of government, ideologies and practices. Possible themes include: globalization, political economy, political violence, and the characteristics of developed and developing countries. Students will gain an understanding of global studies and be able to analyze and evaluate past, present and future geopolitical issues from a comparative perspective and their impact on wellbeing and sustainability. This course was previously SOC-263414 Comparative Politics.
Attributes: Social Science Gen Ed, *World Hist & Glb Awnss Gen Ed, Liberal

POLI 3030 Cultural Differences & Politics (4 Credits)
The course explores the concept of culture and cultural differences with a specific focus on how differences impact international relations. In this current period of globalization, it is more important than ever to be informed about international affairs and the impact of cultural differences as illustrated, for example, by the growing nationalistic fervor of mainland China. Prerequisites: Prerequisites: Intro to Sociology and/or Psychology, or Intro to Cultural Anthropology and, preferably an introductory course in international relations.
Attributes: Liberal

POLI 3040 Ethnic Conflict: The Balkans & Beyond (4 Credits)
The Balkans is a region where power has changed hands as rapidly as ethnic and national boundaries. This course examines the complexity of the regional and ethnic conflicts in the Balkans, especially since the collapse of the Soviet Union. It reviews major political events, international relations and foreign policies between Macedonia, Bulgaria, Greece, Turkey, Yugoslavia, and Albania. Comparing and contrasting ethnic conflict in the Balkans with similar conflicts in other regions, students will formulate practical insights about the diverse nature of ethnic conflict and the possibility of either defining universal approaches to manage them, or building a strong locally defined approach to ethnic conflict resolution. Finally, it examines questions related to nationalism and the impact of globalization. Prerequisites: Prerequisites: Intro to Sociology and/or Psychology, Intro to Macroeconomics, European History, and/or a course in US foreign relations.
Attributes: Liberal

POLI 3045 Foreign Policy Analysis (4 Credits)
The purpose of this course is to familiarize students with the processes of formulating foreign policy. This includes the main theoretical approaches that will shed some light on the most significant agents in the policy-making process. It addresses the subject from the perspective of levels of analysis and different approaches of studies that illustrate the differences of the behavior of states in an interactive international system. Prerequisites: Prerequisites: This course assumes grounding in relevant theories related to international relations.
Attributes: Liberal

POLI 3050 Human Rights & International Humanitarian Law (3 Credits)
The course provides a comprehensive understanding of international human rights and international humanitarian law and how both bodies of law complement each other. The course examines in great detail the various aspects and controversies in the human rights debate and considers the obstacles to the implementation of human rights as universal norms. It traces the evolution of international humanitarian law from the beginning of the 19th century to the present. Moreover, the course examines the concept of war and how it has changed since the end of World War II; the threat posed by terrorist and extremist groups; the difficulty of distinguishing civilians from combatants on the battlefields; and the role and contribution of the United Nations and its successes and failures in developing and enforcing human rights norms. The course ends by examining the role of international tribunals in enforcing international humanitarian law and its prosecution of individuals who violated the law. Prerequisites: Prerequisites: Ethics or U.S. History, familiarity with the United Nations.
Attributes: Liberal

POLI 3055 International Law (3,4 Credits)
The purpose of this course is to introduce students to the core themes of international law. It covers a wide array of topics: from diplomatic immunity to the United Nations charter provisions, and from the recognition of governments to international law as it applies to war crimes. After an introduction presenting the historical development of the theory and practice of international law, the course then examines the sources of international law such as treaties, customs, general principles, and judicial decisions. Moreover, the course examines various forms of jurisdiction as they relate to institutions under international law, including states and governments as they relate to international organizations, individuals, companies, and groups. Prerequisites: The course assumes prior coursework related to international relations.
Attributes: Liberal

POLI 3060 International Organizations (4 Credits)
This course examines international organizations, their origins, purpose, function, and their role in international politics. The course will examine the birth of major international organizations and institutions such as the League of Nations, the United Nations, the World Trade Organization, the World Bank, and the International Monetary Fund, among others. In addition, the course will examine the role of international organizations in conflict avoidance, containment, and resolution. Prerequisites: Previous studies including International Relations theory
Attributes: Liberal

POLI 3065 International Politics & Relations (4 Credits)
In this course students will learn about how nation states, international organizations, and non-state actors interact with one another through governance structures and other means. Students will be introduced to different theories of international relations, including, but not limited to realism, idealism, dependency, and interdependency theory. Particular attention will be given to international organizations and regimes that have emerged in the governmental and non-governmental arenas of international relations. Using the social science methods addressed in the course, each student will be able to develop a major research project based on international relations theories and his or her specific interests and goals. This course was previously SOC-264454 International Politics and Relations.
Attributes: Social Science Gen Ed, Liberal

POLI 3075 Modern Diplomacy (3 Credits)
This course focuses on the goals and practices of modern diplomacy beginning with French and Italian conventions that emerged during the Renaissance to the rise of the new diplomacy of the 20th century and the challenges it faces in the present era. In addition, students examine how politicians and diplomats use diplomacy to secure the interest of their states or groups they represent. Prerequisites: Prerequisites: The course assumes background in history and knowledge related to international relations.

POLI 3080 Modern Political Theory (4 Credits)
The course will examine some of the most important contributions to political theory in the history of Western Civilization with a focus on the modern period, roughly from 1500-1900 C.E.. Students will explore questions about the proper role of government, the nature of political and moral obligation, the role of economics in political life, and the importance of personal, political and religious liberty.
Attributes: Humanities Gen Ed, Western Civilization Gen Ed, *Humanities Gen Ed, Liberal

POLI 3085 Political Parties & Interest Groups (4 Credits)
This course examines in depth the ways citizens participate in setting the public policy agenda and influence policy making. Students will evaluate two dominant institutions through which American citizens communicate their political demands to policy makers: the political parties and interest groups. This includes the debate over the future of political parties and the mechanics of political party involvement in nominations, campaigns, campaign finance and the formation of public policy. They will also study interest groups and their activities and the growing influence of political action committees. This course was previously SOC-263214 Political Parties and Interest Groups.
Attributes: Liberal

POLI 3090 Post-Soviet Russia (4 Credits)
The course examines central trends in the domestic and foreign policy of the Russian Federation since the collapse of the USSR in 1991. The course explores the historical and philosophical legacies informing the foreign policy of the successive Yeltsin and Putin regimes as a basis for understanding the post-Soviet relationships with the West, including the United Sates and three other regions: The countries of the former Soviet Union, the Caspian Region and Central Asia, and East Asia. In this context, the course focuses on the critical analysis of Russia's contemporary international situation. Prerequisites: Prerequisites: US History II and courses in the social sciences.
Attributes: Liberal

POLI 3095 Power & the American Presidency (3 Credits)
This course provides students a comprehensive understanding of the nature of the American system of government, in particular the Office of President. Students examine how the President is elected and how she/he governs in a system of checks and balances provided by the co-equal branches of Congress and the Supreme Court. In this regard, the course examines how the domestic powers of the office are both defined and constrained, while the powers of the presidency in foreign affairs are less so. In addition, the American system of government is viewed in the larger context of the European parliamentary system. Prerequisites: U.S. History I or II, preferably the latter.
Attributes: Liberal

POLI 3105 The American Presidency (4 Credits)
This course will examine the office of the American presidency and the operation of the executive branch of the American federal government from a historical perspective. We will analyze the office of the presidency throughout the history of the Republic, identifying patterns of change as well as continuities in presidential power. We will consider the presidency's design in the Constitution and what factors have led to departures from that framework. This course was previously SOC-263314 The American Presidency.
Attributes: American History Gen Ed, Liberal

POLI 3110 The United States Congress (4 Credits)
As defined in Article I of the Constitution, the Congress occupies a central role in the U.S. federal governmental system. The legislative processes of the U.S. Congress, however, have evolved in form and complexity since the first Congress, 1789-1791. While taking account of historical developments that influenced the evolution of the Congress, current congressional organization will be the major focus of study, including committee structures, rules and informal practices, elections, and the role of lobbyists and interest groups. Checks and balances in relation to the two other branches of the national government will be highlighted, in addition to consideration of the impact of state governments and actors on the national legislative process. This course was previously SOC-263324 The United States Congress.
Attributes: Liberal

POLI 3115 The United States Constitution (4 Credits)
Students in this course will learn about the history, structure, interpretation, and evolution of the American Constitution. Substantial portions of the course will be dedicated to the issues of constitutional rights, constitutional interpretation, the interplay between the American constitutional system and the environment, and major judicial decisions about how, when, and where certain parts of the Constitution are applicable. This course was previously SOC-263344 The United States Constitution: A Survey.
Attributes: American History Gen Ed, Liberal

POLI 3130 Women & American Politics (4 Credits)
This course explores the participation and roles of women in U.S. politics as citizens, voters, activists, and office holders and the impacts of gender in U. S. politics. The historical roles of the suffrage and women's movements in shaping women's engagement in political activities and parties, as well as differences by race and class, will be emphasized. The impact of women officeholders on public policy, at both nationally and at the state level, will be discussed. Other topics may include gender and political behavior; the intersection of race, class and gender in women's political engagement and attitudes; media treatment of women candidates for office, and public attitudes toward women in office.
Attributes: Liberal

POLI 3135 US Foreign Policy and Foreign Relations Law (3 Credits)
The purpose of this course is to give students a comprehensive understanding of American foreign policy and foreign relations law. The course further looks at how the Constitution influences the foreign policy making process and how it limits the choices available to the President and Congress in asserting their authority in foreign affairs. Part I of the course examines the legal authority of the United States Government to conduct foreign affairs and whether the Constitution helps or hinders that authority. Secondly, the course examines how the Constitution allocates foreign affairs power to the President and to Congress and whether checks and balances operate in the same manner in foreign affairs as it does in domestic politics. Particular attention will be given to the rivalry between the Executive and Legislative Branches over which branch has prominence in foreign affairs, and attempt by Congress to assert greater oversight authority in foreign affairs than the President believes is constitutionally mandated. In addition, the course examines the judicial review role of the Federal Courts in overseeing how the President and Congress exercise their respective authority in foreign affairs. Finally, the course focuses on the relationship between the Constitution and International Law, and the limitations International Law imposes on the Federal Government's ability to conduct foreign affairs. The course will address such controversial issues as the President's authority to send American troops into combat without Congressional authorization; Executive Agreements; U.S. participation in multinational military operations; U.S. violation of International Law; Congressional authority to declare war in light of the ban on the use of force in Article 2 (4) of the United Nations Charter; and the President's obligation to disregard U.S. treaty obligations.
Attributes: Liberal

POLI 3996 Special Topics in POLI (3,4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

POLI 3997 Special Topics in POLI (2-8 Credits)

POLI 3998 Individualized Studies in Political Science (POLI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Political Science (POLI). Please contact your mentor/advisor for more details.

POLI 4005 European Integration (4 Credits)
This course focuses on theoretical approaches addressing various aspects of European integration as it relates to EU policies and politics. European integration theory is the field of systematic reflection on the process of political cooperation in Europe and the development of common political institutions. Challenges to integration such as the unanticipated fiscal consequences of the monetary union, the growing power of the European Central Bank, the Syrian refugee crisis, and the impact of 'Brexit' are viewed in the larger context of sustaining or reversing the momentum of European integration. Prerequisites: Economic Policies of the European Union and familiarity with the formation, function, and crises regarding the European Union.
Attributes: Liberal

POLI 4010 Global Perspectives on Political Theory (4 Credits)
In this course students will explore the history and controversies associated with the idea of human rights; different theories of cosmopolitanism (i.e. the idea that a common thread of humanity ought to influence how we think about politics in a globalized world); and a range of cultural perspectives on endearing political questions. This course was previously SOC-263444 Global Perspectives on Political Theory.
Attributes: Western Civilization Gen Ed, Liberal

POLI 4015 Race Law & Politics (4 Credits)
This course examines how race continues to influence law and politics in the U.S., despite claims of a 'post-racial' society. Through the study of such topics as the history of discrimination, policing, voting, and hate speech, students will investigate how legal and political institutions and rules have disparate impacts on different segments of American society - and how those impacts in turn inform and affect identity, law, and politics. This course will offer students the opportunity to analyze the interrelatedness of law, race, and society, and explore how the law is used as a tool for social change.
Attributes: Liberal

POLI 4998 Individualized Studies in Political Science (POLI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Political Science (POLI). Please contact your mentor/advisor for more details.

PSYC: Psychology (Undergraduate)

PSYC 1005 Introduction to Psychology (4 Credits)
The purpose of this course is to gain an overview and examine the various disciplines, core concepts, and theories of psychology. The course will examine the basic concepts of psychology as a social science. Students will examine the major ideas/theories/disciplines within psychology, such as research methods, sensation/perception, memory, theories of personality, psychological disorders, social psychology, and others. Throughout this course, an emphasis will be placed on developing an understanding of psychology as a science of human thought and behavior. This course was previously HDV-282164.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

PSYC 1050 General Psychology (3 Credits)
This course introduces students to psychological thinking, to scientific methodology and to some of the main areas/theories of psychology. It provides an overview of the evolution of psychology as a discipline and a range of applications of psychology. The course includes such topics as the history of psychology, the scientific approach to behavior, personality development and measurement, psychological disorders and treatment, and social influences on behavior. Students will learn how psychologists obtain their knowledge about human behavior and mental processes and on how this knowledge can be applied to everyday life. This is a classroom-based course currently only available to students in the College's European programs.
Attributes: Liberal

PSYC 1996 Special Topics in PSYC (2-4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

PSYC 1998 Individualized Studies in Psychology (PSYC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Psychology (PSYC). Please contact your mentor/advisor for more details.

PSYC 2005 Brain & Behavior (4 Credits)
This course offers an introductory overview of the functioning of the nervous system and how that functioning relates to behavior and experience. Students will have an introduction to the structure and function of the neuron, the synapse, and the anatomy and organization of the nervous system. Additional topics may include how the brain is influenced by drugs and hormones; how it mediates sensation and perception; the brain's role in maintaining homeostasis; how the brain directs movement; and the brain's role in cognition and emotion. There will be a focus on the interplay of genetics, physiology, and the environment in influencing behavior and mental processes. Implications of the field for the understanding and treatment of neurological and mental disorders may also be explored. Please note: Students should not enroll in this course and the advanced level of the same course title as there is significant redundancy in the content of courses.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

PSYC 2020 Abnormal Psychology: Introductory (4 Credits)
This course deals with emotional and mental disorders. It will cover the dynamics, etiology, prevention, and treatment of psychological disorders (such as mood disorders, anxiety disorders, personality disorders, psychotic disorders, and other abnormal personality patterns). Students will gain an understanding of major theories, concepts of psychopathology, and methods of diagnostic classification. Please note: Students should not enroll in this course and the advanced level of the same course title as there is significant redundancy in the content of courses. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course.
Attributes: Liberal

PSYC 2025 Educational Psychology: Introductory (4 Credits)
The student will learn about principles in three areas related to education: growth and development; learning theories; and assessment/evaluation. Topics will include major theories of cognitive development, language development, and social/emotional development, including an emphasis on individual differences. Other major topics covered may include constructivist views of learning, issues of motivation, and various methods of assessment. Learning environments, including but not limited to schools, are discussed, with topics like classroom management, assessment of instructional objectives, and an overview of special populations included. Please note: Students should not enroll in this course and the advanced level of the same course title as there is significant redundancy in the content of courses.
Attributes: Liberal

PSYC 2030 Social Psychology: Introductory (4 Credits)
This course includes a comprehensive overview of the research methods, concepts, and theories related to social psychology, the study of how individuals interact within their social environment. The purpose of this study is to gain an in-depth understanding of the various influences that people and social settings have upon the beliefs, attitudes, and behaviors of others. Significant social phenomena will be explored, along with major theoretical concepts and research within this field. Topics may include: conformity, obedience, collective/group behavior, media/persuasion, prejudice, and discrimination. Please note: Students should not enroll in this course and the advanced level of the same course title as there is significant redundancy in the content of courses. Before taking this course, students should have an understanding of the field of psychology as a science with specific methodologies.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

PSYC 2040 Theories of Personality: Introductory (4 Credits)
This course will examine the field's major theories (such as trait, biological, psychoanalytic, humanistic, cross-cultural, and cognitive learning) for understanding personality. Personality structure, development, and dynamics will be explored from multiple perspectives. The study will cover what makes people similar and different from each other and how and why people think, feel, and act the way they do. Please note: Students should not enroll in this course and the advanced level of the same course title as there is significant redundancy in the content of courses.
Attributes: Liberal

PSYC 2042 Psychology of Happiness (2 Credits)
Can you define happiness or the factors that make one happy? This course examines the concepts, research, and theories of happiness within the broad perspective of positive psychology. Positive psychology encompasses the study of positive experiences, positive character and positive relationships, and the practices that facilitate their development. Topics may include the history of positive psychology, the measurement, development and benefits of happiness, internal traits and external environments that influence happiness, and methods to increase happiness. Note: Students are advised against enrolling in this course and an advanced level Positive Psychology course (e.g., PSYC 4050) as there can be significant redundancy in the content of these courses.
Attributes: Liberal

PSYC 2045 Sports Psychology (4 Credits)
This course will examine major theories, concepts, and applications of sports psychology, as well as current research and studies of the principal topics within the field of sports psychology. Topics covered in this study may include: team dynamics, the use of imagery, anxiety and performance, children and sports, skills training, leadership, and burnout.
Attributes: Liberal

PSYC 2050 Stress & Coping (4 Credits)
This course covers the study of stress and its influence on health and well-being. Topics may include theories of stress; emotional, cognitive, and behavioral symptoms of stress; negative and positive stress; personal stressors; the influence of attitudes and beliefs on the experience of stress; personality and stress; specific types of stress, like job, family, and technology stress; and theory and research related to effectively coping with stress. Students will have an opportunity to consider personal stressors and coping, as well as how to assist others to better cope with stress.
Attributes: Liberal

PSYC 2998 Individualized Studies in Psychology (PSYC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Psychology (PSYC). Please contact your mentor/advisor for more details.

PSYC 3000 Careers in Psychology and Human Development (2 Credits)
Are you considering a professional career in psychology or human development? Perhaps you#know exactly what kind of job#you want to pursue but are unsure of options available to you, both in terms of career and graduate study.#This course is designed to help students gain a better understanding of the diverse career options and graduate study opportunities in psychology and human development.#The course will focus on both traditional and emerging career paths, equipping students with practical knowledge and skills necessary to make informed decisions about their current and future course of studies and occupational strategies in these areas. This course meets 2 advanced level educational planning credits.
Attributes: Liberal

PSYC 3005 Addiction (3-4 Credits)
This course provides an overview of addictions from an interdisciplinary perspective: what is addiction, what are risk and protective factors, addiction epidemiology and monitoring system, etc. Different chemical substances are examined from a clinical perspective, including a historical overview of the use of alcohol and drugs and their influence on society and the impact on counselors' strategies and methods. Attention is further paid to socio-cultural factors that contribute to drug use as well as current treatment perspectives. Prerequisites: Biology of the Brain or an equivalent.
Attributes: Liberal

PSYC 3010 Abnormal Psychology: Advanced (4 Credits)
This course deals with emotional and mental disorders. It will cover the dynamics, etiology, prevention, and treatment of psychological disorders (such as mood disorders, anxiety disorders, personality disorders, psychotic disorders, and other abnormal personality patterns). Students will gain an understanding of major theories, concepts of psychopathology, and methods of diagnostic classification. Please note: Students should not enroll in this course and the introductory level of the same course title as there is significant redundancy in the content of courses. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This course was previously HDV-284074 Abnormal Psychology: Advanced.
Attributes: Liberal

PSYC 3015 Educational Psychology: Advanced (4 Credits)
The student will learn about principles in three areas related to education: growth and development; learning theories; and assessment/evaluation. Topics will include major theories of cognitive development, language development, and social/emotional development, including an emphasis on individual differences. Other major topics covered may include constructivist views of learning, issues of motivation, and various methods of assessment. Learning environments, including but not limited to schools, are discussed, with topics like classroom management, assessment of instructional objectives, and an overview of special populations included. Please note: Students should not enroll in this course and the introductory level of the same course title as there is significant redundancy in the content of courses. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course.
Attributes: Liberal

PSYC 3020 Social Psychology: Advanced (4 Credits)
This course includes a comprehensive overview of the research methods, concepts, and theories related to social psychology, the study of how individuals interact within their social environment. The purpose of this study is to gain an in-depth understanding of the various influences that people and social settings have upon the beliefs, attitudes, and behaviors of others. Significant social phenomena will be explored, along with major theoretical concepts and research within this field. Topics might include conformity, obedience, collective/group behavior, media/persuasion, prejudice, and discrimination. Please note: Students should not enroll in this course and the introductory level of the same course title as there is significant redundancy in the content of courses. Before taking this course, students should have an understanding of the field of psychology as a science with specific methodologies; some basic knowledge of psychological theories/concepts/history.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

PSYC 3025 Advanced Studies in Abnormal Psychology (3 Credits)
This course offers a systematic scientific study of abnormal psychology. Students will learn key concepts and issues as well as recognized disorders in the field of abnormal psychology. We will review definitions of 'abnormality' and common classification systems, current theoretical research in abnormal psychology, and basic theories about the neurological process involved in some abnormal psychological conditions. We will also look at the historical impact of psychological research and theory on the understanding of the etiology and diagnosis of abnormal psychological states; the concept of 'mental illness' and will consider current approaches to treatment. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 3030 Theories of Personality: Advanced (4 Credits)
This course will examine the field's major theories (such as trait, biological, psychoanalytic, humanistic, cross-cultural, and cognitive learning) for understanding personality. Personality structure, development, and dynamics will be explored from multiple perspectives. The study will cover what makes people similar and different from each other and how and why people think, feel, and act the way they do. Please note: Students should not enroll in this course and the introductory level of the same course title as there is significant redundancy in the content of courses. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course.
Attributes: Liberal

PSYC 3035 Behavior Disorders in Children & Adolescents (4 Credits)
This course will focus on the development and behavioral problems of children and adolescents, as well as the clinical methods for assessing and treating these problems. Specifically, students will identify the etiology of various behavioral disorders and become familiar with the DSM-5 diagnostic criteria, assessment methods, and interventions. Students will also utilize diagnostic criteria to evaluate and analyze behavior and mental functioning. Topics covered in this course may include: mental retardation, pervasive developmental disorders, schizophrenia, attention-deficit/hyperactivity disorder, oppositional defiant disorder, conduct disorder, delinquency, substance abuse, anxiety and depression, disorders affecting physical functioning, and psychological aspects of medical problems and procedures. Prerequisites: Introduction to Psychology or equivalent. Abnormal Psychology is highly recommended.
Attributes: Liberal

PSYC 3040 Biological Psychology (3,4 Credits)
This course offers an in-depth overview of the functioning of the nervous system and how it mediates behavior and experience. In addition to structures and functions of the neuron, the synapse, and the anatomy and organization of the nervous system, topics may include how the brain is influenced by drugs and hormones; how it mediates sensation and perception; its role in maintaining homeostasis; how it directs movement; and its role in mediating cognition and emotion. These functions may be analyzed from evolutionary, genetic, and developmental perspectives, with the aim of understanding the complex interplay of genetics, physiology, and the environment in influencing behavior and mental processes. Implications of the field for the understanding and treatment of neurological and mental disorders will also be explored. While it is not required, it might be helpful if students have taken Introduction to Psychology, Human Development, or an equivalent course. Some background in human biology and/or anatomy and physiology might also be helpful. This course was previously HDV-283474.
Attributes: Natural Science Gen Ed, *Natural Science Gen Ed, Liberal

PSYC 3045 Cognitive Psychology (4 Credits)
This course is an in-depth exploration of human cognition and relies heavily on experimental research designed to test models and theories of cognitive processes. It will explore both behavioral and neuropsychological approaches to data and theory. Topics may include attention, perception, multiple memory systems, encoding and retrieval processes, and the roles of knowledge, language, emotion, and reasoning. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This course was previously HDV-283514 . This course contains elements which rely on vision to complete. If you have a visual impairment and are considering registering for this course, it is recommended that you reach out to Accessibility Resources and Services (Disability.Services@sunyempire.edu) in advance of registration to determine if this course is appropriate and what alternatives may be available.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

PSYC 3050 Counseling Theories (4 Credits)
This course is designed to build on the student's knowledge of psychology and provide an overview of the various schools of thought, mainstream theories, and approaches to counseling, such as psychoanalytic, existential, humanistic, person-centered, gestalt, reality, behavior, cognitive/behavior, feminist, and family systems. The course is a practical introduction to the fundamentals of counseling, such as how different theories propose to help people change, the characteristics of the role of the counselor, and the development of the client-counselor relationship. The course also emphasizes the importance of in-depth awareness about the counselor's personal attitudes, values, and ethics, as well as the importance of being knowledgeable about cultural differences and issues. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This course was previously HDV-284044.
Attributes: Liberal

PSYC 3055 Cultural Psychology (4 Credits)
Cultural psychology is the comparative study of cultural effects on human psychology. It examines psychological diversity and the links between cultural norms and behavior. It will examine the ways in which particular human activities are influenced by social and cultural forces. Students can expect to develop a broader, global perception of contemporary psychology. Activities are intended to explain current psychological knowledge and its applications from a cross-cultural perspective. Additionally, this course will assist in developing a useful set of critical-thinking tools with which to analyze and evaluate psychology from various cultural perspectives. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This course was previously HDV-283544.
Attributes: Other World Civilization Gn Ed, *World Hist & Glb Awnss Gen Ed, Liberal

PSYC 3065 Ethical Issues in Psychology (4 Credits)
This course will explore to the role of ethics in psychological practice and psychological science. Students will learn to integrate ethical principles with their own morals and values in hypothetical professional situations. There will be a focus on ethical decision making in the domains of clinical practice, teaching, and research. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 3070 Evolutionary Psychology (4 Credits)
This course covers major concepts in the area of evolutionary psychology, such as the idea of psychological adaptation to social conditions that favored individuals for inclusion in the next generation of the species, as well as the distinct shaping of social behaviors that favored survival both of the individual and of the species. Topics may include the scientific movements that led to evolutionary psychology, including those leading up to the work of Charles Darwin and those developed after the work of Darwin. This course was previously HDV-283454.
Attributes: Liberal

PSYC 3075 Experimental Psychology (4 Credits)
In this course, students will gain knowledge about and hands-on practice of experimental research methods in psychology. Students will learn how to identify key pieces of experiments and how to properly plan out experiments to align with previous research and theory. Focus of study will be on the basic building blocks of psychological processes. Topics covered in this study may include research methods, hypothesis testing, cognition, sensation, attention, perception, memory encoding and retrieval, personality, and attitude formation. Relevant ethical and diversity issues will also be examined throughout the course. While it is not required, it might be helpful if students have taken Introduction to Psychology and a course examining Research Methods. This course was previously HDV-283354 . This course contains elements which rely on vision to complete. If you have a visual impairment and are considering registering for this course, it is recommended that you reach out to Accessibility Resources and Services (Disability.Services@sunyempire.edu) in advance of registration to determine if this course is appropriate and what alternatives may be available.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

PSYC 3080 Stereotyping, Prejudice, and Discrimination (4 Credits)
This course examines traditional and contemporary forms of prejudice and discrimination, as well as the psychological basis and impact of stereotyping. This includes an investigation of the methodology, theoretical perspectives, empirical findings, and applications of psychological research on social categorization, prejudice, discrimination, and intergroup relations across several different target groups. Topics will include, but are not limited to, the automaticity of stereotypes, old fashioned and contemporary forms of prejudice, theoretical approaches to intergroup relations, the psychological origins and consequences of prejudice and discrimination, and interventions for reducing bias and improving intergroup relations. The role of stereotyping, prejudice, and discrimination in creating social inequality and injustice and maintaining group differences will also be considered.
Attributes: Liberal

PSYC 3085 Group Dynamics (4 Credits)
This course is designed to help students gain an understanding of concepts and principles and the various practice considerations, approaches, and processes relevant to individuals' behavior in groups. Specific topics may include: group dynamics research and theory, including group-as-a-whole theory; the variables and stages related to group formation and development; the characteristics of group composition and structure; group leadership styles and patterns; different types of groups; issues related to group influence, power, performance, and decision-making; the influence of the physical environment on group behavior; effective versus ineffective group communication and interactional patterns; the effects of large groups on collective behavior; and the effect of culture on groups and individuals within groups. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 3090 Health Psychology (4 Credits)
This course focuses on the various ways that psychology (the study of human behavior) influences and interacts with various health outcomes. Topics may include factors that influence seeking health care; adherence to medical advice; the experience of stress; the experience of pain; coping with stress and pain; behavior and chronic disease; preventing injuries; addictive behaviors and health; and issues related to weight control and exercise. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This course is part of the BS in Public Health program. This course was previously HDV-284174 .
Attributes: Liberal

PSYC 3095 History & Systems of Psychology (4 Credits)
This course explores major developments and ideas in the history of psychology as an academic discipline. It addresses such topics as the history of ideas about the mind, key historical events that shaped the field, when and how psychology became a science, and the life histories of prominent psychologists. Although psychology really only became an independent discipline in the late 1800s and early 1900s, its history goes back much further than that, and this study will explore the origins of psychological thought and inquiry.
Attributes: Western Civilization Gen Ed, Liberal

PSYC 3100 Learning & Memory (4 Credits)
This course will examine major theories of conditioning, learning, and memory (such as behaviorism, cognitivism, and social learning), explore our current understanding of biological mechanisms of learning and memory, and consider applications of multiple theoretical perspectives in diverse fields such as behavior therapy, education, counseling, and law. The study will also examine cultural and age-related differences in memory and learning. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This course was previously HDV-283654 Learning and Memory.
Attributes: *Social Sciences Gen Ed, Liberal

PSYC 3105 Principles of Testing & Measurement (4 Credits)
This course focuses on the basic principles, theories, issues, and practices in the field of psychological testing and assessment, a field that separates psychology from other mental health professions. While other professionals might use screening tools, risk assessments, and some types of measurements, only psychologists use tests to assess intelligence, personality, and other psychological constructs. This course will introduce how psychologists measure psychological constructs (like intelligence, emotions, and personality), as well as introduce students to common testing instruments that have been developed for the purpose of evaluating individuals. While it is not required, it might be helpful if students have taken Introduction to Psychology, Abnormal Psychology, Theories of Personality, or an equivalent course. This course was previously HDV-283404 Principles of Testing and Measurement.
Attributes: Liberal

PSYC 3110 Psychological Measurements (3 Credits)
This course provides an introduction to the use and limitations of psychological assessment techniques and measurement instruments for assessing ability, aptitude, achievement, intelligence, personality, and abnormalities. The course will cover the basic principles of measurement theory, including validity and reliability, on testing and measurement of psychological constructs, techniques for administration, and interpretation of results. Trends and problems associated with the interpretation and use of results for decision-making will be considered together with ethical and legal issues. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 3115 Psychology of Aging (4 Credits)
In this course, students will learn about the interplay between physical and physiological changes, cognitive changes, behavioral changes, societal expectations, and their psychological impacts on aging adults. Current research, theory, and case examples will present perspectives on the experience of older adults. Topics may include challenges often faced by older adults, how older adults are portrayed in literature and the media, milestones and developmental markers strived for in aging, cultural perspectives on the psychology of aging, and perspectives on positive aging. While it is not required, it might be helpful if students have taken Introduction to Psychology, Human Development, or an equivalent course. This course was previously HDV-284224 .
Attributes: Liberal

PSYC 3120 Psychology of Diversity (3 Credits)
This course introduces students to theoretical, philosophical, and experiential frameworks for thinking about diversity in our communities and society as they relate to social justice. It includes an examination of the experiences of diverse groups, especially traditionally oppressed groups and individuals. This course is designed to engage students in a process of introspection and self-examination about issues such as racism, sexism, classism, and homophobia. Emphasis will be placed on challenging our own world view and the way it fits into institutional oppression. We will also discuss and research theories that explain why such inequalities are perpetuated as well as possible solutions to inequality. Prerequisites: Introduction to Psychology of equivalent.
Attributes: Liberal

PSYC 3122 Psychology of Creativity (4 Credits)
Creativity and innovation are complex psychological processes that play an important role in various academic fields and human activities. Creativity can be considered in terms of various psychological concepts such as personality, cognition, learning, and biological processes. We also know that creativity can be developed and is not fixed. This course will look at the research on various methods of developing creativity in terms of how creativity works, what products are considered creative, what it means to be a creative person, and what social contexts support creativity.
Attributes: Liberal

PSYC 3125 Psychology of Gender (3 Credits)
Gender generally refers to the social, emotional, cognitive, and behavioral expressions of being male or female. Students will examine the concept of gender and its psychological manifestations. Students will use theory and research to apply gender concepts to an understanding of the behavior and attitudes of self and others. Prerequisites: Introduction to Psychology and Biology of the Brain or their equivalent. This is a classroom-based course currently only available to students in Prague.
Attributes: Liberal

PSYC 3127 Psychology of Love (4 Credits)
This course focuses on the psychological aspects of love and the various ways it is demonstrated in human behavior including romantic love, as well as various nonromantic types such as love of family, friends, animals, country, etc. Research on love will be considered in terms of both biological as well as psychological factors. How various types of love develop, how love is experienced, how it is expressed, cultural and social factors that influence love, as well as how it can be lost will all be considered.
Attributes: Liberal

PSYC 3130 The Impact of Culture on Psychological Processes (3 Credits)
This advanced level liberal arts course in psychology introduces students to some of the core research and theory in cultural and cross-cultural psychology, including an examination of important ways in which perception, emotion, judgment, morality, etc. depends on culture. It explores some of the controversy and debate as to the extent to which psychology is inherently cultural or to which studying cultural differences is necessary to understanding psychological processes. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 3132 Investigative Psychology: Offender Profiling & Criminal Psychogeography (3,4 Credits)
This course examines "investigative psychology", a branch of the discipline which concerns itself with criminal action and attendant psychological processes/behavioral actions which are said to occasion or accompany such action. It has a much narrower focus than forensic psychology, being largely focused on criminal activity and police investigation, and primarily originated from the work of Professor David Canter who was invited to aid an investigation into a serial rapist in the UK. From its very outset, it was very much focused on its practical application. The entire idea of criminal profiling remains controversial. It is still far from clear whether it is a task which can be accomplished. It is often portrayed in the media as an art or an intuitive skill set. Allied of course, to a "knowledge" of the elusive psychopathology of the unknown criminal via psychodiagnostic assessment, psychobiographies and evidence from previous cases, finally contributing to the "profile". Or, as some have objected, the "guess". Nevertheless, offender profiling has been extended far beyond its original remit of serious crime and its original classificatory system of organized/disorganized crime. In addition, it does seem able, to some extent, to offer some insight into the mode and manner in which criminals interact with, and within, their physical environment, predicting home locations of serial offenders.
Attributes: Liberal

PSYC 3135 The Use of Experimental Methods in Psychology (3 Credits)
This course surveys experimental psychology in its approach to psychological phenomena, methodological process of building research projects, practical steps during research, and the advantages of triangulation of different research methods. Students examine the major fields of psychology from a research perspective, both to illuminate the experimental methods used to examine psychological phenomena and to explore the variety of approaches currently employed. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 3140 Theories of Personality: Advanced (3 Credits)
This course provides a systematic study of clinical practice of personality styles and the principal theories, with particular emphasis on recent trends, research methodology, and personality measurement. This course examines the major personality styles and personality development, beginning with the specific personality styles, and then continuing with theories examining biological factors and the influence of learning. Theoretical perspectives will be explored with an eye towards their practical and clinical usefulness in explaining behavior, and in facilitating therapeutic solutions. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This is a classroom-based course currently only available to students in Prague.
Attributes: Liberal

PSYC 3145 Trauma & Stressor-Related Disorders (3,4 Credits)
This course focuses on building an understanding of the theory, research, and clinical information related to Trauma and Stressor-Related Disorders, with an emphasis on Post-Traumatic Stress Disorder (PTSD). Topics may include etiology, assessment, diagnosis, treatment, and challenges related to traumatic disorders; the nature of trauma and stressor-related disorders and how they present; research on these disorders and their treatment; history of how these disorders came to be understood; the means and methods of screening, assessment/evaluation, and treatment; and future directions in the field. This course was previously HDV-284344 Trauma and Stressor-Related Disorders.
Attributes: Liberal

PSYC 3996 Special Topics in PSYC (2-8 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

PSYC 3998 Individualized Studies in Psychology (PSYC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Psychology (PSYC). Please contact your mentor/advisor for more details.

PSYC 4010 Applied Social Psychology (4 Credits)
This study is intended to build upon knowledge already gained in a foundational course in Social Psychology by combining the science and theory of social psychology with the practical application of solving problems in the real world. Emphasis will be placed on applications in areas that may include: prejudice and intergroup relations, education, self-esteem, behavior modification, consumer behavior, and industrial/organizational psychology. Prerequisites: Social Psychology or equivalent.
Attributes: Liberal

PSYC 4015 Counseling Theories (3 Credits)
This advanced, liberal arts study introduces the student to the most influential theories and practices of counseling and psychotherapy, looking at their historical evolution, their current role, and their practical application in applied contexts. Prerequisites: This course should be taken during the student's final year of study and after completing most of the concentration courses.
Attributes: Liberal

PSYC 4020 Ecopsychology (4 Credits)
Ecopsychology is the study of how people think and feel about nature, including both healthy and unhealthy relationships, attitudes, and behaviors toward the natural world, as well as the effect that nature has on people. This course investigates whether humans have an innate connection with nature and how the disruption of this connection can impact health and well-being. Topics may include: issues related to spirituality, as they relate to humans' place in the natural world; the role of culture and humans' relationship with nature; whether humans are truly separate from or part of the natural world; and methods for improving humans' relationship with nature.
Attributes: Liberal

PSYC 4025 Human Sexuality (4 Credits)
This course focuses on human sexuality. Topics may include: the anatomy and physiology of the male and female body, including how hormones influence psychology and behavior; typical and atypical gender roles; romantic love; sexual behaviors, both typical and atypical; and communication issues related to the topic of sex. Sexually transmitted diseases and infections, as well as sexual abuse, may also be covered. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This course was previously HDV-283334 .
Attributes: Liberal

PSYC 4030 Media Psychology (4 Credits)
This course engages a comprehensive look at the foundations, history, methodology, and contemporary issues facing the field of media psychology. Topics may include violence and sexuality, ethnic portrayals, and persuasion, as well as current research on the areas of parasocial theory, social media, and the effects of media on development. Differing uses and effects throughout the lifespan are discussed with a recognition that media plays a different role in childhood, adolescence, adulthood, and for the aging adult. An emphasis in media across cultures is included. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 4035 Multicultural Counseling (4 Credits)
This course focuses on the multiple dimensions related to competent multicultural counseling. Major racial groups are studied, along with the counseling, social justice, and advocacy approaches appropriate to each. In a similar fashion, the overarching cultural context of relationships, including factors such as age, race, gender, sexual orientation, religious and spiritual values, mental and physical characteristics, education, family values, socioeconomic status, and within-group as well as between-group cultural differences are examined. Theories of multicultural counseling, such as identity development, pluralistic trends, and systems-oriented intervention strategies (couple, family, group, and community), are considered. Counselor cultural self-awareness and the role of counseling in eliminating biases, prejudice, oppression, and discrimination are emphasized. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 4040 Narrative Counseling (4 Credits)
This course will encompass an overview of historical, philosophical, and ideological aspects of narrative and social constructionist perspectives, with a focus on counseling practices. Topics may include: locating problems in their sociocultural context, opening space for alternative stories, developing stories, questioning, reflecting, thickening plots, spreading the news, and issues of ethics in the therapeutic relationship. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 4045 Narrative Psychology (4 Credits)
This course will explore the concept of 'self as story' by examining the perspectives of several narrative theorists. Narrative psychology is an interdisciplinary perspective concerned with the process of meaning-making; it is a way of viewing self and self-in-the-world, a framework for conceptualizing personality and human nature and lived experience. Topics may include: the meaning of stories in a life; becoming a 'mythmaker;' agentic and communal 'imagoes' (or personal archetypes); the development of a narrative sense of self; exploring your myth, as well as life stories; the autobiographical self ('storying' life and identity); reading lives like a text; the need for narrative development, stories, and memory; the quest for meaning; and transforming and transcending our life stories. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 4050 Positive Psychology (4 Credits)
This course will cover the study of psychology from a positive perspective. Topics may include positive emotional and cognitive states and processes; prosocial behavior and altruism; understanding and changing human behavior from a positive perspective; positive environments; and the future of the field of psychology from a positive psychological perspective. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 4055 Psychology of Men: Theoretical & Clinical Approaches (4 Credits)
This course will focus on psychological issues related to men and boys. Issues related to men may include: depression, substance abuse, and trauma; specific contexts of men, such as colleges, the military, and even school age boys; various forms of masculinity; how gender-role strain, masculine ideologies, roles, identities, and sexual orientation affect men; and current approaches to working with men in the therapeutic setting, including various modalities that include new psychoanalytic models, as well as cognitive, interpersonal, integrative, group, and family therapies, and their effectiveness for boys and men. How socialization of men and boys affects the therapeutic process may also be discussed. Additionally, cross-cultural considerations with men, such as African American, Latino, Gay, Bisexual, and Transgender, Asian American, and religious populations, can provide a diverse approach to possible therapies. Prerequisites: Introduction to Psychology or equivalent.
Attributes: Liberal

PSYC 4060 Sensation & Perception (4 Credits)
This course will examine the concepts, theories, and methods employed to study sensation and perception from a scientific perspective. Topics will range from reception of various physical stimuli and transduction and transmission of signals within the nervous system, to coding, interpretation, and representation in the brain. These approaches will be applied to the major sensory systems. Additional themes that may be explored include development and change over the lifespan, perceptual constancies, perceptual illusions, attention, and spatial perception. While it is not required, it might be helpful if students have taken Introduction to Psychology or an equivalent course. This course was previously HDV-284364 Sensation and Perception. This course contains elements which rely on vision to complete. If you have a visual impairment and are considering registering for this course, it is recommended that you reach out to Accessibility Resources and Services (Disability.Services@sunyempire.edu) in advance of registration to determine if this course is appropriate and what alternatives may be available.
Attributes: Liberal

PSYC 4070 Research Methods in Psychology (3-4 Credits)
This is an advanced study building upon a previous course in experimental psychology. Students will use their previous learning in experimental psychology, the methodological process of building research projects and practical steps during research, to generate their own experimental research design and to critique experimental research. Prerequisites: A previous course in Experimental Psychology or equivalent.
Attributes: Liberal

PSYC 4075 Topics in Developmental Psychology (3 Credits)
The course explores a selection of the most influential theoretical approaches within Developmental Psychology. The student is expected to compare and contrast theories of development, consider their applications, and develop a critical approach. Prerequisites: Introduction to Psychology and Biology of the Brain or their equivalent.
Attributes: Liberal

PSYC 4080 Forensic Psychology (4 Credits)
This advanced course will provide students with a theoretical overview for understanding the specific principles important to the field of forensic psychology. Topics may include: the role of psychology in civil and criminal law; the forensic ethics code and its implications; forensic assessment strategies; the insanity defense; and "expert" court testimony by psychologists. Students will explore the role of forensic psychologists and the clinical and legal issues they face. This course was previously HDV-284164.
Attributes: Liberal

PSYC 4090 Research Practicum in Psychology and Human Development (2-8 Credits)
Under the supervision of a faculty member, students gain practical hands-on experience participating in various research activities pertaining to the collection, analysis, and dissemination of data. Course may be repeated for credit. Before taking this course, students are required to have approval of appropriate PSYC/HUDV faculty member, and have completed at least one prior course in research methodologies, such as SOSC 3025: Social Science Research Methods, HUDV 3085: Research Methods for Lifespan Development, or an equivalent course. This research opportunity meets the SUNY Applied Learning Initiative expectations. This course is cross-listed as HUDV 4090. Prerequisites: SOSC 3025: Social Science Research Methods, HUDV 3085: Research Methods for Lifespan Development, or an equivalent course.
Attributes: Liberal

PSYC 4122 Moral Psychology (4 Credits)
This course will cover the field of moral psychology by examining findings related to how emotions, personality, moral intuition, as well as the possibility of innate moral understandings contribute to thinking and behavior. The course will cover the major theories of moral development including Freud, Piaget, and Kohlberg, among others. Various perspectives on moral development will be explored including cognitive development theories, neuroscience approaches, as well as evolutionary perspectives. Applications will focus on the role of empathy and its development, as well as the role of morals in talk therapy and character education.
Attributes: Liberal

PSYC 4123 Senior Project Proposal (2 Credits)
The student will prepare a proposal for the senior project and engage in educational planning. The senior project facilitates the integration and reflection of knowledge acquired from university learning which is aimed at creating an original culminating work. Educational planning includes the preparation of a rationale essay articulating how the program of study for the bachelor's degree meets the student's educational and career goals. For the senior project proposal, the student will pose a question to be addressed under the guidance of the ESC mentor. The student and mentor will discuss the focus and design of the research question to be developed. The student will identify the appropriate resources needed to address the question and submit the proposal to the mentor. The thesis, based on the proposal submitted for this study, will be carried out the following semester. This course will be used as part of the Educational Planning credit. Prerequisites: As part of a capstone course, students should enroll in Senior Project Proposal during their final year of study. All lower level concentration courses should be complete, as well as at least two advanced level concentration courses or their equivalent.
Attributes: Liberal

PSYC 4150 Senior Project Thesis (3 Credits)
The student will complete the senior project thesis as planned in the proposal phase of this study. The project provides an opportunity to conduct an in-depth examination of a topic of interest related to the study program that emerged from the student's earlier course work, and in this regard will complete educational planning by focusing on the mastery of academic skills, college level writing and presentation, and independent research and critical thinking. The student will be expected to produce a major research paper that meets the standards established during the proposal stage and prepare the final drafts of the rationale essay. This course will be used as part of the Educational Planning credit. Prerequisites: Successful completion of the Senior Project Proposal.
Attributes: Liberal

PSYC 4996 Special Topics in Psych (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

PSYC 4998 Individualized Studies in Psychology (PSYC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Psychology (PSYC). Please contact your mentor/advisor for more details.

RELI: Religion (Undergraduate)

RELI 2025 Introduction to Religious Studies (4 Credits)
Learn about a variety of religious texts and practices from a 'religious studies' perspective. For example, consider ways in which religious behaviors and traditions create a world; examine religious traditions and how they account human experience and how life should be lived; looks at how people go about being 'religious.' This course was previously CUL-222034 Introduction to Religious Studies.
Attributes: Liberal

RELI 3998 Individualized Studies in RELI (2-8 Credits)

RELI 4005 Comparative Religious Ethics (4 Credits)
In this study, we will examine the core ethical/moral teachings and principles of the following religions: Hinduism, Buddhism, Christianity, Judaism, and Islam. The relationship between these traditions and the issues of war and violence will be explored. Methods of ethical reasoning and critical thinking will be applied to the ethical dilemmas that arise across the narrative history of these traditions as students develop a mature understanding in the field of comparative religious ethics.

RELI 4010 Religious Thought in World Perspective (4 Credits)
Learn about a variety of religious traditions, customs, scriptures, liturgies in order to better understand how religious thought and practice has shaped the landscape of human culture in various civilizations. This course was previously CUL-224034 Religious Thought in World Perspective
Attributes: Liberal

RELI 4998 Individualized Studies in RELI (2-8 Credits)

RESP: Respiratory Care

RESP 4010 Disease Management, Patient Education, and Health Promotion (4 Credits)
This course will explore the role of a Respiratory Therapist as a Case Manager, Patient Care Transition Coordinator or Patient Navigator. Through an in depth look at chronic respiratory diseases with review of clinical considerations, epidemiology and therapeutic treatment plans, students will discover how the Health Professional can help the patient in the continuum of care from the hospital to home with continued support processes in the home setting. Strategies to develop patient knowledge of assessing changing conditions in their disease status and promote improved health behavior, improved disease perception and self-management skills will be presented. Students will explore methods to improve patients' quality of life, improve control of symptoms, implement early interventions to improve overall management of their disease, reduce exacerbation of their disease and hospital admissions.

RESP 4030 Advanced Cardiopulmonary Diagnostics, Rehabilitation & Sleep Medicine (4 Credits)
This course provides an overview of the pulmonary diagnostic techniques in current practice with the associated pathophysiology for the respective diagnostic procedures to identify and recommend a course of care progression based upon the associated ailments. The course will explore the various cases and clinical presentations with the available research and disease management strategies. Students will be presented with the information for the tools to diagnose disorders through pulmonary function testing polysomnography, and the rehabilitation of the cardiopulmonary patient to provide optimal outcomes.

RESP 4035 Advanced Neonatal and Pediatric Respiratory Care (4 Credits)
This course provides students with advanced concepts of newborn and pediatric respiratory diseases, including assessment, monitoring, and clinical interventions. The latest advances in respiratory newborn and pediatric care research will be reviewed and evidence-based best practices will be applied to patient care scenarios. Advanced procedures and troubleshooting systems applicable to respiratory care will be presented.

RESP 4080 Advanced Respiratory Critical Care and Interventions (4 Credits)
This course will study the interpretation of critical care diagnostic testing and anticipate care based upon the results. The latest advances in respiratory critical care research will be reviewed and best practices for evidence-based interventions will be applied to patient care scenarios. Advanced procedures and troubleshooting systems applicable to respiratory care will be reviewed. Prior to taking this course, students should have an Associate's degree in Respiratory Care with the NBRC RRT credential OR CCRN credential.

RUSN: Russian (Undergraduate)

RUSN 1998 Individualized Studies in Russian (RUSN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Russian (RUSN). Please contact your mentor/advisor for more details.

RUSN 2998 Individualized Studies in Russian (RUSN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Russian (RUSN). Please contact your mentor/advisor for more details.

RUSN 3998 Individualized Studies in Russian (RUSN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Russian (RUSN). Please contact your mentor/advisor for more details.

RUSN 4005 Leo Tolstoy's Later Works (4 Credits)
This course will focus on Tolstoy's famous later works ('The Death of Ivan Ilych,' The Kreutzer Sonata,' and the late great novella of Chechen courage, Hadji Murad), as well as polemical essays on art and religion ('A Confession'), and the last novel Resurrection . Students will unravel Tolstoy's radical ideas on narrative, history and the formation of a moral self, as well as poetics of his novelistic prose. This is course is an elective, advanced writing skills are required.
Attributes: Humanities Gen Ed, Liberal

RUSN 4010 Leo Tolstoy's War & Peace & Anna Karenina (4 Credits)
'War and Peace' and 'Anna Karenina' are two major novels of Leo Tolstoy. Being masterpieces of realistic fiction, they, at the same time, undermine many literary conventions. Tolstoy's ideas about narrative, history, causation, and the formation of a workable moral self will be explored. Such topics as political and social reform; evolving societal attitudes towards women; family and sexual relations; marriage and divorce; religion and spirituality; Russian attitudes towards nature and national consciousness will be also addressed. Prerequisites: advanced writing skills This is course is an elective, advanced writing skills are required.
Attributes: Humanities Gen Ed, Liberal

RUSN 4015 Masterpieces of Russian 19th & 20th Century Literature (4 Credits)
This course is a study of some of the celebrated works of the Russian 19th and 20th century, from Pushkin through Dostoevsky, Tolstoy, Chekhov and Akmatova to Solzenitzyn. Topics that will be addressed include love, family, sexuality and gender, living through Stalinist terror, forms of resistance to terror. Prerequisites: advanced writing skills This is course is an elective, advanced writing skills are required.
Attributes: Liberal

RUSN 4998 Individualized Studies in Russian (RUSN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Russian (RUSN). Please contact your mentor/advisor for more details.

SOCI: Sociology (Undergraduate)

SOCI 1005 Exploring Society: An Introduction to Sociology (4 Credits)
This introductory study explores the body of knowledge we call 'sociology'-the study of how humans construct their social worlds and how human interactions are influenced by that world. Students will learn about the history of sociology, about the major theories and ways of thinking sociologists have used to make sense of our world, and about key concepts such as class, race, status, ethnicity, gender, socialization, deviance, social control, power and social structure. Students also will be introduced to various research methods social scientists use to help us understand society and the many significant debates about social issues that we face today. This course was previously SOC-282124 Exploring Society.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

SOCI 1998 Individualized Studies in Sociology (SOCI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Sociology (SOCI). Please contact your mentor/advisor for more details.

SOCI 2010 Introduction to Race Class & Gender (4 Credits)
In this introductory course, students will gain an overview of the ways in which race, class, and gender shape individuals' identities and experiences, as well as social institutions, in the United States, today and in the past. Students will become familiar with major social science approaches to inequality, power, and oppression. More specifically, students will examine how race, class, gender, and other forms of social difference constitute intersecting systems of identity, solidarity, and oppression that impact everyone's lives. This course was previously SOC-282264 Thinking About Race, Class and Gender.
Attributes: Social Science Gen Ed, *Diversity Gen Ed, *Social Sciences Gen Ed, Liberal

SOCI 2020 Social Problems in US Society (4 Credits)
This course will explore what constitutes a social problem in contemporary US society and why some social issues capture public attention and others do not. A broad range of social issues and problems will be examined such as: poverty, inequality, immigration, housing, mass incarceration, drugs, crime, environmental degradation.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

SOCI 2998 Individualized Studies in Sociology (SOCI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Sociology (SOCI). Please contact your mentor/advisor for more details.

SOCI 3010 Aging & Society (4 Credits)
This course focuses on aging as part of the human life cycle. Topics may include: biological and psychological aspects of aging; an examination of aging in various cultures; changing views of aging in the United States; how aging affects different segments of our diverse population; death and dying; health and support services for the aging; and social policy issues. This course was previously HDV-283254 Aging and Society.
Attributes: Liberal

SOCI 3020 Memory & Society (4 Credits)
Memory and identity are deeply intertwined. Is there such a thing as individual memory? How do social groups determine what is remembered? When social groups change their understanding or interpretation of an event, how is memory altered? This course examines the construction of memory, transformation of the private experience into the public memory, commemoration of nationalist identity, and the memory dilemma of transnationalism and cosmopolitanism.
Attributes: Liberal

SOCI 3025 Contemporary Global Social Issues (4 Credits)
This advanced level course critically analyzes what constitutes global economic, political, and/or cultural issues and problems. Students will use sociological theoretical perspectives to analyze and interpret global responses and possible solutions to these social issues. Topics may include state sovereignty, globalization, transnationalism, global conflicts, the environment, and/or social movements. Prerequisites: at least one course (or equivalent knowledge) in the discipline of a social science. This course was previously SOC-284544 Contemporary Global Social Issues.
Attributes: Liberal

SOCI 3035 Corruption Civil Society & Social Trust (3,4 Credits)
This course aims at conveying basic knowledge about the contemporary research on corruption, including causes, consequences, different forms/levels of corruption, and the basic methods of measuring and fighting corruption. Over the past twenty years, scholars, policy makers and academics have devoted increasing attention to the study of corruption as an obstacle to development. Corruption is now thought of as a serious social ill having detrimental effects on economic prosperity, people's perceived satisfaction with life, social trust, political legitimacy, and economic equality. In addition, low quality of government is also a causal factor behind violent political conflicts, both inter- and intra-state, and this has also led to an increased interest in the negative effects of corruption on rebuilding post-conflict societies and establishing representative democracy. Prerequisites: Prerequisites: Intro to Sociology and/or Cultural Anthropology, Modern China, or other emerging market nations where corruption impacts the society and economy.
Attributes: Liberal

SOCI 3040 Deviance & Social Control (4 Credits)
This course offers a comparative, historical and critical analysis of deviance and social control. The identification and enforcement of societal norms, values, sanctions, laws and punishment will be analyzed. The role of labeling and the subversive appropriation of labels by oppositional and deviant subcultures will also be addressed. This course was previously SOC-263634 Deviance and Social Control.
Attributes: Liberal

SOCI 3045 Disaster & Society (4 Credits)
What is a disaster? How do social structures, individuals, groups, and institutions react to the loss of social function that occurs as a result of natural, technological, or sociopolitical disaster events? This course explores individual, community, and social causes and effects of disaster from sociological, political, and historical perspectives. Prerequisites: A previous course (or equivalent knowledge) in social theory or social science. This course was previously SOC-283434 Disaster and Society.
Attributes: Liberal

SOCI 3055 Family & Society (4 Credits)
Students will explore the social institution of family, its variations, structures, and functions within the United States. Students will examine how political, historic, economic, and social conditions have had an impact on the evolution of the family as a unit as well as on its internal dynamics. As the family, however it is defined, connects private life with the public world, students might also examine this social institution in the contexts of public policy, workplace, education, and/or other social institutions. Students will also examine "the family" within the contexts of race, class, gender, and evolving family structures. Prerequisites: Exploring Society (introduction to sociology) or comparable prior learning..
Attributes: Liberal

SOCI 3060 Food Systems & Social Justice (4 Credits)
Where does our food come from and what is the Global Food System? #This course examines the#intersections of local, regional, national, and global interests, the effects of industrial agriculture, the ecological and social impact of Western consumerism, and global flows of foodstuffs. Social justice issues on the local, global, and environmental levels will be discussed, such as, surpluses (e.g. obesity epidemic), shortages#(e.g. urban food deserts and global famines), and environmental degradation.
Attributes: Liberal

SOCI 3065 Perspectives on Terrorism (4 Credits)
This course examines the historical and cultural contexts of terrorism from social science perspectives. Students analyze the forms and structures of global terrorist activities and why individuals and state entities engage in terrorist activity. Students explore how media and technology both shape terrorist activity and public perceptions of terrorism.
Attributes: Liberal

SOCI 3070 Power & Inequality (3 Credits)
This course explores the distribution of power in modern post-industrial societies. We will analyze how different individuals and groups are marginalized or excluded from decision making and equal access to resources and opportunities in those societies. The elements explored in this course focus on the distribution of power within the social unit, the resulting structures of power perpetuation, and the outcomes and impacts of these systems on society and organizations. This course is offered for International Education only. Corequisites: Introduction to Sociology; Macroeconomics This course is designed to allow learners to critically evaluate economic (such as Macroeconomics) and business-related courses (such as Human Resource Management and Organizational Behavior) against a backdrop of prevailing social institutions, behaviors, and structure.
Attributes: Liberal

SOCI 3090 Social Movements (4 Credits)
The course focuses on conservative, alternative and progressive social movements in history and contemporary society. The student will have the opportunity to select and examine local, national or global movements applying critical social science perspectives to specific social movements.
Attributes: Liberal

SOCI 3095 Sociology of Education (4 Credits)
This course examines education in American society from various sociological perspectives. Students will explore the relationship between education, social structures, and social interactions. Major issues in the field of education will be identified and analyzed from a sociological perspective. Prerequisites: Introductory Sociology or equivalent.
Attributes: Liberal

SOCI 3100 Sociology of Law (4 Credits)
This sociology study focuses on law and legal systems as products of social structure. As such, this social institution is influenced by political, economic, social, historical and cultural shifts as societies evolve. At the same time, the way societies evolve is affected by the operation and outcomes of the legal system. In many ways, the law defines and drives our understandings and ideas about our social context, such as the meanings of gender and race, what behavior should be criminalized, how the economy works, etc. This study, then, integrates learning in many other areas including psychology, gender, race, class, inequality, social change, social movements, history, etc. How the study will evolve depends greatly on an individual student's learning and professional goals as well as their interests. Prerequisites: Introduction to Law, Introduction to Sociology, advanced law or sociology studies; OR comparable prior learning Studies in other disciplines such as history, psychology, sociology, etc. will enhance the learning in this study. NOTE: This study could function as a capstone study for a concentration in Law and Society and/or Legal Studies. OR it could function as a first study in these concentrations after foundational studies are completed.
Attributes: Liberal

SOCI 3110 Sports & Society (4 Credits)
This course examines sport as a social construction that provides valuable insights to society. Topics may include: how sport is used as an agent of socialization; how gender, race/ethnicity, and socioeconomic status influences sport participation; how deviance is defined in sports; the role of sport in a global perspective; how sports interact with other social institutions. This course was previously SOC-284424 Sports and Society.
Attributes: Liberal

SOCI 3120 Surveillance & Society (3 Credits)
This course examines the topic of surveillance in society from cultural and sociological perspectives. Students explore the topic through an interdisciplinary analysis of contemporary scholarship. We will also examine the historical roots of surveillance and privacy to understand how various forms of control have emerged and are manifested in our daily life. This course is designed to articulate with other studies about society and the workplace. In particular, it is designed to sensitize learners to the challenges and trade-offs that are encountered in social systems and to allow learners to consider similar issues and challenges that are present, or which are evolving, in their social and work worlds.
Attributes: Liberal

SOCI 3125 The Sociological Imagination (4 Credits)
This course examines the work of C.W. Mills as a cornerstone of sociological thought. The idea of a 'sociological imagination,' first proposed by Mills, situates the social actor at the intersection of biography, society, and history. How does this impact how we view the social world? Learn how to understand the connections between what we often consider to be the 'private' problems of the individual with broader social issues that affect us all.
Attributes: Liberal

SOCI 3135 Religion in the US Today (4 Credits)
In this course, students will focus on what 'religion' is, about the range of religious expressions in American society today, and about the multiple connections between religion and society. In effect, the study will focus around two broad questions: What are the effects of religions and religious beliefs upon society? And, how can we think about religion as a social, political and cultural activity?
Attributes: Social Science Gen Ed, Liberal

SOCI 3145 Violence: Systems & Solutions (4 Credits)
Although many of us have grudgingly come to accept violence as an inevitable and almost 'natural' part of our everyday lives, we struggle with developing some understanding of why violence happens and what to we can do about it. This study is intended to explore the multitude of theories about the causes of violence, how violence manifests in today's world, and to think creatively about mechanisms for addressing violence. Specifically, this study will critically examine the following issues: 1. What is violence? What does it mean to say that violence is 'socially constructed?' How is violence measured by government agencies? 2. What are the differences and similarities between individual violence, collective violence and state sponsored violence? How is violence produced by social systems? 3. What are the strengths and weaknesses of the various theories for understanding violence? 4. What approaches have been used to address various forms of violence? Have they been effective? Can we envision new and innovative approaches to addressing violence? Prerequisites: introductory sociology, psychology and/or criminal justice studies; OR comparable prior learning Studies in other disciplines such as history, psychology, sociology, etc. will enhance the learning in this study.
Attributes: Liberal

SOCI 3996 Special Topics in SOCI (2-8 Credits)

SOCI 3998 Individualized Studies in Sociology (SOCI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Sociology (SOCI). Please contact your mentor/advisor for more details.

SOCI 4030 Power & Privilege (4 Credits)
Power, privilege, and oppression contribute to how people perceive and experience the world.#This course examines how ideas of power, privilege, and oppression are defined, and#how they operate in and through social institutions (e.g. the family, education, legal system, etc.), and how they shape social identity (e.g.#ace, class, gender, sexuality, age, ability).##Students will also analyze how these dynamics influence issues such as relationships, experiences, expectations, opportunities, and social justice. This course was previously SOC-284264 Power and Privilege Prerequisites: Introductory Sociology and/or one additional social science, human development, CHS and/or public affairs study related to the topics of this course.
Attributes: *Diversity Gen Ed, Liberal

SOCI 4035 Privacy Security & Freedom: Social Concerns for the 21st Century (4 Credits)
The sociological and philosophical exploration of the questions of privacy, security and freedom in the 21st Century in the context of both the theory and practical, policy-oriented aspects of these social concerns. This study will include an examination of some of the concepts of political and social philosophy, such as private vs. public domains, the individual and the state, freedom, political obligation and their relevance to contemporary society and government, with a particular focus on the Patriot Act, the Homeland Security Act, and current events shaping privacy and security legislation. Prerequisites: Advanced Level Standing This course was previously SOC-283274 Privacy, Security & Freedom.
Attributes: Social Science Gen Ed, Liberal

SOCI 4045 Visual Sociology (4 Credits)
Visual sociology is the examination of social life through the analysis of visual artifacts. This course explores how visual theories and methodologies are used for sociological inquiry. Students will explore how visual images and artifacts represent and interpret social phenomena, social issues/problems, and social change.
Attributes: Social Science Gen Ed, Liberal

SOCI 4998 Individualized Studies in Sociology (SOCI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Sociology (SOCI). Please contact your mentor/advisor for more details.

SOSC: Social Science (Undergraduate)

SOSC 1996 Special Topics in SOSC (1-8 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

SOSC 1998 Individualized Studies in Social Science (SOSC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Social Science (SOSC). Please contact your mentor/advisor for more details.

SOSC 2005 Schooling in America (4 Credits)
This course provides students with the sociological and historical background necessary to understand schooling in America. This course explores the various forms of schooling such as public, private, public schools, and others; education reforms and innovations that are transforming schools; and the role of our educational system in a democratic society. This course was previously SOC-282244 Schooling in America. This course is also cross listed as SOSC 2005. Credit cannot be given for both.
Cross-listed with EDST 2005.
Attributes: Liberal

SOSC 2010 Statistics for the Social Sciences (4 Credits)
This course will present a foundation for when, how, and why different statistical techniques are utilized to answer social research questions. Students will be introduced to the basic concepts and tools of descriptive and inferential statistics, the practice of data analysis, and the interpretation of results. The course may utilize computer software (in addition to hand calculation) as the basis for statistical analyses. Course content may include: visual depiction of data; the normal distribution and measures of central tendency; probability and hypothesis testing; descriptive and inferential statistics; measurements of association between variables; and the selection of appropriate statistical techniques to answer an array of social science research questions. Knowledge of Algebra is recommended. This course was previously SOC-281424 Social Science Statistics
Attributes: Mathematics Gen Ed, *Mathematics Gen Ed, Liberal

SOSC 2996 Special Topics in SOSC99 (1-8 Credits)

SOSC 2998 Individualized Studies in Social Science (SOSC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Social Science (SOSC). Please contact your mentor/advisor for more details.

SOSC 3005 Exploration of Research Methods for the Behavioral Sciences (3 Credits)
This course is an introduction to research methods commonly used to study human behavior with a focus on psychology. It covers guidelines for the formulation of a research problem, hypothesis proposal, selection of operational variables followed by analysis and interpretation of results. The students explore a wide range of research designs and techniques and are exposed to specific details of these methods including history, ethnography, field research, surveys, correlation, and experimental designs. Special attention is given to ethical issues and the advantages and limitations of the various methods. Prerequisites: Statistics and three or more advanced-level courses in psychology and sociology.
Attributes: Liberal

SOSC 3010 Family Violence: Legal & Social Perspectives (4 Credits)
This course will provide a broad overview of the legal and social aspects of family violence. Types of violence and abuse covered in the course include physical and sexual abuse of children, neglect, sibling abuse, dating violence, marital violence, sexual violence against women, and elder abuse. Attention is paid to definitions, historical factors regarding its discovery and identification as a legal and social problem, contributing factors and dynamics, consequences for victims and perpetrators, and social policy and intervention issues. This course was previously HDV-283314 Family Violence and Abuse.
Attributes: Liberal

SOSC 3015 Great Conversations in Social Thought (4 Credits)
Social theorists observe and analyze the social world in order to explain why and how individuals interact with their world. This course is an examination of some of the classical and contemporary social theorists who have contributed to the 'great conversations in social thought'. This course was previously SOC-283484 Great Conversations in Social Thought.
Attributes: Liberal

SOSC 3020 Qualitative Social Science Research: Design & Methods (4 Credits)
Qualitative social science research utilizes an array of approaches to explore and understand human behaviors, social interactions, and the construction of social reality. This course examines the ways social scientists ethically formulate questions, collect and analyze data, and present their findings. Students will learn to identify the strengths and weaknesses of research designs and develop skills to design their own qualitative research project and/or critically evaluate qualitative social science research projects. Prior to taking this course students should take at least one introductory course in the discipline of a social science concentration. This course was previously SOC-284534 Qualitative Social Science Research: Design and Methods.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

SOSC 3025 Social Science Research Methods (4 Credits)
This course introduces students to quantitative and qualitative methods for conducting meaningful inquiry and research in the social sciences. As students learn how to formulate research questions, identify the strengths and weaknesses of research designs, and explore methods of gathering and analyzing data, they develop skills to design their own research projects and/or critically evaluate social science research projects. Prior to taking this course, students should have taken at least one introductory social science or human development course. This course was previously SOC-283424 Survey of Social Science Research Methods.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

SOSC 3127 Topics in Security Studies (3-4 Credits)
This course provides an overview of two important topics in the security studies: terrorism and counterterrorism. It is divided into three main thematic parts. The first part of the course examines terrorism. We will delve into issues such as: the definition of terrorism, its history and roots, terrorist groups and their structure, states and their relations with terrorism, and how and why some people choose terrorism. In the second part, we will study elements of counterterrorist policies such as diplomacy, criminal law, financial control, covert operations, and military force. We will juxtapose military and nonmilitary force as counterterrorist strategies trying to understand if one is more successful than others depending on contexts. The third part focuses on media and public. Media and public are important elements when studying terrorism, because they are one of the main intermediary targets of terrorism.
Attributes: Liberal

SOSC 3132 Urban Studies (4 Credits)
across the world; urban development and growth in the U.S. urban/suburban life; contemporary world-wide urbanization; urban geography and environment; urban political economy; public works; planning; culture; aesthetics; architecture; and prospects for the future. Gain a sound grasp of contemporary thinking and research on urban society, and the intellectual tools to apply this knowledge to topics in the student's own particular area of scholarly interest. This course was previously HIS-243304 Urban Studies.
Attributes: Liberal

SOSC 3996 Special Topics in SOSC (4 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

SOSC 3997 Special Topics in SOSC (4 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

SOSC 3998 Individualized Studies in Social Science (SOSC) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Social Science (SOSC). Please contact your mentor/advisor for more details.

SOSC 4005 Research Practicum (4 Credits)

This course provides students with the opportunity to design and conduct their own social research project. This research opportunity may be viewed as a capstone study for students with social science concentrations and meets the SUNY Applied Learning Initiative expectations.
Attributes: Social Science Gen Ed, Liberal

SOSC 4998 Individualized Studies in Social Science (SOSC) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Social Science (SOSC). Please contact your mentor/advisor for more details.

SPAN: Spanish (Undergraduate)

SPAN 1005 Spanish for Health Care Professionals (4 Credits)

This course has been designed for students who have had no previous experience with Spanish language and Hispanic cultures. Students will have an opportunity to learn functional grammar, vocabulary and cultural concepts to apply in interactions at work. The major goal of this course is to facilitate better communication between health care providers and the growing Spanish-speaking community in the United States. All language skills will be practiced: listening, speaking, reading and writing. Students will be required to practice weekly speaking and listening skills in real time over the Internet. Synchronous practices will take place between 7:30-9:00 pm (ET), unless advised otherwise. Special accommodations will be made for army students. This course does not overlap with Spanish 1 or Introductory Spanish: Language and Culture This course was previously CUL 221194 Introductory Spanish for Health Care Professionals.
Cross-listed with NURS 1005.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

SPAN 1010 Introductory Spanish: Language & Culture (4 Credits)

Introductory Spanish: Language and Culture is designed for students who have no previous Spanish instruction. This course introduces students to the Spanish language, but the emphasis is on the studies of the cultures of the Spanish- speaking world. Language learning in this course will focus on understanding and learning to speak simple phrases, learning limited vocabulary and very basic grammatical structures. All language skills will be practiced: listening, speaking, reading and writing. This course also introduces students to the Spanish-speaking cultures of Spain, Mexico, Central America, the Caribbean and South America. Students will learn similarities and differences in values, attitudes and actions as they investigate different cultures through a wide variety of resources (e.g., online resources, texts, videos). Students will also investigate specific topics related to cultural experiences (e.g., ecotourism in Costa Rica, indigenous cultures in Guatemala). Students should be available for oral practices at least once a week. Special accommodations will be made for army students. Prerequisites: None Corequisites: None There is no overlap with Spanish 1 This course was previously CUL-221294 Introductory Spanish: Language and Culture.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

SPAN 1015 Spanish I (4 Credits)

Spanish I is designed for students who have no previous Spanish instruction. The course focuses on enabling students to communicate effectively in elementary Spanish, and introduces students to the cultures of the Spanish Speaking World. All language skills will be practiced: listening, speaking, reading and writing. Students will be exposed to authentic material from films, songs and websites on a target language. Students should be available for oral practices at least twice a week. Synchronous practices will take place between 7:30-9:00 pm (ET), unless advised otherwise. Special accommodations will be made for army students. This is the first course in the sequence of 2 (Spanish 1 and Spanish 2) This course was previously CUL 221304 Spanish 1. Prerequisites: .
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

SPAN 1020 Spanish II (4 Credits)

This course is designed to be a continuation of Spanish II. Students will build on their introductory studies in Spanish language and culture. They will learn functional grammar, vocabulary and cultural concepts that apply to many different practical real-life situations. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations. All language skills will be practiced: listening, speaking, reading and writing. Students will be required to weekly practice speaking and listening skills in real time. Synchronous practices will take place between 7:30-9:00 pm (ET), unless advised otherwise. Special accommodations will be made for army students. This course was previously CUL 221314 Spanish 2. Prerequisites: SPAN 1015 equivalent completion of Spanish 1.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

SPAN 1025 Spanish in the World of Business (4 Credits)
This course is designed for students who are interested in international business as well as for those interested in enhancing communication with Hispanic clients and consumers in the U.S. Through intensive practice, beginning students will become comfortable with 'need-to-know' language and be able to apply it in a professional context. Language learning in this course will focus on elementary communication skills, basic vocabulary and grammatical structures. All language skills will be practiced: listening, speaking, reading and writing. Students will be required to practice weekly in real time over the Internet. Special accommodations will be made for army students. This course does not overlap with Spanish 1 or Introductory Spanish: Language and Culture or Introductory Spanish for Health Care Professionals. This course was previously CUL-221414 Spanish in the World of Business.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

SPAN 1998 Individualized Studies in Spanish (SPAN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Spanish (SPAN). Please contact your mentor/advisor for more details.

SPAN 2998 Individualized Studies in Spanish (SPAN) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Spanish (SPAN). Please contact your mentor/advisor for more details.

SPAN 3005 Advanced Spanish Composition (4 Credits)
One of the most effective ways to learn to write well is to learn to read well. In taking the role of close reader with respect to a text, the student will learn to recognize the effect that the author's decisions about the organization and language of a text have on the reader. Activities in these course will aid student as a reader to comprehend and decode authentic texts structurally and linguistically, and as a writer, who will produce types of written texts: descriptive composition, narration, reporting, argumentation and exposition. Prerequisites (must complete before registering): Advanced Spanish: Language and Culture (Span_3015), or equivalent and 75% or higher on the placement test, which may be accessed at http://www.spanish-test.net/spanish-test.htm Notes: This course assumes prior experience in Spanish and reserved exclusively for those who scores at least 75% on the placement test (http://www.spanish-test.net/spanish-test.htm). Although this course is an elective, it is highly recommended for students who would like to major in Spanish.
Attributes: Liberal

SPAN 3010 Spanish for Health Care Professionals: Advanced (4 Credits)
This course has the major purpose of teaching Spanish to health care professionals who need to assess, treat, reassure or educate patients who do not speak English and come from countries where Spanish is their native tongue. This course provides a task-based approach to using the Spanish language in a health care environment. Through intensive practice, advanced students will hone their Spanish communication skills and develop strategies for ensuring understanding and accuracy while relaying critical information. They will also learn to identify cultural differences in attitudes towards health care and medicine and how to address these cultural differences in the health care job place. Language learning in this course will focus on advanced communication skills, advanced vocabulary and intermediate-to-advanced grammatical structures. All language skills will be practiced: listening, speaking, reading and writing. Students will be required to practice weekly speaking and listening skills. for oral practices at least twice a week. Special accommodations will be made for army students. Prerequisites: 75% on the placement test (http://s.esc.edu/spanishplacement) or equivalent. Cross-listed with ALLH 3010.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

SPAN 3015 Advanced Spanish: Language & Culture (4 Credits)
Advanced Spanish is designed for students who would like to continue their studies of Spanish language and cultures of the Spanish-speaking world. Practice and further development of essential listening, speaking, reading, and writing skills will be covered.. Writing and presentations are required. Students should be available for oral practices at least twice a week. 75% on the placement test (http://s.sunyempire.edu/spanishplacement) or higher. This course was previously CUL 223294 Advanced Spanish: Language and Culture.
Attributes: Foreign Language Gen Ed, *World Languages Gen Ed, Liberal

SPAN 3020 Civilizations of the Spanish Speaking World (4 Credits)
This course will consist of 2 major parts. The first part will primarily focus on cultures and historical events that shaped Spain from prehistoric times to present days, and which have one of the major influences on the development of the Spanish speaking World. In the second part of the course, we will explore different aspects of the cultures and civilizations of the Spanish-speaking countries in America prior to the arrival of the Spanish and up to the 21st century. Prerequisites: Advanced Spanish: Language and Culture or equivalent This is course is an elective, an advanced knowledge of Spanish is required.
Attributes: Liberal

SPAN 3025 Contemporary Spanish American Theater (4 Credits)
This course examines contemporary Spanish American theater. Student will analyze dramatic texts, performances, and critical and theoretical perspectives to engage in some of the following questions: How does theater create and represent social and political transformation? Where is a place of Spanish American Theater in the trajectory of the Western tradition? What are the major innovations in Spanish American theater and performance in the twenty-first century? Prerequisites: Advanced knowledge of Spanish This is course is an elective, and it is not a part of a sequence.
Attributes: Liberal

SPAN 3030 Latinx in the US (4 Credits)

This course is a study of Latino/a culture in the US. Using cultural studies framework, we will approach Latina/o cultural practices and products (using literature, film, essays, music, visual arts) as dynamic expressions that affirm, contest, resist and are ultimately shaped within and against the mapping of race, nation, gender, and sexuality. Some of the key concepts that will be discussed include border, acculturation, cultural nationalism, community building, identity formation (e.g. migratory or exilic), and hybrid cultures. This is course is an elective, and it is not a part of a sequence; it is highly recommended for students interested in Hispanic and Latin American Studies.
Attributes: Liberal

SPAN 3998 Individualized Studies in Spanish (SPAN) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Spanish (SPAN). Please contact your mentor/advisor for more details.

SPAN 4005 Contemporary Latin American Literature (4 Credits)

This course is an advanced study of contemporary Latin American literature. A representative selection of novels, short stories, and plays by important authors of Latin America will be analyzed in their literary, cultural and political contexts. Each selected author will be studied in relation to his or her particular thematic/formal contribution to the development of such major intellectual movements and tendencies as vanguardism, regionalism, cosmopolitanism, magic realism, boom and postboom. Topics include regionalism versus cosmopolitanism; magical realism and the literature of the boom, and trauma in post-boom literature. Prerequisites: Advanced knowledge of Spanish This is course is highly recommended for all students who would like to major in Spanish or Latin American studies.
Attributes: Liberal

SPAN 4010 History of Spanish Language (4 Credits)

This study serves as an overview of the diachronic (across time) evolution of modern Spanish from spoken Latin. Data from phonetics/phonology and morpho-syntax will form the basis of study. Topics covered include the following: the development of Vulgar Latin and Proto-Romance, the Old Spanish phonological system, morpho-syntactic changes from Latin to Spanish, and the influence of contact languages on modern Spanish. Linguistic analysis of texts and processes of language change will also figure prominently. Prerequisites: Advanced Spanish This is course is an elective, and it is not a part of a sequence; it is highly recommended for students interested in Spanish linguistics. Advanced Knowledge of Spanish is required. Introduction to Linguistics is highly recommended.
Attributes: Liberal

SPAN 4015 Jorge Luis Borges (4 Credits)

Jorge Luis Borges is among the writers, who have brought an international fame to the Latin American Literature. In this course, a student will read some of his most famous short stories, essays and poems. Topics include philosophy and its place in Borges's literary universe; avant-garde poetry; fantastic literature; regionalism versus cosmopolitanism; and modernism versus postmodernism. Prerequisites: Advanced knowledge of Spanish This is course is an elective, and it is not a part of a sequence.
Attributes: Liberal

SPAN 4020 Spanish Avant-Garde(s): Literature Painting Film (4 Credits)

This course will introduce student to a fascinating epoch in the cultural development of Spain, which is called Edad de Plata or 'Silver Age' (1900-1936). While this course will mainly focus on the works of three towering figures, who were also close friends, Federico García Lorca, Salvador Dali and Luis Buñuel, it will also unravel the cultural, political and spiritual contexts, which formed the brilliant generation of writers and artists of the modern Europe, known as Generation 27. Prerequisites: Advanced Spanish: Language and Culture or equivalent This is course is an elective, an advanced knowledge of Spanish is required. Introductory course in literature is recommended.
Attributes: Liberal

SPAN 4998 Individualized Studies in Spanish (SPAN) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor in Spanish (SPAN). Please contact your mentor/advisor for more details.

SSAE:Success & Acad Enrichment (Undergraduate)

SSAE 1005 E-learning Skills for International Students (2 Credits)

This workshop will allow international distance learners to successfully integrate into the American virtual environment by learning about educational technologies, American culture and educational system, expected skills and behaviors, and developing necessary competencies, including academic writing, communication, time management, teamwork, cross-cultural and e-learning skills. The workshop is designed to complement 'iMOOC102: Mastering American eLearning', a massively open online course (iMOOC) freely available for all on Coursera https://www.coursera.org/learn/e-learning), and will provide an opportunity to individualize and finalize the above course by working individually (or in a small group) with an American university professor. During the workshop, students will submit written assignments based on the iMOOC's readings and self-assessments, discuss those with the professor and peers, and receive formative feedback. Students who successfully complete the workshop will obtain U.S. university credit from the State University of New York's Empire State College. Note: this course is only open to students who are enrolled or have previously taken 'iMOOC101 or iMOOC102: Mastering American eLearning' on Coursera.org https://www.coursera.org/learn/e-learning This course was previously EDU-232182 International E-learning Skills: Educational Planning Workshop for International Students. This course may be used to fulfill educational planning credit with mentor approval.
Attributes: Liberal

SSAE 1010 Strategies For Academic Success (2 Credits)
This study is designed to help students develop skills and employ strategies necessary to achieve college-level academic success and become more self-aware and prepared as they pursue a degree. Students will learn strategies for learning independently, including managing time, setting goals and developing action plans. Students will identify a variety of valuable to a variety of valuable support networks and learning resources available through Empire State College and beyond. The course utilizes a 'learning by doing' approach to guide students in identifying the needed resources and practicing important college study skills. New Empire State College students may find this course beneficial in helping them transition to the college and prepare for academic success. For students who opt for the 4 -credit version of this course, there will be an additional emphasis on critical reading, writing, and thinking skills. This course may be used to fulfill educational planning credit with mentor approval.
Attributes: Liberal

SSAE 1015 Tools and Strategies for Academic Success (3,4 Credits)
This study is designed to help students develop skills and employ strategies necessary to achieve college-level academic success and become more self-aware and prepared as they pursue a degree. Students will learn strategies for learning independently, including managing time, setting goals and developing action plans. Students will identify a variety of valuable to a variety of valuable support networks and learning resources available through Empire State College and beyond. The course utilizes a 'learning by doing' approach to guide students in identifying the needed resources and practicing important college study skills. New Empire State College students may find this course beneficial in helping them transition to the college and prepare for academic success. This course was previously EDU-232022 Planning for College Success.
Attributes: Liberal

SSAE 1996 Special Topics in Success and Academic Enrichment (1-8 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.
Attributes: Liberal

SSAE 1998 Individualized Studies in Success and Academic Enrichment (SSAE) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Success and Academic Enrichment (SSAE). Please contact your mentor/advisor for more details.

SSAE 2005 21st Century Careers: Introductory (2 Credits)
In this course, students examine employment trends, predict the effect of these trends on their own careers, identify reliable sources of occupational and job information, and use these sources to advance their understanding of career goals, employers, and how to best present themselves for job searches, advancement, and/or career change. Topics include the changing nature of work, the importance of developing transferable skills for a changing environment, career goals, and more. The course is appropriate for students at any point in their careers. This course was previously EDU 232062 21st Century Careers: Introductory.

SSAE 2010 Making Time: Time Management & the Sociocultural Construction of Time (2 Credits)
Managing one's time for studies, for work, for family, for leisure, and for other responsibilities is seldom an easy task. Yet, making sufficient quality time for study is an important factor in student success in college. Through an introduction to humanities and social science scholarship about time, this course aims to help students consider how to integrate academic theories with everyday 'real life' time management practice. In this regard, this course combines practical assignments for students to reflect on and analyze their own time-management skills with academic readings that consider 'time' from sociocultural and sociohistorical perspectives. This course may be used to fulfill educational planning credit with mentor approval. This course was previously EDU-231402 Making Time: Time Management and the Sociocultural Construction of Time.
Attributes: Liberal

SSAE 2998 Individualized Studies in Success and Academic Enrichment (SSAE) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Success and Academic Enrichment (SSAE). Please contact your mentor/advisor for more details.

SSAE 3005 21st Century Careers: Advanced (2 Credits)
In this course, students research and analyze employment trends, predict the effect of these trends on their own careers, evaluate reliable sources of occupational and job information, and use these sources to advance their understanding of career goals, employers, and how to best present themselves for job searches, advancement, or career change. Topics include the changing nature of work, the importance of developing transferable skills for a changing environment, career goals, and more. Assignments include essays, an annotated bibliography, and a digital profile which includes a resume and a professional work sample. The course is appropriate for students at any point in their careers. Note that there are two versions of this course, Introductory and Advanced; students should not take both SSAE 2005 21st Century Careers: Introductory and SSAE 3005 21st Century Careers: Advanced. This course was previously EDU 232062 21st Century Careers.

SSAE 3010 Independent Learning Strategies (4 Credits)
Course Description: Explore independent and upper level study through assignments focusing on strengthening students' ability to be critical readers, writers, thinkers and self-directed adult learners. The course aims to facilitate the advanced levels of engagement with ideas, sources, and academic skills. Learning topics include, for example: making sense of transitions in life, critical thinking and reading, research skills for critical writing, and independent lifelong learning. Prerequisites: There are no specific prerequisites for this course, but students should have had some prior college-level study and be ready to move to upper-level study. This course may be used to fulfill educational planning credit with mentor approval. This course was previously EDU-233104 Independent Learning Strategies.
Attributes: Liberal, Partial Basic Comm Gen Ed

SSAE 3998 Individualized Studies in Success and Academic Enrichment (SSAE) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Success and Academic Enrichment (SSAE). Please contact your mentor/advisor for more details.

SSAE 4998 Individualized Studies in Success and Academic Enrichment (SSAE) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Success and Academic Enrichment (SSAE). Please contact your mentor/advisor for more details.

STSO: Science, Techn & Society (Undergraduate)

STSO 1005 Introduction to Science & Technology Studies (4 Credits)
This study introduces students to the field of Science and Technology Studies (STS). We will address how STS differs from other fields and the advantages and limits of our unique interdisciplinary approach. Drawing on a range of methods, we will explore topics such as the foundations of scientific knowledge; science as a source of social power and authority; understanding technological systems; race, gender, and postcolonial perspectives; and public engagement with science and technology. In sum, we will open the black boxes of scientific and technical work and work products and consider the implications for society.
Attributes: Social Science Gen Ed, *Social Sciences Gen Ed, Liberal

STSO 1998 Individualized Studies in Science Technology & Society (STSO) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Science, Technology & Society (STSO). Please contact your mentor/advisor for more details.

STSO 2998 Individualized Studies in Science Technology & Society (STSO) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Science, Technology & Society (STSO). Please contact your mentor/advisor for more details.

STSO 3005 Innovation Technology & Society (4 Credits)
What is technology? What is its relationship with individuals and society? Is it always a force for good? This course examines historically important technologies such as the development of writing and the printing of books, and their impact on the human race; and compares these historical developments to modern technological innovations
Attributes: Liberal

STSO 3010 Science & Technology in Western Culture (4 Credits)
This advanced study will explore a broad range of scientific and technological discoveries and developments, from the dawn of Western civilization to the present day. Learn how such innovations built on each other over the centuries, carrying the West, and much of the rest of the planet, through scientific and industrial revolutions and evolution, culminating in the complex, highly-interconnected world of the late 20th Century. Explore how the roots of many modern social, political and environmental issues can be found through the examination of the history of science and technology. This course meets the general education requirement in Western Civilization. This course was previously HIS-243454.
Attributes: Western Civilization Gen Ed, Liberal

STSO 3020 Science and Technology in World Civilizations: Revolution, Innovation, and Incremental Change (4 Credits)
Students in this course will examine the historical and ongoing interplay between science, technology, and society with an eye towards understanding the roots of many social, political, and environmental issues. They will explore the history of scientific and technological activities and achievements, in particular major periods such as the agricultural, scientific, and industrial revolutions, and the move to a systems approach within science and engineering. Within this exploration, students will analyze the interplay of science and technology with society and how these revolutionary periods and other turning points came about and affected different regions at different times. By investigating relevant worldviews related to nature and science and technology, students will appraise the impact of these worldviews on the natural and built environment. And, by examining gender and other aspects of diversity, students will assess the influence of the identity of participants and subjects on the interplay between science- and technology-based activities and society.

Students have the opportunity to develop individualized studies with their mentor in Science, Technology & Society (STSO). Please contact your mentor/advisor for more details.

THEA: Theater (Undergraduate)

THEA 1010 U.S. Theatre History: Introductory (4 Credits)
In this course, students will learn about the history of theater in the United States from the colonial days to the present. They will engage in learning about important plays, playwrights, producers, actors, directors, theaters and significant events such as theater riots. This theatrical history will be contextualized with the social, political, and economic history of the United States during this time. NOTE: Students can take this course at the introductory or advanced level, but not both.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

THEA 1020 Modern US Drama: Introductory (4 Credits)
This course engages students in a wide range of 20th and 21st century plays written by US playwrights. Explore how these plays relate to US culture, society and politics as you consider how race, gender, sexuality and class are reflected in them. Some questions you will consider include: What makes a play 'American?' When does US drama tend to suggest new ways to construct society and when does it reflect familiar customs? Additionally, students will consider dramatic structure and how different playwrights use dramatic structure to achieve various goals. NOTE: Students can take this course at the introductory or advanced level, but not both.
Attributes: Humanities Gen Ed, Arts Gen Ed, *The Arts Gen Ed, Liberal

THEA 1998 Individualized Studies in Theatre (THEA) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Theatre (THEA). Please contact your mentor/advisor for more details.

THEA 2998 Individualized Studies in Theatre (THEA) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Theatre (THEA). Please contact your mentor/advisor for more details.

THEA 3015 U.S. Theatre History: Advanced (4 Credits)
How did Broadway come to be the quintessential home of professional theater in the United States? When did the regional theater movement begin and why? Who becomes a star performer? This course is designed to teach you about the multi-vocal plays, musicals, and theater professionals who have contributed to the history of U.S. theater from the colonial period to today. We will investigate the role of diversity, equity, and inclusion in U.S. theater history while we also situate that history in the social, political, and economic history of the United States.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

THEA 3020 Greek Drama (4 Credits)
Students will survey classical Greek drama by studying several key works by playwrights from this era. We attempt to identify what social, political, economic, and/or personal message each play portrays to audiences and then determine how the various characters, situations, and incidents help to dramatize this position. Aristotle's Poetics will ground our work in theory along with other theories about Greek drama. We will also consider the use of dramatic devices in these plays and investigate concepts such as tragedy, comedy, family curse, tragic flaw, recognition, reversal and a "final gesture of heroism."
Attributes: *The Arts Gen Ed, Liberal

THEA 3025 History of American Musical Theatre (4 Credits)
Do you want to know more about musicals? Students in this course will learn about the history of musicals in the US from the 1890s to the present. We will examine how musicals both react to and influence changes in the social, political, and cultural history of the US. To do this, we will look at the contributions of major directors, choreographers, writers, performers, and other professionals in US musical theatre history. Students will also learn how to analyze the parts of a musical such as the book (story), songs, and choreography.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

THEA 3035 Modern US Drama: Advanced (4 Credits)
This course engages students in a wide range of 20th and 21st century plays written by US playwrights. Explore how these plays relate to US culture, society and politics as you consider how race, gender, sexuality and class are reflected in them. Some questions you will consider include: What makes a play 'American?' When does US drama tend to suggest new ways to construct society and when does it reflect familiar customs? Additionally, students will consider dramatic structure and how different playwrights use dramatic structure to achieve various goals. NOTE: Students can take this course at the introductory or advanced level, but not both.
Attributes: Humanities Gen Ed, Arts Gen Ed, *The Arts Gen Ed, Liberal

THEA 3065 Hamilton: An American Musical (4 Credits)
This course analyzes the theatrical aspects of the Tony Award winning musical, Hamilton. Students will explore the evolution of this musical and will delve into a creative critique of the musical's story, music, choreography, staging, design elements, casting and more. We will also study the creator of Hamilton, Lin-Manuel Miranda, and will situate his work within theater history. We will consider questions such as: Why is this musical so popular? What makes this musical stand out from other musicals? And, as so many people ask, why are tickets to this musical so expensive? Note: Students in this course are *required* to secure access to the video version of the original NYC production through Disney+ or similar platforms.
Attributes: Arts Gen Ed, *The Arts Gen Ed, Liberal

THEA 3998 Individualized Studies in Theatre (THEA) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Theatre (THEA). Please contact your mentor/advisor for more details.

THEA 4005 Shakespeare in Performance (4 Credits)
Shakespeare's plays are excellent pieces of literature but they were originally performed live by actors. Today, more people see Shakespeare's work through film than any other medium. This study examines seminal film productions of various Shakespeare plays including Henry V, Romeo and Juliet, Much Ado About Nothing, Hamlet, Richard III, Othello, and As You Like It. Students will read these plays and then watch assigned films to analyze how these films bring the worlds created by Shakespeare to life for contemporary film audiences. Literary criticism and film criticism will help us along on our journey as students consider how scholars and critics have also reacted to these important cinematic works.
Attributes: *The Arts Gen Ed, Liberal

THEA 4998 Individualized Studies in Theatre (THEA) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor in Theatre (THEA). Please contact your mentor/advisor for more details.

A.A./A.S. In General Studies For Students Matriculated Before Jan. 1, 2022

Overview

Our Associate in Arts or Associate in Science in General Studies is a 64 credit program that is designed to serve students who have completed some college credits but have not yet earned a degree. Many students who choose this degree program will do so while already on a pathway towards a bachelor's degree program.

Of the 64 credits required to complete the program, up to 52 credits of advanced standing credit will be accepted, an exception to the college's regular residency requirement of 24 credits for an associate degree, with the remaining 12 credits to be completed in residence at SUNY Empire State College. Within the 64 required credits, students must complete at least 30 credits across seven of ten SUNY General Education areas, including at least three credits each in Mathematics and Basic Communication. Four credits of Educational Planning are also required. The program must fulfill breadth, meaning that it covers diverse knowledge areas, and depth by which students may take multiple courses in one or more subject areas.

Students work with a mentor to individually design a degree plan that maximizes previously earned credits while completing college learning objectives. In order to graduate, students must have a degree plan concurred by the Office of Academic Review. Each degree plan must contain at least 32 credits designated as liberal studies. Students with between 32 and 48 liberal arts credits will earn an Associate in Science degree (A.S.), while those who earn more than 48 credits in liberal studies will earn an Associate in Arts degrees (A.A.). These credits may then become part of bachelor's degree or certificate program for students who choose to continue beyond the associate degree.

Program Outcomes

The interdisciplinary and general studies approach of the program makes it possible for students to broadly explore their academic interests without having to define a disciplinary focus, while laying a foundation for the next step in their educational path. Further, the educational objectives include:

- Demonstration of breadth and progression in college level learning.
- Meeting SUNY general education requirements in at least seven content areas, including Math and General Education.
- Completion of Educational Planning.
- Consideration of college-level learning prior learning assessment options.

Program Requirements

This program allows for a maximum of 52 advanced standing credits with a minimum of 12 credits earned at SUNY Empire State College for a total of 64 credits.

Of these 64 credits, 30 must meet SUNY General Education requirements in a minimum of seven out of ten areas.

Students with a minimum of 48 Liberal Arts and Sciences courses will be awarded an Associate in Arts, while students with fewer than 48 but

with a minimum of 32 Liberal Arts and Sciences courses will earn an Associate in Sciences degree.

Bachelor Of Science (B.S.) In Accounting For Students Matriculated Before Jan. 1, 2022

The Bachelor of Science (B.S.) in Accounting is a 124-credit program designed to serve students who are interested in pursuing future careers as professional accountants regardless of their chosen field or certification in public, private, nonprofit, and/or governmental accounting services. The program provides the foundation of core competencies, theoretical and technical body of knowledge in the content areas of accounting, general business, and SUNY liberal arts and general education requirements. Students will have the option of completing the degree program through various delivery modes: online, blended, and/or face-to-face study. This program provides students with the option to pursue a more structured degree program in accounting while offering them the option to individualize their degree through their selection of electives.

Students enrolled in 16 credits per semester, two semesters per year, could expect to complete this program in four years. SUNY Empire State College also offers a summer term with accounting and business courses. It permits courses transfer based on the college's policy, up to 93 total upper and lower level credits of same listed courses/topics or equivalent courses.

Note: The registered program does not satisfy the 150-cr., academic requirements for the CPA Licensure. Students need to fill-out and submit a CPA Disclaimer with their degree plan. Student may complete the extra needed credits (26) through graduate and/or undergraduate additional courses/studies/degree/certificates. Students are encouraged to check the availability and policy of undergraduate enrollment in graduate courses at SUNY Empire State College.

Admission

The admissions requirements for the B.S. in Accounting will be the same as current undergraduate admissions requirements, which include proof of high school completion and the ability to pursue college-level work as demonstrated through an essay, which is submitted with the admissions application.

Upon completion of the B.S. in Accounting, graduates will be able to:

1. Identify the legal, economic, and global forces and their impact on a business environment and its sustainability and continuity.
2. Explore the role played by accountants and the role of their professional and ethical conduct in serving the society.
3. Use the functional core competencies of the accounting profession in measurement, reporting, and decision making processes.
4. Apply the foundation of the accounting theory, principles, standards, and system cycles components in classifying, summarizing, and reporting of accounting data for internal and external decision-making.
5. Apply risk analysis and analytical procedures relevant to short-term and long-term budgeting, cost systems and behavior, and investment decisions.
6. Build on professional demeanor and ethical conduct within a diverse and global culture business environment.
7. Leverage and reinforce the use of technology in collecting, analyzing, communicating, reporting and securing of financial date, with application on taxation, auditing, system design and control, and financial analysis.
8. Evaluate professional skepticism and demonstrate professional judgement kills in examining and accessing audit risk.

Bachelor of Science (B.S.) In Business Administration For Students Matriculated Before Jan.1, 2022

The Bachelor of Science (B.S.) in Business Administration is a 124-credit program designed to serve students who are interested in pursuing future careers as business leaders and professionals in public, private, nonprofit and/or international organizations. The program provides a solid foundation of theoretical, conceptual, and applied knowledge in the areas of business, management, and economics and meets SUNY liberal arts and general education requirements. Students will have the option of completing the degree program through various delivery modes, such as online, blended, and/or face-to-face study. The program is based on the same general requirements for the registered undergraduate program in Business, Management and Economics, including admission requirements.

Students enrolled in 16 credits per semester, two semesters per year, can expect to complete this program in four years. SUNY Empire State College also offers a summer term with business, management, accounting, marketing, and economics courses. It permits course transfers based on the college's policy. Students may transfer a total of up to 93 upper and lower level credits of the same listed courses/topics or equivalent courses from SUNY or non-SUNY accredited higher education institution. The program provides students with the option to pursue a more structured degree program in Business Administration while offering them the option to individualize their degrees through their selection of electives.

For additional information about this degree program, please visit the B.S. in Business Administration web page.

Admission

The admissions requirements for the B.S. in Business Administration will be the same as current undergraduate admissions requirements, which include proof of high school completion and the ability to pursue college-level work as demonstrated through an essay, which is submitted with the admissions application.

The program will follow the college policy for granting prior learning credits (PLA) credits to be among the 93 maximum transferable credits.

The business administration degree will be developed through application of theoretical concepts to practical business problem solving and decision making that the business professional encounters in corporate and nonprofit-organization environments. This degree generally offers the broadest array of traditional academic and business disciplines including:

- Economics.
- Accounting.
- Marketing.
- Management.
- Business law.
- The legal environment of business.
- Finance.
- Quantitative methods such as statistics.

Additionally, to meet the complexities of today's evolving business environment, knowledge is essential in:

- Technical areas such as computer applications and management information systems
- International, global and ethical issues confronting contemporary societies.

Students should address and provide evidence of having incorporated these guidelines in the degree program rationale.

When students plan a bachelor's degree program in business administration, they should demonstrate through transcript credits, evaluated learning or Empire State College studies that they have foundational studies in these business disciplines as well as advanced-level learning. Students can accomplish this by referring to the guidelines for the academic areas described here and to the list of suggested study titles presented at the end of this document.

A strong business-administration degree program will follow these guidelines as well as the business, management and economics general guidelines, which specifically state that all students are required to demonstrate knowledge in each of the following areas:

- Communication skills.
- Information management.
- Economics.
- Ethical and social responsibility.
- Quantitative skills.
- Understanding people in an organizational context.
- Understanding organizations within broader contexts.

This program will include learning from each of the following core areas and a capstone study such as business policy or strategic management.

Economics

Degree programs will include both microeconomics and macroeconomics or a combination.

Microeconomics can be conceived of as primarily examining decision making for a whole firm, whereas macroeconomics primarily examines the functioning of the broad environment within which individual firms operate.

Accounting

Students study accounting to understand the approach, logic, strengths and weaknesses of this discipline in order to make informed use of this important management tool. Degree programs will include financial accounting, managerial accounting, a combination or accounting for decision makers.

Marketing

Students study marketing to gain understanding of functional issues that occur every day in business, such as finding customers for its products or services, developing or managing these products or services, identifying needs and distributing products or services. A foundational study in marketing, often titled Principles of Marketing or Marketing Fundamentals, will focus on these functional problems.

Finance

Knowledge in finance will enable students to project and plan the flow of funds so that there are adequate resources available when needed and to make appropriate allocation of funds and investment decisions.

Management

Studies in management foundations, often titled Fundamentals of Management, Principles of Management and Introduction to Management, cover topics such as planning, organizing, leading and controlling. Students are introduced to problem solving and analytical processes used in business environments. This includes establishing goals and objectives, as well as coordinating human, physical and financial resources needed to achieve them.

Legal Environment

The student should have a foundation in law such as provided in the Legal Environment of Business or Business Law. Because laws and regulations increasingly influence business decisions, students need to understand how environment influences organizational decisions.

Quantitative Methods

Students need to have practical and applied quantitative skills appropriate to their work place and career pursuits. Statistics or other quantitative analysis studies will foster informed business judgments.

Management Information Systems

Students need to have an understanding of the use and management of information as an organizational resource, provided through a basic study in information systems and introduction to computer applications.

Capstone Study

A capstone study provides students with methodology, tools and problem-solving skills to integrate their business knowledge while solving problems affecting both the internal and external environments. Such a study could be in business policy, strategic management or an individualized project.

Suggested Advanced-Level Studies

The business administration concentration should include advanced-level studies in a variety of areas such as domestic, international, global and ethical issues that confront contemporary societies. While not intended as a comprehensive listing, additional studies could include:

- Business ethics.
- Business policy (suggested capstone).
- Comparative economics.
- Computer applications in decision making.
- Consumer behavior.
- Corporate finance.
- Corporate social responsibility.
- Cost accounting.
- Diversity in the workplace.
- E-commerce marketing.
- Entrepreneurship.
- Human resource management.
- International business and management.
- International economics.
- International marketing.
- Investment.
- Labor and management relations.
- Leadership.
- Managerial decision making.
- Marketing research.
- Management information systems (MIS).
- Operations management.
- Operations research.
- Organizational behavior.
- Small business management.
- Strategic management (suggested capstone).

The degree program rationale should discuss the appropriateness of all studies in relation to future career plans.

The B.S. in Business Administration is based upon the guidelines for a Business Administration concentration in the Registered Area of Study of Business, Management and Economics. Therefore, students designing a B.S. in Business Administration should consult the concentration guidelines. For students who matriculate beginning in the Spring 2020 term or after, because they can now design and pursue a B.S. in Business Administration, a concentration title of Business Administration is not permitted for a program developed in the Area of Study Business, Management and Economics.

Below is a schedule of lower division and upper division courses, that represent the content areas described by the B.S. in Business Administration concentration guidelines:

Course List

Lower Division (Intro)

Code	Title	Credits
MGMT 1005	Principles of Management	3,4
MRKT 1005	Marketing Principles	4
ACCT 2005	Introductory Accounting I: Financial Accounting	4
ACCT 2010	Introductory Accounting II: Managerial Accounting	4

ECON 2015	Macroeconomics	4
ECON 2020	Microeconomics	4
BUSN 1010	Business Law I	4

SUNY General Education

Code	Title	Credits
Mathematics (Statistics)		4
Basic Communication		4
Select 12 credits from at least three of the following Gen Ed categories:		12
Natural Science		
American History		
Western Civilization		
Other World Civilization		
The Arts		
Foreign Language		

Upper Division (Advanced Level)

Code	Title	Credits
BUSN 3010	Business Ethics	4
BUSN 4030	International Business	4
Advanced level business course such as		4
HRMS 3015	Human Resource Management	
FSMA 3010	Corporate Finance	4
MGMT 3060	Organizational Behavior	4
Advanced level business course such as		4
MGMT 3050	Operations Management	
BUSN 3122	Management Information Systems	4
MGMT 4035	Strategic Management	4

Bachelor Of Science (B.S.) In Human Resource Management For Students Matriculated Before Jan. 1, 2022

The Bachelor of Science (B.S.) in Human Resource Management is a 124-credit program designed to serve students who are interested in pursuing future careers in the field of human resource management. The program provides the foundation of core competencies, theoretical and technical body of knowledge in the content areas of human resource management, business, and SUNY liberal arts and general education requirements. Students will have the option of completing their course work in a variety of delivery modes: online, blended and/or face-to-face study. This program provides students with the option to pursue a more structured degree program in Human Resource Management while offering them the option to individualize their degree through their selection of electives.

Students enrolled in 16 credits per semester, two semesters per year, could expect to complete this program in four years. SUNY Empire State College also offers a summer term that includes courses in Human Resource Management. It permits courses transfer based on the college's policy, up to 93 total upper and lower level credits of same listed courses/topics or equivalent courses.

For more information about this degree program, please visit the B.S. in Human Resource Management web page.

Admission

The admissions requirements for the B.S. in Human Resource Management will be the same as current undergraduate admissions requirements, which include proof of high school completion and the ability to pursue college-level work as demonstrated through an essay, which is submitted with the admissions application.

To prepare to study in the HR field, students should develop an understanding of the environment through study in fields such as psychology, sociology, political science, economics, law and quantitative analysis, including statistics. Students also should ensure they have the ability to communicate in multiple forms (oral, written, electronically) with individuals and groups, and are able to analyze complex information.

Students pursuing an HRM degree should build a strong foundation of knowledge in the functional areas of business including:

- Accounting.
- Finance.
- Management.
- Operations.
- Marketing.
- Information systems.

It is also important to have an understanding of the changing nature of work and the work force, including such issues as workplace diversity and globalization. Students should also understand the interactions among individuals, groups and organizations through a study such as Organizational Behavior or Managerial Psychology.

Students pursuing an HRM degree should have a broad-based understanding of the HR function through study or experience.

HRM Knowledge/Studies

The HR function has four key responsibilities:

- Staffing (recruitment and selection).
- Compensation (direct and indirect).
- Training and development.
- Employee/labor relations,

Students seeking a broad-based HR career should build competencies in these four areas above through a combination of experience, studies and/or internships. Students could also consider taking an integrative (capstone) study to integrate their knowledge of HR and organizations. In addition, students could consider including studies that help in developing knowledge and competencies in specialized areas of HR. Possible topics include:

- Employment and/or labor law.
- Diversity in the workplace.
- Dispute resolution in the workplace.
- International HRM.
- Human resource planning.
- Human resource information systems.
- Change management.
- Performance management.

- Labor economics.
- Workplace safety and health.

Supporting Studies

Other supporting studies could focus on the organization or industry in which the student plans to work. These could include nonprofit management, retail management, manufacturing technology, health-care administration and other similar types of organizational studies.

Lower Division

Core HR Management Courses

Code	Title	Credits
MGMT 1005	Principles of Management	3,4
MRKT 1005	Marketing Principles	4
ACCT 1005	Accounting for Decision Makers	6
ECON 2005	Principles of Economics	4

SUNY General Education

Code	Title	Credits
Mathematics (Statistics)		4
Basic Communication		4
Select 12 credits from the following Gen Ed categories:		12
Natural Science		
American History		
Western Civilization		
Other World Civilization		
The Arts		
Foreign Language		

Upper Division
Core HR Management Courses

Code	Title	Credits
HRMS 3015	Human Resource Management	4
BUSN 3010	Business Ethics	4
BUSN 2010	Business Statistics	4
FSMA 3010	Corporate Finance	4
MGMT 3060	Organizational Behavior	4
HRMS 3010	Diversity in the Workplace	4
HRMS 3040	Staffing the Organization	4
HRMS 3020	Human Resources Information System	4
HRMS 3005	Compensation & Benefits	4
HRMS 3043	Training & Development	4
Human Resource Elective		4
HRMS 4020	Strategic Human Resource Management	4
HRMS 3025	International Human Resources Management	4

Business, Management And Economics - Accounting Concentration - For Students Matriculated After Aug. 1, 2009 But Before Fall 2018

June 22, 2011 — AOS Guidelines: Business, Management and Economics

Empire State College offers the opportunity to complete either a traditional concentration in accounting or an individualized concentration designed to meet the unique needs of Empire State College students. Since various career paths exist within the accounting profession, the career exploration and research phase of the educational planning process is particularly important.

A degree plan with an accounting concentration is expected to satisfy the general guidelines for the business management and economics area of study. In addition, the following core courses define the accounting concentration:

- Introductory Accounting I and II; or Principles of Accounting I and II; or Financial Accounting and Managerial Accounting
- Intermediate Accounting I and II
- Cost Accounting
- Management/Accounting Information Systems
- Corporate Finance
- Advanced Accounting
- Auditing
- Legal Environment of Business or Business Law
- Statistics
- Federal Income Tax

Information on Career Options in Accounting

There are various licensure and professional certification programs in the accounting field. In addition, there are many employment opportunities and professional licenses and certifications available in the public, private and nonprofit sectors, which require specific coursework, course sequences and course levels. Accordingly, it is the students' responsibility, in designing the degree plan, to check with their state board and professional associations regarding the current requirements for any professional designations they are interested in pursuing.

Public Accounting Careers

Empire State College cannot guarantee admission to any professional examination including the Certified Public Accountancy examination, nor satisfaction of the educational requirements for licensure. In order to meet the admissions requirements, students are advised to check with their State Board of Education for licensure requirements.

Note: The board of education licensing department of each state has its own educational and practical experience requirements which may change over time.

In general, being an accountant does not require state licensing or professional certification unless the student is interested in pursuing work in public accountancy as a certified public accountant. The CPA profession is defined by New York Education Law as "holding one's self out to the public in consideration of compensation… providing signature …indicated or implied that the practitioner has acted or is acting, in relation to financial accounting and related statement, or reporting as an independent accountant or auditor or as an individual having or purporting to have expert knowledge in accounting or auditing."

The license is required to practice as an external auditor and to provide an independent opinion on the fair presentation of the financial statements issued by a publicly-held corporation, a nonprofit organization or private company for certain budgeting or banking matters. Candidates for the CPA Exam in New York

Effective August 1, 2009, candidates for the CPA exam in New York state must complete at least a baccalaureate or higher degree consisting of 150 semester hours including, but not limited to:

-at least 33 semester hours in accounting with courses in:

- Financial accounting theory and principles (including advanced financial accounting).
- Managerial accounting.
- U.S. federal tax accounting.
- Auditing and computer auditing.

-36 semester hours in

- General business electives including business statistics, commercial law, computer science, economics and finance.

The curriculum also must include the study of business/accounting communications, ethics/professional responsibility, and accounting research.

Note: The study in auditing must be taken at the upper-division level (third or fourth year) of an undergraduate program or at the graduate level.

Management Accounting Careers

Students may choose to pursue a career in management accounting. Management accountants are strategic financial-management professionals who integrate accounting expertise with advanced management skills to drive business performance inside organizations. Management accountants monitor, interpret, and communicate operating results, evaluate performance, control operations and make decisions about the strategic direction of the organization.

To better prepare students for pursuing a career in management accounting, in addition to the accounting core studies, students should consider including the following studies in their degree program:

- Principles of Marketing.
- Strategic Planning or Strategic Management.
- Business Ethics.
- International/Global Business.

Internal Auditing Careers

Students may choose to pursue a career in internal auditing. Internal auditors evaluate risk exposures related to:

- Organizations' governance, operations and information systems in terms of effectiveness and efficiency of business operations.
- Reliability and integrity of financial and operational information.
- Safeguarding assets.
- Compliance with laws, regulations and contracts.

To better prepare students for pursuing a career in internal auditing, in addition to the accounting core studies, students should consider including the following studies in their degree program:

- Internal Controls or Internal Auditing.
- Internet Communication and Security.

Forensic Accounting Careers

Forensic accounting is another growing career area in accounting. Forensic accountants work in the areas of fraud examination, prevention, detection, deterrence and investigation.

To better prepare students for pursuing a career in forensic accounting, in addition to the accounting core studies, students should consider including the following studies in their degree program:

- Internet Communication and Security.
- Theories of Crime Causation or Behavioral Psychology and Society.
- Case Management.
- Investigation Techniques.
- Interviewing Techniques.

Government or Nonprofit (Not-for-Profit) Accounting Careers

Another career opportunity in accounting is in government and nonprofit financial management. Government and nonprofit accountants and financial managers are interested in working on:

- Project management.
- Planning and execution of several kinds of audits.
- Program planning and controlling to prevent or deter the misuse of public resources in the programs and operations of federal, state, city and local agencies.

It is a stewardship relationship to account for public resources and improve efficiency and effectiveness in governmental and nonprofit business operations. Finance managers are increasingly valued as key members of decision-making teams, assessing how agencies are performing, helping managers operate their programs more efficiently and transforming government processes through technology.

To better prepare students for pursuing a career in governmental and nonprofit accounting, in addition to the accounting core studies, students should consider including the following studies in their degree program:

- Accounting for Government and Nonprofit Organizations.
- Nonprofit Management.
- Public Finance and Budgeting.
- Business, Government and Society.
- Politics and Leadership in the Bureaucracy.

Business, Management And Economics - Accounting Concentration - For Students Matriculated Before Aug. 1, 2009

Jan. 21, 1997 — AOS Guidelines: Business, Management and Economics

Empire State College offers the opportunity to complete both traditional concentrations in accounting and individualized programs designed to meet the unique needs of Empire State College students. Because of the many career opportunities arising from accounting and accounting-related concentrations, the career exploration and research phase of educational planning is particularly important.

There are a variety of licensure and professional certification programs available based upon accounting concentrations. Similarly, there are many employment opportunities available in the public sector for which specific coursework is required. Accordingly, students are advised to review the current requirements for any professional designations that they are interested in pursuing before designing their programs. These professional designations include certified public accountant, certified management accountant and certified internal auditor.

Traditional Concentrations in Accounting

Students are advised that accounting concentrations have historically followed the requirements for professional licensure as a certified public accountant. Empire State College students are advised that if they intend to pursue a career path based on traditional accounting concentrations (whether or not they intend to pursue professional licensure), their college degree programs should include these traditional studies. Students also are advised that a broad liberal-arts background has been emphasized in such programs (a Bachelor of Professional Studies generally would not be acceptable for traditional accounting programs).

Accounting Programs Have Included:
Accounting Core
- Accounting Principles.
- Intermediate Accounting I and II.
- Cost Accounting I and II.
- Income Taxes.
- Advanced Accounting.
- Auditing.

Supporting Core of Studies
- Business Law I and II.
- Finance.
- Statistics.
- Computer Science and Information Systems.
- Economics (Macro, Micro).

Empire State College cannot guarantee admission to the certified public accountancy examination or satisfaction of the educational requirements for licensure. In order to meet the admissions requirements, students are advised that cross-enrollment with another college may be required and credit by evaluation may not be acceptable. Students also are advised that educational requirements often change and that they should not rely on the experience of other Empire State College graduates.

Managerial Accounting Concentrations

The employment experience that Empire State College students have prior to their matriculation at the college and their career goals often make degree programs that emphasize managerial accounting particularly desirable. In such instances, students may find the four areas emphasized by the certified management accounting program particularly helpful in the design of their degree programs. Programs with this career emphasis should include studies in:

- Economics.
- Finance and management.
- Financial accounting and reporting.
- Management reporting.

- Analysis and behavioral issues.
- Decision analysis and information systems.

Managerial accounting concentrations combine studies that are traditionally emphasized in accounting concentrations (discussed earlier) with studies in:

- Information systems.
- Managerial and organizational behavior.
- Financial management.
- Economic and quantitative analysis.

Often, studies in new costing techniques and/or their application to a particular industry are included, as well as studies in budgetary analysis, systems design, cost behavior patterns, and forms of information reporting. Because such concentrations may vary considerably depending upon individual student needs and interests, studies to be included in such concentrations will likewise vary.

Concentrations with other titles where the goal is preparation in managerial accounting should take these guidelines into account.

Concentrations in Financial Management, Nonprofit and Governmental Accounting, Industry and Business Sectors, Banking and Financial Services and/or Other Specialized Situations

It is possible to develop unique programs which combine selected traditional accounting studies with studies geared to students' individual career interests. Such studies might include:

- Nonprofit and/or governmental finance or accounting.
- Specialized studies geared to a particular business sector (such as construction, banking, automotive or financial services, etc.).
- Specialized auditing (governmental, EDP, banking or internal).
- Specialized studies in cost or management accounting.
- Concentrations in financial planning which combine accounting studies with finance, or concentrations in taxation (i.e., personal, corporate, fiduciary, tax and estate planning or regulation).

As the globalization of business continues to evolve, studies with an international focus may also be appropriate.

Business, Management And Economics - Business Administration Concentration - For Students Matriculated After July 1, 2010 But Before Spring 2020

A business administration concentration will be developed through application of theoretical concepts to practical business problem solving and decision making that the business professional encounters in corporate and nonprofit-organization environments. A business administration concentration generally offers the broadest array of traditional academic and business disciplines including:

- Economics.
- Accounting.
- Marketing.
- Management.
- Business law.

- The legal environment of business.
- Finance.
- Quantitative methods such as statistics.

Additionally, to meet the complexities of today's evolving business environment, knowledge is essential in:

- Technical areas such as computer applications and management information systems.
- International, global and ethical issues confronting contemporary societies.

Students should address and provide evidence of having incorporated these guidelines in the degree program rationale.

When students plan a bachelor's degree program in business administration, they should demonstrate through transcript credits, evaluated learning or Empire State College studies that they have foundational studies in these business disciplines as well as advanced-level learning. Students can accomplish this by referring to the guidelines for the academic areas described here and to the list of suggested study titles presented at the end of this document.

A strong business-administration degree program will follow these guidelines as well as the business, management and economics general guidelines, which specifically state that all students are required to demonstrate knowledge in each of the following areas:

- Communication skills.
- Information management.
- Economics.
- Ethical and social responsibility.
- Quantitative skills.
- Understanding people in an organizational context.
- Understanding organizations within broader contexts.

A business administration concentration will include learning from each of the following core areas and a capstone study such as business policy or strategic management.

Economics

Degree programs will include both microeconomics and macroeconomics or a combination. Microeconomics can be conceived of as primarily examining decision making for a whole firm, whereas macroeconomics primarily examines the functioning of the broad environment within which individual firms operate.

Accounting

Students study accounting to understand the approach, logic, strengths and weaknesses of this discipline in order to make informed use of this important management tool. Degree programs will include financial accounting, managerial accounting, a combination or accounting for decision makers.

Marketing

Students study marketing to gain understanding of functional issues that occur every day in business, such as finding customers for its products or services, developing or managing these products or services, identifying needs and distributing products or services. A foundational

study in marketing, often titled Principles of Marketing or Marketing Fundamentals, will focus on these functional problems.

Finance

Knowledge in finance will enable students to project and plan the flow of funds so that there are adequate resources available when needed and to make appropriate allocation of funds and investment decisions.

Management

Studies in management foundations, often titled Fundamentals of Management, Principles of Management and Introduction to Management, cover topics such as planning, organizing, leading and controlling. Students are introduced to problem solving and analytical processes used in business environments. This includes establishing goals and objectives, as well as coordinating human, physical and financial resources needed to achieve them.

Legal environment

The student should have a foundation in law such as provided in the Legal Environment of Business or Business Law. Because laws and regulations increasingly influence business decisions, students need to understand how environment influences organizational decisions.

Quantitative methods

Students need to have practical and applied quantitative skills appropriate to their work place and career pursuits. Statistics or other quantitative analysis studies will foster informed business judgments.

Management information systems

Students need to have an understanding of the use and management of information as an organizational resource, provided through a basic study in information systems and introduction to computer applications.

Capstone study

A capstone study provides students with methodology, tools and problem-solving skills to integrate their business knowledge while solving problems affecting both the internal and external environments. Such a study could be in business policy, strategic management or an individualized project.

Suggested Advanced-Level Studies

The business administration concentration should include advanced-level studies in a variety of areas such as domestic, international, global and ethical issues that confront contemporary societies. While not intended as a comprehensive listing, additional studies could include:

- Business ethics.
- Business policy (suggested capstone).
- Comparative economics.
- Computer applications in decision making.
- Consumer behavior.
- Corporate finance.
- Corporate social responsibility.
- Cost accounting.
- Diversity in the workplace.
- E-commerce marketing.
- Entrepreneurship.

- Human resource management.
- International business and management.
- International economics.
- International marketing.
- Investment.
- Labor and management relations.
- Leadership.
- Managerial decision making.
- Marketing research.
- Management information systems (MIS).
- Operations management.
- Operations research.
- Organizational behavior.
- Small business management.
- Strategic management (suggested capstone).

The degree program rationale should discuss the appropriateness of all studies in relation to future career plans.

Revised Nov. 20, 2008
Revised March 11, 2009 (CUSP Suggestions)

Business, Management And Economics - Business Administration Concentration - For Students Matriculated Before July 1, 2010

A concentration in business administration provides preparation in academic areas that help a student understand business organizations and their operations, and to manage effectively in a business environment. For some students, the business-administration concentration may serve as good preparation for a career in nonprofit organizations.

Business administration combines study in traditional academic disciplines, such as economics, with the study of professional subjects that provide theory and concepts useful in understanding business problems and decision making, and which assist students in applying theoretical knowledge to practical problems. Business-administration programs should include an understanding of the international, global and ethical issues confronting business today. The student's rationale should give evidence that these guidelines have been incorporated into the degree program.

Business administration concentrations should evidence knowledge in each of the following core areas:

Economics

Students should study both microeconomics and macroeconomics. Microeconomics can be conceived of as primarily examining decision making for a whole firm. Macroeconomics primarily examines the functioning of the broad environment within which individual firms operate.

Accounting

Students should study accounting to understand the approach, logic, strengths and weaknesses of accounting in order to make informed use of this important management tool.

Marketing

Students in their study of marketing will focus on functional problems that every business needs to deal with such as finding customers for its products or services, producing products or services, identifying needs and distributing products or services.

Finance

Knowledge in finance will enable students to plan the flow of funds so that there are adequate resources available when needed, and to make appropriate investment decisions.

Management

Knowledge should include the problems and processes of analyzing organizational environments. This includes establishing goals and objectives, and coordinating human, physical and financial resources to achieve these objectives.

Legal environment

Because laws and regulations increasingly influence business decisions, students need to understand how the legal environment influences organizational decisions.

Quantitative methods

Students need to have the quantitative skills appropriate to their workplace and career pursuits. Knowledge in this area includes statistics or calculus or other areas of quantitative reasoning, which will foster informed business judgments.

Computers and information systems

Knowledge in this area should ensure that a student has been introduced to computers and two or more applications. Students should be aware of the multiple uses of computers and their impact on the business environment.

Other Studies

A capstone study is highly recommended. Such a study will provide students with the opportunity to integrate their business knowledge while solving problems affecting both the internal and external environments. To achieve this objective, a student might study business policy or strategic management or design his/her own project individualized to his/her own needs and interests.

Other suggested studies include:

- International business.
- Operations research or management.
- Organizational behavior.
- Labor relations.
- Ethics.
- Entrepreneurship.
- Human resource management.

This is not intended as a comprehensive listing. The degree-program rationale should discuss the appropriateness of all studies in relation to future career plans

Business, Management And Economics - Economics Concentration - For Students Matriculated After Mar. 1, 2016 But Before Jan. 1, 2020

Background

A focus on economics within the Business, Management and Economics Area of Study deals with how people make choices and organize production, distribution and consumption of goods and services.

A concentration in economics provides a foundation for employment in a wide range of fields, including teaching, research, policy analysis, government service, banking, insurance and general business. All require a solid theoretical base and ability to analyze data. Therefore, a blend of theoretical and applied studies is advisable.

All concentrations in economics should reflect a progression of studies from the introductory to the advanced level, which respond to the student's own personal, academic and professional goals. They can cover a range of possibilities such as (a) a purely theoretical orientation, especially for those interested in graduate study; (b) an applied orientation for those whose interest is mainly in working in industry; and (c) a policy orientation for those who wish to pursue careers with the government.

Foundation

Students will develop an understanding of the language of microeconomics; roles of economic decision making at the individual and firm level; an ability to use graphical analysis in problem solving; and the ability to identify an appropriate concept for application and reason through to logical conclusions. This would normally be accomplished in a study of Principles of Microeconomics or similar studies.

Students will develop an understanding of the language of macroeconomics; the structure of the aggregate economy; the roles and impacts of government and institutions on the economy; tools of fiscal and monetary policy; an ability to use algebraic graphical analysis in problem solving; and the ability to apply these concepts to the real world. This would normally be accomplished in a study of Principles of Macroeconomics or similar studies.

The study of economics requires facility with algebra, statistics (including probability) and one semester of calculus.

Advanced

Building on the vocabulary and concepts learned at the introductory level, as well as facility with the tools learned in algebra, statistics and calculus, students must deepen their understanding of both microeconomics and macroeconomics by study.

At the advanced level, students will demonstrate increasing levels of sophistication in solving problems as well as becoming familiar with the professional literature. Tools for analysis include both calculus and more advanced graphical analysis, as well as a deeper understanding of

theory. Students typically gain this knowledge in studies of Intermediate Microeconomics and Intermediate Macroeconomics.

In order to both understand the economics literature and apply economic concepts to real-world data, students must study data analysis at the advanced level (e.g., econometrics; financial data analysis; advanced statistics; forecasting).

Students are expected to demonstrate that they can apply sophisticated analysis to a broad range of fields. They will do this by including at least three additional advanced level studies in economics. These studies must be distributed across different fields of economics. (Including, but not limited to international, health, environmental, economic development, labor, monetary, economic history, history of economic thought, political, industrial organization, crime, sports, comparative systems, etc.) Students may wish to add focus to one or more fields by adding additional advanced level studies.

For more information on careers and fields of study, students may wish to consult the American Economics Association's website for students (http://www.aeaweb.org/students/).

Business, Management And Economics - Economics Concentration - For Students Matriculated Before Mar. 1, 2016

Economics is a discipline within the social science field. The core of economics deals with people's attempts to organize their environment to satisfy their material needs by the production, distribution and consumption of goods and services. More broadly, it overlaps with other social sciences such as history, sociology, political science, geography and psychology.

Students' degree programs reflect both personal intellectual interests and career goals. A degree in economics provides a foundation for employment in a wide range of fields including teaching, research, policy analysis, government service, banking, insurance and general business. All require the ability to manipulate and analyze data as well as a solid theoretical base. A blend of theoretical and applied studies is advisable.

As part of the BME area of study at Empire State College, a concentration in economics allows the student the breadth to select studies from a wide constellation of applied and theoretical areas and to plan a program around individual interests. However, a concentration should possess defensible progression and integration. Ideally, the concentration would incorporate broad content areas such as public economics rather than separate studies such as public revenues or public expenditures.

While maintaining the individuality of a degree program, we must recognize certain professional and community expectations within a discipline. At the minimum, certain foundational studies are essential before a student can be an effective learner at more advanced levels. In that spirit, the following studies are suggested for consideration in a concentration in economics.

Foundation

A solid foundation introduces the beginning student to the terminology, concepts and analytical tools utilized by economists. It is strongly recommended that the student survey the major principles, institutions and problems in contemporary life by completing some study of both macroeconomics (the study of the aggregate economy) and microeconomics (the study of individual components of the economy) at the introductory level.

This recommendation is based on:

- The range of new concepts to be learned that will carry over to more advanced study.
- The traditional division between micro and macro, whereby not all critical concepts of the discipline will be covered in either alone.

Also at this level of study, the student should have an understanding of graphs, tables, algebraic equations, and cause-effect relationships as found in college algebra and differential calculus in order to be able to fully grasp marginal analysis of functional relationships. Further work in mathematics is essential for students intending to pursue graduate study.

A knowledge of statistics is important for most economic studies which have a quantitative orientation because applications of descriptive statistics, graphical methods, probability, correlation, regression, etc. are made in them. Beyond that, any student who hopes to understand economic literature from journals and other professional sources will benefit from studies in statistics.

Advanced

After absorbing all the vocabulary and concepts at the introductory level, the student may not be able to translate them into the examination of complex economic phenomena unless he/she studies them at a higher level of abstraction. For instance, a student who is interested in pursuing a concentration in health economics will need more than an introductory exposure to the determination of prices, output and productivity before applying them to the economics of health. These elements are examined more fully in intermediate microeconomics or intermediate macroeconomics. In most cases, knowledge from both intermediate areas is appropriate before further study can be pursued effectively.

In any discipline, the student is expected to gain an understanding of the development of its thinking. Economics is a dynamic and evolutionary study whose paradigm shifts through preclassical, classical, marginalistic or Keynesian contexts present the student with an excellent opportunity to examine the various schools of thought. It is the study that gives the discipline its philosophical and theoretical base and enables the student to better understand how the economic system operates.

In sum, all concentrations in economics should reflect a progression of studies from the introductory to the advanced level which respond to the student's own personal, academic and professional goals. They can cover a range of possibilities including:

- A purely theoretical orientation, especially for those interested in graduate study.
- An applied orientation for those whose interest is mainly in working in industry.
- A policy orientation for those who wish to pursue careers with the government.

Business, Management And Economics - Finance Concentration - For Students Matriculated After Dec. 1, 2013 But Before Jan. 1, 2020

March 21, 2013 — AOS Guidelines: Business, Management and Economics

Background

Finance is a branch of applied economics which studies monetary and financial decision making under conditions of risk and uncertainty. Firms and investors utilize various instruments and institutions to manage the transfer of funds from those who save to those who invest in regulated markets.

Foundation Studies

The concentration in finance should include principles and concepts of micro- and macroeconomics, accounting, and legal aspects of business. Problem solving in finance uses advanced quantitative methods, including statistical analysis and often calculus.

Progression in the Concentration

The finance function consists of assessing the financial horizon, utilizing quantitative and analytical tools and methodologies. The concentration typically will include one or more studies which focus on the firm as the generator of financial instruments and on the valuation of those instruments. In addition, students should comprehend tools and analysis used by businesses to make their financial decisions (e.g., Corporate Finance, Financial Management). Building on this, students explore financial instruments and valuation and investment of those instruments (e.g ., Investments, Security Analysis and Portfolio Management). Knowledge of financial markets — both domestic and international — is crucial for full understanding of funds transfers in the global economy (e.g., Money and Banking or Financial Markets and Institutions and International Finance). In the current financial arena, an understanding of ethical and social responsibility is imperative. Sophisticated financial modeling software and electronic spreadsheets are used in "real world" simulations using advanced quantitative skills and methodologies, which might include econometrics.

Students seeking a broad-based finance career should build competencies in the topics listed above through a combination of experience, studies and/or internships. Students are encouraged to take an integrative (capstone) study to assimilate their knowledge of finance. The capstone might integrate prior knowledge and create pathways to the professional work.

Career Paths

There are various career opportunities in finance. Among them are:

- Working within a corporate financial structure.
- Theoretical analyzer of finance.
- Financial professions as an investment banker or trader.
- Public finance professional.
- Wealth management advisor.

For students wishing to study finance as a path to corporate management, many of the studies in the management or business administration concentrations (such as accounting, strategic management and leadership) are also appropriate. Other students might wish to focus more on the theory of finance and would find additional studies in economics, corporate finance, portfolio theory and research methods appropriate. Those interested in a more "Wall Street"- focused career might consider international accounting, risk analysis and symbolic logic.

Notes:

- Students interested in personal financial consulting might be better served by designing a degree based on the Certified Financial Planner (CFP) curricular guidelines.
- Students preparing for graduate work in finance should explore entrance requirements. Graduate work generally requires facility with sophisticated quantitative methods, as well as depth in microeconomic analysis.

Business, Management And Economics - Finance Concentration - For Students Matriculated Before Dec. 1, 2013

Feb. 1, 1993 — AOS Guidelines: Business, Management and Economics

Finance is the study of the direct and indirect transfer of funds from those who save to those who invest. It includes both the financial instruments which are bought and sold and the markets in which they are traded.

The study of finance builds upon a foundation of economic concepts. It applies those concepts to information that comes from a solid foundation in accounting theory, and it uses concepts from statistics to deal with the uncertainty inherent in forecasting the future. Much of the problem solving in finance uses algebra. Electronic spreadsheets are used in "real-world" simulations. Advanced quantitative skills are desirable.

The concentration typically will include:

- One or more studies which focus on the firm as the generator of financial instruments and on the valuation of those instruments.
- One or more studies which focus on the investor as the purchaser of financial instruments.
- One or more studies of financial markets, both domestic and international.

These studies form the core of a concentration in finance.

Related Career Directions

- Finance within a corporate financial structure or as a personal financial consultant/advisor: studies in risk management, interview techniques, the psychology of interpersonal relations and communication skills.
- Finance in corporate management: studies in management or business administration concentrations.

Theory of Finance

Students who wish to focus more on the theory of finance would find studies appropriate in:

- Economics.
- Corporate finance.
- Portfolio theory.
- Securities analysis.
- International finance.
- Money and banking.
- Research methods.

Business, Management And Economics - Human Resource Management Concentration - For Students Matriculated After July 1, 2009 But Before Spring 2020

Background

The human resource management professional is an essential partner in developing and executing the strategy of the organization. Individuals working in the HR field are key players in ensuring the organization has the right people in the right places doing the right things at the right times. In effect, it is the HR professional's responsibility to ensure HR policies, procedures and practices are matched effectively with the organization's strategies. This includes functions such as:

- Recruiting/staffing.
- Training.
- Planning and development.
- Reward systems including direct and indirect monetary rewards.
- Workplace safety and health.
- Employee/labor relations.

To perform these functions, an HR professional needs to interact with people across the organization and needs to have an understanding of these functions. The HR professional is in a trusted position; those who serve in this field are held to high standards of integrity, discretion and discernment.

Issues that currently face professionals in this field are numerous and complex. The legal, economic and political environments at the local, state, country and international levels impact how HR strategies can be achieved. In addition to understanding the broad framework of the relevant laws (e.g., for equal opportunity, income security, safety and health, labor-management relations), the HR professional also needs to understand the economic, social and political environments and their impact on HR activities within an organization. Of critical importance are issues such as globalization, rise of knowledge worker and technology. The HR function is frequently asked to implement policies and programs to enhance the organization's ability to thrive in environments undergoing rapid change.

Progression in the Concentration

To prepare to study in the HR field, students should develop an understanding of the environment through study in fields such as psychology, sociology, political science, economics, law and quantitative analysis, including statistics. Students also should ensure they have the ability to communicate in multiple forms (oral, written, electronically) with individuals and groups, and are able to analyze complex information.

Students pursuing an HRM concentration should build a strong foundation of knowledge in the functional areas of business including:

- Accounting.
- Finance.
- Management.
- Operations.
- Marketing.
- Information systems.

It is also important to have an understanding of the changing nature of work and the work force, including such issues as workplace diversity and globalization. Students should also understand the interactions among individuals, groups and organizations through a study such as Organizational Behavior or Managerial Psychology.

Students pursuing an HRM concentration should meet the general guidelines for business, management and economics, and have a broad-based understanding of the HR function through study or experience.

HRM Knowledge/Studies

The HR function has four key responsibilities:

- Staffing (recruitment and selection).
- Compensation (direct and indirect).
- Training and development.
- Employee/labor relations.

Students seeking a broad-based HR career should build competencies in these four areas above through a combination of experience, studies and/or internships. Students could also consider taking an integrative (capstone) study to integrate their knowledge of HR and organizations. In addition, students could consider including studies that help in developing knowledge and competencies in specialized areas of HR. Possible topics include:

- Employment and/or labor law.
- Diversity in the workplace.
- Dispute resolution in the workplace.
- International HRM.
- Human resource planning.
- Human resource information systems.
- Change management.
- Performance management.
- Labor economics.
- Workplace safety and health.

Supporting Studies

Other supporting studies could focus on the organization or industry in which the student plans to work. These could include nonprofit management, retail management, manufacturing technology, health-care administration and other similar types of organizational studies.

Related Concentrations

In addition, students could also consider developing a degree plan in related concentrations such as training and development, gender/diversity/LGBT issues in the workplace, labor or industrial relations, or other areas of organizational studies.

Business, Management And Economics - Human Resource Management Concentration - For Students Matriculated Before July 1, 2009

The field of human resource management deals with what was formerly called the "personnel function." People in this field provide services to organizations in the area of recruiting, staffing, training, counseling, compensation and benefits, safety, equal opportunity and affirmative action, and labor relations. There are a number of laws that impact on this area. They deal with:

- How people are paid.
- Work and environmental safety.
- Equal opportunity and discrimination issues.
- How benefits are administered.
- Issues covered by the National Labor Relations Act, which defines collective activity in the work place.

A growing area of human resource management is in the development and management of human resource information systems (HRIS). The human resource function also frequently implements programs that deal with productivity improvement and total quality management.

This field deals with people; therefore, an understanding of psychology and sociology is essential. An understanding of the changing nature of work and the work force, including issues of cultural diversity, is also important. The ability to communicate orally and in writing with individuals and groups is essential.

Studies that are considered essential to the field of human resource management include:

- Human resource management.
- Compensation and benefits administration.
- Training and development.
- Employment and labor law.
- Affirmative action and cultural diversity in the workplace.
- Business mathematics.
- Managerial psychology, industrial psychology or organizational behavior.

Additional studies in the field of human resource management could include:

- Recruitment and selection.
- Staffing.
- Executive or sales compensation.
- Human resource information systems.
- Performance appraisals.

- Employee assistance programs.
- Total quality management or productivity improvement.
- Labor economics.
- Wage and price theory.
- Security and safety.

Because human resources professionals perform many of the functions of other managers, supporting studies could include:

- Economics.
- Psychology.
- Sociology.
- Management.
- Statistics.
- Accounting.
- Corporate finance.
- Marketing.
- Business history or labor history.

Practitioners in the field need to understand how organizations function and how change is implemented. Other supporting studies could be directly related to understanding the kind of organization the person plans to work in. These could include nonprofit management, retail management, manufacturing technology, health care administration and other similar types of organizational studies.

Business, Management And Economics - Information Systems Concentration - For Students Matriculated Before July 1, 2015

Introduction: What is "information systems?"

- Information is data that has been given meaning through some process, and therefore has added value.
- Systems are the ways in which we develop that information, including through models, as well as the use of processes that will help us implement those models.

For the student who wishes to develop a degree program in information systems, definition is the initial challenge; as the definition develops, the degree program will take shape.

There are many ways to approach information systems. Many professionals and educators have tried to identify different approaches by adding modifiers, which has led to terms such as "management information systems" and "computer information systems." MIS is understood to be focused on the management aspects, while CIS is focused on the technical aspects. However, as the area has developed, the differentiation between the managerial and the technical has blurred.

At Empire State College, there are three primary areas of study which accommodate a degree in information systems:

- Business, management and economics.
- Science, mathematics and technology.
- Interdisciplinary studies.

Separate guidelines are provided for each of these areas of study. However, a common core of knowledge has been identified as appropriate for any of these areas of study.

Students can consider other possibilities than IS for their concentration titles. For example:

- In the SMT area, a student who comes to the college with substantial experience and/or transcript credit in computer technology may want to build on that background to develop a degree program in information technology. An SMT student who wishes to have a more theoretical approach, including extensive study of mathematics and algorithms, may want to pursue a degree in computer science.
- In the BME area, a student pursuing a degree in information systems management may consider studies such as accounting information systems, human-resource information systems, and so on, depending on his/her interests and needs.

Common Core of Knowledge for Information Systems

In any degree program, progression and integration are important. Progression is important because one needs to move from a foundation to a deeper level of understanding. Integration exists when links exist among the degree program studies. Both are addressed in the common core of knowledge for information systems. To begin, the foundation is defined, which is important for any degree program. Then, the essential links are presented. From these essential links, the rest of the degree program will then differ, depending on student goals and interests.

The core areas that relevant area of study faculty have agreed upon as essential for a degree in information systems include:

Computer Fundamentals
This area comprises three subareas, all of which need to be addressed: applications, programming and introductory IS concepts.

- Applications include word processing, use of spreadsheets, database management and telecommunications.
- Knowledge of telecommunications includes a basic understanding of networks and the Internet.
- Programming is introductory and can be in any language. Introductory IS concepts would provide an overview of the area, including basic hardware and software, as well as common applications of IS, including, but not restricted to, the use of IS for decision-making support.

Business, Management and Economics Fundamentals
Information systems exist within organizations. In many cases, the organization is involved in business transactions. Therefore, some basic understanding of business and management fundamentals is important. This could be chosen from one or more of the areas of economics, behavior/ management and/or finance/accounting.

Quantitative Reasoning
All students should already have (or develop) skill and confidence with the interpretation of material containing quantitative information and mathematical symbols, and they should have (or develop) an ability to express ideas using mathematical symbols and language. It is important to be able to articulate an understanding of mathematics, not simply perform calculations. The choice of mathematical subject matter for development of quantitative reasoning will depend on the student's background and interest. Subjects such as algebra, statistics, finite math or technical math are all good choices. In addition, students would greatly benefit from an understanding of basic statistical concepts.

Systems Analysis and Design (Advanced Level)
Key to understanding information systems is an understanding of systems analysis and design. This includes an understanding of the systems lifecycle as well as systems and network models.

Information Technology (advanced level)
Information technology concerns the hardware aspects of information systems. Many students come to Empire State College with background in information technology. This may include training in networks or the underlying technology of the World Wide Web or advanced understanding of programming languages. In this area, currency is important and students should be considered in the learning contract, possibly through study of data communications and networking or advanced programming languages.

Information Systems (advanced level)
In addition to systems analysis and design, which was already identified as a core subject, and an understanding of systems and information technology, a student should have an advanced level of understanding in databases, MIS or project management in information systems. Any advanced-level IS study should include some aspect of decision making.

Understanding of the Work Environment
Information systems always exists in some context, within which there is wide variability. Often, but not always, the environment is a business organization. Studies that would provide this perspective include technology and society, technology management, cross-cultural management, organizational behavior, computer ethics, human-computer interaction or e-commerce.

In this common core, the student has investigated information technology and information systems at the advanced level. He or she has studied systems analysis and design. The content of the rest of the concentration will depend on the specific area of study. Three of the most common possibilities are discussed below.

An IS Degree Within the Area of Study of Business, Management and Economics

In addition to satisfying the general BME guidelines, students wishing to develop an IS degree within BME are advised to take business, management, and economics studies that include IS components or that complement the IS studies in the core area. The following are suggested topic areas. The list below is by no means exhaustive. These studies should be beyond the introductory level and address competencies, learning and knowledge areas such as the following:

- **Telecommunications management:** responsibility for the operations and performance of the communication network within the organization, including project management, computer operations and computer security
- **Database management and administration:** combination of data-management and data-administration roles and responsibilities, including studies such as relational databases, enterprise data modeling, client interface and management information systems
- **Accounting and financial management:** responsibilities such as dealing with investments in vertical information systems, procurement, operations management and implementation of an information systems' financial strategy within the organization; cost accounting is an integral part of this area.

- **Planning:** positioning of IS within other organizational functions to support business strategies and goals through studies such as business planning, strategic planning, strategic control systems and systems development.

An IS Degree Within the Area of Study of Science, Mathematics and Technology

Note: The guidelines have been revised for a concentration in information systems. Review the guidelines located in the Science, Mathematics and Technology area of study.

The general SMT guidelines are met through the core studies for a degree in IS. One additional area that needs to be included in an IS degree under SMT would be further study in mathematics. This should be beyond the introductory level and could include areas such as discrete math or advanced quantitative methods in business.

- Discrete mathematics would cover logic, the concept of complexity, methods of proof and graph theory.
- Advanced quantitative methods would include topics such as decision making under uncertainty and linear programming.

Beyond the core, students in SMT likely will have an area they would like to focus on in their additional advanced-level studies. The following are some suggested areas. This list is by no means exhaustive:

- **Programming**: integrative studies such as object oriented programming, theory of programming languages and artificial intelligence.
- **Networks**: data communications, voice systems, computer security and network administration.
- **Web design**: web programming, web design and web development.
- **Databases**: study of databases, data modeling, database management, relational databases, decision support systems, enterprise data modeling, artificial intelligence and expert systems.
- **Telecommunications**: study of the integrated nature of telecommunications, where voice, data and graphics are united.

Studies should not focus on specific commercial packages, since these narrow approaches will not serve the student's long-range goals. Specific titles may go out of date, or the manufacturer may change its name or go out of business. It is also important to strike the proper balance between study of general concepts and of specific software tools and packages. While students can and should gain hands-on experience with software in their studies, at least equal emphasis must be placed on mastery of the concepts and principles. The concepts and principles are the key to successful lifelong learning and to mastering the use of new software tools and techniques as they become available. A specific example of this principle would be developing a study in "web design," rather than a study titled "Microsoft Frontpage."

An IS Degree Within the Interdisciplinary Studies Area of Study

Separate guidelines are given for the interdisciplinary studies area of study and these are the best source for any student developing a degree within this AOS. However, it is assumed that a student with an interdisciplinary studies degree in IS would have the common core identified above. For the additional studies in the information systems area, several of the studies at the advanced level should integrate viewpoints and applications. An example may be a degree that looks at the technical and implementation aspects of e-commerce.

Business, Management And Economics - International Business Concentration - For Students Matriculated Before July 1, 2013

July 1, 2013 - AOS Guidelines: Business, Management and Economics

For the concentration in international business, an awareness of the different sociocultural, political and legal environments in international business and the resultant consequences on international business planning and decision-making processes adopted by managers operating in that context is crucial.

Because international business concentrations may offer many diverse career opportunities, the career exploration in the research phase of degree program planning is particularly important. Many career opportunities exist in private industry, global commerce, international organizations, government, or banking, among others. In some careers, specialized knowledge specific to employers' needs may be desirable for employment (for example, banking or government work). However, for the majority of industry careers, specialized knowledge may not be required. Instead, a basic program in international business and then on-the-job experience in the industry and/or any international experience inside or outside of the home country is helpful to career progression. Students should carefully consider their employment options and expectations in the design of their degree programs. These experiences often can be complemented or enhanced through individualized learning contracts, which allow students to pursue topics relevant to their employment situations or goals.

The guidelines that follow provide guidance to a basic program in International Business. These should be augmented with additional knowledge in areas personally relevant. Students pursuing an International Business concentration should meet the General AOS Guidelines for Business, Management and Economics, and demonstrate fundamental knowledge in each of the following areas:

- Economics.
- Management.
- Accounting.
- Marketing.
- Finance.

Students should demonstrate a broad-based understanding of the International Business domain through study or college-level equivalent experience in the following areas:

- International business.
- International economics.
- International marketing.
- International finance.
- International business law.

Additionally, knowledge in the following optional areas would enrich the degree plan:

- International cross-cultural management.
- Economic geography.

- Emerging markets.
- Ethics in a cross-cultural perspective.
- Global strategy.
- Global business history.
- International accounting.
- Comparative political economy.
- Business and the state.
- International organizations.
- International negotiations.
- International financial institutions.
- International human resource management.
- International relations.
- Comparative management.
- Sustainable development.
- Outsourcing.
- Globalization.

In addition, students can pursue studies with specific geographic focus or studies in international or comparative development.

A focus of the general education requirements might consider areas that could provide a foundation for and enrich the concentration. Appropriate choices include American history, world history, Western and other world civilizations, political science (world governments and U.S. government), comparative literature or world literature, art history, statistics or algebra, world philosophies and religions and a language other than English (with at least an intermediate level of competence). Depending on the world region on which the student wants to focus in his/her career, theme-based or geographic area knowledge related to that area would be valuable. Students should be sensitive to the impression that their concentration titles may have on prospective employers or graduate school admission committees. Programs may be quite traditional (e.g., Business Administration) or much more individualized (e.g., Organizational Studies or Non-Profit Management), and the titles should reflect those.

SUNY Empire State College offers the opportunity to complete a number of different concentrations related to international business. There are also a number of international affairs-related concentration titles that a student may design. These may include some knowledge of international business, but an "International Business" concentration should reflect the guidelines provided here. In addition to international business, BME concentrations with an international emphasis might include international marketing, international finance, international economics, international human resource management, or international management.

Business, Management And Economics - Management Concentration - For Students Matriculated On Or After July 1, 2010 But Before Sept. 3, 2014

Rapid evolution in management knowledge has enhanced organizations' effective marshaling of human, physical and financial resources in widely distributed geographical locations. Because of changes in the environments in which both public as well as private-sector organizations operate, degree programs in management must demonstrate that the student has an understanding of:

- Technology.
- Ethics.
- Globalization.
- Diversity.

Managers always have had to understand systems, morality, people and geography; however, now, increasing globalization requires both capacity and discernment on the part of managers.

Managers filling a variety of roles and functions coordinate human, physical and financial resources to accomplish organizational goals. Processes such as decision making are essential in all forms of organizations, including businesses, government agencies and nonprofit groups. Since managers work with and through individuals, small groups and whole organizations, students developing a concentration in management will benefit from giving special attention to human behavior, including behavior grounded in cultures others than their own.

Preparation

Fulfillment of SUNY general education requirements will provide both breadth of learning and a solid foundation in disciplinary theory. Together, these concepts and frameworks may prove helpful in understanding and applying organizational and management concepts.

Students pursuing a management concentration should meet the area of study and general guidelines for business, management and economics and have a broad-based understanding of business functions through study or experience.

In developing proposed educational plans leading to a bachelor's degree with a concentration in management, it is recommended that students consider demonstrated knowledge in broad areas including management theory, concepts and frameworks that constitute the common body of management knowledge.

This knowledge has been organized in four primary categories:

- Time (historically).
- Levels of organizational skill.
- Functions.
- Roles.

The student's rationale should show where each of these areas are addressed.

Time

The history of management traces influences on management thought and the accretion of management knowledge that can be taught, learned and practiced. Examples of studies from the historical perspectives are History of Management Thought and History of Business.

Levels Of Organizational Skill

The levels of organizational skill approach organizes management knowledge around: the individual (psychology), small groups/cliques (social psychology), whole organizations (sociology, economics), organization-environment (sociology, economics). Examples of studies examining this approach are Organizational Behavior and Organizational Development and Change.

Functions

The functional approach organizes management knowledge around functions that decision makers engage in at all levels of an organization such as planning, organizing and controlling. Examples of studies often using this approach are Management Concepts and Principles of Management.

Roles

Studying the roles that managers fill (i.e., entrepreneur, disturbance handler, figurehead and leader) is a relatively recent way of organizing management knowledge. Examples of studies using this approach are Leadership, Conflict Resolution, Communications and Decision Making.

Additionally, it is recommended that knowledge of diversity should be demonstrated by the student because effective managers understand and appreciate diversity in the workplace.

Managers also draw on analytical tools and theory from a variety of disciplines that provide intellectual tools for understanding, predicting, allocating and controlling. Programs are strengthened by:

- Demonstration of knowledge in quantitative areas such as public finance, corporate finance and accounting.
- Learning grounded in several different academic disciplines such as economics, psychology, sociology and mathematics.
- Studies that explore:
  - The institutional setting (business, government, education, religious) which he or she is most likely to manage
  - Institution-specific knowledge (such as the history and development of the institution, specialized vocabulary, customers/clients, legal environment and defining events)
  - For students currently or expecting to manage in the public sector - political science, public finance
  - Studies that help in developing knowledge and competencies in specialized areas of management to ensure he or she has acquired substantial knowledge of management theories and their application.

A non-exclusive list of possible topics is:

- Organization theory.
- Operations management.
- Project management.
- Organizational development.
- Human resource management.
- Labor relations.
- Strategic management.
- Leadership.
- Conflict management/conflict resolution.
- Business communications.
- Decision making.
- Management concepts/principles.
- Organizational behavior/development and change.
- History of management thought/business.
- Nonprofit management.
- Sports/hospital management.
- Financial/marketing management.
- Management information systems.

- Managerial economics.
- Statistics.
- Corporate social responsibility.
- Research methods for management.
- International management/business.
- Green management.

A capstone study, while not required, will provide opportunity to synthesize several different studies into a final learning experience.

Additionally, students may want to consider related concentrations such as business/public administration or individualized concentrations (nonprofit management or sports management).

Note: The terms "management" or "manager" are used in the private sector. "Administration" or "administrator" are the comparable terms used in the public sector.

March 2009

Business, Management And Economics - Management Concentration - For Students Matriculated On Or After Sept. 3, 2014 But Before Jan. 1, 2020

Overview

The management concentration prepares students with the competitive knowledge and skills necessary in for-profit and nonprofit organizations, to achieve success in their professional careers and to advance to graduate studies. The concentration's course work is fully aligned with SUNY's general education curriculum, resulting in graduates who are able to draw upon a foundation in the liberal arts, as well as business courses. Fulfillment of the SUNY general education requirements will provide both breadth of learning and a solid foundation in disciplinary theory.

Additionally, the concentration is fully integrated within the Business, Management and Economics area of study guidelines. These guidelines support an understanding of communication skills, information management, economics, ethical and social responsibility, quantitative skills and an understanding of people and organizational contexts.

Together, these concepts and frameworks may prove helpful in understanding and applying organizational and management theory and practices. Supported by an outstanding faculty who draw upon decades of academic and business experience, the concentration combines academic rigor and experiential applications in developing essential leadership and management knowledge and skills.

Managers filling a variety of roles and functions coordinate human, physical and financial resources to accomplish organizational goals. Processes such as decision making are essential in all forms of organizations, including businesses, government agencies and nonprofit groups. Since managers work with individuals, small groups and whole organizations, students developing a concentration in management will benefit from giving special attention to human behavior, including behavior grounded in cultures other than their own. Managers have to understand systems, morality, people and geography. Increasing

globalization requires additional capacity and understanding of the complexities of working in a global environment.

The rapid evolution in management knowledge has enhanced organizations' effective marshaling of human, physical and financial resources in widely distributed geographical locations. In light of changes in the environments in which both public as well as private-sector organizations operate, students must understand such factors as technology, ethics, globalization, sustainability and diversity.

Organization of the Concentration

The management concentration is organized around a core of recommended knowledge and skills that can be demonstrated through studies, course work and/or prior learning assessment. The concentration encompasses a wide range of topics within the fields of management history and theory, the social sciences, quantitative and analytical business skills, globalization, leadership, organizational behavior, human resources and strategic management. A well-designed, comprehensive degree program will, in turn, address each of these through the key learning outcomes. A capstone study, while not required, will help provide the student with the opportunity to synthesize several different studies into a final learning experience.

Learning Outcomes
Broad-Based Knowledge of Management Fundamentals
Students will demonstrate the ability to identify, analyze, understand and resolve management-related issues or challenges by integrating a foundation in the liberal arts with knowledge of management theory, history and practice while examining management from individual, institutional and societal perspectives. Examples of relevant subjects would include fundamentals of management, principles of management, history of management, management theory, leadership theory and managerial leadership. The exact studies a student may elect will vary according to the relevance of the course to a particular degree program and more than one course may be required to provide sufficient knowledge in this topic.

Specific Knowledge of Management Practice
Students will define, differentiate and properly understand management roles, functions, methods, processes and technologies while demonstrating the ability to apply them to a variety of organizations in local and global-management contexts. Examples of relevant subjects would include accounting, finance, marketing, leadership theory, managerial leadership, operations management and project management. The exact studies a student may elect will vary according to the relevance of the course to a particular degree program and more than one course may be required to provide sufficient knowledge in this topic.

Critical Thinking And Applied Learning Skills
Students will construct coherent and viable positions based on an understanding of best management practices and principles; conceptualize, design and communicate the effective use of the management function in support of organizational development in highly competitive, diverse markets. Examples of relevant subjects would include organizational behavior, psychology, statistics and studies in human resources management. The exact studies a student may elect will vary according to the relevance of the course to a particular degree program and more than one course may be required to provide sufficient knowledge in this topic.

Ethical And Globally Responsible Learning
Students will develop an understanding of justice, equality, sustainability and the importance of becoming ethical, morally responsible and effective business leaders and of the cultural and ethical complexities of conducting business on a global scale, while developing the skills and perspective needed for effective leadership in a multicultural environment. Examples of relevant subjects would include studies in business ethics, cross-cultural management, diversity, globalization and international business. The exact studies a student may elect will vary according to the relevance of the course to a particular degree program and more than one course may be required to provide sufficient knowledge in this topic.

Capstone Study
While not required, a capstone study will provide the student with the opportunity to synthesize several different studies into a final learning experience. Examples of capstone studies include strategic management, small business management, organizational development and change, or nonprofit management. The exact capstone study a student may elect will vary according to the relevance of the study to a particular degree program.

Business, Management And Economics - Management Concentration - For Students Matriculated Before July 1, 2010

The rapid evolution of management knowledge has enabled organizations to marshal geographically distributed human, physical and financial resources more effectively than at any time previously. New approaches to organizing, decision making and communicating have been central to these developments and are as important to raising standards of living as progress in science and computer technology.

Managers fill a variety of roles and functions to coordinate to accomplish organizational purposes. Processes such as decision making are essential in all organizations, including businesses, government agencies and nonprofit groups. Since managers work with and through individuals, small groups and whole organizations, students developing a concentration in management will benefit from increasing their understanding of human behavior, including behavior grounded in cultures others than their own.

Managers draw on analytical tools and theory from a variety of disciplines that provide diverse intellectual tools for understanding, predicting, allocating and controlling. A well-designed program in management will include learning grounded in several academic disciplines (e.g., economics, psychology, sociology and mathematics) that will hone such tools.

Management is important in a variety of institutional settings, from educational to penal to social services. As an academic focus, management is both an area within business and public administration, and a body of knowledge that transcends institutional settings.

Students pursuing careers in business or public institutions may wish to choose between a management concentration and a business administration or public administration concentration, which maintain separate guidelines. These two concentrations, within their respective

institutional settings (business or public sector), require broader preparation than a management concentration:

- Business administration and public administration presume preparation in a wide variety of subject areas, one of which is management.
- Management concentrations include more management studies than business administration concentrations, but not as many studies in such areas as accounting and finance.

Note: The terms "management" or "manager" are used in the private sector. "Administration" or "administrator" are the comparable terms used in the public sector.

Preparation

In developing proposed educational plans leading to the award of a bachelor's degree with a concentration in management, it is recommended that students consider educational preparation in three broad areas:

1. Specialized body of management theory, concepts and frameworks that constitute the common body of management knowledge. For teaching and learning about management, this knowledge has been organized in at least four primary ways:
   - The time or historical approach traces influences on management thought and the accretion of management knowledge that can be taught, learned and practiced. Examples of studies examining historical perspectives are history of management thought and the history of business.
   - The units of analysis approach organizes management knowledge around four levels that managers commonly deal with: the individual (psychology), small groups/cliques (social psychology), whole organizations (sociology, economics) and organization-environment (sociology, economics). Examples of studies examining this approach are organizational behavior and organizational development and change.
   - The functional approach organizes management knowledge around functions that decision makers engage in at all levels of an organization. An elemental list of such functions includes, at a minimum, planning, organizing and controlling. Examples of studies examining this approach are management concepts and principles of management.
   - The approach through roles that managers fill (such as disturbance handler, figurehead and leader) is a relatively recent way of organizing management knowledge. Examples of studies examining this approach are leadership, conflict resolution, communications and decision making.
2. In planning his or her program, a student should consider studying about the institutional setting (business, government, education, religious) in which they are most likely to manage. Institution-specific knowledge (such as the history and development of the institution, specialized vocabulary, customers/clients, legal environment and defining events) all contribute to managerial effectiveness. For example, students expecting to manage in the public sector may choose to include studies of political science. Government or public finance might be more appropriate to study than corporate finance for management students expecting to enter (or continue working in) the public sector.
3. Students will be well served by incorporating both breadth and depth in their programs. Disciplinary knowledge will assist students in understanding general theory and concepts that will be valuable in

managing effectively both within and among organizations. Such knowledge provides a body of analytical concepts and approaches that will:

- Assist a manager in identifying opportunities.
- Develop and evaluate alternatives.
- Recognize and resolve major problems that commonly arise.
- Communicate ideas effectively.

These subjects may appear as part of a student's concentration or general learning. They often will provide valuable support in focused study of management and organizations.

Appropriate Studies

Appropriate studies from broad areas of knowledge, such as those listed below, will provide breadth in learning as well as a solid foundation in relevant disciplinary theory, concepts and frameworks that may prove helpful in understanding and applying organizational and management concepts.

The areas of knowledge:

- Communications (e.g., oral communication, writing and language).
- Humanities (e.g., literature, philosophy, the arts).
- Mathematics (e.g., college math, algebra, statistics, calculus).
- Science (e.g., life sciences such as biology and physics).
- Social sciences (e.g., anthropology, economics, history, psychology, sociology).
- Technology (e.g., history of technology, forecasting, computing).

Integration Of Organizational Knowledge

In general, students concentrating on business management will be well served by acquiring knowledge of all, or most, of the areas designated for business administration.

- One or more of these areas should be emphasized, depending on a student's background and interests.
- Management students should include several additional studies in management, such as organization theory, human resource management, labor relations and/or strategic management to ensure they have acquired substantial knowledge of management theories and their application.

April 1996

Business, Management And Economics - Marketing Concentration - For Students Matriculated Before July 1, 2010

Marketing has emerged as a distinct discipline in business schools and a critical part, if not the main element, in modern business. The challenge of today and tomorrow is not our ability to produce goods and services but, rather, our ability to market what we produce.

Marketing today is looked upon as a total system. It is a process that affects every facet of our lives. One definition of marketing is that it is the performance of business activities that directs the flow of goods and services from the producer to the consumer or end user. Today,

the marketing concept places the focus on the consumer, the end user, and the functions of the organization are directed to satisfying those needs and, thus, its own. There are estimates that more than one-third of nongovernment jobs include some aspect of marketing.

Marketing Today

Today, those engaged in marketing face unprecedented challenges and opportunities as our growing dependency on marketing increases. And, over the past few years, we have moved from a domestic market to a global market. The basic functions of marketing remain, but new challenges have been added. We must learn to produce what end users in other nations and cultures need and want. We have become a market for foreign producers of everything from foreign cars to fruit preserves. To survive in the world market and to keep our domestic factories producing, we must be smarter and more innovative in our practice of marketing than our foreign competitors.

A Marketing Degree

Success in marketing requires the ability and willingness to:

- Make decisions.
- Take risks.
- Communicate clearly.
- Interpret information wisely.
- Make a commitment to lifelong learning.

Learning is a necessity because marketing is not a science, where the outcome can be predicted. Marketing is constantly changing in a dynamic environment with new theories, new approaches and new applications of theory and practice. There are no formulas for success, because in every element of marketing is the unknown human factor. Marketing today can be applied to products, services, political candidates, people and ideas. It includes profit-making and nonprofit-making institutions. Its creative application is tantamount to success.

An associate or bachelor's degree is generally required for a basic starting position in the marketing field. A Master's of Business Administration degree is becoming necessary for advanced management or special areas of marketing such as research, brand management and senior management positions.

There are exceptions, but a sound education in marketing will require:

- Marketing topics.
- Math.
- Communications.
- Computers.
- Liberal arts studies (such as psychology, sociology and ethics).
- International marketing studies and an understanding of cross-cultural differences.

A college degree focusing on marketing can be designed based on the following guidelines. It is the individual student's career focus that will determine the content of the chosen degree program. There is room for flexibility and the final program should reflect both the student's academic needs and his/her interests.

In developing this degree plan, students should build their plan as a pyramid, with the essential subjects at the base, followed by those that add depth to the degree plan and, finally, those subjects that add support to the overall plan.

It is recommended that students consider as essential to any concentration in marketing knowledge such areas as:

- Principles of marketing.
- Introduction to computer science.
- College math.
- Oral communications.
- Management.
- Business law.
- Principles of economics.
- Basic accounting.

To add depth to their degree plan, students should consider those subjects that relate to their specific marketing concentration such as:

- Marketing management.
- Consumer behavior.
- Advertising.
- Salesmanship.
- Retailing.
- Marketing research.
- Public relations.
- International marketing.
- Marketing planning and forecasting.
- Distribution management.
- New product planning and development.
- Sales management.
- Product management.
- Direct marketing.
- Industrial marketing.
- Nonprofit marketing.
- Management information systems.
- Business logistics.
- Marketing decision making.
- Business communications.
- Price theory.
- Packaging.
- Motivation.
- Managerial psychology.
- Marketing high technology.
- Advertising management.

Liberal arts subjects that can give breadth and support a marketing concentration include:

- Advanced math/statistics.
- Anthropology.
- Psychology.
- Literature.
- Sociology.
- Logic.
- Economic history of the U.S.
- History of economic thought.
- Social responsibility of business.
- Cultural elements.

- Government and business.
- The psychology of persuasion.
- Communications theory.
- Business ethics.
- Creative writing.
- Human development.

Business, Management And Economics For Students Matriculated Before Jan. 1, 2004

The business, management and economics (BME) area of study comprises both professional and disciplinary studies. Programs in this area enable students to pursue educational and occupational interests and provide a solid foundation to function in a changing world. They include studies leading to an understanding of organizations and of the interactions among consumer, government, nonprofit and private-sector interests.

In order to function effectively as professionals, students need to:

- Understand the work environment and internal functioning of organizations.
- Understand the impact of domestic, political, social, ethical, international, technological, economic and environmental issues.
- Think critically.
- Analyze situations in a variety of different contexts.
- Develop a cogent argument and to substantiate their ideas.
- Develop an appreciation of the cultural heritage of people having backgrounds and abilities different from their own, to respond to diversity.
- Communicate effectively with a variety of audiences, in both oral and written formats.
- Include computer experiences in their programs.
- Master basic quantitative skills.
- Understand economic principles.

A student's BME program should provide such learning opportunities. A broad selection of studies in the liberal arts and sciences also will enhance a student's abilities to function in the increasingly diverse work environment

The responsibility for program development in the BME area of study lies primarily with the student. The studies chosen should support student-identified goals. In addition, effective programs must meet college requirements and must show progression, depth and diversity of study.

Specific guidelines have been developed for concentrations in the following areas:

- Accounting (Note: Accounting concentration guidelines are effective for students matriculated prior to the Fall 2018 term.)
- Business administration (Note: Business Administration concentration guidelines are effective for students matriculated prior to the Spring 2020 term.)
- Economics.
- Finance.
- Human resource management (Note: Human Resource Management concentration guidelines are effective for students matriculated prior to the Spring 2020 term.)
- Information systems.
- International business.
- Labor relations.
- Management (Note: Management concentration guidelines are effective for students matriculated prior to the Spring 2020 term.)
- Marketing.
- Public administration.

Business, Management And Economics For Students Matriculated Effective Jan. 1, 2004, But Before Sept. 2021

The business, management and economics (BME) area of study consists of both professional (such as accounting) and disciplinary (such as economics) studies. Programs in this area enable students to pursue educational and occupational interests and provide a solid foundation to function in a changing world. They include studies leading to an understanding of organizations and of the interactions among consumer, government, not-for-profit and private sector interests. These guidelines should be read and understood in the context of the introduction to the area of study guidelines in the Student Degree Planning Guide.

The responsibility to research current professional and disciplinary trends and program development lies with the student. The studies chosen should support student-identified goals. In addition, effective programs must meet college requirements and must show progression, depth and diversity of study.
Business, Management and Economics General Guidelines

The general guidelines apply to all concentrations within BME. Several specific concentrations have additional guidelines. All students are expected to demonstrate knowledge in each of the following areas:

- Communication skills: demonstration of skills that enhance the ability to function in a professional or organizational environment.
- Information management: demonstration of a basic understanding of information technology and systems appropriate to chosen fields.
- Economics: demonstration of the ability to solve problems using economic principles and concepts.
- Ethical and social responsibility: demonstration of an understanding of and appreciation for ethical and social issues facing organizations and their environments.
- Quantitative skills: demonstration of an understanding of analytical tools appropriate to chosen fields.
- Understanding people in an organizational context: demonstration of understanding of how individuals and groups function or behave in organizations.
- Understanding organizations within broader contexts: programs should provide a solid foundation for graduates to function effectively in their professions or organizations in a complex and changing world — to accomplish this, students might include learning that addresses diversity, political, international, technological or environmental issues.

A Broad, Effective Background

Students should be able to think critically and to analyze situations in a variety of different contexts, develop a cogent argument and substantiate their ideas. A broad selection of studies in the liberal arts and sciences will enhance a student's ability to accomplish this.

Furthermore, programs should provide a solid foundation for graduates to function effectively in their professions, or organizations, in a complex and changing world. To accomplish this, students might include learning that addresses diversity, political, international, technological or environmental issues.

Additional specific guidelines have been developed for concentrations in the following areas:

- Accounting/accounting practices (Note: Accounting concentration guidelines are effective for students matriculated prior to the Fall 2018 term. Accounting Practices guidelines are for students matriculated beginning Spring 2019.)
- Business administration (Note: Business Administration concentration guidelines are effective for students matriculated prior to the Spring 2020 term.)
- Economics.
- Finance.
- Human resource management (Note: Human Resource Management concentration guidelines are effective for students matriculated prior to the Spring 2020 term.)
- Information systems.
- International business.
- Labor relations.
- Management (Note: Management concentration guidelines are effective for students matriculated prior to the Spring 2020 term.)
- Marketing.
- Public administration.

Community And Human Services For Students Matriculated After Jan. 1, 2014 But Before Sept. 7, 2021

Statements

Community and Human Services Guidelines

Community and human services is a field of study that aims to prepare learners to:

- Improve the quality of life of individuals, families, groups and communities.
- Develop, enhance and improve access to services for people in need.
- Promote equality and social justice.

The community and human services area of study prepares students for a wide array of roles in direct service and/or management in the helping professions and community service. Fields of study may include, but are not limited to human services, health services, early childhood, child welfare, emergency management, advocacy and community organizing, public affairs and criminal justice. Students will acquire and apply a broad range of knowledge about the social, economic and political conditions of our world.

Studies in this area emphasize six essential foundations represented in students' degree plan for the bachelor's level. **For the associate's degree, students are expected to meet a minimum of at least three of the essential foundations.** Students will explain how they meet these foundations in their rationale essay. Knowledge of each foundation is demonstrated through studies and/or prior learning assessment. Examples of studies that are aligned with the guidelines are provided; however, **please be aware these are only examples and is in no way an exhaustive list**.

Knowledge of Human Behavior

Students identify and demonstrate an understanding of human behavior within the context of various social, developmental, global, economic, political, biological and/or environmental systems. These studies cover theory, historical and developmental perspectives.
Below are a few examples of studies that are aligned with the guideline:

- Human Development.
- Fire-related Human Behavior.
- Child Development.
- Deviant Behavior.
- Stress in Families.
- Or Cognitive Psychology.

Knowledge of Service Delivery

Students identify and analyze systems, institutions and policies that are relevant to the delivery of services in their field of study.
Below are a few examples of studies that are aligned with the guideline:

- History of Social Welfare.
- Human Service Management.
- Introduction to Social Welfare.
- Fire-Prevention Organization and Management.
- Introduction to Human Services.
- Early Childhood Program Administration.
- The United States Health Systems.
- Managed Care.
- Social Policy Analysis
- And/or Community Organization.

Skills

Students acquire skills in assessment, intervention and evaluation with individuals, families, groups and/or communities in their field of study. Additionally, students demonstrate digital and information literacy as appropriate to their field.
Below are a few examples of studies that are aligned with the guideline:

- Case Management.
- Documentation in Human Services.
- Observation and Assessment in Early Childhood Programs.
- Counseling Theory.
- Working with Survivors of Rape and Sexual Assault.
- Fire Investigation and Analysis.
- Creative Arts Therapy: Working with Special Populations.
- Health Informatics.
- Family Intervention.
- And/or Crisis Intervention.

Ethics

Students articulate and evaluate the code of ethics and/or the professional standards within their field and apply them to practice situations within their field. Students identify and examine possible conflicts between their own values and professional expectations. Below are a few examples of studies that are aligned with the guideline:

- Human Service Ethics.
- Introduction to Ethics.
- Ethical Dilemmas in Criminal Justice
- And Ethics in Health Care.

Diversity

Students demonstrate recognition of the range of human diversity, as well as examining the impact of their own power, privilege and oppression on work with individuals, families, groups and communities. Human diversity may include, but not be limited to race, ethnicity, gender, class, socioeconomic status, age, culture, religious beliefs, sexual orientation, sexual identity, geographic differences, and/or ability.
Below are a few examples of studies that are aligned with the guideline:

- Sex and Gender in a Cross-Cultural Perspective.
- Contemporary Global Issues.
- Economic Issues in Health Services.
- Crime and Punishment in American Life.
- Exploring Human Diversity Through Film.
- Exploring Poverty and Resiliency.
- And Disabled in America.

Application and Integration

Students demonstrate the application of knowledge, values and skills related to their field. . Meeting this guideline through practical application such as an internship is encouraged; however, an internship is not required to meet the guideline. Students can demonstrate knowledge through applied learning activities and/or assignments within coursework such as interviews, role plays, research projects, mock assessment, mock counseling sessions, and grant writing. In addition, this guideline can also be met through prior learning assessment.

- For example, studies could include Applications of Fire Research, Social Science Research Methods, Social Policy Analysis, Healthcare Management, Developing Infant Toddler Programs, Helping and Counseling Skills, Observation and Assessment of Children, Family Intervention, Crisis Intervention, Managing Bioterrorism and Delivering Human Services.

The potential concentrations are numerous and may be focused or broadly structured, depending upon the student's specific interests and goals, prior learning and experience, organizing framework and general expectations of recognized helping professions. The organizing framework may be arranged by professional/vocational expectations; however, some frameworks may be guided by practice with a specific population, theme or interdisciplinary concentration.

Within any conceptualized CHS concentration, students are expected to consider and discuss in their degree program rationales whether and/or how the areas listed above are relevant to their specific concentrations.

Community And Human Services For Students Matriculated Before Jan. 1, 2014

The community and human services area of study explores the relationship of human beings' needs and values to social conditions in community living and prepares students for a wide array of helping professions and community service roles.

Through community and human services study, students obtain and enhance values, knowledge and skills necessary to understand and contribute to the development and maintenance of healthy communities, groups and individuals. They analyze, develop, carry out and evaluate methods of prevention and resolution of social and individual problems and barriers.

The objectives of studies in community and human services are to prepare students for:

- Work with individuals, groups and communities in problem-solving situations.
- Entry or continuation in the practice of human services in a variety of areas and at a variety of levels of practice, including advocacy/ community organization, social policy and change, administration, and/or direct service delivery/practice/intervention with groups and individuals.
- Graduate education or other forms of professional development.

Study in this area emphasizes the understanding and integration of four essential foundations, each with its own set of unique competencies:

- **Knowledge:** understanding of the interdisciplinary, conceptual base of practice, historical contexts and the nature of people who live in communities; history of social institutions and social change; human beings and their behavior individually and in groups; evolution of human service systems and public policy; impact of social, economic, political, biological and environmental factors on individuals and communities; relationship of social policy to human service practice
- **Skills:** understanding of the collaborative, helping and problem-solving relationships between human service worker and client; interpersonal skills; prevention and intervention skills; administrative skills; information management skills; research skills; advocating, community organizing and policy management skills.
- **Attitudes and values:** understanding the ethical basis for human service practices with individuals, groups and communities; understanding, respect for and commitment to autonomy, confidentiality, self-determination and the basic rights of individuals and groups from diverse backgrounds.
- **Experience, application and practice:** understanding of the settings, dimensions, systems and mechanics of human service delivery; experience of delivering effective services to individuals, groups and communities; contributing to the development and maintenance of healthy individuals, groups and communities through prevention, intervention, organizing and policymaking activities. Note: Application can focus on individual, group, community and/or systems activities.

Students should explicitly discuss in their rationale essay how each of these four foundations are incorporated and demonstrated in their degree

program. It is not necessary that these foundations appear in specific degree titles.

The potential concentrations are numerous and may be focused or broadly conceptualized, depending upon the student's specific interests and goals, prior learning and experience, organizing framework and general expectations of recognized helping professions. The organizing framework will typically be professional/vocational; however, problem-oriented, thematic or interdisciplinary frameworks may be appropriate.

Because degrees in community and human services may take many forms, students must support their designs with clear and articulate rationales.

Even in a broadly conceptualized CHS concentration, it is not expected that all of the areas listed previously will be reflected in specific study titles; however, the student should discuss in the degree-program rationale how they have been explored. In more narrowly conceptualized concentrations, students are encouraged to consider and discuss in their degree program rationales whether and/or how the areas listed above may be relevant to their specific concentrations.

Sample Concentrations

Note: Titles are meant to be illustrative, not exhaustive nor comprehensive.

Health Care Related

- Health Care Administration.
- Health and Human Services Case Management.

Human Services Related

- Advocacy in Human Services.
- Human Service Management.
- Disability Studies in Human Services.
- Studies in Diversity and Human Services.
- Education and Training in Human Services.
- Public Safety.
- Economic Security.

Management Related

- Human Resources
- Personnel Issues for Employee Assistance Professionals
- Managed Care

Mental Health Related

- Intervention Strategies.
- Alcohol and Substance Abuse.
- Child and Adolescent Development.
- Counseling Skills.
- Adult Development.

Social Agency Related

- Social Welfare Institutions
- Agencies, Systems and Organization Behavior
- Program Development
- Administration in Human Services
- Criminal Justice Services
- Rehabilitation Services

Social Science Related

- The Child and Family in Society
- History of the Family
- History of Social Institutions
- Social Issues
- Criminal Justice
- Studies in Social Change
- Community Studies
- Public Policy

Cultural Studies - Communication And Media Concentration - For Students Matriculated After Sept. 1, 2013 But Before Sept. 7, 2021

Sept. 1, 2013 — AOS Guidelines: Cultural Studies

Concentrations in communication should demonstrate knowledge of processes, procedures, methodologies and media involved in the dissemination of information and ideas. Twenty-first-century studies in communication and media include an examination of media's impact on culture, democracy and digital identity in an era of rapid technological change and emerging environments.

Areas of focus include:

- Communication, which could include one or more of the following sub-areas: rhetorical communication (public speaking), nonverbal communication, interpersonal communication, intrapersonal communication, mass communication, relational communication, organizational communication, intercultural communication, health communication and/or political communication.
- Media and culture (with a focus on interpretation of film, television, music and new media artifacts).
- Digital media studies (with a focus on new, Web-based, mobile, immersive and emergent media).
- Applied communication (such as writing for social and digital media, journalism, advertising, or public relations).

Students are expected to demonstrate the development of the following knowledge and skills, as appropriate to their area of focus.

Knowledge

- Foundational understanding of the selected sub-area (for example, an introduction to mass communication or knowledge of visual or media literacy).
- Theory: an understanding of the theoretical and philosophical frameworks and/or methods for communications and media analysis.
- History: a knowledge of the history and associated politics of media institutions/industries in a culture; knowledge of the role of media in culture/society, democracy and the development of digital identity.
- Currency: knowledge of current developments and critical perspectives in one or more media fields; knowledge of emergent/new media and the future of a specific media or communication field.

- Ethics: an ability to understand and apply ethics in communication and media fields demonstrated through knowledge of ethics, law, policy, or a consideration of bias in media, such as sexism or racism.
- Legal and policy developments in communication/media.

Skills/Practical Applications of Knowledge

- Strong writing and research skills.
- Fluency in communicating with and about contemporary communication tools.
- Ability to create and critique media artifacts.
- Ability to develop and critique media campaigns.
- Interpretation of media, which can include visual or media literacy and/or more advanced analysis, including analysis of diversity in media.
- Capstone or culminating project: students should work with their mentors to choose or develop a capstone study towards the end of their programs, or demonstrate similarly appropriate culminating work.

Courses in this area generally meet the following college level learning goals: active learning, breadth and depth of knowledge; social responsibility; communication ; critical thinking and problem solving; information and digital media literacy.

Additional Considerations

Writing courses are foundational and students concentrating in communication should have the equivalent of College Writing or Introductory Composition.

Students wishing to go into marketing, advertising or PR should demonstrate the requisite knowledge which may be gained, for example, from course work in the BME marketing area. These courses have a logical progression and some require prerequisites.

Communication and media fields require strong research and citation skills at a professional level. Studies in this area reflect this requirement. Prior to taking upper-level courses, students must understand the difference between scholarly journals and academic books, popular magazines and newspapers and Web sources. They should be able to cite these properly and write in a sophisticated style.

Students wishing to attend graduate school should consult the requirements of potential schools as they plan their degree program. Many in communications or business fields, for example, will expect them to take courses in statistics and qualitative and/or quantitative research methods.

Cultural Studies - Communication and Media Concentration - For Students Matriculated Before Sept. 1, 2013

Feb. 1, 1993 — AOS Guidelines: Cultural Studies

Concentration: Communications

Framework: Professional/Vocational

Concentrations in communications generally include studies that focus on processes, procedures, methodologies and media involved in the dissemination of information and ideas. Concentrations in communications can be achieved through a combination of studies utilizing the following theoretical, practical and historical approaches:

- A core of theory in communication methods, processes, and practice in the communications field.
- Studies in the development of communication theory and use.
- Study of ethical issues in communications.

Cultural Studies - Creative Writing Concentration - For Students Matriculated Before Sept. 2013

Feb. 1, 1993 — AOS Guidelines: Cultural Studies

Concentration: Creative Writing

Framework: Disciplinary

Concentrations in creative writing generally include studies that will focus on the form, structure and uses of language as it is applied to fiction, poetry or drama. Creative writing is a competency-based concentration which can be achieved through studies in:

- **Theory:** critical theory, particularly in the student's genre of primary interest.
- **History:** an appreciation of at least one literary genre in historical perspective through the study of literary texts, major authors or literary criticism.
- **Practices:** facility in writing fiction, poetry or drama.

For disciplinary concentrations in creative writing, major emphasis will be placed on the practice of writing with supporting attention to theoretical and historical studies.

Cultural Studies - Expository Writing Concentration - For Students Matriculated Before Sept. 1, 2013

Feb. 1, 1993 — AOS Guidelines: Cultural Studies

Concentration: Expository Writing

Framework: Disciplinary

Concentrations in expository writing generally reflect a competency-based program that enables students to become more effective writers of expository prose. It is a program of studies for students who have mastered:

- Basic lower-division writing skills, including correct use of grammar, diction, punctuation, sentence and paragraph structures
- Clarity, coherence and concreteness in the development of thought.

Well-developed concentrations in expository writing can be achieved through studies in:

- Theory: rhetoric, grammar, logic, style or linguistics.
- History: the development of the English language either through linguistic or literary studies.
- Practice: advanced-level facility in the writing of expository prose, including some practice in professional writing and research such as technical writing, business communications, advertising copywriting or journalism.

While much of the work in the concentration should include practice in expository writing, the degree program could reflect a broad range of cultural studies in other liberal arts and sciences, including studies that will give students the opportunity to write in subject areas in the humanities and social sciences.

Cultural Studies - Journalism Concentration - For Students Matriculated Before Sept. 7, 2021

Feb. 1, 1993 - AOS Guidelines: Cultural Studies

Concentration: Journalism

Framework: Professional/Vocational

Concentrations in journalism are generally supported by studies in social and political science, literature, media technologies and the arts, as well as other broadly defined cultural studies. Such concentrations with a professional/vocational focus normally include studies leading to:

- The development of competency in various forms and styles in journalism.
- The development of skills of investigative reporting, interviewing, news gathering and journalistic research.
- Internships or fieldwork.
- Knowledge of the organization and development of the profession of journalism, its history and its impact on society.
- Understanding of the procedures, rights and obligations of journalists, which includes an awareness of constitutional, legal and ethical issues.

Cultural Studies - Languages Concentration - For Students Matriculated After Sept. 1, 2013 But Before Sept. 7, 2021

Sept. 1, 2013 — AOS Guidelines: Cultural Studies

Studies in world languages (eg., Spanish, German, French, Italian, Chinese, etc.) aim to foster cross-national and cross-cultural understanding and to facilitate the development of skills associated with language acquisition, such as speaking, writing, reading and listening. These skills are particularly important in the 21st century, when local and world cultures are increasingly intertwined. Indeed, linguistic and

cultural competency opens numerous opportunities to experience and contribute to globalization and enhances learners' professional and personal growth. Employment opportunities for graduates with language concentrations include teaching, sales, market research, international law, public relations, state and federal service, foreign service, the airlines, travel agencies and businesses.

Framework: Disciplinary

Concentrations in languages generally demonstrate knowledge of and lead to:

- The effective use of language in the exploration of different cultures, including one's own, and for the purposes of written and oral communication.
- Skills in using resources of the target language (or knowing how to discover cultural information, etc.).
- An enhancement of an inquiring and open-minded attitude when faced with otherness.

In their studies of world languages, students might want to focus on literature or language.

> A. If the focus is in literature, students' programs should highlight knowledge of the representative literary works in the target language, studied in their literary, cultural and political contexts. Students should demonstrate advanced-level knowledge of a particular language, advanced-level knowledge of literature taught in the target language and advanced-level knowledge of civilization or history that focuses on the region where the targeted language is spoken.
>
> B. If the focus is in language, students' programs should demonstrate knowledge of the structure of the target language in the context of linguistic theory. Students should demonstrate advanced-level language skills, advanced-level linguistics skills in the target language and advanced-level knowledge of the civilization or history that focuses on the region where the targeted language is spoken.

The program in world languages, literatures and cultures does not award teacher certification.

Cultural Studies - Languages Concentration - For Students Matriculated Before Sept. 1, 2013

Feb. 1, 1993 — AOS Guidelines: Cultural Studies

Concentration: Languages

Framework: Disciplinary

Concentrations in languages generally include studies leading to:

- The ability to read, write and speak the language fluently.
- Familiarity with representative texts in the original.
- Competency in other areas of study relating to the language, such as culture, philosophy, history, social problems, translation and specific topics in literature, depending upon the student's objectives.

Cultural Studies - Literature Concentration - For Students Matriculated After Sept. 1, 2013 But Before Sept. 7, 2021

Sept. 1, 2013 — AOS Guidelines: Cultural Studies

The literature concentration is designed to develop students' critical thinking, expository writing and analytic abilities through a study of works of literature written primarily in English. Through a study of texts from different periods, genres and national origins, students will develop a breadth and depth of knowledge and understanding of literature, including authors, themes and literary works. Students are expected to learn about formal aspects of writing as well as the broader cultural and historical contexts of literary texts. A concentration in literature offers a valuable foundation for a general liberal arts education and helps to develop the analytic and writing abilities necessary for future graduate study and/or possible careers in teaching, writing, journalism, film and media, publishing, advertising, public relations, law and public policy, among others.

Those concentrating in literature are expected to develop competencies in the areas listed below. They also should reflect a building of knowledge from more general, foundational courses to more specialized, advanced studies. While the student has the freedom to design his or her own program in keeping with particular interests and goals, following the guidelines below in order will develop the competencies expected for a concentration in literature. Students also are encouraged to take an interdisciplinary and individualized approach to the study of literature, incorporating and at times emphasizing studies in areas such as philosophy, the arts, religion, the social sciences, history, languages, science and environmental studies, media studies, law and political philosophy, medicine, women's and gender studies, African-American studies, Native-American studies, Asian-American studies, Latino/Latina-American studies, disability studies and other aspects of cultural studies.

Students will demonstrate:

- A progression of knowledge, including foundational knowledge gained, for example, from a survey study such as Introduction to Literature, or its equivalent.
- Knowledge of different literary genres, including poetry, fiction, and drama; may also include knowledge of creative writing, memoir and more experimental techniques.
- An understanding of literary periods, which may include knowledge of early/late British literature and/or early/late American literature; it also may include comparative literature from different cultural traditions and genres.
- Awareness of issues of diversity, including differences in race, ethnicity, gender, sexuality and class; this might include knowledge of African-American literature, Native-American literature, Asian-American literature, Latino-American literature, multicultural writers, women writers, women's and gender studies, queer fiction, immigrant literature, social protest fiction and disability studies.
- Knowledge of critical approaches to literature and advanced knowledge of literary theory.
- In-depth study of one or more major authors, literary movements, themes, or genres.

Cultural Studies - Literature Concentration - For Students Matriculated Before Sept. 1, 2013

Feb. 1, 1993 — AOS Guidelines: Cultural Studies

Concentration: Literature

Framework: Disciplinary

Concentrations in literature generally include studies that will broaden a student's understanding of literary genres, periods, themes and major authors. Well-developed concentrations in literature generally contain studies of:

- A substantial body of literary texts including literature of different periods.
- The relationships between literature and the historical/literary contexts in which it developed.
- Studies of authors outside the traditional canon.
- Critical approaches to literature.

Cultural Studies - Philosophy Concentration - For Students Matriculated After Sept. 1, 2013 But Before Sept. 7, 2021

Sept. 1, 2013 — AOS Guidelines: Cultural Studies

A foundational discipline in the humanities, philosophy is the search for truth and understanding of the most basic and important questions human beings ask, including our place in the universe and the meaning of life, the rightness and wrongness of actions, the nature of reality, the existence of God, the relationship between the individual and the state, human nature and freedom and the possibility and limits of knowledge. The study of philosophy provides an excellent training for most academic and professional careers and occupations, as its methods of inquiry are applied in all fields and areas of human endeavor, including business, medicine, art, science, technology, government, law and finance. Studying philosophy improves the ability to think clearly and logically, to create and evaluate arguments, to read and write thoughtfully, to better appreciate the positions of others, to learn and to be creative and to solve problems and adapt to different circumstances. These skills are eminently transferable and marketable and particularly desirable in an era when people change careers and jobs frequently.

Concentrations in philosophy generally aim to develop the student's awareness and understanding of the nature and dimensions of philosophical inquiry. Such concentrations also emphasize the development of analytical and speculative thinking, including the ability to articulate and criticize various philosophical perspectives or problems, using the vocabulary, concepts and methods that reflect the principal historical traditions in the field.

Concentrations in philosophy can be organized in different ways, including by thematic and non-Western approaches. For the purposes of these guidelines, the disciplinary framework is presented.

Disciplinary concentrations in philosophy generally reflect the current dominant trends, structure and content of the philosophy curriculum at most undergraduate institutions. That curriculum includes demonstrated knowledge of the following:

- Foundational knowledge of philosophy, the history of philosophy and/or methods of philosophical investigation.
- Non-Western philosophy.
- Formal logic, particularly for students considering graduate study in philosophy or a career in law.
- Topics in contemporary philosophy.
- The major philosophical issues involved in metaphysics, theory of knowledge, ethics and social/political philosophy.
- Theories of interpretation.

Cultural Studies - Philosophy Concentration - For Students Matriculated Before Sept. 1, 2013

Feb. 1, 1993 — AOS Guidelines: Cultural Studies

Concentration: Philosophy

Framework: Disciplinary

Concentrations in philosophy generally aim to develop the student's awareness and understanding of the nature and dimensions of philosophical inquiry. Such concentrations also emphasize the development of analytical and speculative thinking, including the ability to articulate and criticize various philosophical perspectives or problems, using the vocabulary, concepts and methods that reflect the principal historical traditions in the field.

Concentrations in philosophy can be organized in different ways, including by thematic and nonwestern approaches. For the purposes of these guidelines, the disciplinary framework is presented.

Disciplinary concentrations in philosophy generally reflect the current dominant trends, structure and content of the philosophy curriculum at most undergraduate institutions. That curriculum includes studies of:

- The major developments in the history of philosophy.
- Topics in contemporary philosophy.
- The major philosophical issues involved in metaphysics, theory of knowledge, ethics and social/political philosophy.
- Critical thinking/critical analysis.
- Theories of interpretation.
- Logic.

Note: Graduate programs in philosophy often require or include studies in logic.

Cultural Studies - Religious Studies Concentration - For Students Matriculated After July 1, 2006 But Before Sept. 3, 2014

The academic study of religious traditions requires the student to develop the ability to use relevant methods of critical thinking, reading, and writing to analyze and assess the content of religious texts, beliefs, and practices.

The studies should:

- Reflect a multicultural perspective and include an awareness of diverse representations of religious expressions in their ancient, modern and contemporary forms.
- Contain a substantive historical component that fosters an understanding of the growth and development of religions in various cultures and of significant cross-cultural relationships.
- Reflect an interdisciplinary perspective that provides the student an understanding of the usefulness of diverse disciplinary (e.g., sociological, psychological, philosophical) approaches to the study of religion.

Although individuals may find religious studies useful in the exploration of their personal beliefs, prospective students should be aware that the faculty of Empire State College is committed to a pluralistic perspective in teaching religious studies, examining multiple schools of religious thought including critiques of religion itself. The faculty's commitment also includes the tacit understanding that no tradition has exclusive access to religious truth, however that is defined.

At Empire State College, a well-designed religious studies program should evidence:

- Study of diverse religious expressions including those from the East and West.
- Historical study of religion.
- Consideration of the phenomenon of religion through the social sciences.
- Consideration of recurring religious themes, patterns, structures, language and practices.
- Examination of the place of religion in society both as an institution and as an ethical and/or moral force.
- Critical study of the significance of sacred texts, scriptures, traditions, rituals and devotional practices.

Cultural Studies - Religious Studies Concentration - For Students Matriculated After Sept. 3, 2014 But Before Sept. 7, 2021

Overview

Religious stories and devotional behaviors are a core part of most human societies. Throughout time, religions and their varying communities and traditions of interpretation have played vital roles in culturally and politically shaping and reshaping our lives and world. To elucidate this

complex of personal, social and historical interconnections requires multiple perspectives.

The academic study of religious traditions therefore employs multiple disciplinary approaches to analyze and compare the content of, theories about and effects of diverse religious texts, beliefs and practices. This work can be undertaken in several areas of studies, depending on the student's emphasis. For example, the student can create a Cultural Studies, Social Science, or Interdisciplinary Studies degree plan with a concentration in religious studies.

Skills and Knowledge

Students who graduate with a religious studies concentration should be able to effectively evaluate theories that define the phenomenon of religion. Therefore, they should include studies that:

- Analyze recurring religious themes, patterns, structures, language and practices.
- Identify and analyze core components such as deity, cosmogony, theodicy and ethics.
- Critically examine the significance of sacred texts, scriptures, traditions, rituals and devotional practices.

Students who graduate with a religious studies concentration should develop a multicultural perspective and investigate diverse representations of religious expressions in their ancient, modern and contemporary forms. Therefore, they should compare traditions from at least three of these categories:

- Religions of "The Book" (Judaism, Christianity, Islam).
- Scriptural Asian religions (Hinduism, Buddhism, Confucianism, Daoism).
- Indigenous Asian religions (Shintoism, Bonism, Shamanism).
- North and/or South American native religions.
- African and/or African diaspora religions.

Students who graduate with a religious studies concentration should investigate historical contexts of the growth and development of religions in various cultures as affected by significant cross-cultural relationships. Therefore, studies should investigate and compare:

- The place of religion in societies both as an institution and as an ethical and/or moral authority.
- How diverse traditions account for male and female roles.
- The role of religions as a political force from both historical and contemporary perspectives.

Finally, students who graduate with a religious studies concentration should be able to apply diverse disciplinary approaches to the study of religion. Therefore, the degree plan should include theoretical foundations in several fields, such as:

- Anthropology.
- Art.
- Philosophy.
- History.
- Literature.
- Political science.
- Psychology.
- Sociology.

Although individuals may find religious studies useful in the exploration of their personal beliefs, prospective students should be aware that Empire State College is committed to a pluralistic perspective in teaching religious studies, examining multiple schools of religious thought, including critiques of religion itself. This commitment also includes the tacit understanding that no tradition has exclusive access to religious truth, however that is defined.

College Learning Goals

In keeping with the college guidelines, students should develop the ability to use relevant methods of critical thinking, reading and writing to synthesize their findings. In writing about your degree plan, include how your individual application of religious studies concentration guidelines has helped you to accomplish some of the college learning goals. Some of these learning goals may be met outside your concentration, or may be infused in multiple courses.

Active Learning: Assess and build upon previous learning and experiences to pursue new learning, independently and in collaboration with others.

Breadth and Depth of Knowledge: Cultivate a broad, interdisciplinary understanding in the liberal arts and sciences, as well as expertise in a particular field.

Social Responsibility: Engage in ethical reasoning and reflect on issues such as democratic citizenship, diversity, social justice and environmental sustainability, both locally and globally.

Communication: Express and receive ideas effectively, in multiple contexts and through multiple strategies.

Critical Thinking and Problem Solving: Evaluate, analyze, synthesize and critique key concepts and experiences and apply diverse perspectives to find creative solutions to problems concerning human behavior, society and the natural world.

Quantitative Literacy: Read, interpret, use and present quantitative information effectively.

Information and Digital Media Literacy: Critically assess, evaluate, understand, create and share information using a range of collaborative technologies to advance learning, as well as personal and professional development.

Cultural Studies - Religious Studies Concentration - For Students Matriculated Before July 1, 2006

Feb. 1 1993 — AOS Guidelines: Cultural Studies

Concentration: Religious Studies

Framework: Disciplinary

The field of religious studies encompasses a variety of histories, issues and questions. Concentrations should include perspectives and approaches to religious thought and activity including:

- Religion as a discipline.
- Textual criticism and analysis.
- Historical and social-science methods.

Concentrations in religious studies should include studies leading to an understanding of:

- The phenomenon of religion as an aspect of human experience.
- Recurring religious themes, patterns and structures.
- The different perspectives of the nature of religious study.
- The major religious traditions and religious thinkers, including western and nonwestern.

Effective through June 30, 2006

Cultural Studies - Writing Concentration - For Students Matriculated After Sept. 2013 But Before Sept. 2021

Sept. 1, 2013 — AOS Guidelines: Cultural Studies

Writing concentrations are competency based. In order to develop proficiency in writing, writing concentrations include the following knowledge and skills areas:

- **Theory:** knowledge of appropriate writing or language theory.
- **History and currency:** appreciation of the field through a historical perspective; knowledge of current developments in the field and knowledge of related fields relevant to and supportive of the concentration; digital literacy.
- **Practice:** skill development in writing, both in the concentration and in other types of writing relevant to the concentration.

Writing concentrations may be general and broadly conceptualized, or they may have a specific focus. The following samples show how writing concentrations may be focused. Keep in mind that there are many options depending on the student's specific interests and goals.

Business/Professional Writing Focus

A business/professional writing focus should demonstrate knowledge in some of the following areas:

- Business communications, professional writing, speech writing, proposal writing, technical writing, grant writing, new media theory, writing for multicultural audiences (theory, practice).
- Designing information in written and digital formats, writing for the Web, (history/currency).

Supportive, relevant knowledge might be demonstrated in the areas of business (e.g., management, leadership, advertising, marketing communication, public relations), communications (e.g., public speaking, interpersonal and/or small group communications), media studies, arts for visual communication and/or ethics or legal issues, depending on the focus of the concentration and the student's goals.

Creative Writing Focus

A creative writing focus should demonstrate knowledge in some of the following areas:

- Various types of creative writing (e.g., fiction, short fiction, drama, poetry, creative nonfiction, digital writing), critical interpretations of literature, work that focuses on a creative project or portfolio (theory, practice).
- Literature that spans different time periods and provides a historical perspective, digital forms of writing, creative blogging, writing for games, history of creativity (history/currency) Supportive, relevant areas of study might be in the type of literature the student wants to create, knowledge of people and time periods and/or creative writing as a profession, depending on the focus of the concentration and the student's goals.

Expository Writing Focus

Expository writers articulate their ideas and share information for personal, public and/or academic purposes (e.g., essays, op-ed or magazine articles). Expository writing concentrations may be general or may be focused on a specific field (e.g., writing for the sciences).

An expository writing focus should demonstrate knowledge in some of the following areas:

- Different forms of expository writing (college writing, essay writing, article writing, technical writing) researching across the disciplines, advanced grammar, editing (theory, practice).
- History of the English language, the essay from its historical to its contemporary form, writing for the Web (history/currency).

Supportive, relevant knowledge might be demonstrated in the specific field of writing the student wants to pursue (e.g., sciences for science writing, studies of history and culture for travel writing, et cetera).

Cultural Studies For Students Matriculated After Sept. 3, 2014 But Before Sept. 2021

Statements

Overview

Cultural studies explores how human beings understand, articulate and produce cultural work to influence, shape and reflect their worlds. Cultural studies may include concentrations in communications and media, writing, languages, literature, philosophy, religious studies and other areas.

Students designing programs in the area of cultural studies are expected to develop the following knowledge and skills, as appropriate to their particular concentration or focus.

Knowledge

- Identify major authors, works, ideas and developments in the field.
- Distinguish among and apply different forms and approaches in the field. (For example, literature students may investigate fiction, drama and poetry; students of communication and media should understand the advantages and disadvantages of print vs. video vs. online forms of communication; philosophy and religion students may investigate major religions or philosophical approaches.)

- Explain and apply theories, critical approaches and methodologies in the field.
- Examine diverse cross-cultural and historical perspectives which may address questions of gender, class, race, sexuality, disability, etc.
- Demonstrate understanding of current issues and trends as appropriate to the selected field. (For example, concentrations in religion might examine the rise of extremist religions in politics; concentrations in writing might examine writing for digital media.)

Skills
- Critically read and interpret information, including the ability to distinguish main and supporting ideas, evaluate the logic of a presentation, identify underlying assumptions and interpret levels of meaning.
- Communicate ideas fully, precisely and creatively in discussion and writing.
- Research and use sources appropriate to the field from a variety of modes, including digital and social; evaluate sources; cite sources correctly.
- Demonstrate research that includes comparison and analysis of diverse perspectives, values and beliefs.

Concentration Guidelines

Specific guidelines have been developed for concentrations in the following areas:

- Communication and media.
- Journalism.
- Languages.
- Literature.
- Philosophy.
- Religious studies.
- Writing.

Cultural Studies For Students Matriculated Before Sept. 3, 2014

Cultural studies may include concentrations in communications, creative writing, expository writing, rhetoric and composition, journalism, languages, literature, philosophy, religious studies and other areas.

Cultural studies intersects and overlaps with various other areas of study (such as historical studies, the arts or social science). Degree programs in cultural studies should be focused on an articulated goal and have a relatively broad frame of reference.

 Students designing programs in the area of cultural studies:

- Explore the ways in which human beings understand and articulate their world.
- Examine the relationship between culture as lived experience and culture as creative and philosophical expression.
- Explore aesthetic and cognitive forms and values within social and historical contexts.
- Study artistic expression, social and cultural norms and belief systems and modes of communication.
- Examine cross-cultural and historical perspectives addressing questions of gender, class and race.

- Develop skills in critical reading, interpretation and writing, including the ability to distinguish the main point of a text from supporting argument or evidence, evaluate the logic and rhetoric of a presentation, identify underlying assumptions and interpret levels of meaning.
- Develop skills to communicate their own ideas and feelings fully, precisely, and creatively in speech and writing.
- In upper-level work, acquire conceptual vocabularies, knowledge of sources and critical skills appropriate to their areas of focus or lines of inquiry.

Revised February 1993

Concentration Guidelines
Specific guidelines have been developed for concentrations in the following areas:

Communication and media.
Journalism.
Languages.
Literature.
Philosophy.
Religious studies.
Writing.

Educational Studies For Students Matriculated After Jan. 1, 2008 But Before Sept. 1, 2015

Our 21st-century work and social environments require new knowledge and skills. There is an increasing need for individuals who can help others both learn new things and apply what they know in various settings. Students who choose to design a degree program in educational studies have careers in areas as diverse as teaching, researching and policymaking.

Note: Educational studies degree programs are usually not the best option for students who wish to earn New York state teaching certification (see the section on teacher certification at the end of this document).

Students pursue a wide range of concentrations that may distinguish them as practitioners, researchers/evaluators, social activists, specialists or generalists. Yet, common to all educational-studies degree programs is study of the following topics:

- Foundations of education.
- Learning theories.
- Instructional strategies.
- Curricular design.
- Diversity issues.
- Uses of technology.
- Social context of learning.
- Methods of inquiry.
- Human development.
- Content appropriate to the concentration.

Students may address these topics in various ways appropriate to their concentrations. These topics could be included in one or more studies

or advanced-standing components, and may not necessarily appear as these explicit titles. In the rationale, students describe how their degree program addresses these topics.

For those interested in becoming practitioners, other components in the concentration should demonstrate:

- An emphasis on understanding learners and learning
- Effective teaching and learning strategies.

Concentrations may include community and family education, instructional technology, teaching and training, early childhood learning or adult learning.

Students interested in study and research on education, society, and culture may design concentrations based in the social and behavioral sciences or the humanities. These disciplines might include anthropology, economics, history, philosophy, political science, psychology and sociology. The degree program for those choosing this concentration should include more than one component in methods of inquiry.

Degree programs may be organized according to thematic or problem-oriented frameworks, with concentrations such as social change, public policy, learning communities and lifelong learning. These degree programs should demonstrate a focus on a distinguishable theme or learning context.

Teacher Certification

Empire State College does not have a registered teacher certification program at the undergraduate level but does offer a Master of Arts in Teaching degree that encompasses New York state teaching certification at the middle school and secondary levels.

Students interested in obtaining teacher certification as undergraduates should consult the New York State Education Department for specific requirements and share these requirements with their primary mentor. Students planning to pursue certification after completing their Empire State College undergraduate degree should consult with the college through which they plan to pursue certification. Often, undergraduate students seeking teacher certification are better served with liberal arts or disciplinary concentrations.

For more information on pathways to teacher certification, consult the educational studies website and talk with an educational studies or Master of Arts in Teaching mentor.

Revised November 2007
Revised August 2000

Educational Studies For Students Matriculated After Sept. 1, 2015 But Before Sept. 1, 2018
Statements

As a student in educational studies, you will examine the processes involved in teaching and learning through courses and studies about topics such as learning theories or social context, as well as be exposed to practical applications such as technology in the classroom and curriculum development.

Through your examination of current issues, innovations and research, you will build a foundation of historical, philosophical, sociological, political, multicultural and gender perspectives in relation to education.

There is an increasing need for individuals who can help others both learn new things and apply what they know in various settings. Students who choose to design a degree program in educational studies have careers in diverse settings, including training, teaching in certain settings or contexts, researching and policymaking. Note: A degree in Educational Studies from Empire State College does not lead to teacher certification. [1] Students intending to go on for teacher certification should follow up with faculty in the program of interest.

Learning Outcomes
Learners in Educational Studies will:

- Identify, define and apply acquired knowledge of learning theories, teaching, literacy and instructional strategies.
- Identify, define and apply foundational knowledge, grounding them in their concentration.
- Demonstrate an understanding of learners and learning, as appropriate for the concentration.
- Demonstrate an understanding of curricular design, identifying, defining and applying theories of curricular design.
- Demonstrate an understanding of appropriate areas of human development, as well as the skills to apply such knowledge to specific situations and evaluate the outcomes.
- Be able to utilize and analyze technology in teaching and learning and evaluate its success and/or failure in applied situations.
- Demonstrate cultural competence and understanding of diverse learners.
- Demonstrate understanding and application of the social context of learning.
- Demonstrate the ability to utilize various methods of inquiry.

Concentrations may include:

- Community and family education.
- Educational studies.
- Childhood studies.
- Teaching and training strategies.
- Early childhood learning.
- Adult learning.
- Literacy.

[1] Students intending to go on for teacher certification should follow up with faculty in the program of interest.

Educational Studies For Students Matriculated After Sept. 1, 2018 But Before Sept. 1, 2021
Statements
Learning Outcomes
Students with a degree in Educational Studies should demonstrate knowledge and understanding of the following competency areas, as appropriate to the concentration. In the rationale essay, students should describe how their degree program addresses these competencies, but

they are not required to demonstrate that they have a separate study or course in each area. Competencies may be included in one or more studies or advanced standing components and while some courses are listed as examples, students are encouraged to think broadly and may address competencies in various ways.

Learners in Educational Studies will address the following competencies in their degree plans:

- Professional standards. Understand the professional standards related to their chosen concentration. Examples include Exploring the Professions: Children and Child Care and Introduction to Teaching.
- Foundational knowledge. Understand the foundational knowledge of the field from either a historical or philosophical perspective, grounding them in their chosen concentration. Examples include Schooling in America and Historical Foundations of American Education.
- Learners and learning. Understand learners and the theoretical approaches that support the learning process. Examples include Learning Theories and Human Learning: A Developmental Approach.
- Social contexts of learning. Understand the sociological perspective of learning including the relationships between home, school, and community. Examples include Sociology of Education and Family and Society.
- Curricular design, instructional strategies, and assessment. Understand knowledge of comprehensive curriculum design appropriate to their concentration. Examples include Curriculum and Environments for Preschoolers for those that plan to work with young children, Curriculum, Instruction, and Assessment for students that plan to work in schools, or Models of Instructional Design for students interested in educational technology.
- Language and literacy development. Understand language and literacy development appropriate to their concentration. Courses might include Emergent Literacy and Teaching Methods: Reading in Elementary Schools. Please note: Children's Literature typically does not address language or literacy development.
- Human development. Understand stages of human development appropriate to the chosen concentration. Please note: a lifespan course in human development is recommended. Students planning to work with a specific age group are strongly encouraged to undertake further study in that specific developmental stage to demonstrate breadth and depth. For example, students could take Human Development at the introductory level followed by Infant and Toddler Development, Child Development, or Adolescent Development at the advanced level depending on their focus.
- Uses of technology. Understand the appropriate use of technology in teaching and learning and evaluate its success and/or failure in applied situations. Examples include Young Children and Technology and Utilizing Technology in the Classroom.
- Cultural competency. Understand the range of human diversity, and potential implications for educational settings. To accomplish this, students might include courses such as The Culture of Caregiving: Infants, Toddlers and Families, Diversity in Educational Settings, and Race, Class, and Gender.
- Methods of inquiry. Understand how to locate, evaluate and effectively use information related to their field. Examples include Observation & Assessment of Children, Statistics for the Social Sciences, and Qualitative Social Science Research: Design & Methods.

Educational Studies For Students Matriculated Before Jan. 1, 2008

Teaching and learning begin with the family and gradually build to include, although they are not limited to, the community, schools, the workplace, farms, hospitals, prisons, colleges and universities.

Therefore, to understand educational institutions and the teaching and learning process, students developing concentrations in educational studies should:

- Inquire into who, when, where and why people participate in educational and learning activities by including the history, philosophy, sociology and psychology of education as basic foundation studies.
- Gain knowledge and skills in the uses and applications of technology in education.
- Build a broad foundation in the liberal arts and sciences, including multicultural perspectives by designing a range of learning activities including independent study, technology-mediated learning, field experiences and group studies.

Students who are not planning to engage in teaching, but are interested in educational processes and institutions, can design concentrations that examine these institutions and processes through the framework of the social and behavioral sciences and other disciplines, including anthropology, economics, history, philosophy, political science, psychology and sociology. For example, a concentration may be developed in the history of education, the economics of education, the sociology of education, educational psychology, etc. Degree programs also can be organized according to thematic or problem-oriented frameworks, with concentrations such as education and society, education and social change, education and public policy, learning communities and lifelong learning.

Students who are not planning to become certified teachers in New York state may design concentrations that include both the studies referred to and studies that focus on the relationship between theory and practice, and on educational practice itself. These students may be planning to work, or may be working, in teaching/training programs for adults, workforce development, community education, international training and development or other nonpublic institutions or educational settings.

Note: Empire State College does not have a registered teacher certification program at the undergraduate level. Students interested in preparing themselves for teaching certification in New York state must consider their options carefully and should consult with an educational studies mentor. Educational studies may not be the best option; they may be better served with a concentration in a school subject area such as English, history, science, math, foreign language, etc., or they may want to consider an interdisciplinary program that combines educational studies with a specific discipline. Students must contact the State Education Department (S.E.D.) for specific certification requirements or speak with an S.E.D. advisor. They also should be aware that new and radically changed certification requirements were implemented in 2004.

Historical Studies for Students Matriculated Before Mar. 17, 2008

Students interested in historical studies may choose from a wide range of possibilities. Studies may be organized by types of history (e.g.,

social, political, religious, economic, diplomatic, quantitative), by national experiences or geographical areas (e.g., American history, Western civilization, Far Eastern history, Third World studies), by time periods (e.g., ancient history, medieval civilization, modern history), and in other ways.

Concentrations in historical studies may use any of the college's five organizing frameworks. Students may wish to plan disciplinary degree programs. Typically, such concentrations include:

- Western civilization, American and other national histories.
- The Third World experience (such as the history of Africa, Latin America, the Middle East or Asia).
- Historical methods and historiography.
- Supporting language studies.

Interdisciplinary Historical Studies

Interdisciplinary concentrations in historical studies represent a conscious attempt to explore linkages among allied disciplines from a historical perspective (e.g., ancient history, literature, culture and language).

Study in comparative history is frequently interdisciplinary in approach, as is work in emerging areas such as psychohistory and cliometrics. The thematic framework allows a student to trace and explore one or more problems in historical studies with emphasis on considering the origins, development and possible resolution of the issue.

Professional programs include studies vital for developing career-entry skills in areas such as:

- Teaching.
- Archival employment.
- Historical preservation and restoration.
- Scholarly editing.
- Research and writing official histories for state and federal agencies and private corporations.

Students with a professional/vocational emphasis frequently include internship experiences in their degree program plans.

The faculty of the college expects that students who design degree programs in historical studies will acquire the following enabling skills and understandings:

- Communication skills, including effective writing and speaking skills, and the ability to read critically.
- Research skills, including a basic understanding of how to use libraries, and of the diversity of materials that record and interpret the past.
- A broad knowledge of the historical literature that pertains to the topics of study included in the degree program.
- An understanding of the linkage between historical studies and allied disciplines.
- An understanding of the historical experiences that go beyond a single time period and national or cultural experience.
- An understanding of historical forces that have shaped social change and contemporary human problems.
- The ability to analyze historical material and make judgments, to establish causal relationships between facts, to find order and patterns, to answer why and how, not simply report.

- An understanding of the history as a creative art, a subjective discipline and an imaginative interpretation of the past.

Revised February 1993

Historical Studies For Students Matriculating After Mar. 17, 2008 But Before Sept. 7, 2021

Students interested in historical studies may choose from a wide range of possibilities. Concentrations may be organized by:

- Types of history (e.g., social, race/ethnicity/class/gender, political, religious, environmental, economic, diplomatic, quantitative).
- National experience or geographical areas (e.g., American history, Western civilization, East Asian history, studies of regional history).
- Time periods (e.g., ancient history, medieval civilization, modern history, colonial/post-colonial).
- Themes (ethnic studies, labor history).
- In other ways.

Students designing concentrations in historical studies should investigate graduate school opportunities and requirements and visit the historical studies website.

Building on the studies used to meet the SUNY general education requirement, students may design a concentration in historical studies using any of the college's five organizing frameworks:

- Disciplinary concentrations include work in Western civilization, national, regional or ethnic histories, African-American experience, historical methods and historiography, and appropriate supporting studies, such as economics, statistics, literature and/or science.
- Interdisciplinary concentrations in historical studies represent a conscious attempt to explore linkages among allied disciplines from a historical perspective (e.g., anthropology, economics, literature, and languages). Study in comparative history is frequently interdisciplinary in approach.
- Thematic frameworks allow a student to trace and explore one or more themes in historical studies.
- Problem-oriented frameworks emphasize consideration of possible resolutions or continuing significance of the chosen problem.
- Professional programs include studies vital for developing career-related skills in areas such as archival or museum employment, historical preservation and restoration, scholarly editing and the research and writing of official histories. Students with a professional emphasis frequently include internship experiences in their degree program plans.

The faculty of the college expects that students who design degree programs in historical studies will acquire the following enabling skills and understandings:

- An understanding of historical processes and events that have shaped social change and contemporary human problems.
- Knowledge of the breadth of historical writing and interpretation (the conversation within the discipline) that pertains to the topics of study included in the degree program.

- An understanding of the linkage between historical studies and other disciplines.
- An understanding of human experiences that go beyond a single time period and national or cultural experience.
- An understanding of the diversity of sources that record and interpret the past, including written texts, and original documents, photographs, visual materials, oral histories, historical objects and media, and of how to identify and evaluate primary and secondary sources.
- Research skills, including a basic understanding of how to use libraries and virtual libraries, archives, databases and other internet resources.
- Knowledge of the forms of citation shared by professional historians, especially the conventions known as the Chicago/Turabian style (see Writing History Papers).
- The ability to analyze and interpret historical resources and perspectives and to make judgments; to explore causal relationships, to seek order and patterns; to ask why and how -- not simply report.
- The ability to think critically and communicate effectively.
- An understanding of history as a creative art, a subjective discipline and an imaginative interpretation of the past.

Finally, students designing concentrations in historical studies are encouraged to include a capstone study or a final integrating independent study.

Human Development - Psychology Concentration - for Students Matriculated After Dec. 1, 2013 but Before Jan. 1, 2020

The discipline of psychology encompasses the scientific study of mind and behavior. Psychology employs specific methodologies for understanding humans, ranging from simple observation to rigorous experimentation. Its subjects include, but are not limited to, how people develop and learn; how behaviors, relationships and beliefs are motivated; how the brain, behavior and environment interact; how people interact with the world around them, including how they perceive it, how they respond to it intellectually and emotionally and how these processes change throughout life; and how all of these processes are integrated into the personality under interpersonal, social and cultural influences.

While many psychology students ultimately will engage in further training and education to work within the field, many will pursue work outside the field of psychology in areas that rely upon an understanding of human thought and behavior, including law, the health care professions, business careers, education, nonprofit agencies and many others.

To prepare for a career in psychology (such as becoming a psychologist, social worker, counselor, researcher, or teacher), students typically earn a graduate degree. The psychology concentration prepares students well for the expectations of such graduate programs. Graduate programs are selective and take into consideration a student's academic record, letters of recommendation, field and research experience and, in most cases, Graduate Record Examination (GRE) scores. It is strongly recommended that students who are considering going on for graduate training consult with websites or other sources of information about graduate programs while designing their degree. Another excellent source of information

is the American Psychological Association (APA) Guidelines for the Undergraduate Psychology Major.

Students who concentrate in psychology should meet all of the guidelines for a degree in human development. However, for many of the content areas outlined in the human development guidelines, there are additional discipline-specific ways (outlined below) to meet the guidelines. Specifically, students concentrating in psychology should both refer to the human development guidelines and address the additional guidelines below related to biological bases of development, research issues in human development and ethical issues in human development. In addition, there is content in the area of professional development that should be addressed by students concentrating in psychology.

Biological Bases of Development

In order to understand the biological influences on emotional, cognitive and behavioral development, students concentrating in psychology should specifically understand the interaction between the brain, behavior and the environment. They should demonstrate this knowledge by:

1. Explaining basic neurological brain mechanisms that relate to emotional, cognitive and behavioral aspects of the person.
2. Identifying how the brain's normal and abnormal functioning influences areas of human experience and behavior (e.g., language, thought, learning).

Research Issues in Human Development

In order to develop scientific reasoning and problem-solving skills (especially effective research skills) for interpreting and drawing evidence-based conclusions about human development and behavior, students concentrating in psychology should specifically understand multiple research methodologies (e.g., quantitative, qualitative, testing and measurement) employed within the field of psychology to understand human thought, feeling and behavior. Additionally, they should demonstrate a basic understanding of the statistical tools and techniques used in quantitative research design. The standard method for meeting this guideline for those interested in graduate work is to take studies in research methods and statistics. Students should demonstrate this knowledge by:

1. Applying (practically or theoretically) or critiquing methodologies of social and behavioral science research.
2. Interpreting and communicating knowledge gained through basic statistical techniques.

Ethical Issues in Human Development

In order to develop ethically and socially responsible attitudes and behaviors specific to the field of psychology, students concentrating in psychology should understand the formal regulations that govern professional ethics in psychology and the values that contribute to positive outcomes in work settings and society. They should demonstrate this knowledge by:

1. Explaining the current ethical guidelines as outlined by the American Psychological Association.
2. Applying (practically or theoretically) professional codes of conduct to guide decision making and behavior within the multiple domains of professional work, including clinical, research and teaching activities.

Professional Development

Students concentrating in psychology should understand how to apply psychology-specific content, skills and self-reflection. Additionally, students should develop knowledge about potential job and career trajectories and professional possibilities. They should demonstrate this knowledge by:

1. Applying psychological content and skills (practically or theoretically) to assess, understand, assist, or promote change in specific individuals, populations, behaviors, or other situations or problems
2. Exploring ways of using psychological knowledge and skills strategically in future educational, occupational or personal endeavors.

Human Development - Psychology Concentration - for Students Matriculated Before Dec. 1, 2013

Spring 2002 - Area of Study Guidelines: Human Development

Advice for Students Developing Concentrations in Psychology

Provided that they conform to the area of study guidelines, many concentrations related to children, adolescents, adults and families may fit well within the human development area of study. Psychology, however, is the only disciplinary concentration in human development, and, as such, studies in this concentration should be selected to meet the general expectations in the field.

In recent years, the field of psychology has changed and expanded so that psychology departments are increasingly diverse in their offerings. Thus, it is no longer feasible to provide students with a single comprehensive plan of studies that "covers" the field. Instead, when developing their programs, students and their mentors should consider the possibility of either emphasizing a particular focus or direction or designing a general plan of study in psychology that provides a basis for graduate school or some other specific goal. This section is designed to provide some assistance in that planning process.

Human Development Website

The Empire State College website contains much information for students who are in the process of designing their degree programs. The human development site has relatively current information that also may be relevant to students concentrating in psychology. We suggest that students visit this site as they begin their investigations, and make use of the Internet in seeking out additional information.

The American Psychological Association

The best source of current information about psychology, however, will come from the American Psychological Association. We strongly recommend that all students concentrating in psychology become student members of this organization. Applications are available from human development mentors, or by contacting:

American Psychology Association
Membership Office, 750 First Street NE
Washington, DC 20002-4242
202-336-5500 or 800-374-2721 (ext. 5580 for membership)

www.apa.org

Membership in this organization includes two publications: The APA Monitor, an easily accessible monthly magazine with current news about research, education, policy, legal issues, and jobs; and The American Psychologist, a monthly journal with scholarly articles of general interest to all professional psychologists, often with a focus on application.

The APA also publishes a large number of other journals and books, which are available to members at a discount. Of particular interest to undergraduates are the Publication Manual of the American Psychological Association (APA)and Is Psychology the Major for You?: Planning for Your Undergraduate Years (Woods and Wilkinson (Eds.))

The first book, an important reference for every student who concentrates in psychology, describes how to write a research article, defines the APA writing style and provides details about how to cite and list any and all kinds of references. The second book presents an overview of the discipline, describes the kinds of critical skills psychology students can acquire and offers a description of a variety of careers open to psychology students. While most students might want to purchase The Publication Manual, the second book can probably be borrowed from a library (or possibly a human development mentor).

The Undergraduate Concentration in Psychology

There are three major sources of information about how undergraduate degree programs in psychology might be constructed.

1. First, recent articles published in The American Psychologist will bring students up to date on the kind of curriculum professional psychologists believe best serve the undergraduate student. To date, three such articles are relevant and useful:
Benjamin, L.T. (2001). American psychology's struggles with its curriculum: Should a thousand flowers bloom? American Psychologist, 56, 735-742.

> Brewer, C.L. (1997). Undergraduate education in psychology: Will the mermaids sing? American Psychologist, 52, 434-441.

> McGovern, T. V., Furumoto, L., Halpern, D. F., Kimble, G. A., & McKeachie, W. J. (1991). Liberal education, study in depth, and the arts and sciences major: psychology. American Psychologist,46, 598-605.

> Of the three articles, the most directly relevant, and possibly the most useful, is still McGovern et al (1991). However, reading all three articles will give students a good understanding of why psychologists have been, and continue to be, reluctant to propose a standardized curriculum for all students. The history is interesting, and the issue of standardization is one that extends well beyond the discipline of psychology.

2. A second source of information comes from examining the degree programs designed by other colleges. Students seeking to concentrate in psychology should collect at least six different programs from a variety of other colleges and universities. They should be examined for commonalties and differences, as well as for some basic underlying logic or structure. These catalogs are generally available in any library (as well as high-school guidance offices); however, students also should be able to access them through the Internet, in particular through a link to college catalogs via the Empire College website.

3. A third source comes from interviewing people who work as psychologists or who use psychology in their jobs. They should be

asked about the studies they took that are useful to them, studies they undertook that have not been useful and studies they did not take that would have been useful. Finally, they can simply be asked for advice. Two or three such interviews can be very helpful to students as they design their degree programs.

Note: An undergraduate concentration in psychology is not sufficient for a career as a psychologist. The objective orientation and quantitative skills emphasized in most psychology studies, however, are highly regarded by many employers in almost any profession. Thus, the concentration can be useful for those with bachelor's degrees that are immediately seeking work. For any professional work in psychology, however, a graduate degree, in many cases a Ph.D. or equivalent, is essential, and several of the better known options are described below.

Of course, a psychology concentration prepares students not just for graduate programs in psychology, but also for many other professional programs, such as in law, business, education, health or social work. If graduate study in any field is a possible goal, either immediately or in the near future, the degree program ought to be designed with that possibility in mind. Students should familiarize themselves with graduate school entrance requirements and make every effort to include them in their program.

Graduate Study
Psychology Ph.D. Programs
A Ph.D. is the degree of choice for those wishing to become a professional psychologist — either in applied areas (e.g., mental health and industry) or in higher education. Students who plan on pursuing a Ph.D. should take special care in the design of their programs. The following studies are almost mandatory:

- Statistics, research methods and laboratory studies: Not only do many graduate schools expect such studies, but they will be required again in graduate school. An initial exposure to them in an undergraduate program will make them somewhat easier to deal with later on.
- Exposure to the practice of psychology: It is particularly helpful if the student serves as a research assistant in a psychology laboratory or research project at a local college or university and/or does an internship with a known state or local nonprofit agency. The student's supervisor can provide invaluable letters of recommendation to the graduate schools. This experience is also an important indicator to the graduate school about the seriousness of the student's commitment to the field.
- Coverage of the "traditional" areas within psychology that are part of the Psychology Subject Test of the Graduate Record Examination (GRE): Information about the content of this test, which often is required of graduate-school applicants, can be found in the yearly GRE Information and Registration Bulletin. These probably can be obtained from your mentor or directly from the Educational Testing Service at www.gre.org. The latest booklet provides the following breakdown of the areas covered in the examination:
  - Experimental or natural science 40% - learning, language, memory, thinking, sensation and perception, physiological psychology and ethology.
  - Social science 43% - abnormal and clinical, developmental, social and personality.
  - General 17% - history, applied psychology, measurement, research designs and statistics.

Note: It is important that the undergraduate program be heavily academic (as opposed to vocational or professional). Graduate psychology departments are not impressed with counseling, therapy or psychoanalytic courses on undergraduate transcripts. The faculty in most Ph.D. programs believe that such courses should be undertaken only in graduate school.

Psy.D. Programs
The Doctorate in Psychology is a more recent degree designed for those with applied interests, particularly in clinical psychology, and with relatively less interest in the research and science emphases of accredited Ph.D. programs. Although these programs differ from the Ph.D. programs, the requirements are quite similar. Details about their requirements should be obtained from the universities directly.

Master's in Social Work (MSW) Programs
The M.S.W. offers a faster route than the two doctoral programs to state-recognized credentials for doing clinical work with individual clients. In New York state, holders of this degree (along with those holding a Ph.D., Psy.D. or M.D. in psychiatry) can receive third-party payments as a therapist. Those schools that offer these programs are usually more flexible in the knowledge of psychology that they expect or require of their applicants. Some even may welcome the kinds of counseling experiences frowned upon in typical Ph.D. graduate psychology programs. A key activity here is to study the entrance requirements for particular programs. If possible, the graduate advisor at the schools that offer these programs should be interviewed; they might provide direct advice about a student's proposed degree plan.

Master's Degrees in Psychology
A number of master's programs in psychology can be found at many different colleges, either in the liberal arts or in specialty areas such as counseling or school psychology, art therapy, alcoholism studies and so forth. The general liberal arts programs clearly extend students' knowledge and understanding of psychology, and no doubt enhance their lives or work skills, but these programs are not intended as preparation for a profession.

The specialty programs, however, particularly if accredited by the appropriate professional association, do prepare students for work. The colleges or universities that offer them should be able to provide solid information about both requirements and curricula, and about post-graduate employment.

The Degree Program Rationale
Once the concentration studies have been selected according to the needs, interests and future plans of the student, the psychology concentration must be defended in a written rationale. Such a rationale will ordinarily include at least the following information:

- the student's goals or purposes in seeking a concentration in psychology
- a description of the activities undertaken to learn about psychology concentrations, namely: 1. books or articles read, 2.
- undergraduate catalogs consulted, 3. interviews undertaken and 4. if appropriate, graduate programs examined
- an accounting of what was learned from those activities
- a specification of how the studies selected in the concentration fit together
- a description of how the selected studies address the human development area of study guidelines

- an explanation of the underlying logic and structure of the entire degree program.

Human Development For Students Matriculated After Dec. 1, 2013 But Before Sept. 7, 2021

Statements

Students of human development seek an understanding of psychological, social, biological and other changes over the life span. Change can take the form of growth, maturation, loss, impairment, resilience, adaptation and/or the enrichment of human potential, identity and meaning. Concentrations may encompass the life cycle or may focus on a particular age group (e.g., early childhood, adolescence, older adulthood); population (e.g., women, men, LGBTQ); situation (e.g., grieving and loss, incarceration, disability); or theme (e.g., health, families, cultural differences, spirituality).

Students of human development have the opportunity to pursue and integrate personal, academic and professional goals. Many students find that what they learn enables them to better understand themselves and others, enhances their ability to work with people in various capacities and prepares them for more advanced, or graduate study. Human development can be appropriate for students who plan to work in many fields, including law, the health-care professions, business careers, education, nonprofit agencies, and many others.

Students of human development should be able to demonstrate knowledge in the following content areas, whether through studies, a series of studies, components within individual studies or college-level knowledge demonstrated through the prior learning assessment (PLA) process. The content areas below represent the minimum foundation for any concentration within human development. More specific concentration titles should be supported through the degree plan and a description of this degree plan in the rationale essay.

Biological Bases of Development

Students of human development should develop an understanding of the biological influences on emotional, cognitive and behavioral change over time. They should demonstrate this knowledge by:

1. Interpreting human behavior and development from a biological (which includes neurological, genetic, physiological, evolutionary, endocrinological) perspective.
2. Identifying how biological changes influence human development and behavior over time.

Cognitive and Emotional Bases of Development

Students of human development should develop knowledge of both cognitive and affective underpinnings of human development. This knowledge can include theories and empirical bases of cognition, learning, memory, motivation, meaning, emotion and executive functioning. Students also should understand factors that influence cognitive performance, emotional experience and their interaction across the lifespan. They should demonstrate this knowledge by:

1. Distinguishing the major components of primary theories in the study of emotion and cognition in human development.

2. Applying (practically or theoretically) the primary theories of emotion and cognition in development to practical situations or problems across the lifespan.
3. Identifying major factors that influence the development of cognition, emotion and their interaction.

Social Bases of Development

Students of human development should develop knowledge of interpersonal, intragroup and intergroup processes and dynamics as they influence human behavior and development, as well as theories of how humans develop within social contexts (which can include micro-level contexts like families and schools or macro-level contexts like communities, culture and society). Theories of how aspects of humans develop can include theories of personality development, identity development, the development of specific difficulties (such as psychopathology and problem behaviors) or normal and abnormal development in any domain of human functioning (e.g., language functioning, interpersonal functioning). They should demonstrate this knowledge by:

1. Distinguishing the central ideas of major theories of human personality, behavioral, or problematic development within a social (e.g., familial, intergenerational, peer, school) context.
2. Applying (practically or theoretically) principles of social influence on development to individuals, families or other groups.

Cultural Bases of Development

Students of human development should develop an understanding of the impact of aspects of culture and diversity on development. They should demonstrate this knowledge by:

1. Articulating how culture influences individuals' development.
2. Interpreting the influence of diversity on their own and others' functioning.

Research Issues in Human Development

Students of human development should develop scientific reasoning and problem-solving skills (especially effective research skills) for interpreting and drawing evidence-based conclusions about human development and behavior. They should demonstrate this knowledge by:

1. Using scientific reasoning to interpret human development and behavior.
2. Identifying research methods used to analyze developmental patterns.
3. Locating, evaluating and using social science information effectively.

Ethical Issues in Human Development

Students of human development should develop ethically and socially responsible professional attitudes and behaviors. They should demonstrate this knowledge by:

1. Applying (practically or theoretically) ethical standards and skills to evaluate and further science and practice.
2. Identifying values and behaviors that contribute to individual and social well-being.

Human Development For Students Matriculated After Oct. 1, 2009 But Before Dec. 1, 2013

Students of human development seek understanding of psychological, social, biological, and spiritual change over the life course. Change can take the form of growth, maturation, loss, and/or impairment, as well as enrichment of human potential. Concentrations may encompass the life cycle or may focus on a particular age group (prenatal and infants, children and/or adolescents, adults or elderly), population (women, men, transgendered), situation (grieving and loss, incarceration, or disability) or theme (health, environment, cultural differences).

All concentrations should place these studies within contexts such as family, relationships, community, society, culture, and/or the natural environment.

Students of human development have an opportunity to pursue and integrate personal, academic and professional goals. Many students find that what they learn enables them to:

- Better understand themselves and others.
- Enhance their ability to work with people in various capacities.
- Prepare for more advanced or graduate study.

Students of human development must demonstrate coverage of the following topics either through a study, a series of studies, components within a study or college-level knowledge through the PLA process. Students should obtain a broad foundation of knowledge in these topics before progressing to advanced studies, covering a range of theoretical perspectives and explanatory models about the process of human development across the life span. They should plan to explain how they have obtained knowledge in these topics in the rationale essay submitted with their degree plan.

- **Biopsychosocial development:** 1) an understanding of biological, physiological, and neurological change over time, 2) an understanding of cognition, emotion and the behavior of individuals across the lifespan, 3) an understanding of interpersonal processes and social relationships, 4) an understanding of social and cultural influences on development and 5) (interactions of the above) an understanding of how the social, psychological and physical influence each other across the lifespan, contributing to change over time
- **Individual differences:** an understanding of characteristics, influences, and developmental outcomes (such as a study in personality theory or abnormal psychology), as well as human diversity (the range of differences in human experience and how that influences development)
- **Contexts for development:** an understanding of the micro-level contexts for change (such as relationships and family), as well as an understanding of the macro-level contexts (such as community, culture, and society)
- **Methodologies for inquiry:** an understanding of the body of principles, approaches and techniques employed by a particular branch of knowledge, which may be either quantitative or qualitative; should encompass hypothesis development, systematic data collection and analysis and research-reporting conventions.

Note: One concentration title within human development has particular meaning in the wider academic community: psychology. A psychology concentration is expected to meet the rigors of the discipline, including methodology and specific studies. Students planning a psychology concentration should consult Advice for Students Developing Concentrations in Psychology.

October 2009

Human Development For Students Matriculated Before Oct. 1, 2009

These guidelines are designed to help students become aware of the central issues in human development, not to prescribe a specific set of study titles. It is important to note that the areas of inquiry described below may be addressed through a variety of approaches.

Studies in human development may draw upon many different disciplines of the natural, social and behavioral sciences in an effort to understand human experience and behavior. Illustrations and understanding of human behavior also may be explored through humanistic and cultural studies.

Concentrations in the human development area of study must in some way address critical topics in the following areas:

- The nature of human development and changes across the life span.
- The social and environmental contexts in which human development takes place.
- The determinants of human development and behavior.
- The domains and dimensions of thought, emotion and action.
- A range of theoretical perspectives and explanatory models.

Human development uses the scientific method as its basic model of learning and knowing. Students are expected to develop competencies in the following areas:

- Asking and researching questions.
- Observing and analyzing behavior.
- Recording and interpreting data and observations.
- Examining and communicating ideas.

An education in human development also includes experience of self and others as a complementary model of learning and knowing.

Not all of these areas need be reflected in specific study titles; however, the student will be expected to indicate in the degree program rationale how the various topics and methods have been explored.

There is one concentration title within human development that has particular meaning in the wider academic community: psychology. A psychology concentration is expected to meet the rigors of the discipline, including methodology and specific studies. Students planning a psychology concentration should consult Advice for Students Developing Concentrations in Psychology.

Revised January 1995

Interdisciplinary Studies For Students Matriculated After Sept. 3, 2014 But Before Sept. 7, 2021

Statements

Overview
Students who wish to address complex questions or engage in broad exploration of knowledge may wish to choose the Interdisciplinary Studies area of study.

The Interdisciplinary Studies area of study offers general or liberal, multidisciplinary and interdisciplinary studies approaches, each of which differs from the others in important ways.

- **General or liberal studies approach** makes it possible for you to broadly explore your academic interests without having to define a disciplinary focus or foci. This approach is typically formatted as a one-column degree program with a concentration labeled "General Studies," "Liberal Studies," "Liberal Arts," or "Liberal Arts and Sciences," depending on the content of the degree plan. It may incorporate elements of multidisciplinary and/or interdisciplinary approaches.
- **Multidisciplinary approach** enables you to compare two or more disciplines side by side in ways that may or may not overlap. This can be useful for open-ended comparison(s) of different approaches to themes or problems you wish to explore. A concentration of this nature might be called something like "Multidisciplinary Approaches to X."
- **Interdisciplinary approach** allows you to address complex questions that cannot be answered by any one single discipline. The core method of Interdisciplinary Studies (referred to as IDS in the remainder of this document to differentiate it from the overarching Interdisciplinary Studies area of study) is to integrate theories and practices from two or more academic disciplines into one integrated program, creating opportunities to craft new approaches to meet specific interests and situations.

Note: Students who intend to pursue graduate degrees in IDS should utilize this approach when developing their undergraduate degree programs. You should familiarize yourself with the disciplinary discussion of IDS via the Association of Interdisciplinary Studies, or AIS

All of these approaches to Interdisciplinary Studies area of study degrees, while highly flexible, should align with the college learning goals. The following should be demonstrated and identified in your essay:

- **Active Learning:** Assess and build upon previous learning and experiences to pursue new learning, independently and in collaboration with others.
- **Breadth and Depth of Knowledge:** Cultivate a broad, interdisciplinary understanding in the liberal arts and sciences, as well as expertise in a particular field.
- **Social Responsibility:** Engage in ethical reasoning and reflect on issues such as democratic citizenship, diversity, social justice and environmental sustainability, both locally and globally.
- **Communication:** Express and receive ideas effectively, in multiple contexts and through multiple strategies.
- **Critical Thinking and Problem Solving:** Evaluate, analyze, synthesize and critique key concepts and experiences and apply diverse perspectives to find creative solutions to problems concerning human behavior, society and the natural world.
- **Quantitative Literacy:** Read, interpret, use and present quantitative information effectively.
- **Information and Digital Media Literacy:** Critically assess, evaluate, understand, create and share information using a range of collaborative technologies to advance learning, as well as personal and professional development.

Some learning goals may be met in courses within this area of study or your degree concentration, while others may be met through general learning. Many of these goals will be reflected throughout your interdisciplinary studies.

Area of Study Guidelines

Because this area of study offers widely varied degree approaches, ranging from general exploration to intensively examined, focused projects, it has three separate sets of guidelines. In your rationale essay, be sure to indicate which set you are following.

Also, make sure to specify which approach you will take within your degree plan. (This is typically done through naming the concentration as one of the approaches just described.)

General, Liberal, or Liberal Arts and Sciences Degree Approach Guidelines
The guidelines for General, Liberal, or Liberal Arts and Sciences degrees (hereafter called General Studies) must abide by SUNY and ESC requirements for all degree programs, which include the following:

- Meets SUNY general education requirements.
- Demonstrates breadth (see note 1 below).
- Demonstrates progression (see note 2 below).
- Addresses ESC requirements for degree levels and types (see the Student Degree Planning Guide).
- Addresses college learning goals.

In addition, in the rationale essay you must indicate why you chose this broad and exploratory structured approach to your education and how it meets your personal or professional goals.

Note 1: Breadth is defined as foundations in diverse knowledge areas which are often met by general education requirements.

Note 2: Progression typically means that introductory studies are followed by advanced, more specific studies. For example, a foundation in sociology might be followed by any number of topical or research methods studies in that field.

Multidisciplinary Degree Approach Guidelines
In addition to meeting the general studies degree requirements, students developing a multidisciplinary degree should clearly identify a theme, problem, issue, or interest that they intend to examine from multiple disciplinary perspectives. You should name those disciplines and state what you expect them to contribute to understanding the theme. To choose these, you can review the guidelines of various areas of study and consider which are relevant to your project.

Along with the requirements of the General Studies degree, your degree plan and rationale essay for a multidisciplinary degree should describe how your learning through prior learning or ESC studies clearly addresses the Interdisciplinary Studies area of study guidelines by:

- Including **foundational knowledge** in multiple disciplines and explaining how you selected them to address a theme, question, or topic of interest
- Building on that foundational knowledge to show **progression** in each selected discipline
- **Comparing** what the diverse disciplinary approaches brought to your understanding of the theme, question, or topic.

Interdisciplinary Degree Approach Guidelines

Much like a multidisciplinary degree, IDS degrees draw from several disciplinary fields to address a theme, question, or topic of interest. However, rather than comparing how different disciplines approach a problem, they take the additional step of synthesizing these approaches as integrated learning. Since two or more disciplines are integrated to yield a unique, synthesized perspective, each individual educational experience may include different additional learning outcomes. An IDS degree can integrate knowledge from historical studies, cultural studies, political science, social science, literary studies, the arts and/or additional perspectives, depending on exactly which interest you pursue.

Examples of some recognized interdisciplinary fields are:

- Africana Studies.
- Ethnic Studies.
- Native American Studies.
- Women's Studies.

The concerns of such fields cannot be understood easily through a stand-alone discipline, or fully resolved through disciplinary comparison (i.e., a multidisciplinary approach).

Aside from the fields above, you may select other themes, problems, or questions to address. Since IDS is process-oriented, each individual educational experience may include different learning outcomes. However, this may not be a linear process; your sense of the problem, and even the problem itself, will change as you progress. You can consult with texts or experts, or may already have theoretical and methodological experience in a field, in which case PLAs can fulfill part of the process. You should review the guidelines for various areas of study, traditional and nontraditional coursework and other concentrations in order to determine how best to address your theme, question, or topic of interest.

Note: This review is meant to inform you rather than guide you. Consult your mentor during this process.

Along with the requirements for General Studies, your degree plan and rationale essay for an IDS degree should clearly addresses the Interdisciplinary Studies area of study guidelines by describing how your learning:

- **Identifies** a theme, question, or problem.
- Incorporates knowledge from **multiple disciplinary foundations** to address the identified theme, question, or topic of interest.
- Demonstrates **progression** evidenced through introductory, intermediate and advanced knowledge within those disciplines that address aspects of your complex question, topic, or theme.
- **Integrates** knowledge gained from two or more disciplines to address your question or theme.
- **Applies a comprehensive perspective** in a capstone study that synthesizes learning to address your identified theme, question, or problem.

Conclusion

Whether you conceive of your undergraduate education as a chance to freely explore, a chance to compare and contrast how scholars and others understand something that concerns you, or a chance to integrate diverse understandings and create your own unique contribution to such understanding, you can do so in Interdisciplinary Studies.

Interdisciplinary Studies For Students Matriculated Before Sept. 3, 2014

Bachelor's Degrees

A key characteristic of concentrations within interdisciplinary studies is that they bridge two or more program areas to connect or combine the different perspectives of those areas. These combinations and linkages can be developed by:

- Including studies from two or more areas that relate to a single theme or topic (e.g., various business courses and communication studies combined into a concentration called communication in organizations).
- Combining different area perspectives within a single study (e.g., political, economic, literary and social perspectives combined in a study titled Modern China).

Most interdisciplinary concentrations include both types of study.

Some concentrations are interdisciplinary by nature, and already recognized and defined by the scholarly community; examples are environmental studies, cognitive science or Native American studies. Students with such concentrations may wish to examine survey or introductory textbooks and study college catalogs to determine what these known concentrations typically cover.

On the other hand, an interdisciplinary concentration also can be created to match a particular student's interest. As with all concentrations, it may be focused upon a theme, problem or profession, or on a topic that necessarily includes several disciplines; examples selected from approved student programs include arts management, culinary educational studies, holistic health or writing as therapy.

As with all concentrations, the structure of interdisciplinary studies concentrations must meet the college's expectations of progression and integration:

- **Progression** refers to a significant development in the program from introductory to increasingly advanced learning. It is usually demonstrated when the concentration includes foundation studies in the different areas and further studies that either refine the foundation areas and/or combine different areas relevant to the concentration.
- **Integration** refers to the concentration's organization or form, in other words, to how the individual studies come together to support or define the concentration's theme or topic.

A common way of establishing a concentration's integral structure is to:

1. Subdivide the concentration into three or four major areas that, in the student's view, cover the key components of the problem or theme of the concentration.

2. Identify which studies in the degree program belong to which component. The component parts might be entirely original with the particular concentration, or they might be borrowed from the guidelines of other program areas.

For example, a professionally oriented interdisciplinary concentration might comprise studies in history, theory and practice; a social science-oriented concentration, borrowing from psychology, might comprise studies in academic methods (e.g., research or evaluation skills), disciplinary surveys, relevant practice skills (e.g., interviewing, counseling, problem solving) and integrated advanced-level studies.

The concentration components also could be content based. For example, a concentration in women's health could be subdivided into three main areas: studies about women, studies about health and studies that integrate women and health.

Note: Subdivisions of an interdisciplinary concentration are typically not the different disciplines or perspectives that make the concentration interdisciplinary; rather, each subdivision is itself a combination of perspectives.

Defining the Concentration

It is when the subdivisions are combined that the concentration is defined as a whole. In recognition of the importance of the whole, a unique requirement for interdisciplinary concentrations is the inclusion of one study that explicitly integrates the key component parts. In most instances, this integrating study carries the same title as the concentration. Depending upon the student's needs, it can occur at any time during the student's studies.

The written rationale also plays an important role in defining the interdisciplinary-studies concentration. To provide an adequate account of the purpose and meaning of the concentration, beside the usual topics, the interdisciplinary rationale also should include:

- An explicit discussion of the different program areas represented in the concentration.
- The underlying structure (method of integration).
- The nature of the integrating study.
- The student's reason(s) for choosing the interdisciplinary program for his or her concentration.

The following interdisciplinary examples are not prescriptive; these programs could have comprised any number of other studies or types of organization. The left column shows how the structure of the example was conceptualized, and the right column lists those studies that comprise the example components. The integrating study is marked with an asterisk.

Women's Health

In this example, the concentration draws upon studies from science, mathematics and technology, community and human services, human development and cultural studies. Progression is shown by foundation studies in the different disciplines, intermediate- and advanced-level integration studies; the integrating study, women and health, serves to capstone the entire program.

Note: The structure is by content rather than function.

Health
Human Biology
Nursing Arts

Personal Adjustment
Human Development
Health Psychology
Health Industry in the U.S.

Women
Introduction to Women's Studies
Adolescence: Growing up Female
Feminist Theory
Middle and Old Age: Social Issues for Women

Women and Health
AIDS: Special Issues for Women
Mental Health Problems for Women
Medical Approaches to Aging: Gender Issues
Women and Health: Past and Future

Professional Training and Development

This concentration combines studies from human development and educational studies, along with studies from either business, management and economics or community and human services, depending upon the student's orientation. Progression is shown by foundation studies in psychology, education, communications and human services (or business), and integrated studies that are largely intermediate and advanced.

The integrating study is an intermediate-level survey of the purposes and methods of professional training and development.

Single Perspectives
Human Development Foundations of Education
Basic Communication Skills
Overview of Human Services (or Survey of Business Organizations)

Integrated Studies
Professional Training and Development: Purposes and Methods
Adult Development and Learning
Workshop Design and Implementation
Learning Theory

Methods of Analysis
Program Evaluation
Tests and Measurement in Education Statistics

Criminal Justice

In this example, the concentration draws on studies from community and human services, social theory, social structure and change and human development. Progression is shown by foundation studies in human services, sociology and psychology as well as introductory surveys in criminal justice and corrections, by intermediate and advanced studies in the different areas (e.g., probation and parole) and by advanced integrated studies (e.g., crime and poverty, ethnic issues in corrections).

The integrating study in this program is an introductory survey of the entire field.

History
Introduction to Criminal Justice
Incarceration in America: A History

Theory
Theories of Correction
Introduction to Sociology
Human Behavior

Crime and Poverty
Ethnic Issues in Corrections
Crime and Corrections in the Middle East and Europe

Practice
Criminal Law
Probation and Parole
Program Evaluation
Statistics
Internship: Division For Youth

Note: A criminal justice concentration also could be designed to fit within the community and human services program area or as a specialty of sociology within the social theory, social structure and change program area.

Associate Degrees

Students select the interdisciplinary studies program area for their associate degrees for at least two very different reasons.

- Students may wish to construct an interdisciplinary concentration or focus along the lines of the bachelor's degree program, but with fewer credits. For them, the bachelor's degree guidelines can be followed, although without so much emphasis upon progression and comprehensiveness.
- Students are either not yet prepared, or do not wish to construct a comprehensive concentration or focus. In this case, all studies are listed within a single column and the program can be regarded as somewhat comparable to a broad liberal-arts or social-science major at local community colleges. The concentrations of such programs have no title, or they may be called general studies, liberal studies or interdisciplinary. The student should consult the mentor about the appropriateness of a one-column or two-column format for the associate degree. A program with a concentration in liberal studies, for example, may employ a one-column format or a two-column format that differentiates liberal studies and nonliberal studies.

Although single-column programs are not organized around a concentration or focus, they still have an order or an underlying organizational plan. The purpose of these programs is to introduce the student to a broad spectrum of studies that illustrate different (often conflicting) concerns, perspectives and methods of higher education's academic disciplines. At the same time, the program can include foundation studies in areas that interest the student, in particular his or her projected concentration for the bachelor's degree (assuming it is known), and associated fields, regardless of whether they fall within an existing discipline.

A Broad Spectrum of Studies

In designing these programs students need to explore and understand the meaning of a broad spectrum of studies. Traditionally, breadth is defined by including in a program a minimum of two or three studies from each of the broad areas of the humanities, the social sciences and the natural sciences and mathematics.

A slightly different way of defining breadth might be to include a couple of studies from each of a number of Empire State College's different program areas.

The traditional approach will ensure that students will be introduced to a number of existing disciplines (such as psychology or history); the program-area approach also will introduce students to subject areas where several disciplines are explicitly combined (such as women's studies or environmental science). Although both approaches, alone or in combination, are appropriate, they are by no means the only way of conceptualizing breadth.

The key requirement is that once students determine how breadth is to be achieved in their program, they must explain it in their written rationale. They need to describe how their interpretation of breadth meets their own particular needs and purposes and how it provides underlying structure to their program. Thus, the rationale becomes as important a part of the associate degree program as the actual selection of studies.

Revised May 1995

Public Affairs For Students Matriculated Before Sept. 7, 2021

Public affairs is a broad label that has been used for more than 40 years in higher education and the professions to describe an "eclectic" and "interdisciplinary" approach to the study of organizations and individuals that operate in what is considered the public interest and the social issues and problems with which they are faced. Students who are currently employed in public service or those who aspire to careers in public service might be served by an area of study in Public Affairs. The area of study is designed for those who are interested in serving and bettering society through public service, civic engagement, political and government careers, public communications or non-profit service.

Studies and faculty in Public Affairs often rely upon "input from economics, psychology, sociology, planning, business administration, statistics, law, engineering, and environmental science, in addition to the traditional fields of public administration and political science (1)."

Students interested in concentrations in such subjects or related subjects might consider Public Affairs as an area of study. Depending upon a student's interest and focus, it might also be desirable or appropriate to consider a degree in Community and Human Services; Social Theory, Social Structure and Change; Business, Management and Economics; or Interdisciplinary Studies. An arts management concentration might also be a degree in The Arts; technology policy might come under a degree in either Science, Mathematics and Technology or Business, Management and Economics.

Students with a degree in Public Affairs should demonstrate knowledge and understanding of the following areas, as appropriate to the concentration. Students may address these competencies in various ways. They could be included in one or more studies or advanced standing components and might not necessarily appear as these explicit titles.

Students need not demonstrate that they have a separate study or course in each area.

Theoretical and Philosophical Concepts

The theoretical and philosophical underpinnings of subjects related to the student's concentration should be explored. Knowledge of the philosophy of American government is essential for most students in Public Affairs.

> Most introductory courses in political science, public administration, public policy, criminal justice, public communications and the like examine relevant theory. At the upper level, most disciplines include studies of theory (e.g., political theory, communications theory). Studies in international politics

and international relations usually include an examination of relevant political theory. Organizational Behavior examines theories of how individuals behave in the workplace and other organizations. For criminal justice students, criminology is the study of theories of criminal behavior, and studies in penology or theories of justice (including restorative justice) examine the theory of corrections and punishment. Studies in ecology and global climate change are among the subjects that might meet this expectation for students in environmental policy. In addition, some studies include theoretical concepts that might be appropriate for any student in Public Affairs. For example, the study of economics can provide an understanding of how markets work, when they don't work well and how public sector interventions might improve upon market outcomes.

Historical and Comparative Perspectives

Knowledge of the historical origins of American government and the public institutions that are central to the student's concentration should be demonstrated. The student should also have an understanding of how these institutions compare to those of other countries, of other times or of jurisdictions within the United States.

Again, most introductory courses cover the history of the institutions being studied. Studies that provide an understanding of federalism and the constitutional form of U.S. government are especially important to students in Public Affairs, including introductory studies in American politics and government and U.S. history and advanced studies in constitutional history and constitutional law. In addition, studies that compare American political and governmental systems and those of other nations or that compare different criminal justice, emergency management, media or other public systems or organizations ordinarily compare their origins and the structures within which they operate.

Social Context

Most studies in the various Public Affairs concentrations examine social issues and how they should be addressed.

Most policy, ethics and economics studies would satisfy this guideline, and studies dealing with race, class and gender; crime; environmental problems; disaster; the impact of media or technology on society; urban affairs; international affairs; health problems, and social welfare deal with social perspectives and issues.

Legal or Policy Environment

Public institutions operate within a legal environment and are affected by — if not part of the process of creating – public policy. Students should demonstrate an understanding of how these factors affect their areas of concentration.

Studies in constitutional law or constitutional history would satisfy this guideline for students in political science, public administration or public policy, although students in the latter two areas might be expected to have a greater concentration of competencies in this area. Knowledge of administrative law would also provide such competency for students in public administration, public policy or government. Students in public communications or journalism should understand the role that media coverage plays in influencing

public policy. They might also meet this guideline by a study of communications law.

Economic, Financial or Budgetary Issues

Students in Public Affairs should understand the economic and financial environment in which they function.

Much of public policy is driven by economic and budgetary issues. Studies of public policy would address this competency for many students and others may need more depth in economics. The rationale should address the decision. For students who desire to function in governmental management positions, the study of public finance and budgeting would be important. For others — such as those in public communications or criminology — a general study of economics would suffice. Private-sector finance and budgeting might be relevant for students in non-profit management as part of a degree in Public Affairs.

Ethics, Values and Diversity

Degree programs in Public Affairs should reflect a student's understanding of ethical concerns related to the area of concentration and the values – good, bad or indifferent -- that society places on the development of public policy.

All policy studies examine societal values and how policy is developed to advance them. The extent to which public institutions meet or fail to meet the needs of a diverse population also involves consideration of ethics and values. Thus, studies which in some way address issues of race, class, gender, disabilities or discrimination against oppressed groups — including those related to human resources, affirmative action and employment law – provide knowledge and understanding of the need for diversity. The study of ethics might be accomplished through a study of general ethical principles, a study of professional ethics covering a number of different fields or a study which examines ethical issues and problems in a particular profession related to the student's concentration.

Communications Skills

The development of oral and/or written communications skills is important in all concentrations in Public Affairs.

Studies should demonstrate skills in writing, report-writing, interviewing or others relevant to the concentration through studies at the advanced level.

Research Skills and Information Analysis

Obtaining and evaluating information is a key skill for students in Public Affairs.

A student's program should demonstrate skill in the use of quantitative, qualitative, interviewing, investigative or other research skills relevant to the concentration, as well as the ability to analyze that information. Study beyond the introductory level should be expected. The study of social science research methods would be satisfactory for many students. Students in law enforcement might meet this guideline through study of investigative techniques. Students in journalism would show sufficient understanding of this competency through a study of investigative reporting. In emergency management or homeland security, environmental policy or health policy, familiarity and analysis of geographic

information systems or crime mapping might suffice. Qualitative methods and historiography might be sufficient for students in public history.

Technical and Scientific Knowledge

For some students in Public Affairs, specific technical or scientific knowledge might be necessary.

Again, knowledge of geographic information systems might satisfy this guideline for some students. Basic knowledge of environmental science should be expected for those in environmental policy, and some understanding of health systems and the economics of health care should be expected of those in health policy. For students in public health, knowledge of bio-statistics, epidemiology or nutrition might meet this guideline. A student interested in forensic investigation should have knowledge of biology and chemistry, and those interested in forensic accounting should have knowledge of basis accounting practices. A political science student who anticipates working with polling data will need knowledge of statistics that goes beyond what is offered in an introductory statistics course or a basic study of research methods. Emergency management students may need a variety of technical and scientific knowledge — geology, geography, climatology, epidemiology, risk management or information technology — depending up the focus of the student's program and the area of specialization. Journalism students and those in public communications or public relations should be expected to have advanced writing studies appropriate to their area of interest and, perhaps, technical production knowledge.

Public Affairs concentrations include, but are not limited to:

Government-related
- Public Administration
- Public Policy
- American Government and Politics
- Political Science
- International Affairs
- Women in Government
- Urban Planning

Law-related
- Criminal Justice
- Legal Studies
- Law, Justice and Society
- Homeland Security
- Social Justice and Peace Studies

Communications
- Public Communications
- Journalism
- Public Relations

Health-related
- Health Policy
- Environmental Policy
- Public Health

Other
- Emergency Management
- Public History
- Non-Profit Management and Leadership
- Gender Policy
- Technology Policy
- Urban Affairs
- Arts Management

These are examples of common majors or concentrations in colleges, schools and departments of public affairs in other institutions of higher learning. Many others may be appropriate concentration titles for a degree in Public Affairs, as well.

1 Mackelprang, A.J. and A. Lee Fritschler: "Graduate Education in Public Affairs/Public Administration," 35 Public Administration Review 182-90 (Mar.-Apr. 1975)

Science Mathematics And Technology - Biology Concentration - For Students Matriculated Before Spring 2020

Biology is the study of the structure and function of living systems. Its foci range from the submicroscopic (molecules, organelles) and microscopic (cells) to the macroscopic (organs, organisms, populations). An understanding of the interrelatedness of these increasingly complex levels of organization is essential to the development of a biological perspective.

The study of biology should include:

- An overview of the biological subdisciplines through an introductory survey or a series of studies in those subdisciplines that provides exposure to knowledge at each level of biological organization.
- Laboratory and field experience integrated with theory.
- Studies in chemistry, physics and mathematics, essential for in-depth understanding of biological systems and required for both bachelor's- and advanced-level work in biological sciences.
- Computer literacy.

In developing the concentration, at least one advanced-level study should be included from each of the major areas. Examples of possible studies follow:

- Cellular/molecular biology (cell biology, genetics, microbiology, molecular biology, biochemistry).
- Organismic biology (comparative anatomy, physiology, plant biology, invertebrate zoology, marine biology).
- Population biology (evolution, ecology, epidemiology, animal behavior).

The remaining advanced-level studies in the concentration can be either focused in a single area of biology or distributed among the different areas according to the student's preference.

Studies in different biological subjects often cover the same topics in different context. For example, the mechanism of cell division is addressed in studies of cell biology, genetics, zoology and botany.

This overlap is advantageous; repetition allows the student to view the topic from several perspectives. The resultant integration permits the development of an understanding of the functional relatedness of living organisms and demonstrates the unity of the various disciplines within biology.

Finally, the student may wish to include interdisciplinary studies in which biology is considered in a social, ethical and behavioral context and where biology serves to illuminate evolving contemporary concerns such as environmental problems, the AIDS epidemic, genetic engineering, public health, human sexuality and nutrition.

Science Mathematics And Technology - Computer Science Concentration - For Students Matriculated Before Jan. 1, 2009

Computer science focuses on aspects of the computer field that have a sufficiently well-defined set of abstract concepts and principles to be characterized as "scientific." The objective of a concentration in computer science is to master those abstract concepts and principles — the theory of the field — and to implement, demonstrate and test this theory via a computer.

A concentration in computer science would be a good choice for someone interested in computers and computing, including the general principles of computing and in how computers and computer programs work most efficiently.

Computer science is still a relatively "young" science, and its theory, while powerful, provides only limited help in finding usable solutions for many common problems. Therefore, computer science, as a disciplinary concentration, probably would not be the best choice for someone primarily interested in specific, real-world problem solving, particularly in the business world. For such individuals, concentrations in computer information systems, applied computer systems, computer programming, computer applications systems or computer studies would generally be more worthwhile.

Mathematics

Mathematics has provided much of the context from which the field of computer science has been emerging. Because mathematics continues to provide this background, as well as a variety of specific, immediately usable tools and concepts for computer scientists, intensive study of mathematics is required as part of the concentration in computer science.

This includes:

- Traditional math, based upon continuous variables (including algebra, trigonometry, analytic geometry, calculus).
- More recent understanding of discrete or finite (non-continuous) sets, groups, trees, graphs, matrices, linear programming, linear algebra.

Until recently, only a few topics from this latter tradition of discrete mathematics have been included in the school mathematics courses taken by most students. Thus, adult students returning to college often have not studied much, if any, discrete mathematics.

Because of the central and prerequisite position of discrete mathematical ideas within the field of computer science, study of discrete math is required. If a student does not have prior learning in discrete mathematics, study should begin in an early contract (though not necessarily the first).

The recommendations for formulating concentrations in computer science are summarized below.

A. The degree program should include study of the following areas:

1. Mathematics:
   Differential and integral calculus (8 or more credits). Inclusion of concepts and computational techniques related to computers (e.g., Newton's algorithm series) is recommended. Differential equations is recommended, but not required. Knowledge of algebra, trigonometry and analytic geometry (sometimes called precalculus) is necessary to begin calculus; students should include a contract in these prerequisites if they do not have sufficient previous mathematics background.
   Discrete mathematics (at advanced level, requiring understanding of axioms, theorems and proofs). This may require study of discrete math at introductory level (involving primarily concepts and techniques) first for students who have not encountered the subject previously.
2. Structured programming in at least one language, preferably two.
3. Data structures (including at least an introduction to runtime analysis and efficiency, or a separate, more thorough component in algorithm analysis).
4. Computer hardware, architecture, organization, and/or assembly language programming.

B. The degree program should also include study of at least two of the following areas, or of closely related subjects.

1. Operating systems.
2. Database principles, file processing.
3. Analysis of algorithms.
4. Artificial intelligence.
5. Numerical methods, statistical and scientific computing.
6. Communications and/or networks.
7. Principles of programming languages.
8. Theory of computation.
9. Compilers.
10. Simulation.
11. Software engineering.
12. Computer graphics.
13. Logic and switching theory.

C. The degree program should include an explicit, real-world project of some sort, in which the student is involved in the planning, implementation and evaluation of a practical application involving a specific, working hardware and software system.

This component can be part of or grow out of one of the other above components.

Note:

- Any of all of the above subjects can appear as part of the advanced-standing or contract-learning sections of the degree program.
- Mentors may wish to encourage students to explain in their degree-program rationale how their program meets the guidelines, with specific reference to the contracts or components that include the study areas in A, B and C above.

Science Mathematics And Technology - Information Systems Concentration - For Students Matriculated After July 1, 2011 But Before Aug. 31, 2015

About Information Systems

Information systems specialists focus on integrating information technology solutions and business processes to meet the information needs of businesses and other enterprises, enabling them to achieve their objectives in an effective, efficient way. The science, mathematics and technology perspective on information technology emphasizes information, with technology as an instrument for generating, processing and distributing information.

Professionals in the discipline are concerned primarily with:

- The information that computer systems can provide to aid an enterprise in defining and achieving its goals.
- The processes that an enterprise can implement or improve using information technology.

They must understand both technical and organizational factors and be able to help an organization determine how information and technology-enabled business processes can provide a competitive advantage.

> "The information systems specialist plays a key role in determining the requirements for an organization's information systems and is active in their specification, design, and implementation. As a result, such professionals require a sound understanding of organizational principles and practices so that they can serve as an effective bridge between the technical and management communities within an organization, enabling them to work in harmony to ensure that the organization has the information and the systems it needs to support its operations. Information systems professionals are also involved in designing technology-based organizational communication and collaboration systems.'" (Computing Curricula 2005, p. 14).

Our guiding authority for this document is Computing Curricula 2005 and the IS 2010 Body of Knowledge. This joint effort by the Association for Computing Machinery (ACM), the Association for Information Systems (AIS) and The Computer Society (IEEE-CS) includes current curricular recommendations from the leading professional organizations in the computing fields. Students should read Computing Curricula 2005 to understand how computing disciplines are related.

Information systems, as a disciplinary concentration, probably would not be the best choice for someone primarily interested in computing infrastructure needs of the organization (e.g., hardware and connectivity); for such individuals, a concentration in information technology or computer studies would be more appropriate. On the other hand, students interested primarily in the abstract, theoretical concepts of computing would be better served by a concentration in computer science.

At Empire State College, the variation among degrees in information systems occurs with the identification of the area of study. Each student must design a degree program that meets the general guidelines for an area of study. The information systems curricular guidelines represent a common core of knowledge, which any information systems degree will contain within those general guidelines.

Foundation

To be successful in the workplace, students must understand the role(s) of IS in an organization, and develop good communication, interpersonal and quantitative skills.

Communications skills

All students should already have, or develop, skill and confidence with communication, particularly communicating in writing. Technical communication, the specialty of communicating technical information, is of particular value to individuals in this field.

Quantitative reasoning

All students should already have, or develop, skill and confidence with the interpretation of material containing quantitative information and mathematical symbols, and should have, or develop, an ability to express ideas using mathematical symbols and language. It is important to be able to articulate an understanding of mathematics, not just perform calculations. The choice of mathematical subject matter for development of quantitative reasoning will depend on the student's background and interest. Subjects such as algebra, statistics, finite math or technical math are all good choices. In addition, students would benefit from an understanding of basic statistical concepts to support in-depth analysis of data. Students should include material beyond the introductory level and in areas such as discrete math or advanced quantitative methods in business. Discrete mathematics supports algorithmic thinking, and such study would cover logic, the concept of complexity, methods of proof and graph theory. The advanced quantitative methods would include topics such as decision making under uncertainty and linear programming.

Information Technology

Students should show, through their degree program and their rationale, that they have both foundational knowledge and knowledge beyond the foundation in this area. Typically, at least some content in the information technology area will be at the advanced level.

Programming

Students should already have, or develop, an understanding of programming, not just coding. This involves problem solving with logic.

Database

Students should demonstrate an understanding of data modeling, database programming and basic database-administration concepts.

IT infrastructure

Students should be familiar with the technical foundations of information systems. This typically includes operating systems, networks and computer/systems security.

Organizational, Ethical and Social Context

Students must understand their social and professional responsibilities as computer professionals as well as the role(s) of IT in the organization.

Professional, legal and ethical aspects

Students must understand their social and professional responsibilities as computer professionals as well as the role(s) of IT in the organization.

Organizational context and behavior

Students should understand the contexts within which they work and be prepared to take on the roles expected of professionals.

Students should develop skills in leadership, collaboration and negotiation.

Theory, Development and Management of Systems

Students must include systems analysis and design as central to understanding information systems. Students must have familiarity with project management concepts, as well as an understanding of the issues involved in the acquisition and management of information systems.

Systems analysis and design

This knowledge should encompass an understanding of the systems life cycle and issues in requirements definition and system implementation at the advanced level. The student should know the system analysis and design life cycle from analyzing the business case through requirements modeling and system architecture to system operations and support and the major activities in each phase, as well as understand how the process helps address the larger organizational needs.

Project management

Skills and knowledge of project management methodologies and skill in applying the techniques of project management are required. This knowledge should encompass an understanding of the project life cycle from planning to closing and the key knowledge areas (scope, cost and time management) to ensure that organizational resources are planned and deployed effectively and that evaluation and quality are maintained in the system-development process.

information systems strategy

Students should understand the issues and complexities involved in the effective acquisition and management of information systems within an organization, including assessment of existing infrastructure along with emerging technologies, an understanding of globalization and a strategic perspective.

Individual Context

Each student brings his or her own goals and background to the study of IS. It is these goals for future study or work which will provide the context for the student's degree.

Students must develop an appreciation for the type(s) of organization in which they work, or intend to work, as well as the interpersonal and communication skills needed to be successful in that environment. For example, a student who intends to work in a government (federal, state, local) should understand bureaucracies, politics and regulations, while a student who works in a scientific research environment should understand how scientists view data, design studies, etc.

Some students may be interested in information systems as supporting managerial decision making within or across functional areas of business. For this student, an understanding of these functional areas should be included.

Currency

Information systems and the environment in which they exist are always changing. Degree programs must demonstrate currency in the field and show understanding of emerging and evolving technology and environment relevant to their individual context.

Currency can be viewed in two ways: on the one hand, currency refers to current technologies; on the other, currency can be seen as not-obsolete.

If students want to use earlier learning in their programs they should consider how old, how specialized and how extensive the earlier learning is. Courses which encompassed analysis, problem definition, algorithms, data structures, programming concepts and testing methodology may provide a useful foundation to explore recent developments in computer technology. Courses which are product specific (hardware or software) may be less useful. When earlier learning is judged to provide a useful foundation within the program, students should be sure to incorporate opportunities to bridge to newer platforms or applications within their degree program.

Rationale

Students should discuss in their rationale essay how each of the above topics are incorporated into their degree program, how the program is designed to meet their goals and how the program meets the currency criteria discussed above. It is not necessary that the specific terms used above appear in individual study titles.

Science Mathematics And Technology - Information Systems Concentration - For Students Matriculated Before July 1, 2011

What Is "Information Systems?"

Information is data that has been given meaning through some process, and therefore has added value. Systems are the ways in which we develop that information, including through models, as well as the use of processes that will help us implement those models.

For the student who wishes to develop a degree program in information systems, definition is the initial challenge; as the definition develops, the degree program will take shape.

There are many ways to approach information systems. Many professionals and educators have tried to identify different approaches with modifiers, which has led to terms such as "management information systems" (MIS) and "computer information systems" (CIS). The general understanding was that MIS would be more focused on management aspects, while CIS focused on the technical aspects.

However, as the area has developed, the differentiation between the managerial and the technical has blurred. These guidelines use the more general title of information systems

At Empire State College, in addition to the common core, there are three primary areas of study which accommodate a degree in information systems:

- Business, management and economics.
- Science, mathematics and technology.
- Interdisciplinary studies.

Separate guidelines are provided for each of these areas of study. However, a common core of knowledge has been identified as appropriate for any and all of them.

Students can consider other possibilities than IS for their concentration titles. For example:

- In the SMT area, a student who comes to the college with substantial experience and/or transcript credit in computer technology may want to build on that background to develop a degree program in information technology. An SMT student who wishes to have a more theoretical approach, including extensive study of mathematics and algorithms, may want to pursue a degree in computer science.
- In the BME area, a student pursuing a degree in information systems management may consider studies such as accounting information systems, human-resource information systems, and so on, depending on his/her interests and needs.

Common Core of Knowledge for Information Systems

In any degree program, progression and integration are important. Progression is important because one needs to move from a foundation to a deeper level of understanding. Integration occurs when links exist among the degree program studies. Both are addressed in the common core of knowledge for information systems. To begin, the foundation is defined, which is important for any degree program. Then, the essential links are presented. From these essential links, the rest of the degree program will differ, depending on student goals and interests.

The core areas that relevant area of study faculty have agreed upon as essential for a degree in information systems include:

Computer Fundamentals
This area comprises three subareas, all of which need to be addressed: applications, programming and introductory IS concepts.

- **Applications** include word processing, use of spreadsheets, database management and telecommunications; knowledge of telecommunications includes a basic understanding of networks and the Internet.
- **Programming** is introductory and can be in any language.
- **Introductory IS concepts** would provide an overview of the area, including basic hardware and software, as well as common applications of IS, including, but not restricted to, the use of IS for decision-making support.

Business, Management and Economics Fundamentals
Information systems exist within organizations. In many cases, the organization is involved in business transactions. Therefore, some basic understanding of business and management fundamentals is important. This could be chosen from one or more of the areas of economics, behavior/ management and/or finance/accounting.

Quantitative Reasoning
All students should already have (or develop) skill and confidence with the interpretation of material containing quantitative information and mathematical symbols, and they should have (or develop) an ability to express ideas using mathematical symbols and language. It is important to be able to articulate an

understanding of mathematics, not simply perform calculations. The choice of mathematical subject matter for development of quantitative reasoning will depend on the student's background and interest. Subjects such as algebra, statistics, finite math or technical math are all good choices. In addition, students would greatly benefit from an understanding of basic statistical concepts.

Systems Analysis and Design (advanced level)
Key to understanding information systems is an understanding of systems analysis and design. This includes an understanding of the systems lifecycle as well as systems and network models.

Information Technology (advanced level)
Information technology concerns the hardware aspects of information systems. Many students come to Empire State College with background in information technology. This may include training in networks or the underlying technology of the World Wide Web or advanced understanding of programming languages. In this area, currency is important and students should be considered in the learning contract, possibly through study of data communications and networking or advanced programming languages.

Information Systems (advanced level)
In addition to systems analysis and design, which was already identified as a core subject, and an understanding of systems and information technology, a student should have an advanced level of understanding in databases, MIS or project management in information systems. Any advanced-level IS study should include some aspect of decision making.

Understanding of the Work Environment
Information systems always exists in some context, within which there is wide variability. Often, but not always, the environment is a business organization. Studies that would provide this perspective include technology and society, technology management, cross-cultural management, organizational behavior, computer ethics, human-computer interaction or e-commerce.

In this common core, the student has investigated information technology and information systems at the advanced level. He or she has studied systems analysis and design. The content of the rest of the concentration will depend on the specific area of study. Three of the most common possibilities are discussed below.

An IS Degree Within the Business, Management and Economics Area of Study

In addition to satisfying the general BME guidelines, students wishing to develop an IS degree within BME are advised to take business, management, and economics studies that include IS components or that complement the IS studies in the core area. The following are suggested topic areas. The list below is by no means exhaustive. These studies should be beyond the introductory level and address competencies, learning and knowledge areas such as the following:

- **Telecommunications management:** responsibility for the operations and performance of the communication network within the organization, including project management, computer operations and computer security
- **Database management and administration:** combination of data-management and data-administration roles and responsibilities, including studies such as relational databases, enterprise data modeling, client interface and management information systems

- **Accounting and financial management:** responsibilities such as dealing with investments in vertical information systems, procurement, operations management and implementation of an information systems' financial strategy within the organization; cost accounting is an integral part of this area
- **Planning:** positioning of IS within other organizational functions to support business strategies and goals through studies such as business planning, strategic planning, strategic control systems and systems development.

An IS Degree Within the Science, Mathematics and Technology Area of Study

The general SMT guidelines are met through the core studies for a degree in IS. One additional area that needs to be included in an IS degree under SMT would be further study in mathematics. This should be beyond the introductory level and could include areas such as discrete math or advanced quantitative methods in business.

- **Discrete mathematics** would cover logic, the concept of complexity, methods of proof and graph theory.
- **Advanced quantitative methods** would include topics such as decision making under uncertainty and linear programming.

Beyond the core, students in SMT likely will have an area they would like to focus on in their additional advanced-level studies. The following are some suggested areas. This list is by no means exhaustive:

- **Programming:** integrative studies such as object oriented programming, theory of programming languages and artificial intelligence
- **Networks:** data communications, voice systems, computer security and network administration
- **Web design:** web programming, web design and web development
- **Databases:** study of databases, data modeling, database management, relational databases, decision support systems, enterprise data modeling, artificial intelligence and expert systems
- **Telecommunications:** study of the integrated nature of telecommunications, where voice, data and graphics are united.

Studies should not focus on specific commercial packages, since these narrow approaches will not serve the student's long-range goals. Specific titles may go out of date, or the manufacturer may change its name or go out of business. It is also important to strike the proper balance between study of general concepts and of specific software tools and packages.

While students can and should gain hands-on experience with software in their studies, at least equal emphasis must be placed on mastery of the concepts and principles. The concepts and principles are the key to successful lifelong learning and to mastering the use of new software tools and techniques as they become available. A specific example of this principle would be developing a study in "web design," rather than a study titled "Microsoft Frontpage."

An IS Degree Within the Interdisciplinary Studies Area of Study

Separate guidelines are given for the interdisciplinary studies area of study and these are the best source for any student developing a degree within this AOS. However, it is assumed that a student with an interdisciplinary studies degree in IS would have the common core identified above. For the additional studies in the information systems area, several of the studies at the advanced level should integrate

viewpoints and applications. An example may be a degree that looks at the technical and implementation aspects of e-commerce.

Science Mathematics And Technology - Mathematics Concentration - For Students Matriculated Before July 2012

Feb. 1, 1993 — AOS Guidelines: Science, Mathematics and Technology

Mathematics serves as a creative and organizing force for studies in the sciences, as a problem-solving methodology for studies in technology and as an abstract study of fundamental structures for its own sake. It has become increasingly important as a tool for the social sciences.

A concentration in mathematics should include the following core areas:

- Differential and integral calculus.
- Linear algebra.
- Abstract algebra.
- Real analysis.

In addition, there should be in-depth study of a particular area of mathematics. Possibilities include mathematics education, mathematical modeling, statistics or numerical analysis.

Each program in mathematics should include some application project, based on the area of specialization. For example, a degree program focusing on statistics could include a statistical research project. A student preparing for graduate work in mathematics may want to research the development of the proof for the four-color problem.

The computer has become an essential tool for mathematics. Along with including areas of discrete mathematics in the program, attention should be paid to the use of the computer as a tool. For example, programming would be included in a study of numerical analysis and the computer would be used for statistical analysis.

Science Mathematics And Technology For Students Matriculated After Jan. 2009 But Before Sept. 7, 2021

Program Goals

Concentrations in science, mathematics and technology (SMT) may include work in the natural sciences (physics, chemistry and biology), mathematics, computer science and a range of technological, applied science and health-related fields. Organizing frameworks may be disciplinary, interdisciplinary, thematic, problem oriented or professional/vocational.

Since knowledge in science, mathematics and technology is rapidly and continually evolving, students must develop an awareness of the field or area as an ongoing area of inquiry, including knowledge of recent developments. They should develop skills for acquiring

knowledge independently, in order to avoid scientific and technological obsolescence.

SMT degrees should demonstrate both breadth and depth. Degrees should be designed to provide the student with an understanding of the definition and scope of a field or area, including its fundamental laws and concepts. SMT students also should pursue a progression of study that leads to the development of in-depth knowledge and skills, and an increasingly critical and sophisticated understanding of the theoretical and conceptual models of the field.

Program Objectives

Students with degree programs in science, mathematics and technology should demonstrate:

- An understanding of the definition and scope of a field or area including its fundamental laws and concepts, including:
  - A working knowledge of the vocabulary of a field.
  - An understanding of fundamental principles by applying them to a variety of problems or situations.
- Basic competencies needed to work in science, mathematics or technology, such as:
  - Working knowledge of needed experimental techniques, including data acquisition and interpretation.
  - Working knowledge of needed mathematics.
  - Communication skills appropriate to their fields including reading, writing, and presentation skills.
  - Familiarity with established computer applications to the particular field of interest.
- A critical perspective that allows them to compare and evaluate theories, models and experimental work.
- An awareness of the wider context in which science and technology operate, i.e. understand the relationships between science, technology, and society.

Additional specific guidelines have been developed for concentrations in the following areas:

- Biology
- Chemistry
- Computer science
- Environmental science
- Information systems
- Information technology
- Mathematics
- Physics
- Technology

Science Mathematics And Technology For Students Matriculated Before Jan. 2009

Science Mathematics and Technology Guidelines for Students Matriculated Before Jan 1 2009

Concentrations in science, mathematics and technology (SMT) may include work in the natural sciences (physics, chemistry and biology), mathematics, computer science and a range of technological, applied science and health-related fields. Organizing frameworks may be disciplinary, interdisciplinary, thematic, problem oriented or professional/vocational.

Degree programs in science, mathematics and technology should include:

- An understanding of the definition and scope of a field or area, including its fundamental laws and concepts.
- Basic competencies needed to work in science, mathematics and technology, such as:
  - Working knowledge of scientific methodology including laboratory techniques and data interpretation.
  - Working knowledge of needed mathematics.
  - Communication skills including technical writing, data presentation and scientific argumentation.
  - Familiarity with established computer applications to the particular field of interest.
- Knowledge in appropriate supporting areas and significantly related fields (e.g., calculus for advanced scientific study; organic chemistry for advanced study in the biological sciences).
- A progression of study which leads to the development of in-depth knowledge and skills, which should be carried out at an advanced level within the concentration, and should include:
  - Resource acquisition skills, including skills in information gathering.
  - Problem-solving skills, including definition, analysis, research design, evaluation and testing, as well as knowledge of appropriate experimental and applications methodologies.
  - An increasingly critical and sophisticated understanding of the theoretical and conceptual models of the field.
  - An awareness of the field or area as an ongoing area of inquiry, including knowledge of recent developments.

Since knowledge in science, mathematics and technology is rapidly and continually evolving, students in this area should develop skills for acquiring knowledge independently, in order to avoid scientific and technological obsolescence. Skill in pursuing knowledge independently involves:

- Knowledge of the inter-relationships and domains of various fields in science, mathematics and technology related to the concentration.
- Awareness of the range and limits of one's own skills and knowledge.
- Development of a critical perspective which allows one to compare and evaluate theories, models and experimental work in new areas of study.

Finally, the student's degree studies should provide an awareness of the wider context in which science and technology operate. This includes such elements as:

- Understanding the relationships between science and its applications.
- Understanding the relationships between science and technology and society.
- Understanding the potential limitations of science and technology.

It is not necessary that everything in the previously listed areas of knowledge, skills and competencies be included explicitly in student degree programs as specific study topics. Students should, however, address the way in which their proposed SMT program responds to these

guidelines; this could certainly be included within the description and discussion contained in the degree program rationale.

Additional specific guidelines have been developed for concentrations in the following areas:

- Biology
- Chemistry
- Computer science
- Environmental science
- Information systems
- Information technology
- Mathematics
- Physics
- Technology

Social Science For Students Matriculated After Jan. 1, 2014 But Before Jan. 1, 2018

Statements

For Students Seeking Associate Degrees

At the associate level, studies generally emphasize the first three elements of the guidelines for this AOS: developing a broad social perspective, a historical perspective and a comparative perspective. Such studies normally include exposure to theoretical concepts and research methods, as well as development of writing and critical thinking skills. Formal study of theory and research methods is typically undertaken at the advanced level for the bachelor's degree.

Students who develop an associate degree in Social Theory, Social Structure and Change may seek to establish a foundation for advanced study in fields encompassed by the AOS, or for advanced study in one of the cognate professional fields that have roots in the fields encompassed by this AOS (e.g., human services, health services, business).

For Bachelor's Seeking Student

Social Science encompasses a variety of academic disciplines. Students who choose to develop a concentration in this area explore theories, methods and problems addressed by such fields as sociology, political science and anthropology. Students may choose to work within the boundaries of a single academic discipline or may engage in a study which crosses disciplinary lines, such as criminal justice. Concentrations in areas such as women's studies, communications, ethnic studies and African-American studies which necessarily rely upon a dominantly social (rather than literary, artistic, historical or psychological) perspective also belong in this area of study.

In formulating their degree programs, students should address the following developmental goals which define the aims of study in this area. Concentrations in Social Science should be planned to develop:

- A broad social perspective. Students should be familiar with institutions, systems of belief, cultural patterns, or political and economic structures of society and how these are interrelated.
- A historical perspective. Students should be able to locate social issues within a historical context, and appreciate the forces which bring about change in values, ideas, customs, institutions, or political and economic systems.

- A comparative perspective. Students should examine the similarities and differences between one set of social rules, institutions, mores, political or economic structures and others of the same or different times, places, cultures, nations and states. Students should be able to address themselves to the causes of such differences or similarities and to evaluate their significance. A comparative perspective also includes understanding of race, class and gender within social groups.
- A theoretical perspective. Students should be able to identify, understand and use general theories and conceptual schemes to define and approach their chosen topics, questions or problems.
- Knowledge of research methods. Students should be able to identify, understand and use research methods appropriate to the topics, questions or problems that are central to their concentrations.
- Critical ability. Students should learn to analyze, criticize and evaluate key concepts, assumptions, theories and methodologies of their particular field of study. This requires development of advanced-level writing abilities.

Social Science For Students Matriculated After Jan. 1, 2018 But Before Sept. 7, 2021

Purpose

To provide context for the area of study guidelines for area of study Social Science.

Statements

The Social Science area of study includes a variety of academic disciplines and approaches. Social science traditions explore a range of social, political and economic issues. Students who develop programs in Social Science examine theories, methods, problems and solutions in their chosen concentrations.

Social Science students may pursue a single academic discipline or may design an interdisciplinary degree. Among the most frequent Social Science disciplines are anthropology, economics, political science and sociology. Many other concentrations are also possible, including, but not limited to, African-American studies, communications, community organization/development, criminology, environmental studies, ethnic studies, family studies, gender studies, gerontology, LGTBQ studies, Latino/a studies, Native American studies, organizational studies, peace and conflict studies, perspectives on social change, social or cultural geography, urban studies and women's studies.

While some of these concentrations could be pursued within another area of study, the key to approaching any field within the Social Science area of study is that the student's program relies primarily upon a social (rather than a literary, artistic, historical or psychological) perspective. At the core of this area of study is learning to think like a social scientist.

These guidelines encompass a wide range of topics, theoretical frameworks and approaches to research. Particular areas within the social sciences have their own theories and research methods. As they design individual programs, students and mentors should incorporate frameworks and methods that are most relevant to their area of focus.

For Students Seeking Associate Degrees

Students who develop associate degrees in Social Science explore social science perspectives related to their personal, community, academic or professional interests. Associate degree students may design a concentration in a single discipline or in an interdisciplinary field, such as those mentioned above.

The associate degree establishes a solid foundation for further exploring the social sciences, earning a bachelor's degree in a social-science field, or pursuing a bachelor's degree in one of the professional fields that have roots in the social sciences (e.g., business and management, health services, human services).

At the associate level, the emphasis is on the first two elements of the Social Science guidelines: developing a broad social-science perspective, as well as recognizing historical and cultural differences. Associate level students also gain exposure to concepts and methods, as well as practice in reading, writing and analytical thinking skills. More focused study of theory and research methods typically occurs at the bachelor's degree level.

For Students Seeking Bachelor's Degrees

Students who develop bachelor's degrees in Social Science develop the capacity to think critically about the social world and act as informed citizens and community members.

Students will gain in-depth exposure to theories and methods that are most relevant to their chosen topics or questions. They develop advanced-level reading, writing and analytical thinking skills that are important to career success, community projects, intellectual development and graduate study.

The bachelor's degree provides a strong foundation for further exploring personal, academic and professional interests in social science, or for a graduate degree in a social-science field. The degree also prepares graduates for employment, community service and/or a graduate degree in a professional field that is rooted in, or benefits from, a social-science background (e.g., law, public health, social policy, human services).

The Guidelines

Broad Social Science Perspective
- Students identify questions and topics that social scientists typically pursue.
- Students recognize how social scientists look at those topics.
- Students build a social-science vocabulary relevant to their concentrations.
- Students examine relationships among different elements of social life (e.g., institutions, systems of belief, cultural patterns, or political and economic structures of society).

Historical and Comparative Perspectives
- Students identify and analyze how key elements of social life vary across time, place and culture.
- Students identify and analyze the dynamics of power and privilege in relation to race, class, gender, age, sexuality, etc.
- Students identify and analyze sources of change in society.
- Students place their personal experiences within broader social and historical contexts.

Theoretical Perspectives
In relation to their chosen topics, questions or problems:

- Students identify and describe relevant concepts and theories.
- Students assess the strengths, limitations and significance of relevant concepts and theories.
- Students apply concepts and theories to the topics and questions they are addressing.
- Students develop their own social-science ideas and present their reasoning, evidence and conclusions.

Social Science Research Methods
In relation to their chosen topics, questions or problems:

- Students identify tools and processes used in social-science research.
- Students identify strengths and limitations of social-science research methodologies.
- Students accurately describe and assess the purposes, procedures and conclusions of examples of social-science research.
- Students identify and analyze ethical issues and political values embedded in social-science research.

Critical Thinking and Analysis
In relation to their chosen topics, questions or problems:

- Students analyze, criticize, apply and evaluate key concepts, assumptions, theories and methodologies from a social-science perspective.

Communication and Information Literacy in Social Science
In relation to their chosen topics, questions, or problems:

- Students demonstrate library research, academic writing and communication abilities appropriate to their degree level (e.g., associate, bachelor's).

Social Science For Students Matriculated Before Jan. 1, 2014

(formerly known as Social Theory, Social Structure and Change)

Social science (Social theory, social structure and change) encompasses a variety of academic disciplines. Students who choose to develop a concentration in this area explore theories, methods and problems addressed by fields such as sociology, political science and anthropology. Students may choose to work within the boundaries of a single academic discipline or engage in a study which crosses disciplinary lines, such as criminal justice.

Concentrations in areas such as women's studies, communications, ethnic studies and African-American studies which necessarily rely upon a dominantly social (rather than literary, artistic, historical or psychological) perspective also belong in this area of study.

In formulating their degree programs, students should address the following developmental goals which define the aims of study in this area. Concentrations in social science (social theory, social structure and change) should be planned to develop:

- **A broad social perspective:** familiarity with institutions, systems of belief, cultural patterns, or political and economic structures of society and how these are interrelated.

- **A historical perspective:** ability to locate social issues within a historical context, and appreciate the forces which bring about change in values, ideas, customs, institutions or political and economic systems.
- **A comparative perspective:** examination of the similarities and differences between one set of social rules, institutions, mores, political or economic structures and others of the same or different times, places, cultures, nations and states; ability to address causes of such differences or similarities and to evaluation of their significance; understanding of race, class and gender within social groups.
- **A theoretical perspective:** identification, understanding and use of general theories and conceptual schemes to define and approach topics, questions or problems.
- **Critical ability:** analysis, criticism and evaluation of key concepts, assumptions and theories of particular field of study; development of writing abilities and research skills appropriate to individual interests.

Students may meet these objectives in many ways, including thematic, issue- or problem-oriented studies which need not be focused on a single objective, but can respond to a number of the aims described above.

In order to assist faculty who review the programs, students should describe their research and thinking regarding their concentration studies in light of these objectives in their degree program rationales.

Students who plan disciplinary approaches to fields within this area of study will be expected to be aware of the standard expectations for academic study within that field.

The Arts For Students Matriculated Before Sept. 1, 2015

Statements

Study possibilities in The Arts include both the practice and the history and criticism of the visual arts (sculpture, painting, crafts, photography, design, graphics, etc.); the performing arts (dance, theatre, music, etc.); and the film arts (film, video, photography, etc.). Any of the five organizing frameworks may be used to design concentrations: disciplinary, interdisciplinary, problem oriented, professional/vocational or thematic.

A degree program in The Arts should provide for the development of:

- Understanding of the historical and cultural context of works of art.
- Knowledge of relevant theoretical and philosophical issues.
- Awareness of diverse cultural perspectives.
- Awareness of current developments and critical perspectives.
- Research skills.
- Technical proficiency;
- Capacity to formulate, express, and communicate concepts and images;
- And ability to formulate critical judgments.

Concentrations in The Arts begin with foundation studies which prepare the student for more advanced-level work. Advanced-level competence should be developed in those areas which are most relevant to the specific concentration design and to the specific organizing framework. A progression of studies for concentrations in practice, performance and creation should lead to: competence in methods and techniques; an understanding of current developments, theory and critical perspectives;

and should result in resourcefulness and independence. A progression of studies for concentrations in history and criticism should lead to competence in understanding history, theory, critical perspectives and cultural contexts. In planning the concentration, consideration should be given both to depth and breadth.

Students who wish to continue their studies on the graduate level and/or become practicing artists should consult the guidelines for professional degrees, which have been developed by professional associations such as the College Art Association and American Theater Association.

Students preparing for graduate work also should investigate the entrance requirements of specific graduates schools.

The creative arts are traditionally included with those studies considered to be liberal arts. Studio arts would fall within this definition. Learning not considered liberal studies focuses on specialized knowledge and skills often related to specific professional vocational needs and practices. Technical photography, art therapy techniques, advertising art and methods for art education might fall into this category.

The Arts For Students Matriculated On Or After Sept. 1, 2015, But Before Sept. 7, 2021

Statements

The Arts area of study encompasses a wide range of possible studies and concentrations in the arts, including the practice, performance and creation of the arts, a focus on historical studies, sociocultural studies and critical/theoretical studies in the arts and the integration of the arts in other professions. Students may choose to organize their degree program around disciplinary, interdisciplinary, problem-oriented, professional/vocational, or thematic approaches and should consider including learning about more than one artistic discipline in their degree plan.

A degree program in the arts should provide for the development of skills and understandings in the following areas:

- The history of at least one form of creative expression.
- The practice of at least one form of creative expression.
- Artistic theory in at least one form of creative expression.
- Artistic practice through a variety of social or cultural perspectives (i.e. gender-based, identity-based, location-based, etc.).
- Research skills, including a basic understanding of how to use libraries and virtual libraries, archives, databases and other Internet resources related to arts-related disciplines.
- The ability to describe, interpret and critique artistic expression and/or works.

Concentrations

Concentrations in the arts begin with foundational studies, which prepare the student for more advanced-level work. Advanced-level competency should be developed in those areas which are most relevant to the specific concentration design and to the specific organizing framework. In planning the concentration, consideration should be given both to depth and breadth. Primary mentors helping students design concentrations in the Arts should encourage each student to consult faculty and others who are knowledgeable about the arts in general, are

knowledgeable about the Arts area of study and possess recognized virtuosity and/or substantial experience in the particular area of the student's interest.

Concentrations in practice, performance and creation should lead to advanced work in:

- The creation of artistic works or performances related to the concentration.
- An understanding of the development of practice or methodology in the concentration.

Concentrations that focus on historical studies, sociocultural studies, or critical/theoretical studies should lead to an advanced understanding of:

- The history of both the specified artistic form itself and the scholarship surrounding that form.
- The current and past artistic theory associated with the specified artistic form.
- The artistic practice of the specified form, as seen through a variety of social or cultural perspectives (i.e. gender based, identity based, location based, etc.).
- Research skills, including a basic understanding of how to use libraries and virtual libraries, archives, databases and other Internet resources related to their disciplines.

Concentrations that focus on the integration of the arts in other professions (i.e. arts management, museum studies, educational studies in the arts, etc.) should lead to an advanced understanding of:

- The practice of the specified professional discipline.
- The history of both the specified professional discipline itself and the scholarship surrounding that discipline.
- The current and past artistic theory associated with the specified professional discipline.
- The practice of the specified discipline through a variety of social or cultural perspectives (i.e. gender-based, identity-based, location-based, etc.).
- Research skills, including a basic understanding of how to use libraries and virtual libraries, archives, databases and other Internet resources related to their disciplines.
- The ability to describe, interpret and critique artistic expression and/or works as they relate to the specified professional discipline.

Continuing Study

Students who wish to continue their studies on the graduate level should consult the entrance requirements and guidelines for professional degrees that have been developed by art schools, graduate programs and professional associations.

GRADUATE CATALOG

2024-2025 General Information

The Empire State University School for Graduate Studies offers 29 registered degree programs including a Doctorate in Education. Additionally, the school offers 26 advanced certificate programs, which a student can complete alone or in combination with a master's program, and one Certificate of Advanced Study. Twenty-seven combined, accelerated bachelor's/master's degrees are also offered to highly qualified, current SUNY Empire undergraduate students and additional combined graduate pathways in partnership with several undergraduate programs of SUNY Cobleskill, SUNY Morrisville, and SUNY Canton.

The Empire State University School of Nursing and Allied Health offers two additional master's programs: the Master of Science in Nursing Administration and the Master of Science in Nursing Education, as well as a Certificate of Advanced Study in Nursing Education and a Certificate of Advanced Study in Nursing Administration.

The information in this catalog is current as of May 31, 2024. The university reserves the right to make changes in policy and regulations, and its faculty reserves the right to change academic content as circumstances dictate, subsequent to publication. Each student is expected to have knowledge of the information in this document and in other university publications. For updated information, contact:

Graduate Programs

Degrees

- Adolescent or Middle Childhood Education, Master of Arts in Teaching (p. 538)
- Adolescent Special Education, Master of Arts in Teaching (p. 542)
- Adolescent Special Education, Master of Education (p. 545)
- Adult Education, Master of Arts (p. 547)
- Agricultural Education, Master of Arts in Teaching (p. 550)
- Applied Analytics, Master of Science (p. 554)
- Applied Behavior Analysis, Master of Science (p. 555)
- Business Management, Master of Business Administration (p. 557)
- Childhood Special Education, Master of Arts in Teaching (p. 559)
- Community and Economic Development, Master of Arts (p. 561)
- Curriculum and Instruction, Master of Education (p. 563)
- Cybersecurity, Master of Science (p. 564)
- Educational Leadership and Change, Educational Doctorate (p. 565)
- Educational Technology and Learning Design, Master of Arts (p. 568)
- Finance, Master of Science (p. 570)
- Healthcare Analytics, Master of Science (p. 572)
- Healthcare Leadership, Master of Business Administration (p. 572)
- Higher Education, Master of Arts (p. 575)
- Information Technology, Master of Science (p. 575)
- Liberal Studies, Master of Arts (p. 577)
- Marketing Analytics, Master of Science (p. 580)
- Nursing Administration, Master of Science (p. 580)
- Nursing Education, Master of Science (p. 582)
- Public Adminstration, Master of Public Administration (p. 583)
- Public History, Master of Arts (p. 585)
- Social and Public Policy, Master of Arts (p. 587)
- Work and Labor Policy, Master of Arts (p. 589)

Combined Degree Pathways and Programs

The School for Graduate Studies currently offers combined degree pathways for highly qualified undergraduates of Empire State University, SUNY Canton, SUNY Cobleskill, and SUNY Morrisville. Undergraduates may take up to four master's courses during their undergraduate study to accelerate time to degree completion.

Eligibility, admission requirements, prerequisites, combined pathway courses, and program requirements will vary by program. Not all pathways are offered to all undergraduate schools. Please refer to the footnotes.

The links below will take you to each program's page for more information.

- BS in Accounting to MBA in Business Management (p. 608) (CPA-150 and CPA-150E Licensure Qualified Program)[1]
- Pathways to the MBA in Business Management (p. 606)[1,2,3,4]
- Pathways to the MBA in Healthcare Leadership (p. 611)[1,2]
- Pathways to the M.S. in Finance (p. 611)[3]
- Pathways to the M.S. in Information Technology (p. 613)[3]

- Pathways to the M.A. in Community and Economic Development (p. 610)[1]
- Pathways to the M.A. in Liberal Studies (p. 613)[1]
- Pathways to the M.A. in Work and Labor Policy (p. 616)[3]
- Pathways to the MAT in Adolescent Education (p. 604)[1]
- Pathways to the MAT in Adolescent Special Education (p. 605)[1,3]
- Pathways to the MS in Nursing Education or Nursing Administration (p. 615)[1]

[1] Offered to Empire State University undergraduates
[2] Offered to SUNY Canton undergraduates
[3] Offered to SUNY Cobleskill undergraduates
[4] Offered to SUNY Morrisville undergraduates

Advanced Certificates

The School for Graduate Studies offers 26 advanced certificates, listed below. Some of which a student may incorporate into one of their MA or MS degrees.

Advanced, or graduate certificates are a post baccalaureate credential and are designed to provide focused study to support career interests. Certificates are offered online and can be completed as an individual credential or incorporated into a related master's degree for those meeting program admission requirements.

Since an advanced certificate is separate from a master's degree, students who want to earn this credential must submit an application to the certificate program. Application information is available through the college's web page.

Students may complete an advanced certificate by itself or combine it with a master's degree. If a certificate is completed by itself, it is not eligible for financial aid. If the certificate is combined with a master's degree, financial aid will cover the cost of those certificate courses that apply to the master's degree.

It is important to note that if admitted to more than one advanced certificate, these programs must be completed sequentially.

Certificates of Advanced Study

The School for Graduate Studies also offers a certificate of advanced study (CAS) in TESOL. The School of Nursing and Allied Health offers a CAS in Nursing Education and one in Nursing Administration. The Certificates of Advanced Study are post graduate programs designed for students already holding a master's degree.

- American Studies, Advanced Certificate (p. 591)
- Child and Family Advocacy, Advanced Certificate (p. 591)
- Community Advocacy, Advanced Certificate (p. 591)
- Cybersecurity, Advanced Certificate (p. 592)
- Emerging Media and Technology for the Arts, Advanced Certificate (p. 592)
- Financial Management and Analysis, Advanced Certificate (p. 593)
- Global Brand Marketing, Advanced Certificate (p. 593)
- Global Finance and Investment, Advanced Certificate (p. 594)
- Healthcare Management, Advanced Certificate (p. 594)
- Heritage Preservation, Advanced Certificate (p. 594)
- Human Resource Management, Advanced Certificate (p. 595)

GRADUATE DEGREES

Adolescent or Middle Childhood Education, Master of Arts in Teaching

The Master of Arts (M.A.T.) in Teaching in Adolescent or Middle Childhood Education program is an innovative clinically-rich approved teacher education program consisting of multiple tracks designed to meet the diverse needs and experiences of our students. The M.A.T. program is a fully accredited teacher education program appropriate for both career changers and recent college graduates seeking certification in order to teach in New York State middle and high schools. This is a 42-credit program of part-time study taught through on-site and online resources. It provides mentoring and other forms of professional development throughout the program.

The M.A.T. certification areas are:

- Middle Childhood Education – Biology, Chemistry, Earth Science, English, Spanish, Mathematics, Physics, Social Studies, and the General Science 5-9 extension*
- Adolescence Education – Biology, Chemistry, Earth Science, English, Spanish, Mathematics, Physics, Social Studies
- Agricultural Education Pre-K to 12 (p. 550)

*The Middle Childhood General Science 5-9 extension is available to science students meeting additional content area requirements.

Upon admission to the M.A.T. program, you are assigned an academic advisor. Your academic advisor will guide you through the program.

It is important for M.A.T. students to be mindful of the fact that their participation in this program requires that they adhere to multiple policies and requirements. In addition to being an Empire State University student and responsible for adhering to the university's policies and procedures as listed in this catalog, students must also follow New York State Education Department requirements for the teacher certification process and, if a school district employee, must follow the policies and procedures of the school district.

Requesting Transfer Credit

After admission, students should discuss the possibility of transfer credit with their academic advisor. To request transfer credit, students complete the Transfer Credit Request Form available through the Quicklinks box of the Graduate Student Center on MySUNYEmpire (https://my.sunyempire.edu).

Program Delivery and Tuition Rate

This master's program is delivered through online courses with some synchronous sessions. This program is billed at the non-MBA rate.

Mandatory Professional Licensure Disclosure

New York State takes pride in the high quality of its licensed and certified professionals. For the protection of its citizens, each license and certificate has requirements that individuals must meet in order to be licensed or certified in New York State. SUNY's academic programs leading to licensure or certification are carefully designed to meet and exceed these State requirements. This is a role SUNY plays in protecting the public. Other states frequently have their own requirements, so if your goal is to practice in another state, this disclosure will help you check to see what that state requires. The full details regarding this disclosure related to the applicable SUNY Empire degree programs may be found here (https://sunyempire.edu/online-compliance/licensure/).

Admission Requirements

Admission to the M.A.T. program is selective. This program enrolls new students in the fall term only. To be admitted to the M.A.T. program, the candidate must hold a bachelor's degree from a regionally accredited institution and meet prerequisites in the following areas:

1. Content area preparation – you must:
   - meet New York State certification requirements by having 30 credits in the content area;
   - meet any other certification content requirements that may apply (e.g., the New York State social studies distribution, at least 6 credits of advanced-level coursework).
2. Academic excellence – you must:
   - have a cumulative 3.0 GPA or the equivalent;
   - demonstrate the academic skills necessary to meet the academic and professional demands of the program;
   - demonstrate the capacity to develop skills in using learning technologies.

Application decisions are based on:

- undergraduate and graduate transcripts that document the required GPA, and content area preparation;
- an application essay by the candidate that demonstrates the writing and critical-thinking skills needed for success in a demanding graduate program, as well as the strong potential to make a successful transition into teaching as a profession; and
- the candidate's employment and volunteer/community service history.

An applicant who meets all other admissions requirements and has no more than 6 credits of content area course deficiencies may be admitted to the program. The student must make up the deficiencies by the end of the second term in the program.

Application

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

Program Tracks

Three pathways to certification are available to students in the M.A.T. program:

- **Transitional B Certification**
- **Clinically-Rich Residency**
- Classroom Academy Residency (p. 540)

These tracks offer an assortment of enrollment sequences. The enrollment sequence will depend on the required clinical coursework that aligns with a student's chosen track. Regardless of the track chosen, all sequence types contain *the same first-year coursework*.

Please Note: The clinical supervision courses (i.e., Mentored Teaching, Intensified Mentored Teaching or Residency Seminar courses) in both tracks must be completed with a B or better. If the course grade results in less than a B, students may repeat the course in accordance with the Graduate Evaluation and Grading Policy found in the Policies and Procedures section of this catalog.

Transitional B Certification Track Sequences
Transitional B Certification Enrollment Sequence

In the first year, students enroll on a part-time basis, completing 15 credits of graduate coursework and 50 hours of field experience (15 of which must be in Special Education). Upon successful completion of the first year of courses, meeting New York State Education Department requirements and obtaining a qualifying teaching position, students may apply for a Transitional B Teaching Certificate. While employed as a teacher of record, MAT degree candidates complete 15 credits in year two of the program and 12 credits in year three. Students are responsible for obtaining their Transitional B teaching position and are not placed into clinical settings by the program. During this period, a mentor teacher in the employing school, program faculty and program field supervisors provide instructional support. Successful completion of years two and three of the program, including the capstone, result in the award of the MAT degree.

Intensified Mentored Teaching Track for Transitional B Certification Enrollment Sequence

The one-year Intensified Mentored Teaching track allows students to complete a year of Mentored Teaching as the teacher of record while on Transitional B certification. The intensified track features a 6-credit course, Intensified Mentored Teaching 1 (IMT1), during the first semester of classroom teaching. This 6-credit course will include eight observations by faculty members and additional mentoring and support through both online and face-to-face components of the course. Intensified Mentored Teaching 2 (IMT2) is a 3-credit course, taken during the second semester of classroom teaching, and includes seven observations by faculty mentors. The pedagogical impact of an intensified year of mentored teaching strongly supports students' initial teaching experiences, enabling the faculty to offer increased support to students during this critical first year as a teacher of record.

Residency Track Sequences
Clinically-Rich Residency Enrollment Sequence

The Master of Arts in Teaching Clinically-Rich Residency Program uses a blended model of delivery, with online, face-to-face and clinically-based instructional modes. After completing the first year of the M.A.T. program, students begin a year-long placement in a 7-12 classroom with a critic teacher certified in the resident's content area. Residents will assume more responsibility incrementally for the classroom, culminating in the complete assumption of the critic teacher's classes for eight weeks during the spring term.

During the year-long residency, students will complete additional coursework that links theory to classroom practice. Residents receive intensive mentoring by faculty members and field supervisors. The program concludes with the capstone project. Upon graduating from the M.A.T. program, completers are recommended for New York State Initial (and Professional) teacher certification. After obtaining three years of qualifying teaching experience, program completers are eligible for Professional certification.

[1]   Each course integrates structured field experiences in New York State schools.

Classroom Academy Enrollment Sequence

The Classroom Academy residency model is a pathway option within our existing 3-year M.A.T. program. After the first year of the program, Classroom Academy Residents are fully integrated into a host school for year 2 and 3. M.A.T. students will teach alongside a critic teacher, under a gradual release of responsibility model. Over 2 years, the resident will gradually take over the responsibilities of the teacher, including following curriculum, lesson planning, and classroom leadership. Residents will have the support and guidance of their critic teacher, field supervisor and course instructors over 2 years while working in their placement.

During the Classroom Academy residency experience, students will complete additional coursework that links theory to classroom practice. Residents receive intensive mentoring by faculty members and field supervisors. The program concludes with the capstone project. Upon graduating from the M.A.T. program, completers recommended for New York State Initial (and Professional) teacher certification. After obtaining three years of qualifying teaching experience, program completers are eligible for Professional certification. Completion of the Classroom Academy pathway provides each Resident 1 year of experience to count towards their Professional certification.

[1] Each course integrates structured field experiences in New York State schools.

Upon successful completion of the program, the teacher candidate will be able to:

- Establish a classroom climate that emphasizes learning and considers teaching context and student diversity through the use of culturally responsive pedagogical practices;
- Demonstrate understanding of students' physical, social, emotional, and cognitive development stages of late childhood and adolescence, an understanding of praxis, research-based strategies to teach all learners, and appropriate uses of technologies for teaching and learning;
- Demonstrate an integration of expert content area expertise, curriculum knowledge, and pedagogical knowledge related to the teaching of that particular subject;
- Demonstrate the ability to use a variety of appropriate assessments to inform their teaching practice; and
- Demonstrate respect for learner differences, a commitment to personal growth, and the capacity to reflect on his/her teaching effectiveness.

Adolescent Special Education, Master of Arts in Teaching

Empire State University's Master of Arts in Teaching (M.A.T.) in Adolescent (grades 7-12) Special Education program is a 45-credit, **Residency** or **Transitional B** certification program available in New York State. The program's philosophy and subsequent courses are based on an inclusive model that prepares teacher candidates for collaboration and co-teaching in the inclusion classroom. Completion of the program (and passing the appropriate certification exams) leads to Students with Disabilities 7-12 Generalist Initial and Professional Certification.

Program Delivery and Tuition Rate

Curriculum delivery is blended using multiple delivery formats including online, synchronous sessions, webinars and other technologies. It is billed at the non-MBA rate.

Mandatory Professional Licensure Disclosure

New York State takes pride in the high quality of its licensed and certified professionals. For the protection of its citizens, each license and certificate has requirements that individuals must meet in order to be licensed or certified in New York State. SUNY's academic programs leading to licensure or certification are carefully designed to meet and exceed these State requirements. This is a role SUNY plays in protecting the public. Other states frequently have their own requirements, so if your goal is to practice in another state, this disclosure will help you check to see what that state requires. The full details regarding this disclosure related to the applicable SUNY Empire degree programs may be found here (https://sunyempire.edu/online-compliance/licensure/).

Admission

Admission to this program is selective. This program enrolls new students in the fall term only. A candidate must hold a bachelor's degree from a regionally accredited institution.

An ideal candidate will:

- possess 24 credits in the liberal arts and sciences distribution (6 credits in Math, Science, Social Studies and English); and
- have a cumulative GPA of 3.0, or the equivalent.

An applicant who meets all other admissions requirements and has no more than 6 credits of content area course deficiencies may be admitted to the program. The student must make up the deficiencies by the end of the second term in the program.

Application

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

Three pathways to certification are available to students in the M.A.T. in Adolescent Special Education program:

- **Transitional B (p. 542)**
- **Clinically-Rich Residency**
- **Classroom Academy Residency**

The pathways offer an assortment of enrollment sequences. The enrollment sequence chosen will depend on the required clinical coursework that aligns with a student's chosen track. Regardless of the track chosen, all sequence types contain *the same first-year coursework*.

Please Note: The clinical supervision courses (i.e., Mentored Teaching or Residency courses) in both tracks must be completed with a B or better. If the course grade results in less than a B, students may repeat the course in accordance with the Graduate Evaluation and Grading Policy found in the Policies and Procedures section of this catalog.

Transitional B Enrollment Sequence

The Adolescent Transitional B certification pathway is a part-time option designed for working adults who would like to become certified teachers of record while simultaneously completing their M.A.T. degree. The blended course delivery (in-person and online) requires that students are computer literate in order to engage in this technology-rich program.

Transitional B certification is a full New York State teaching certification that allows qualified M.A.T. students to seek employment as teachers of record after just one year in the program. First-year requirements include successful completion of:

- 18 credits of introductory special education coursework
- 50 hours of field experience in New York State schools
- Appropriate New York State Certification Exams
- Child Abuse, School Violence, Autism, & DASA training
- any liberal arts and sciences course deficiencies identified at admission

During the second and third years of the Transitional B certification pathway, students may continue their coursework while working as a full or part-time 7-12 special education teacher in a New York state school. In this setting, students will be mentored by faculty members and networked with other Transitional B certification teachers across the state. The program culminates in the Mentored Teaching Capstone course. In addition to completing the 45-credit program, students must pass the Students with Disabilities CST exam in order to qualify for Initial certification.

Clinically-Rich Residency Enrollment Sequence

The Clinically Rich Residency is the first of two possible pathways in our our 3-year MAT program in Adolescent Special Education (grades 7-12). After the first two years in the program, our candidates are placed in a host school during their last year in the program. The candidates teach alongside a Critic Teacher, under a gradual release of responsibility model. During the year, the Resident gradually takes over the responsibilities of the teacher, including following curriculum, lesson planning, and classroom leadership. Residents have the support and guidance of their Critic Teacher, Field Supervisor and course instructors throughout the year while working in their placement. There are opportunities available for the candidates to maintain their employment by using one of the residency models such as a teaching assistant or a substitute teacher. Candidates must complete 8-weeks full-time in the classroom to meet the requirements of the residency.

Upon completing all certification requirements, program completers are eligible for New York State Students with Disabilities 7-12 Generalist initial certification (and Professional certification with three years of teaching experience).

Classroom Academy Residency Enrollment Sequence

The Classroom Academy residency model is the second pathway option within our existing 3-year M.A.T. program in Adolescent Special Education, grades 7-12. After the first year of the program, Classroom Academy residents are fully integrated into a host school for year 2 and 3. M.A.T. students will teach alongside a critic teacher, under a gradual release of responsibility model. Over two years, the resident will gradually take over the responsibilities of the teacher, including following curriculum, lesson planning, and classroom leadership. Residents will have the support and guidance of their critic teacher, field supervisor and course instructors over two years while working in their placement.

During the Classroom Academy residency experience, students will complete additional coursework that links theory to classroom practice. Residents receive intensive mentoring by faculty members and field supervisors. The program concludes with the capstone project within the M.A.T. in Special Education program.

Upon completing all certification requirements, program completers are eligible for New York State Students with Disabilities 7-12 Generalist initial certification (and Professional certification with three years of teaching experience).

[1] Each course integrates structured field experiences in New York State schools.

Upon successful completion of the program, students will be able to:

- Collaborate with families, related service providers, and other school personnel to design and implement individualized curricula for students with disabilities;
- Develop transition services in consultation with relevant stakeholders;
- Critically evaluate research in special education;
- Articulate the philosophy and classroom application of inclusive education;
- Make instructional and environmental modifications based on students' learning needs;
- Assess behavior to develop and implement a behavior intervention plan;
- Demonstrate effective classroom management practices involving students with disabilities;
- Assess and interpret data to design and implement individualized instruction;
- Implement evidence-based practices to instruct students with disabilities;
- Conduct formative and summative assessments to inform instruction; and
- Demonstrate reflective professional growth practices.

Adolescent Special Education, Master of Education

Empire State University's Master of Education (M.Ed.) in Adolescent Special Education program is a 33-42 credit program available fully online but requiring access to New York State schools. The program's philosophy and subsequent courses are based on an inclusive model that prepares teacher candidates for collaboration and co-teaching in the inclusion classroom. Completion of this degree program and passing scores on the New York State Teacher Certification Examinations lead to New York State Students with Disabilities 7-12 Generalist Initial and Professional certification. It is designed for those already teaching and certified in New York State but looking for additional certification in Students with Disabilities.

In addition to their coursework, students will complete 50 hours of pre-residency classroom field observations, one residency term under the supervision of a special education critic teacher, and a capstone action research project to meet program requirements leading to Initial Certification.

Program Delivery and Tuition Rate

This master's program is delivered through online courses. However, the clinical residency experience (four weeks) must be completed in a New York State school. The program is billed at the non-MBA rate.

Mandatory Professional Licensure Disclosure

New York State takes pride in the high quality of its licensed and certified professionals. For the protection of its citizens, each license and certificate has requirements that individuals must meet in order to be licensed or certified in New York State. SUNY's academic programs leading to licensure or certification are carefully designed to meet and exceed these State requirements. This is a role SUNY plays in protecting the public. Other states frequently have their own requirements, so if your goal is to practice in another state, this disclosure will help you check to see what that state requires. The full details regarding this disclosure related to the applicable SUNY Empire degree programs may be found here (https://sunyempire.edu/online-compliance/licensure/).

Admission

Admission to this program is selective. This program enrolls new students in the fall term only. A candidate must hold a bachelor's degree from a regionally accredited institution and provide proof of New York State teaching certification.

An ideal candidate will:

- possess 24 credits in the liberal arts and sciences distribution (6 credits in Math, Science, Social Studies and English), and
- have a cumulative GPA of 3.0, or the equivalent

An applicant who meets all other admissions requirements and has no more than 6 credits of liberal arts course deficiencies may be admitted to the program. The student must resolve the deficiencies prior to beginning the clinical residency experience.

Application

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

The M.Ed. in Special Education is a 33-42 credit program including classroom observations and residency. The required courses of the degree are outlined in the table below. Some or all foundation courses may be waived at the point of admission. Students should consult with their academic advisor regarding course sequencing and foundation courses.

[1] These are foundational courses and can be waived with appropriate documentation. Candidates who are deficient in one or more core foundational courses will be required to take those courses as part of their program of study.

Upon successful completion of the program, students will be able to:

- Collaborate with families, related service providers, and other school personnel to design and implement individualized curricula for students with disabilities;
- Develop transition services in consultation with relevant stakeholders;
- Critically evaluate research in special education;
- Articulate the philosophy and classroom application of inclusive education;
- Make instructional and environmental modifications based on students' learning needs;
- Assess behavior to develop and implement a behavior intervention plan;
- Demonstrate effective classroom management practices involving students with disabilities;
- Assess and interpret data to design and implement individualized instruction;
- Implement evidence-based practices to instruct students with disabilities;
- Conduct formative and summative assessments to inform instruction; and
- Demonstrate reflective professional growth practices.

Adult Education, Master of Arts

The Master of Arts (M.A.) in Adult Education is a program designed for professionals interested in adult learning, education and training, including learning in education, business, government, unions, and not-for-profit organizations. Students in the program engage in studies related to learning in organizations, online learning, adults in higher education, higher education and student affairs, adult literacy, and adult learning for social change and community engagement. This fully online program blends theory and application with opportunities for students to both choose from structured online group studies to individualized studies that respond to the interests of the particular learners. Students in the program will be encouraged to reflect on their own learning, a process deepened within a collaborative community of faculty members and peers.

Students may choose from three concentrations of this 30-credit degree. The **General** concentration allows students to choose from a range of electives which should align with their area of interest. The **Workplace Learning** concentration and the **Community Education** concentration will have specific courses within this focus area.

Drawing on a solid foundation, students can meet individual goals and customize their degree programs to meet those needs. Therefore, students entering the program are encouraged to begin to think about a capstone project – i.e., a concrete and focused project in the field of adult learning – around which to build electives.

The hallmarks of the program include:

- A supportive online community with opportunities for collaboration;
- A blending of theory and application, with possibilities for internships/practicums designed by the student;
- A robust learning environment with opportunities to deepen understanding of technology mediated learning;
- Opportunities for hands-on engagement with the innovative practices of Empire State University;
- A deepening of reflection on practice and awareness of self as a learner; and
- Practice in learning design, program evaluation, and research.

PRIOR LEARNING ASSESSMENT

For students with more extensive applied experience or study in an area related to adult education, the program allows for up to 12 credits of evaluated learning through prior learning assessment and/or transfer credit. The American Council of Education has evaluated some credit sources from organizational or military learning at the graduate level that, when applicable, can be used in a student's program. In addition, in consultation with program faculty, students can submit learning essays to be considered for graduate level prior learning assessment and credit toward their degree. There is no fee for prior learning assessment at the graduate level.

PROGRAM DELIVERY AND TUITION RATE

While most of this program is delivered online asynchronously, some courses may have synchronous supplemental learning opportunities via webinars in the evening. Instructors will make an effort to schedule these activities at times that work for their students. In addition, due to the nature of some courses, students may be required to access or acquire additional software and/or hardware for some course activities. Students will be notified of additional requirements in a course's full syllabus. This program is billed at the non-MBA rate.

ADMISSION

Admission to this program is selective. This program enrolls new students in the fall, spring, and summer terms. Applicants should possess a bachelor's degree.

APPLICATION

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

PROGRAM CURRICULUM

The following tables outline the required courses and suggested enrollment sequences of the General, Workplace Learning, and Community Education concentrations. The graduate fall and spring terms are 15 weeks long, and the summer terms have some offerings for eight weeks and some for 15 weeks.

SUGGESTED ENROLLMENT SEQUENCES

The enrollment sequences below are based on two courses per term - a typical part-time schedule. These are sample fall and spring start enrollment sequences only. The exact enrollment sequence should be planned between the student and the advisor as part of degree planning, as not all students enroll in 6 credits every term.

GENERAL CONCENTRATION - Fall Term Start (Part-Time)

First Year

Fall		Credits
ADLC 6005	Rethinking Experience & Learning in Adulthood	3
ADLC 6010	Learning & Development in Contemporary Adulthood	3
	Credits	**6**

Capstone Project

M.A. in Adult Education students do a final culminating experience in a two-course sequence with other students at the end of their program. In this two-course sequence, students can choose from among the following three options: a professional project; a practicum; or a policy-brief. In the final project design course (ADLC 7010) the students design a study which addresses any suitable problem within adult learning but must demonstrate the student's core skills through research, application, integrative analysis, and advocacy. The project is executed in the second term in the capstone (ADLC 7015) through the professional project, practicum or policy-brief, described below. The final project is both written and presented orally by students at the conclusion of the final project term with other students and will demonstrate the ability to investigate an adult learning problem, using many of the skills acquired throughout the program. Successful completion will demonstrate research, application, integrative analysis, advocacy, and writing and oral presentation skills. It also will show a keen awareness and understanding of the social justice issues in adult learning environments. The student will have the resources of the instructor teaching the two culminating studies and may add a consulting faculty content expert with greater familiarity of the specific study. The consulting faculty content expert will only give advice on the project and attend the oral presentation, if possible, and will not serve a role in evaluation.

PROFESSIONAL PROJECT

A professional project should meet a clear need or address a problem in the student's community, school or work environment. It demonstrates practical application of theory to practice. It is based upon independent research and analysis of the various approaches to the problem, and the proposed solution. Professional projects generally can take the form of the development of a curriculum or course (with evaluative components), but also may involve a performance improvement initiative in a workplace or adult learning setting. A professional or community project should demonstrate the ability to integrate coursework with an actual professional product. It involves reading and research during the term prior to provide theoretical insights, to write a literature review, to research related projects and to provide a broader context for the work that will be done in a paper of approximately 20 pages. In the final project term students design work on the project; write a blog or journal of the activities and the insights gathered during the experience; and an analytic essay. The final project, including the literature review is approximately 30 pages.

In the project design term, the following sections are completed:

- An introduction to the project to be completed, addressing the need and proposed audience;

- A theoretical framework for the work;
- Draw upon and reference appropriate academic literature;
- Review related projects in the field;
- Lay out a project completion plan; and
- Propose an evaluation and assessment strategy, including a proposed return on the investment in the activity.

In the final project term, the following are completed:

- Complete the curriculum and professional project design;
- Test your project with faculty member, and possibly secondary advisory faculty or other students in the class;
- Write an assessment of the final project completion and recommendations for future delivery; and
- Orally present the project through PowerPoint, Prezi, video or other format in a webinar.

PRACTICUM

A practicum must be a learning opportunity where you develop skills and practical insights related to the development, analysis, implementation or evaluation in the workplace. It involves considerable work at a specific site or in a fieldwork setting where you can try out the ideas you have developed in this program or examine their applicability to specific situations or theories. A practicum is a very effective way to expand the program knowledge and provide an exciting and challenging culminating experience. It also allows you to use your coursework and gain experience in actual field settings.

In the project design term:

- Reading and research during the term to provide theoretical insights and a broader context for the work that you will be doing. The project design paper will contain the following sections:
  - An introduction to the practicum to be completed; A theoretical framework for the work;
  - Draw upon and reference appropriate academic literature;
  - Review related environments in the field; and
  - Lay out a practicum completion plan.

In the final project term:

- Approximately 120 hours of work in the practicum during the term;
- A blog or journal of your activities and the insights gathered during the experience; and
- Some field site supervision by an appropriate professional, or observations of the nature and quality of the work that you do or the projects that you undertake during the practicum. At the end of the practicum, your field supervisor will need to provide an evaluation of the work done in the practicum.
- The final project reflection paper will include a rewrite of the sections in the project design and reflection sections including:
  - Analysis of the experience;
  - Evaluation of self-identified goals;
  - Recommendations for practice or research in the area.
  - Orally present the project through PowerPoint, Prezi, video or other format in a webinar.

POLICY-BRIEF

Because adult education is closely intertwined with struggles for social justice/equity and change in the work environment, and because to be

an effective adult educator often means advocating effectively for/with communities you work with, a final project option in the MAAL program is to focus on a policy brief. This policy brief will address a salient issue within the field of adult education.

For the policy brief, students might consider a content study which explores the building of cohesive arguments to support their positions. Students might consider advocacy or activist-based courses which will assist them in developing persuasive projects/presentations.

Once an issue is chosen to explore, students will write a 25-page policy brief for the following three audiences (all of whom may have differing levels of knowledge about the topic):

- Public policy makers who currently (or possibly might in the future) set policy and funding for such adult education programs in N.Y., the state of the student and or nationally. For HRD students the brief would explore the benefits, what might be done, what's been done to the highest levels of the organization.
- Private-sector funders who currently (or possibly might in the future) provide funding to adult education programs in N.Y., states and nationally. (These private-sector funders can include foundations, corporate giving offices, or individual donors.) For HRD students this section of the brief would be directed at the potential financial supporters of the issue you are addressing.
- Current and potential advocates for adult education (i.e., the general public, community and ethnic organizations, social service providers, labor organizations, business groups, etc. who should have a stake in adult education in N.Y./nationally and who could benefit from having well-researched and well-presented "ammunition" when making the case for investment in the field). For HRD students this would address potential advocates and collaborators in the organization.

In the project design term, the student writes the following three sections as research background for the policy brief.

- A definition of the issue – Why is it important/a salient issue and to whom?
- What has been done about the issue so far – Nationally, in your state or in similar companies or organizations.
- Results of these efforts to date – In this section students define why investing in this is important for the adult education field and for the organization or society as a whole.
- A proposed timeline for collecting material for the brief.

In the final project term, the student writes the final three sections and prepares an oral presentation for the intended audience on the brief.

- How increased investment should be targeted. Further research be done, pilot projects be established, an office be created somewhere to work on this further, professional development opportunities be created.
- A proposal for financing and considering the return on investment.
- Methodology and sources: In a brief Appendix, state where the information came from for the brief, how the information was gained such as through literature review, interviews.

An Oral Presentation – Done on presentation software such as PowerPoint, Prezi, or video, the student prepares a 10-minute oral brief that will be presented to classmates.

Upon successful completion of the program, students will be able to:

- Participate in the public discourse of adult and higher education as writers, speakers, and producers of digital information, the ability to explore adult learning through multiple conceptual lenses, the ability to define problems, ask questions, and find appropriate methods of problem-solving and research in their scholarly inquiry and professional practice;
- Develop the skills of critical analysis, synthesis and evaluation and of informed and effective communication;
- Enhance practices as critically reflective practitioners, developing habits of reflective practice and recursive learning, habits of intentional and ethical practice, awareness of themselves as social actors in their capacities of learners and educators;
- Enhance skills in designing, developing, and deploying effective and innovative learning environments and learner supports for adult and higher education audiences with attention to learner needs, respect for the diversity of social and personal experience, and effective program administration;
- Recognize and address the ways in which disparate knowledge claims and discourses intersect with power relationships, including building an awareness of multiple paradigms concerning participation, leadership, service, advocacy, and social and intellectual critique; and
- Enhance abilities to work collaboratively with others with differing perspectives and ways of knowing, will gain an appreciation for multiple sources of learning and develop critical perspectives on adult education, including both academic and field-based practices.

Agricultural Education, Master of Arts in Teaching

The 42-credit Master of Arts in Teaching (M.A.T.) in Agricultural Education leads to New York State Initial and Professional certification and is designed to be completed in two to three years of part-time study. The program provides students an accessible and flexible route to gaining teacher certification in the area of PreK-12 Agriculture via two possible certification pathways: Residency or Transitional B. The M.A.T. in Agricultural Education is offered in a blended learning format that combines online courses, synchronous sessions, and clinical experience through immersion in New York State schools. The curriculum provides a strong foundation in pedagogy linked to content, including preparation in child and adolescent development, multicultural education, use of learning technologies, assessment of learning, as well as agriculture-specific courses. This program also features extensive mentoring by program faculty.

The Pathways to Certification

The Clinically-Rich Residency pathway allows students to attend part-time for one year while gaining the academic background and practical field experience that prepares them to enter a year-long residency placement. After completing the first year of the program (18 credits and 100 hours of field experience), residents begin a year-long placement with a certified agricultural educator. As the school year progresses, residents incrementally assume more responsibility for the classroom, building to an immersion and lead instructional responsibility for the critic teacher's classes for eight weeks during the spring term. Students who successfully complete their coursework, meet performance expectations in their residency placement, and complete the appropriate certification requirements are eligible for the New York State Initial certificate in

Agricultural Education (and Professional certification with 3 years of teaching experience).

The Transitional-B pathway is a part-time option for working adults who want to become certified teachers of record while completing their degree. Transitional B certification is a full New York State teaching certification that allows qualified students to seek employment as teachers of record after just one year in the program. During the second and third year of the Transitional B certification pathway, students may continue their coursework while working as a full or part-time teacher in a New York State school. In this setting, students will be mentored by faculty members and networked with other Transitional B certification teachers across the state. Students who successfully complete their coursework, meet performance expectations in their clinical experience, and complete the appropriate certification requirements are eligible for the New York State Initial certificate in Agricultural Education (and Professional certification with 3 years of teaching experience).

Requesting Transfer Credit

After admission, students should discuss the possibility of transfer credit with their academic advisor. To request transfer credit, students complete the Transfer Credit Request Form available through the Quicklinks box of the Graduate Student Center on MySUNYEmpire (https://my.sunyempire.edu).

Program Delivery and Tuition Rate

This master's program is delivered through online courses with some face-to-face meetings required. These face-to-face meetings are attached to specific courses and are held regionally throughout New York state. This program is billed at the non-MBA rate.

Mandatory Professional Licensure Disclosure

New York State takes pride in the high quality of its licensed and certified professionals. For the protection of its citizens, each license and certificate has requirements that individuals must meet in order to be licensed or certified in New York State. SUNY's academic programs leading to licensure or certification are carefully designed to meet and exceed these State requirements. This is a role SUNY plays in protecting the public. Other states frequently have their own requirements, so if your goal is to practice in another state, this disclosure will help you check to see what that state requires. The full details regarding this disclosure related to the applicable SUNY Empire degree programs may be found here (https://sunyempire.edu/online-compliance/licensure/).

Admission Requirements

Admission to this program is selective. This program enrolls new students in the fall term only. To be admitted to the program, the candidate must hold a bachelor's degree from a regionally accredited institution and meet prerequisites in the following areas:

1. Content area preparation – you must:
   - meet New York State certification requirements by having 30 credits in the content area;
2. Academic excellence – you must:
   - have a cumulative 3.0 GPA or the equivalent;
   - demonstrate the academic skills necessary to meet the academic and professional demands of the program;
   - demonstrate the capacity to develop skills in using learning technologies.

Application decisions are based on:

- undergraduate and graduate transcripts that document the required GPA, and content area preparation;
- an application essay by the candidate that demonstrates the writing and critical-thinking skills needed for success in a demanding graduate program, as well as the strong potential to make a successful transition into teaching as a profession; and
- the candidate's employment and volunteer/community service history.

An applicant who meets all other admissions requirements and has no more than 6 credits of content area course deficiencies may be admitted to the program. The student must make up the deficiencies by the end of the second term in the program.

Application

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

Program Tracks

There are two tracks within the M.A.T. Agricultural Education program:

- **Transitional B certification**
- **Clinically-Rich Residency**

Both tracks offer an assortment of enrollment sequences. The enrollment sequence will depend on the required clinical coursework that aligns with a student's chosen track. Regardless of the track chosen, all sequence types contain *the same first-year coursework*.

Please Note: The clinical supervision courses (i.e., Mentored Teaching, Intensified Mentored Teaching or Residency Seminar courses) in both tracks must be completed with a B or better. If the course grade results in less than a B, students may repeat the course in accordance with the Graduate Evaluation and Grading Policy found in the Policies and Procedures section of this catalog.

Transitional B Certification Track
Transitional B Certification Enrollment Sequence
In the first year, students enroll on a part-time basis, completing 15 credits of graduate coursework and 50 hours of field experience (15 of which must be in Special Education). Upon successful completion of the first year of courses, meeting New York State Education Department requirements and obtaining a qualifying teaching position, students may apply for a Transitional B Teaching Certificate. While employed as a teacher of record, degree candidates complete 15 credits in year two of the program and 12 credits in year three. Students are responsible for obtaining their Transitional B teaching position and are not placed into clinical settings by the program. During this period, a mentor teacher in the school setting, program faculty and program field supervisors provide instructional support. Successful completion of years two and three of the program, including the capstone, result in the award of the M.A.T. degree. Program completers are eligible for New York State Initial teaching certification (and Professional certification with three years of teaching experience).

Intensified Mentored Teaching Track for Transitional B Certification Enrollment Sequence

The one-year Intensified Mentored Teaching track allows students to complete a year of Mentored Teaching as the teacher of record while on Transitional B certification. In order to pursue this pathway, the student must secure a full time (1.0 FTE) teaching position in their content area for the entire school year (September-June). The intensified track features a 6-credit course, Intensified Mentored Teaching 1 (IMT1), during the first semester of classroom teaching. This 6-credit course will include eight observations by faculty members and additional mentoring and support through both online and face-to-face components of the course. Intensified Mentored Teaching 2 (IMT2) is a 3-credit course, taken during the second semester of classroom teaching, and includes seven observations by faculty mentors. The pedagogical impact of an intensified year of mentored teaching strongly supports students' initial teaching experiences, enabling the faculty to offer increased support to students during this critical first year as a teacher of record. Program completers are eligible for New York State Initial teaching certification (and Professional certification with three years of teaching experience).

Residency Track
Clinically-Rich Residency Enrollment Sequence

The Master of Arts in Teaching (M.A.T.) Clinically-Rich Residency Program uses a blended model of delivery, with online, face-to-face and clinically-based instructional modes. After completing the first year of the program, students begin a year-long placement in a 7-12 classroom with a critic teacher certified in the resident's content area. Residents will assume more responsibility incrementally for the classroom, culminating in the complete assumption of the critic teacher's classes for eight weeks during the spring term.

During the year-long residency, students will complete additional coursework that links theory to classroom practice. Residents receive intensive mentoring by faculty members and field supervisors. The program concludes with the capstone project within the program. Program completers are eligible for New York State Initial teaching certification (and Professional certification with three years of teaching experience.)

Upon successful completion of the program, the teacher candidate will be able to:

- Demonstrate how his/ her teaching practice reflects equity, democracy, and diversity and how lessons are meaningful or relevant to students;
- Integrate content-specific language and differing viewpoints and methods of inquiry grounded in appropriate NYS Standards in teaching practice;
- Demonstrate clear, theory-based approaches to instruction in the content area;
- Demonstrate multiple means of differentiated instruction for diverse learners;
- Articulate effective approaches to assessment in instructional decision-making and the capacity to reflect on and improve practice;
- Demonstrate the use of technology to improve practice and assessment, and to meet the needs of diverse learners;
- Articulate issues of accessibility in technology use; and
- Demonstrate growth and reflection related to his/her teaching practice.

Applied Analytics, Master of Science

The M.S. in Applied Analytics is a 30-credit, fully online program designed for professionals who are interested in enhancing their knowledge and skills within the field of data science and applied analytics. The program dives into the core concepts and principles of data analytics, providing a solid foundation in statistical methods, artificial intelligence, and machine learning to understand, analyze, and interpret massive amounts of data. Throughout the program, students will not only acquire theoretical knowledge in the field but also develop and improve essential skills in critical thinking and problem-solving, leadership, managerial communication, teamwork and collaboration, and ethical decision-making.

Program Design

The program is designed with six core courses (18 credits), three concentration courses (9 credits), and the experiential learning capstone course (3 credits). The six core courses will enhance students' data analytics and technology skills. This core curriculum is supplemented by three concentration courses in decision-making and management, in which students will apply the knowledge and skills learned in the core courses to their concentration of choice: management or education. The experiential learning capstone allows students to integrate their learning throughout the program and apply it in a real-world setting.

Program Delivery and Tuition Rate

This program is delivered through online instruction, providing flexibility and convenience for working professionals and adult learners. Students may complete the program on a full-time or part-time schedule. It is billed at the non-MBA rate.

Admission

Admission to this program is selective. This program enrolls new students in the fall and spring terms. To be considered for admission candidates should possess a bachelors degree and the following prerequisites or the equivalent of:

- statistics
- information technology

A candidate who has not completed these prerequisites may be accepted into the program but acceptance will be contingent upon completing the courses within the first year.

Application

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

The M.S. in Applied Analytics offers **two concentrations:** Management and Education. The exact enrollment sequencing of these concentrations should be planned between the student and the advisor as part of degree planning.

Program Curriculum

All students will be required to take six core courses (18 credits), three courses in their area of concentration (9 credits), and the capstone course (3 credits).

Code	Title	Credits
CORE COURSES (18 credits)		*18*
INFT 6015	Database Design and Management (3cr)	
APAN 6015	Data Models and Structured Analysis (3cr)	
APAN 6010	Computer Aided Multivariate Analysis (3cr)	
APAN 6020	Data Mining & Machine Learning for AI (3cr)	
MGMT 6095	E-Commerce Marketing Strategies (3cr)	
MGMT 6185	Quantitative Methods for Decision Making (3cr)	
CONCENTRATION COURSES (9 credits)		*9*
Management Concentration		
PPOL 6020	Research Methods (3cr)	
APAN 6025	Applied Management Analytics (3cr)	
Choose one (3cr):		
MGMT 6040	High Performance Management	
or MGMT 6105	Leadership in Public & Nonprofit Organizations	
Education Concentration		
PPOL 6020	Research Methods (3cr)	
CURI 6015	Leading in a Learning Environment (3cr)	
EDET 6080	Evaluation Assessment and Data Driven Learning Design (3cr)	
CAPSTONE COURSE (3 credits)		*3*
APAN 7010	Applied Analytics Capstone (3cr)	
Total Credits		**30**

Upon completion of the M.S. in Applied Analytics, students should be able to:

- Leadership: Evaluate large stores of data as part of database design to discover patterns and trends that go beyond simple analysis to new and industry-leading insights;
- Problem Solving Critical Thinking: Apply analytic tools such as machine learning and artificial intelligence to critically evaluate applied research, and develop meaningful insights;
- Disciplinary Knowledge: Analyze descriptive and inferential statistics and interpret the computer-generated statistical results with data visualization in business applications using programming languages such as R and Python;
- Ethical Reasoning: Develop ethical decision-making competencies through statistical methods and the application of analytical tools such as Microsoft Power BI;
- Strategic Thinking: Strategize how the issues facing leaders and decision makers, in a variety of fields, can be resolved ethically;
- Managerial Communication: Analyze and present big data to make strategic decisions including resource allocation. Bridge the communication gap between technical and traditional business managers; and
- Teamwork: Collaborate and contribute effectively to the achievement of organizational goals in a team environment.

Applied Behavior Analysis, Master of Science

The Master of Science (M.S.) in Applied Behavior Analysis (ABA) program prepares students to become Board-Certified Behavior Analysts (BCBA) and New York State Licensed Behavior Analysts. Applied Behavior Analysts focus on the science of human behavior. This program focuses on compassionate behavior change. Students may acquire field experience in a variety of settings, including schools, residential facilities, healthcare organizations, or community settings. This program was designed to align with the Association for Behavior Analysis International's Verified Course Sequence requirements and New York State's requirements for Licensed Behavior Analysts.

Program Delivery and Tuition Rate

Students may enroll full or part-time and can complete the 41-credit program in as little as two years. The M.S. in Applied Behavior Analysis offers a fully online curriculum paired with required clinical experiences to provide a rigorous, yet flexible program. Students may acquire field experience in a variety of settings, including schools, residential facilities, healthcare organizations, or community settings. This program is billed at the non-MBA rate.

Mandatory Professional Licensure Disclosure

New York State takes pride in the high quality of its licensed and certified professionals. For the protection of its citizens, each license and certificate has requirements that individuals must meet in order to be licensed or certified in New York State. SUNY's academic programs leading to licensure or certification are carefully designed to meet and exceed these State requirements. This is a role SUNY plays in protecting the public. Other states frequently have their own requirements, so if your goal is to practice in another state, this disclosure will help you check to see what that state requires. The full details regarding this disclosure related to the applicable SUNY Empire degree programs may be found here (https://sunyempire.edu/online-compliance/licensure/).

Admission

Admission to this program is selective. This program enrolls new students in the fall term only. An interview may be required with program faculty once a student is deemed eligible for the program.

Application

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

The following tables outline the required courses and suggested enrollment sequence of the program. The graduate fall and spring terms are 15 weeks long, and the summer terms have some offerings for eight weeks and some for 15 weeks.

Required Courses

Code	Title	Credits
CORE Courses		
APPL 6005	Applied Behavior Analysis I	3
APPL 6010	Applied Behavior Analysis II	3
APPL 6015	Single Subject Design &Measurement	3
APPL 6020	Developing & Increasing Socially Significant Behaviors	3
APPL 6025	Functional Behavioral Assessment	3
APPL 6030	Ethics in Applied Behavior Analysis	3
APPL 6035	Supervision and Staff Training	3
APPL 6040	Maintaining Client Records in Applied Behavior Analysis	2
APPL 6045	Autism Spectrum Disorder & Evidence Based Practices	3
EDUC 6045	Teaching Diverse Learners	3
CAPSTONE Courses		
APPL 7001	Applied Behavior Analysis Capstone I	2
APPL 7002	Applied Behavior Analysis Capstone II	2
APPL 7003	Applied Behavior Analysis Capstone III	2
PRACTICUM Courses		
APPL 7005	Applied Behavior Analysis Practicum I	3
APPL 7010	Applied Behavior Analysis Practicum II	3
Total Credits		**41**

Suggested Enrollment Sequence

This suggested sequence is based on a typical full-time (9cr) schedule. The exact enrollment sequence should be planned between the student and the advisor as part of degree planning.

Course	Title	Credits
First Year		
Fall		
APPL 6005	Applied Behavior Analysis I	3
APPL 6015	Single Subject Design &Measurement	3
	Credits	**6**
Spring

APPL 6040	Maintaining Client Records in Applied Behavior Analysis	2
EDUC 6045	Teaching Diverse Learners	3
	Credits	**5**
Second Year		
Fall		
APPL 6025	Functional Behavioral Assessment	3
APPL 6030	Ethics in Applied Behavior Analysis	3
APPL 7001	Applied Behavior Analysis Capstone I	2
APPL 7010	Applied Behavior Analysis Practicum II	3
	Credits	**11**
Spring		
APPL 6035	Supervision and Staff Training	3
APPL 6045	Autism Spectrum Disorder & Evidence Based Practices	3
APPL 7002	Applied Behavior Analysis Capstone II	2
APPL 7003	Applied Behavior Analysis Capstone III	2
	Credits	**10**
	Total Credits	**41**

Upon successful completion of the program, students will be able to:

- Describe the fundamental theories, principles, and practices of applied behavior analysis.
- Apply the principles of applied behavior analysis, including assessment, research methodologies, and evidence-based practices

to address a range of behavioral issues with individuals with autism spectrum disorder in varied settings.

• Become skilled consumers of research to evaluate evidenced-based practices that might be utilized to engage in socially significant behavior change for individuals with autism.

• Apply the principles of applied behavior analysis to serve individuals with autism.

• Adhere to New York State and Federal regulations and guidelines.

• Work effectively and ethically with a variety of professional colleagues including direct reports.

• Develop culturally humble behaviors to serve individuals with autism and their families, and to collaborate effectively with other professionals.

Business Management, Master of Business Administration

The Master of Business Administration (M.B.A.) in Business Management is a 36-credit, fully online program designed for aspiring, early and mid-career managers and professionals who are interested in enhancing their managerial and professional skills, advancing opportunities for upward mobility, or fulfilling management and leadership roles in businesses or nonprofit organizations. Throughout the program, students will develop and improve their critical and strategic thinking, problem-solving, ethical decision making, leadership, and managerial communication skills, develop cross-cultural competence and sensitivity, and apply and practice management strategies in various contexts. The program also gives students the opportunity to specialize their degree by choosing from seven concentrations:

- *General Business*[1]
- *Human Resource Management**
- *Business Analytics*
- *Healthcare Management*
- *Nonprofit Management*
- *Project Management*
- *Finance*

[1] In addition to their master's degree, students in the General Business concentration can incorporate an advanced graduate certificate into their degree program and earn a second credential. Certificate options are found in the Advanced Certificates section of this catalog.

* The Society for Human Resource Management (SHRM) Alignment SHRM has acknowledged that SUNY Empire State University's MBA in Business Management with a specialization in **Human Resource Management** has received renewal of its alignment with SHRM's *HR Curriculum Guidebook and Templates* until December, 2025. Throughout the world, 451 programs in 341 educational institutions have been acknowledged by SHRM as being in alignment with its suggested guides and templates. The HR Curriculum Guidebook and Templates were developed by SHRM to define the minimum HR content areas that should be studied by HR students at the undergraduate and graduate levels.

Program Delivery and Tuition Rate

While most of this program is delivered online asynchronously, some courses may have a small number of synchronous supplemental learning opportunities via webinars or virtual environments. Instructors will make an effort to schedule these activities at times that work for their students. In addition, due to the nature of some courses, students may be required to access or acquire additional software and/or hardware for some course activities. Students will be notified of additional requirements in a course's full syllabus. This program is billed at the MBA rate.

Admission

Admission to this program is selective. This program enrolls new students in the fall, spring and summer terms. In addition to completing the graduate application, this 36-credit hour program requires the completion of a bachelor's degree from a regionally accredited institution and builds upon foundational requirements in statistics (3 credits), macroeconomics/microeconomics (3-6 credits) and accounting (3 credits). These foundation requirements can be met by either undergraduate or graduate coursework with similar content completed

prior to entering the program or by completing the following Empire State University foundation courses (3-9 credits) as part of the degree:

Code	Title	Credits
MGMT 6000	Applied Business Statistics	3
MGMT 6010	Financial Accounting	3
MGMT 6015	Principles of Economics	3
Total Credits		**9**

The foundation requirements must be completed in order to continue in the program beyond the first year.

Application

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

The M.B.A. in Business Management program gives students the opportunity to specialize their degree by choosing from seven concentrations: General Business, Finance, Human Resource Management*, Healthcare Management, Nonprofit Management, Business Analytics, or Project Management. In addition to their master's degree, students in the General Business concentration can incorporate an advanced graduate certificate into their degree program and earn a second credential.

Program Curriculum

The M.B.A. in Business Management's curriculum consists of eight core courses (24 credits), three concentration courses (9 credits), and a capstone course (3 credits) as outlined below.

Prerequisite Requirements [1] (0-9 credits)

Code	Title	Credits
MGMT 6000	Applied Business Statistics	3
MGMT 6010	Financial Accounting	3
MGMT 6015	Principles of Economics	3

Core Courses (24 credits)

Code	Title	Credits
MGMT 6020	Leadership & Executive Development	3
MGMT 6025	Strategic Perspectives of Global Management	3
MGMT 6030	Management Information Systems & Data Visualization	3
MGMT 6040	High Performance Management	3
MGMT 6016	Financial Management	3
or MGMT 6075	International Financial Management	
MGMT 6050	Operations and Supply Chain Management	3
MGMT 6122	Corporate Communication and Marketing Strategy	3
or MGMT 7005	Global Marketing Strategies	
MGMT 6060	Managerial Economics	3
or MGMT 6065	Economics for Global Managers	

General Business Concentration (9 credits)
select 3 open electives
Finance Concentration (9 credits)
select 3 from the following courses:

Code	Title	Credits
FSMA 6010	Quantitative Methods in Finance	3
FSMA 6020	Investment Analysis	3

FSMA 7015	Strategies of Financial Management	3
FSMA 6080	International Accounting	3
FSMA 6095	International Financial Law & Regulation	3
FSMA 7020	Global Financial Strategy	3

Healthcare Management Concentration (9 credits)
select 3 from the following courses:

Code	Title	Credits
HCLM 6075	Managing Healthcare Systems	3
HCLM 6080	Health Policy & Management	3
HCLM 7005	Healthcare Strategic Communication	3
HCLM 6065	High Performance Leadership	3

Business Analytics Concentration (9 credits)
select 3 from the following courses:

Code	Title	Credits
INFT 6015	Database Design and Management	3
APAN 6020	Data Mining & Machine Learning for AI	3
APAN 6015	Data Models and Structured Analysis	3
MGMT 6155	Strategies for Marketing Research	3
MGMT 6095	E-Commerce Marketing Strategies	3

Nonprofit Management Concentration (9 Credits)

Code	Title	Credits
MGMT 6160	Strategic Planning for Public & Nonprofit Organizations	3
MGMT 7055	Strategic Marketing for Nonprofit Organizations	3
MGMT 6022	Grant Writing for Public and Nonprofit Organizations	3

Human Resource Management Concentration (9 credits)

Code	Title	Credits
MGMT 6125	Managing Human Capital	3
MGMT 6135	Performance Management & Total Rewards	3
MGMT 7045	Strategic Human Resource Management	3

Project Management Concentration (9 credits)

Code	Title	Credits
MGMT 6115	Tools & Processes in Project Management	3
MGMT 6120	Managerial Perspectives of Project Management	3
MGMT 7070	Strategy & Tactics in Project Management	3

Capstone (3 credits)

Code	Title	Credits
MGMT 7080	Strategic Business Applications	3

[1]This program builds upon foundation requirements in statistics (3 credits), macroeconomics/microeconomics (3-6 credits), and accounting (3 credits). These requirements can be met by either undergraduate or graduate coursework with similar content completed prior to entering the program or by incorporating the following foundation courses (0-9 credits) into your degree. If all prerequisites have been completed prior to admission, the MBA degree will consist of 36 credits. If prerequisites have not been met prior to admission, the degree will consist of 39-45 credits, depending on the number of prerequisites, which must be completed.

#back to enrollment sequences (p.   ) (p.   )

* The Society for Human Resource Management (SHRM) Alignment

SHRM has acknowledged that Empire State University's MBA in Business Management with a specialization in **Human Resource Management** has received renewal of its alignment with SHRM's *HR Curriculum Guidebook and Templates* until December, 2025. Throughout the world, 451 programs in 341 educational institutions have been acknowledged by SHRM as being in alignment with its suggested guides and templates. The HR Curriculum Guidebook and Templates were developed by SHRM to define the minimum HR content areas that should be studied by HR students at the undergraduate and graduate levels.

Upon successful completion of the program, students will be able to:

- Disciplinary Knowledge: Integrate core functional knowledge to facilitate sound managerial decision-making;
- Critical Thinking and Problem Solving: Integrate theory and practice to analyze business problems through inference and evaluation;
- Strategic Thinking: Demonstrate knowledge of theory and application of qualitative and quantitative methods to facilitate problem solving;
- Leadership: Manage organizational processes and transformational change effectively;
- Ethical Reasoning: Apply theory and tools necessary for sound ethical reasoning;
- Global Understanding: Assess the challenges associated with managing in a global environment;
- Managerial Communication: Communicate effectively orally and in writing across managerial contexts and with diverse stakeholders; and
- Teamwork: Contribute effectively to the achievement of organizational goals in a team environment.

Childhood Special Education, Master of Arts in Teaching

Empire State University's Master of Arts in Teaching (M.A.T.) in Childhood Special Education program is a 45-credit, innovative, clinically rich, approved teacher education program designed to meet the diverse needs and experiences of our students. The fully accredited program is designed for both career changers and recent college graduates seeking 1-6 New York State Initial certification. This **Transitional B** pathway is designed to be completed in two to three years of part-time study.

The program's philosophy and subsequent courses are based on an inclusive model that prepares teacher candidates for collaboration and co-teaching in the inclusion classroom. The M.A.T. in Childhood Special Education program's goal is twofold:

- to produce caring and highly specialized teachers who have the ability to meet the challenges in today's inclusion classrooms; and
- to produce teacher candidates who facilitate the growth of their students by empowering students to actively participate in their learning and reach their highest potential.

Program Delivery and Tuition Rate

Using blended approaches of online and synchronous sessions, the M.A.T. in Childhood Special Education program is able to serve students across New York State. Completion of the program (and passing the appropriate certification exams) leads to Students with Disabilities 1-6 Generalist Initial and Professional certification. The M.A.T. in Childhood Special Education program features extensive mentoring by program faculty, attention to the Common Core Learning Standards and other contemporary issues in New York State education, and a clinical orientation including extensive immersion in New York State schools. This program is billed at the non-MBA rate.

Mandatory Professional Licensure Disclosure

New York State takes pride in the high quality of its licensed and certified professionals. For the protection of its citizens, each license and certificate has requirements that individuals must meet in order to be licensed or certified in New York State. SUNY's academic programs leading to licensure or certification are carefully designed to meet and exceed these State requirements. This is a role SUNY plays in protecting the public. Other states frequently have their own requirements, so if your goal is to practice in another state, this disclosure will help you check to see what that state requires. The full details regarding this disclosure related to the applicable SUNY Empire degree programs may be found here (https://sunyempire.edu/online-compliance/licensure/).

Admission

Admission to this program is selective. This program enrolls new students in the fall term only. A candidate must hold a bachelor's degree from a regionally accredited institution.

An ideal candidate will:

- possess 24 credits in the liberal arts and sciences distribution (6 credits in Math, Science, Social Studies and English);
- and have a cumulative GPA of 3.0, or the equivalent.

Application

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

Particular attention will be given to instructional design for the inclusive and co-teaching classrooms; special education identification and assessment practices; classroom management and behavioral interventions; foundations of research with an emphasis on action research; and applied behavioral analysis for severe stereotypical behavior.

Transitional B certification is a full New York State teaching certification that allows qualified students to seek employment as teachers of record after just one year in the program. First-year requirements include successful completion of:

- 18 credits of introductory Special Education coursework
- 50 hours of field experience in New York State schools
- Appropriate New York State Certification Exams
- Child Abuse, School Violence, Autism, & DASA training
- any liberal arts and sciences course deficiencies identified at admission

During the second and third years of the Transitional B certification pathway, students may continue their coursework while working as a full or part-time 1-6 special education teacher in a New York State school[2]. In this setting, students will be mentored by faculty members and networked with other Transitional B certification teachers across the state. The program culminates in the Mentored Teaching Capstone course. In addition to completing the 45-credit program, students must pass the Students with Disabilities CST Exam in order to qualify for Initial certification.

Suggested Enrollment Sequence

First Year		
Fall		**Credits**
SPED 6005	Introduction to History of Special Education Law [1]	3
SPED 6010	Child and Adolescent Development [1]	3
	Credits	**6**

EDUC 6130	Literacy Across the Curriculum	3
SPED 7035	Special Education Mentored Teaching Capstone	3
	Credits	**6**
	Total Credits	**45**

[1] Each course integrates structured field experiences in New York State schools.

[2] Students who have previously been convicted of a felony are advised that their prior criminal history may impede their ability to complete the requirements of certain academic programs (e.g. teacher certification programs) and/or to meet licensure/certification requirements for certain professions (e.g. K-12 teaching). Students who have concerns about such matters are advised to contact the dean's office of their intended academic program.

Upon successful completion of the program, students will be able to:

- Collaborate with families, related service providers, and other school personnel to design and implement individualized curricula for students with disabilities;
- Develop transition services in consultation with relevant stakeholders;
- Critically evaluate research in special education;
- Articulate the philosophy and classroom application of inclusive education;
- Make instructional and environmental modifications based on students' learning needs;
- Assess behavior to develop and implement a behavior intervention plan;
- Demonstrate effective classroom management practices involving students with disabilities;
- Assess and interpret data to design and implement individualized instruction;
- Implement evidence-based practices to instruct students with disabilities;
- Conduct formative and summative assessments to inform instruction; and
- Demonstrate reflective professional growth practices.

Community and Economic Development, Master of Arts

The Master of Arts (M.A.) in Community and Economic Development program incorporates two distinct, yet related bodies of theory and practice. One addresses economic development and the other addresses the larger area of community development. This program stresses the importance of linking these two concepts in a model that integrates the development of social capital and community capacity with the economic development of the community. After a broad examination of the public policy process, students will examine theoretical development concepts, as well as approaches that real communities have used in an effort to produce positive economic outcomes, as well as improvement in the quality of life of their members. Building on this foundation, students explore issues of relevance to community and development by selecting, in consultation with the program coordinator, elective courses that satisfy their particular interests and career needs. This master's degree program culminates with a final project that provides the opportunity to examine a community development problem or issue in an in-depth manner.

Students for Whom this Program is Appropriate

This program is designed for those who wish to build agencies, businesses and nonprofit organizations which simultaneously pursue economic and socially responsible objectives – the integrated bottom line – to create more attractive, inclusive and sustainable communities. Graduates of the M.A. in Community and Economic Development program will transform existing organizations to be socially responsible, start their own organizations that embrace social issues, and pioneer new ways of management that meet human needs and treat stakeholders with justice and respect. Students may come from business or nonprofit organizations or governmental agencies such as economic development agencies, or they may be "private" individuals who want to assume positions of leadership in changing their communities.

Program Delivery and Tuition Rate

This master's program is delivered through online courses and is billed at the non-MBA rate.

Admission

Admission to this program is selective. This program enrolls new students in the fall and spring terms. Applicants should possess a bachelor's degree.

Application

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

This 30-credit program's curriculum consists of 5 required core courses (15 credits), 4 concentration courses (12 credits) in the form of electives based on your area of interest, and a final capstone course (3 credits).

Code	Title	Credits
PPOL 6007	Policy Process	3
PPOL 6030	Public Policy Analysis	3
CAED 6010	Principles of Community & Economic Development	3
CAED 6040	Stakeholder-Sensitive Business Models	3

CHOOSE:		
PPOL 6021	Methods for Policy Research (preferred course)	3
OR		
PPOL 6020	Research Methods (if you intend to pursue doctoral studies)	
CAED 7010	Final Project - Professional Project: Community & Economic Development	3
Electives		12
Total		30

Transfer Credit

After admission, students should discuss the possibility of transfer credit with their academic advisor. To request transfer credit, students complete the Transfer Credit Request Form available through the quicklinks box of the Graduate Student Center on MySUNYEmpire (https://www.sunyempire.edu/mysunyempire/).

Typically, 9 credits are acceptable for transfer subject to the Transfer Credit Policy (located in the policy section of this catalog).

Final Project

The final project represents the capstone experience in the program. This shall take the form of a Policy Memorandum, which is designed to support students' professional and personal goals. This is a challenging task which draws on and brings together the skills and concepts learned through the master's program. It requires identification of a public policy issue, examination and interpretation of various sources of information relating to the issue including scholarly sources, analysis of possible approaches to the issue and the student's recommendations regarding the issue.

Learning Activities and Course Goals

As the capstone project for the master's program, the policy memo builds on prior coursework and provides the opportunity for the student to engage in a sustained examination of a major policy issue. The purpose is to reinforce the knowledge and skills required to analyze policy issues, develop defensible positions on policy issues, and clearly communicate a position in the form of a policy memo, which is standard fare in the work of legislators, elected officials, agency heads and other organizational leaders involved in the formation of policy.

The policy memo includes the exploration of a critical issue, the development of alternative approaches to the issue and a reasoned, evidence-based, defensible argument about how the issue should be addressed. It is important to keep in mind the distinction between a policy memo and other academic papers. Whereas academic papers build arguments by gradually introducing the least important ideas first, a policy memo uses an "inverted pyramid" of ideas, delivered as efficiently as possible, beginning with the most important. In a policy memo getting at the truth through the exploration and the interpretation of what is known about an issue is more important than developing new knowledge. As such, no thesis statement or theoretical framework underpins a policy memo.

Course goals:

- the ability to clearly identify a critical policy issue related to the student's program;
- the ability to identify and access relevant information related to the problem;

- demonstration of a nuanced comprehension, evaluation and interpretation of the body of knowledge surrounding the issue;
- exhibition of a disciplined application of knowledge in the formulation of alternative, feasible approaches to the issue; and
- presentation, in tightly-constructed prose, of a well-reasoned defensible approach to the issue that draws on relevant concepts from previously completed coursework.

The student will engage in the relevant readings for this project and prepare drafts of the policy memo. As opposed to preparing the entire memo all at once, the student will develop the memo in sections as follows: Executive Summary (while this appears first in a policy memo, its exact contents will change as the student progresses through this course); Argument, Counter Arguments, Analysis, Recommendations.

Following instructions in the online course, drafts will be submitted to the instructor for review and comments; the student will revise project drafts and return. This process will be repeated until the draft is accepted by the instructor. While there is no set number of pages for a policy memo, which can range from a page to a hundred pages, for the purposes of this program, 20-30 pages is the target. The specific task should dictate the length. The writer should use a direct, efficient style of writing that results in a "tight" memo that does not ramble or engage in needless repetition.

Upon successful completion of the program, students will be able to:

- Understand the policy process from formation to implementation;
- Create paradigm for analyzing public policy;
- Intensively engage with specific policy issues;
- Engage in sustained, disciplined research effort; and
- Develop competencies that they are likely to need as professionals in the public policy arena.

Curriculum and Instruction, Master of Education

The Master of Education (M.Ed.) in Curriculum and Instruction prepares professionals with educational responsibilities to advance as leaders and innovators. Those who complete the degree will develop a strong foundation for career-long growth as reflective practitioners with concern for equity and social justice. They will demonstrate growth as caring professionals who skillfully apply current theories and research to their pedagogical practice and will develop their capacities to lead in creating effective learning communities among diverse learners.

The M.Ed. satisfies the requirement that K-12 teachers complete a master's degree in the initial certificate content or related area in order to obtain professional certification. Students may be able to independently pursue certification after completion of the M.Ed.

It is important to note that the M.Ed. does not lead to New York State teacher certification. Teacher certification is possible through the college's Master of Arts in Teaching (M.A.T.) Program.

PROGRAM DELIVERY AND TUITION RATE

This master's program is delivered through online courses and is billed at the non-MBA rate.

ADMISSION

Admission to this program is selective. This program enrolls new students in the fall, spring, and summer terms.

APPLICATION

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

The graduate fall and spring terms are 15 weeks long, and the summer terms have some offerings for eight weeks and some for 15 weeks. The exact enrollment sequence should be planned between the student and the advisor as part of degree planning.

ELECTIVES AND TRANSFER CREDIT

Some students use electives to broaden their exposure to new areas of knowledge, while others use them to increase their skills or knowledge in a particular area. The information found in the Course Catalog will provide you with a description of electives offered through the School for Graduate Studies and those specific to the M.Ed. program.

After admission, students should discuss the possibility of transfer credit with their academic advisor. To request transfer credit, students complete the Transfer Credit Request Form available through the Quicklinks box of the Graduate Student Center on MySUNYEmpire (https://www.sunyempire.edu/mysunyempire/).

FINAL PROJECT

For the Final Project of the M.Ed. in Curriculum and Instruction degree, students will be required to take two courses: Research Design and Final Project Capstone. In the design course, students will choose between a curriculum project, a professional development project or a community-based project and develop the literature review. The literature review will then be utilized in the last course, the capstone, where the project is completed. Each of the courses will have an individual instructor who will be the sole grader for each. Enrollment in the Final Project Capstone depends on a B or better in Research Design.

For the final project in the M.Ed. in Curriculum and Instruction, students should follow APA guidelines and include the following components: An Introduction (Students will identify their topic and research question), A literature review/framework (Students will ground their topic in peer reviewed research), Project Design and Mapping (Students will explain their project content and design and map their project to relevant standards and/or community needs), and Assessment/Evaluation (Students will explain how they will know that their project is having an impact on students and/or the community).

Upon successful completion of the program, students will be able to:

- Compare and contrast various perspectives and applications of critical pedagogy;
- Collaborate in creating a process for reflection and action in a community of learners;
- Generate ideas for programs and policies that develop effective learning communities;
- Create a learning reform model that takes into account developments in policies, research, technology, employment, and culture;
- Develop learning activities that utilize new media to foster the development of theories and methods that impact creative expression and communication across modalities and genres;
- Develop strategies to effectively infuse social media into the work of communities of learning;
- Adapt instructional strategies in response to institutional and systemic changes while developing students' capacity to become change agents toward a more just and democratic society;
- Analyze and critique educational research studies including identifying components, methodologies, variables, theoretical frameworks, and ethical issues;
- Design a curricular or community-based project, based on researching best practices that can enhance P-20 learning; and
- Evaluate how the roles of educational researcher and reflective practitioner contribute to students' identities as educators.

Cybersecurity, Master of Science

The Empire State University Master of Science (M.S.) in Cybersecurity is a 30-33 credit, fully online program. This program offers students an in-depth understanding of technology, policy, and security measures that are necessary for information security implementations. Upon graduation, students will be prepared to design and execute sophisticated solutions that protect global systems and infrastructures.

The 30-credit pathway is designed to attract IT professionals in the Science, Technology, Engineering, and Mathematics (STEM) fields who wish to advance their career opportunities in the cybersecurity field. To prepare students new to the field, the program offers an alternate 33-credit pathway which includes an additional 3-credit IT essentials course taken in the first term. The 30-33 credit M.S. in Cybersecurity degree program may be completed within two years.

PROGRAM DELIVERY AND TUITION RATE

This program is delivered through online instruction, providing flexibility and convenience for busy individuals balancing work, family and personal obligations. Students may complete the program on a full-time or part-time schedule. Full-time enrollment for students who want to complete the program in 20 months requires enrolling in 9 credits per term and in 3 to 6 credits during the summer terms. Part-time students may complete the program in 24-27 months. The program is billed at the non-MBA rate.

ADMISSION

Admission to this program is selective. This program enrolls new students in the fall and spring terms. Applicants should possess a bachelor's degree with foundational knowledge or experience in computer programming and computer networks. A candidate who is found to be lacking the proper foundational knowledge may be accepted into the program, but will be required to take the additional 3-credit foundation course:

Code	Title	Credits
INFT 6122	Essentials of Information Technology	3

APPLICATION

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

Code	Title	Credits
Foundation Course		
INFT 6122	Essentials of Information Technology [1]	3
Core Courses		
INFT 6045	IT Security Policies & Procedure	3
INFT 6065	Ethical Hacking and Network Defense	3
INFT 6070	Cybersecurity Risk Analysis and Management	3
INFT 6132	Network Administration	3
INFT 6142	Computer Systems Security	3
INFT 6147	Enterprise Information Security Management	3
INFT 6157	Data and Application Security	3
Elective 1		3
Elective 2		3
Capstone Course		
INFT 7005	Cyber Security Integration Strategies	3
	Total Credits 30-33 [1]	

[1] *Applicants must demonstrate foundation knowledge in computer programming and computer networks. Applicants who are found to be lacking this foundational knowledge must take INFT 6122.*

Upon successful completion of this program, students will be able to:

- Disciplinary Knowledge: Demonstrate knowledge and understanding of the policies and stakeholders and to secure a computer-based system, process, or program to meet business needs.
- Professional Decision Making: Analyze and resolve security issues in networks and computer systems to secure an IT infrastructure. Also, design, develop, test and evaluate secure software.
- Master of Methods and Tools: Apply current techniques, skills, and tools necessary for cyber defense within an organization.
- Capacity for Innovation and Collaboration: Develop policies and procedures to manage enterprise security risks. Analyze the local and global impact of computing on individuals, organizations, and society.
- Ethics and IT Compliance: Describe professional, ethical, legal, security, and social issues and responsibilities related to computing.

Educational Leadership and Change, Educational Doctorate

The 54-credit Educational Doctorate (Ed.D.) in Educational Leadership and Change is designed to prepare mid--career practicing professionals to hold leadership positions in higher education, where graduates serve as change agents. The Educational Leadership and Change program uses a scholar-practitioner model, which starts with the assumption of self-directed, collaborative learning among researchers, practitioners, educators, and students to produce scholar practitioners. Scholar-practitioners apply their scholarship to practice being able to develop and create new knowledge which informs their work and the work of others (Shapiro, 2003).

Learning in a community of practice through cohorts is one of the central tenets of this program. It is facilitated through face-to-face and online interaction among students and faculty. Four residencies are held in total: a virtual residency at the start of the first year, followed by three two-to-three day residencies in person in May/June. These face-to-face meetings are held in Saratoga Springs and encompass workshops and course meetings. Each cohort constructs its community of practice throughout the program, learning together in embodied and integrated ways, and is supported by an innovative programmatic e-learning space. A sense of shared commitment and responsibility is nurtured over time. This cohort provides an environment for this model of learning to occur. Students culminate their program with a directed research project based in their own site of practice or directed at issues in their field.

Program Delivery and Tuition Rate

Most of the Ed.D. program is delivered online asynchronously. In addition, the program is supported by four required cohort residencies which provide interpersonal experiences, and access to a community space that supplements the online course work.

The first cohort residency is typically held at the start of the first term, followed by a short in-person residency in May/June at the end of years one, two and three. Students should refer to the catalog calendar, course syllabi, and the Term Guide (https://banner.sunyempire.edu/StudentRegistrationSsb/ssb/term/termSelection/?mode=search) for exact dates, locations and times.

This program is billed at the non-MBA rate.

Admission

The audiences for this program are higher education professionals and faculty who are looking to advance into upper leadership positions in the higher education ecosystem. Applications for admission are reviewed using a holistic approach that takes into account the totality of an applicant's educational and professional accomplishments and potential for successful completion of the program and leadership in higher education. Applicants to the Ed.D. in ELC program are required to have an earned master's degree in a related area. At minimum, applicants should have coursework or significant related experience in History and Philosophy of Higher Education, and Economics and Finance of Higher Education. Following program admission, students have up to one academic year to complete any outstanding prerequisite courses (a maximum of two courses).

Please review full admission requirements and procedures found on the Admissions (p. 616) page of this catalog.

Program Curriculum

The Ed.D. in Educational Leadership and Change requires a total of 54 credit hours beyond the master's degree. The required prerequisite master's coursework in the areas recommended by the Council for the Advancement of Higher Education Programs, provide the foundation on which the Ed.D. builds to prepare mid-career professionals to be successful leaders in higher education.

Required Courses

The program begins with 12 credits of core coursework in the fundamental areas of leadership and change, 9 credits of research coursework, and 12 credits of advanced core coursework. Students then complete 6 credits of electives and the capstone sequence, which includes both a comprehensive portfolio assessment and a dissertation.

Code	Title	Credits

CAPSTONE COURSES		**15**
EDLC 8000	Professional Portfolio Seminar	
EDLC 8001	Advanced Research Methods	
EDLC 8002	Dissertation I	
EDLC 8003	Dissertation II	
EDLC 8004	Dissertation III	
Total Credits		**54**

Cross Registration and Transfer Credits

Students may transfer in or cross-register for no more than 6 credits toward the core, advanced core, research, or elective coursework. Students may not cross-register or transfer in credit toward capstone courses (i.e. EDLC 8000-8004). To be eligible for consideration, transfer credits must be:

- 7000-level or above
- from a regionally accredited college or university
- a final grade of B or better
- no more than seven years old at the time of the student's admission to the graduate program

Approval occurs in consultation with advisor after admission.

Suggested Enrollment Sequence

The table below outlines the typical half-time schedule sequencing. Supplementing this online coursework will be close mentorship, four short required residencies; one virtual and three face-to-face, and access to an online community space.

Course	Title	Credits

Dissertation

The Final Project of this Doctoral program is an applied dissertation which is:

- Research embedded in the student's professional context;
- Requires implementation process of an intervention or an action plan after conducting an extensive study of the topic using appropriate research designs;
- Designed to demonstrate the student's ability to use data/research to solve practical problems;
- Provides the opportunity to design new curricula, new policies, and/or new ways of introducing reform in their college or university; and

- Is an exercise whereby doctoral students demonstrate their ability to frame change as leaders and implement it using data to drive their professional efforts.

Students should be mindful of the six, non-course critical points of the program as described below and must successfully address the requirements at each point to progress.

Non-course Ed.D. Critical Points

Critical Point 1 - Year 1 Residencies
- First residency is held shortly after the start of the fall term and is a virtual meeting.
- Second residency is held shortly after the start of the summer term and is an in-person meeting.
- Attendance is required at both residencies.

Critical Point 2 - Year 2 Residency
- Third residency is held a few weeks after the start of the summer term.
- This is an in-person meeting and attendance is required.

Critical Point 3 - Professional Portfolio and IRB
- Need successful completion of EDLC 8000 and approval of Dissertation Prospectus & Portfolio form before enrolling in EDLC 8002
- FORM 1 = Dissertation Prospectus & Portfolio form - to be submitted after EDLC 8000.
- FORM 2 = Dissertation IRB Approval form - to be approved (if applicable) after EDLC 8000 with supervision of the Dissertation Chair.

Critical Point 4 - Dissertation Committee and Candidacy
- FORM 3 = Dissertation Committee form - to be approved at the beginning of EDLC 8001 as part of the course.
- FORM 4 = Dissertation Candidacy form - to be approved before enrolling in EDLC 8002.

Critical Point 5 - Final Residency
- Fourth residency is held a few weeks after the start of the summer term.
- This is an in-person meeting and attendance is required.

Critical Point 6 - Completion of Dissertation
- During last term of enrollment, student completes online application for graduation from the Ed.D. program.
- At the completion of EDLC 8004, student defends dissertation. Defense is an open event, typically two hours in length and may be held virtually or in-person.
- FORM 5 = Dissertation Completion form - to be approved if student passes defense.
- When all requirements are met as discussed with the doctoral committee, and any necessary revisions are addressed, student submits final dissertation for publication in library repository.[1]

Students should be in regular contact with their academic advisor and refer to the Ed.D. Student Handbook for guidance regarding the dissertation's specific policies and procedures. The handbook and all required forms can be found on MySUNYEmpire (https://my.sunyempire.edu) under the Graduate Student Center link.

[1] Graduation clearance also involves verification that the dissertation was submitted to and approved for publication in UMI/ProQuest.

Upon completion of this program, students will be able to:

- Effectively communicate in oral and written form to a variety of stakeholders (e.g. students, employees, accreditors, and scholars) in both professional and scholarly settings;
- Apply research and data analysis to make leadership decisions that guide an institution of higher education through the process of innovation and change;
- Translate theories and principles of higher education leadership, change management, and innovation to practice as a scholar-practitioner to make leadership decisions that guide an institution of higher education through the process of innovation and change;
- Overcome barriers to the implementation of strategic change in higher education institutions;
- Make ethical leadership and management decisions to complex problems, in ambiguous situations, with multiple stakeholders; and
- Lead an institution of higher education to become more socially just through policies and strategies.

Educational Technology and Learning Design, Master of Arts

The Master of Arts (M.A.) in Educational Technology and Learning Design is an interdisciplinary program that is designed for individuals from a variety of backgrounds, where faculty members and students engage in authentic learning activities using educational technologies. These technologies include tools that extend face-face or online learning experiences beyond the training or classroom environment with a matrix of tools that can make up personal and networked learning environments. These tools include means of networking and communication; interacting in immersive environments; engaging in simulations and games; sharing resources; consolidating images, audio and video content; and collaborating on projects.

This program is appropriate for current instructional designers or those interested in instructional design careers for the college, school or corporate or professional organization training environments. K-12 teachers seeking **professional certification** may also benefit from this program. Community College or other faculty interested in expanding their understanding of instructional technology and learning design engage in this program for increased specialization. There are also specialized options for artists and arts educators along with those interested in a Science, Math, Technology and Engineering focus. For a student, being part of this community of practice is to model the types of interactions and creative, problem-based activities made possible by using a range of educational technology tools.

Program Delivery and Tuition Rate

While most of this program is delivered online asynchronously, some courses may have a small number of synchronous (same-time) supplemental learning opportunities via webinars or virtual environments to help promote student community. Instructors will make an effort to schedule these activities at times that work for their students. In addition, due to the nature of some courses, students may be required to access or acquire additional software and/or hardware for some course activities. Students will be notified of additional requirements in a course's full syllabus. This program is billed at the non-MBA tuition rate.

Admission

Admission to the M.A. in Educational Technology and Learning Design is selective. This program enrolls new students in the fall and spring terms only.

Application

Please see the Graduate Admissions (https://catalog.sunyempire.edu/graduate/admission/) page of this catalog for a complete listing of materials required to complete a graduate application.

The M.A. in Educational Technology and Learning Design program offers a 30-credit professional-focused curriculum. Students will be required to take five core courses (15 credits), four elective courses in their area of concentration (12 credits), and one capstone course (3 credits). Students can choose to embed a certificate program for the electives or individualize the electives to support the capstone study.

Program Curriculum

Code	Title	Credits
Core Courses (5)		
EDET 6005	Learning with Emerging Technologies: Theory & Practice	3
EDET 6010	Media Literacies in Emerging Technologies	3
EDET 6015	Instructional Design for Online Learning Environments	3
EDET 6020	Issues and Ethics in the Digital Age	3
EDET 6025	Assessing Learning in Digital Environments	3
Concentration Electives (4)		12
Capstone		
EDET 7020	Capstone Project	3
Total Credits		**30**

Electives

Students can choose individualized electives, or they may embed one of the certificate programs below into their degree plan to satisfy its electives component. Degree program planning should begin before you enroll in electives.

- Advanced Certificate in Instructional Design and Emerging Technologies (p. 596)
- Advanced Certificate in Teaching and Training with Technology (p. 601)
- Advanced Certificate in STEM Education and Emerging Technologies (p. 600)
- Advanced Certificate in Emerging Media and Technology for the Arts (p. 592)

Students must apply to a certificate program separately.

Course Enrollment Sequence

The suggested course enrollment sequence for a part-time student beginning their program in the fall term is below.

Course	Title	Credits
First Year		
Fall		
EDET 6005	Learning with Emerging Technologies: Theory & Practice	3
EDET 6015	Instructional Design for Online Learning Environments	3
	Credits	**6**
Spring		
EDET 6010	Media Literacies in Emerging Technologies	3
EDET 6020	Issues and Ethics in the Digital Age	3
	Credits	**6**
Summer		
EDET 6025	Assessing Learning in Digital Environments	3
Elective 1		3
	Credits	**6**
Second Year		
Fall		
Elective 2		3
Elective 3		3
	Credits	**6**
Spring		
Elective 4		3
EDET 7020	Capstone Project	3
	Credits	**6**
	Total Credits	**30**

Degree Program Planning

To begin planning your degree program, think about your long- and short-range goals and your area of focus. Your academic advisor can assist you in thinking through these goals/interests and the ways in which they can be made into appropriate electives. If you are considering doctoral study,

you also should investigate the requirements of programs that interest you so that you can incorporate their requirements into your Master of Arts degree.

Degree program planning should begin before you enroll in electives.

Capstone

The last term of the program offers an opportunity for students to work collaboratively or individually on their capstone project. The capstone allows students to design a specific project, a small program, or a creative endeavor that would meet a clear need in their educational, community, or work environments.

Capstone projects must be completed and demonstrated using the instructor-approved student's choice of online or emerging technology(ies), and must have a well-articulated statement of need, rationale, literature review and project design strategies (including a description of formative and summative evaluation techniques to be employed).

Upon completion, the Capstone documentation must include a written and video reflective statement on the design process and on the results of evaluation components. Capstone projects may be made accessible through a resource repository, at the student's discretion, for the benefit of future students, thereby advancing knowledge in the field. Using a Creative Commons license is suggested. At the conclusion of their capstone, students present their projects at the Virtual Showcase.

The three credit capstone course is typically offered in the spring and fall.

In what ways do specific tools help us as learners demonstrate not only what we know, but our capacity to create, interact and collaborate across multiple settings? Understanding these new dynamics requires complex communicative understandings and collaborative skills.

Upon successful completion of this program, student should be able to:

- Consider the social, ethical and legal impacts of new technologies on our lives, individually and collectively.
- Explore the multiple, unfolding political and economic impacts of digital media as a transformative agent in the global civic and market arenas.
- Develop an understanding of how people learn in technology-mediated environments.
- Examine and evaluate learning that occurs in technology mediated environments, and the impact of digital tools, resources and learning design methods in these settings.
- Acquire the skills and capacity to identify, employ and evaluate technologically supported tools and learning design methodologies.
- Conduct original projects both individually and in collaborative faculty-student teams in order to expand knowledge in the field.

Finance, Master of Science

The Master of Science in Finance is a 36-credit, fully online program designed for students interested in developing and improving their professional competencies and skills in various finance related disciplines to increase their marketability. The program has a well-designed and rigorous curriculum with a focus on international perspectives and a strong commitment to the high ethical standards required in the finance field. The program provides students with state-of-the-art skills and the knowledge necessary to compete in an increasingly challenging business environment. Additionally, as an affiliated university program[1] of the (http://www.cfainstitute.org)CFA Institute (CFA) (https://www.cfainstitute.org/en/programs/cfa/charter/)®, a significant portion of the core curriculum, with appropriate electives, covers the Institute's Candidate Body of Knowledge (CBOK)®.

The program is ideal for those working or planning to work in the following areas:

- Commercial and retail banking
- Investment and insurance companies
- Security analysis, security trading and brokerage
- Corporate finance, venture capital, and private equity
- Corporate restructuring, merger and acquisition (M&A)
- Portfolio management and risk management
- Financial services and consulting
- Government financial auditors
- Financial information systems and data providers
- Financial data analysis

Program Design

This program is delivered through online instruction (asynchronous), providing flexibility and convenience for working professionals and adult learners. Students may complete the program on a full-time or part-time schedule. Full-time students may complete the program in 20 months if they enroll in 9 credits in the fall and spring terms and 3 to 6 credits during the summer terms. Part-time students may complete the program in 24-27 months.

Program Delivery and Tuition Rate

This master's program is delivered through online courses (asynchronous) and is billed at the non-MBA rate.

Course Materials Fee

The MS in Finance program requires access to online financial data. The School for Graduate Studies will provide access to this data via the London Stock Exchange Group (LSEG) Eikon web application for a fee, charged at the time of course registrations.

® The Candidate Body of Knowledge (CBOK) is a registered trademark owned by the Chartered Financial Analyst Institute (CFA).

[1] Completion of the MS in Finance program does not guarantee acceptance into or passage of any of CFA Institute's programs.

Admission

Admission to this program is selective. This program enrolls new students in the fall and spring terms. Applicants should possess a bachelor's degree in business or related field with the following prerequisites:

- 3 credits of financial accounting
- 3 – 6 credits of economics (micro or macro)
- 3 credits of statistics

Application

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

The MS in Finance program's curriculum consists of foundation courses, advanced core courses, electives, and the final capstone. Students must choose four elective courses to reflect their interests and to reinforce the individual focus of their degree, based on their chosen concentration (track). To satisfy this requirement, students may choose one of the three available concentrations below. Students can also incorporate advanced graduate certificates into their master's degree, without additional course work.[1]

Elective 1		3
	Credits	**6**
Second Year		
Fall		
Elective 2		3
Elective 3		3
	Credits	**6**
Spring		
Elective 4		3
FSMA 7020	Global Financial Strategy	3
	Credits	**6**
	Total Credits	**36**

Upon successful completion of the program, students will be able to:

- Disciplinary Knowledge: Students will be able to integrate core functional knowledge and quantitative methods in the areas of finance to facilitate sound financial decision-making processes;
- Critical Thinking and Problem Solving: Students will be able to integrate theory and practice to analyze financial problems through inference and evaluation;
- Strategic Thinking: Students will be able to demonstrate appropriate financial management skills to facilitate effective decision-making processes;
- Leadership: Students will be able to utilize the leadership capacity to be highly effective financial managers and leaders for financial decision-making;
- Ethical Reasoning: Students will be able to apply theory and tools necessary for sound ethical reasoning in finance;
- Global Understanding: Students will be able to understand the interdependencies in a fast-changing global financial environment;
- Managerial Communication: Students will be able to communicate effectively orally and in writing across a comprehensive range of financial contexts and with diverse stakeholders; and
- Teamwork: Students will be able to contribute collaboratively and effectively to the achievement of organizational financial goals in a team environment.

Healthcare Analytics, Master of Science

The Master of Science (M.S.) in Healthcare Analytics program is a 30-credit, online program that provides students with strategic approaches to healthcare decision-making within public and private institutions. These strategic approaches will be used to develop frameworks for solving analytical problems in the healthcare field. The tools and methods will also be used to make decisions on which data needs to be collected, what information systems can be effectively used to collect the data, and what analyses should be performed in order to inform healthcare decision-making.

PROGRAM DESIGN

The six core courses (18 credits) will enhance students' data analytics and technology skills. These core courses are supplemented by three specialized courses (9 credits), in which students will apply the knowledge and skills learned in the core courses to the healthcare industry. The experiential learning capstone course (3 credits) allows students to integrate their learning throughout the program and apply it in a real-world healthcare setting.

PROGRAM DELIVERY AND TUITION RATE

This program is delivered through online instruction, providing flexibility and convenience for working professionals and adult learners. Students may complete the program on a full-time or part-time schedule. It is billed at the non-MBA rate.

ADMISSION

Admission to this program is selective. This program enrolls new students in the fall and spring terms. To be considered for admission candidates should possess a bachelors degree and the following prerequisites or the equivalent of:

- statistics
- information technology

A candidate who has not completed these prerequisites may be accepted into the program but acceptance will be contingent upon completing the courses within the first year.

APPLICATION

Please see the **Graduate Admission** section of this catalog for a complete listing of materials required to complete a graduate application.

Code	Title	Credits
INFT 6015	Database Design and Management	3
APAN 6015	Data Models and Structured Analysis	3
APAN 6010	Computer Aided Multivariate Analysis	3
APAN 6020	Data Mining & Machine Learning for AI	3
MGMT 6095	E-Commerce Marketing Strategies	3
MGMT 6185	Quantitative Methods for Decision Making	3
PPOL 6020	Research Methods	3
HCLM 6015	Health Information Management and Informatics	3
HCLM 6065	High Performance Leadership	3
HCAN 7010	Healthcare Analytics Capstone	3
Total Credits		**30**

Upon successful completion of the program, students will be able to:

- Leadership: Evaluate large stores of data as part of database design to discover patterns and trends that go beyond simple analysis to new and industry leading insights;
- Critical Thinking Problem Solving: Apply analytic tools such as machine learning and artificial intelligence to critically evaluate applied research;
- Disciplinary Knowledge: Analyze descriptive and inferential statistics and interpret the computer-generated statistical results with data visualization in healthcare applications using programming languages such as R and Python;
- Ethical Reasoning: Develop ethical decision-making competencies through statistical methods and the application of analytical tools such as Microsoft Power BI;
- Strategic Thinking: Strategize how the issues facing leaders and decision makers, in the healthcare field, can be resolved ethically;
- Managerial Communication: Analyze and present big data in order to make strategic decisions including resource allocation. Bridge the communication gap between technical and traditional healthcare managers; and
- Teamwork: Collaborate and contribute effectively to the achievement of organizational goals in a team environment.

Healthcare Leadership, Master of Business Administration

Today's challenging health care environment is intensifying the need for more effective leadership that combines strategic awareness, visionary prowess, operational expertise, and knowledge of health policy. The MBA in Healthcare Leadership (MBA-HCL) is a 42 credit online program, designed to enhance students' analytical, leadership, communication and problem solving skills while becoming proficient in the theory and practice of effective management of health care organizations. The program is ideal for:

- Healthcare executives and senior managers who seek hospital leadership positions
- Senior managers in health care fields, such as health insurance, pharmaceuticals, HMOs, and medical supply seeking to advance their knowledge and competencies
- Healthcare professionals and providers, for example, physicians, nurses, pharmacists, social workers, who aspire to leadership positions
- Allied health professionals, for example, rehabilitation therapists, imaging specialists, nutritionists, and public health specialists who seek leadership development
- Members of boards of directors seeking advanced knowledge of governance and core leadership competencies
- Professionals in such areas as legal, regulatory, marketing, HR, finance, IT, risk management, informatics, and patient relations who wish to contribute more fully to their organization's vision, learn about the relationship of health policy to their role, and gain skills for advancement

Assessment

Once admitted to the MBA program, you will have an opportunity to generate up to 9 credits through independent direct assessment (IDA)

exams. The IDAs allow you to demonstrate prior learning, academic and professional knowledge, and competence associated with three courses: Healthcare Economics, Healthcare Finance, and Health Information Management and Informatics. Information regarding the topics covered in each IDA, along with suggestions about how to prepare for the IDA exams, are provided. Faculty members with subject matter expertise evaluate student performance on the IDAs. Students who wish to take these exams must take them in the first term of their program. Since the exams are only offered in the fall and spring terms, students starting their program in the summer term will not have an opportunity to take them until the following fall and should plan accordingly.

Transfer Credit

After admission, students should discuss the possibility of transfer credit with their academic advisor. To request transfer credit, students complete the Transfer Credit Request Form available through the Quicklinks box of the Graduate Student Center on MySUNYEmpire (https://my.sunyempire.edu).

Program Delivery and Tuition Rate

This master's program is delivered through online courses and is billed at the MBA rate.

Admission

Admission to this program is selective. This program enrolls new students in the fall, spring, and summer terms. Applicants should possess a bachelor's degree. The preferred professional background includes 2-4 years of experience in a managerial or clinical capacity in a health care environment or relevant experience in a related organizational setting.

PREREQUISITES

Any or all of the following prerequisites will be waived if the student has taken an undergraduate course in the area or has had professional experience in the area:

- accounting (3 credits)
- microeconomics (3 credits)
- statistics (3 credits)

Application

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

The MBA in Healthcare Leadership consists of six core courses (18 credits), six elective courses (18 credits) based on student interest and which reinforce the individualized focus of the degree, and two capstone courses (6 credits) culminating in a final project.

Code	Title	Credits
Core Courses		**18**
HCLM 6005	Mastering Leadership in Healthcare Organizations	
HCLM 6010	Analysis of Healthcare Markets & Health Policy	
HCLM 6015	Health Information Management and Informatics	
HCLM 6020	Healthcare Economics	
HCLM 6025	Healthcare Financial Management	
HCLM 6030	Quantitative Methods & Healthcare Operations Management	
Elective Courses (six)		**18**
Capstone Courses		**6**
HCLM 7010	Evidence-based Decision Making in Healthcare Organizations	
HCLM 7015	Strategic Executive Leadership for Healthcare Organizations	
Total Credits		**42**

Enrollment Sequence

Students have flexibility in pacing through the program. The following is a suggested enrollment sequence[1]:

Course	Title	Credits
First Year		
Fall		
HCLM 6005	Mastering Leadership in Healthcare Organizations	3
HCLM 6010	Analysis of Healthcare Markets & Health Policy	3
	Credits	**6**
Spring		
HCLM 6015	Health Information Management and Informatics	3
HCLM 6020	Healthcare Economics	3
	Credits	**6**
Summer		
HCLM 6025	Healthcare Financial Management	3
HCLM 6030	Quantitative Methods & Healthcare Operations Management	3
	Credits	**6**
Second Year		
Fall		
Elective 1		3
Elective 2		3
Elective 3		3
	Credits	**9**
Spring		
HCLM 7010	Evidence-based Decision Making in Healthcare Organizations	3
Elective 4		3
	Credits	**6**
Summer		
Elective 5		3
Elective 6		3
	Credits	**6**
Third Year		
Fall		
HCLM 7015	Strategic Executive Leadership for Healthcare Organizations	3
	Credits	**3**
	Total Credits	**42**

Electives

Some students use electives to broaden their exposure to new areas of knowledge, while others use them to increase their skills or knowledge in a particular area. The term registration information will provide you with a listing and description of electives offered through the School for Graduate Studies and those specific to the MBA-HCL program. Electives also are offered during the summer term. Sample electives include:

Code	Title	Credits
HCLM 6023	Health Care Delivery & Reimbursement Systems	3
HCLM 6026	Comparative Health Care Systems	3

HCLM 6035	Healthcare Accounting	3
HCLM 6040	Competencies for Healthcare Ethics	3
HCLM 6045	Case Studies in Bioethics	3
HCLM 6050	Healthcare Legal & Regulatory Affairs	3
HCLM 6055	Healthcare Marketing Services	3
HCLM 6060	Healthcare Quality Control & Compliance Risk Management	3
HCLM 6065	High Performance Leadership	3
HCLM 6070	Human Resources Competencies in Healthcare	3
HCLM 6075	Managing Healthcare Systems	3
HCLM 6080	Health Policy & Management	3
HCLM 6085	Governance & Trusteeship	3
HCLM 7005	Healthcare Strategic Communication	3

[1] Students have the opportunity to assess out of 3 of the first courses of the program (HCLM-6015, HCLM-6020 and HCLM-6025) through independent direct assessment (IDA) exams. These exams must be taken in the first term of a student's program (fall or spring).

Upon successful completion of the program, students will be able to:

- Disciplinary Knowledge: Students will be able to integrate core functional knowledge to facilitate sound managerial decision-making;
- Critical Thinking and Problem Solving: Students will be able to integrate theory and practice to analyze business problems through inference and evaluation;
- Strategic Thinking: Students will be able to use evidence-based practices to facilitate effective strategic decision-making processes;
- Leadership: Students will be able to manage organizational processes and transformational change effectively;
- Ethical Reasoning: Students will be able to apply theory and tools necessary for sound ethical reasoning;
- Understanding the Healthcare Ecosystem: Students will be able to integrate the needs of stakeholders, perspectives, trends, and developments that influence the direction of the industry;
- Managerial Communication: Students will be able to communicate effectively orally and in writing across managerial healthcare contexts and with diverse stakeholders; and
- Teamwork: Students will be able to contribute effectively to the achievement of organizational goals in a team environment.

Higher Education, Master of Arts

The Master of Arts (M.A.) in Higher Education is a 30-credit degree program designed to enhance students' and professionals' contributions to higher education, preparing them for a broad range of administrative roles in this growth area as well as to conduct research related to their work. Many of our students are working professionals in higher education, faculty in community colleges looking for advancement, and others are exploring student success.

This program is flexible, offering part-time study in five semesters. This program provides contemporary perspectives on careers, policies, administration, history, organization, social justice and educational equality, data-based decision making and teaching in post-secondary education. The final project is an opportunity for either a practicum or a professional project directly related to participant's area of interest.

Prior Learning Assessment
For students with more extensive applied experience or study in an area related to adult learning, the program allows for up to 12 credits of evaluated learning through prior learning assessment and/or transfer credit. The American Council of Education has evaluated some credit sources from organizational or military learning at the graduate level that, when applicable, can be used in a student's program. In addition, in consultation with program faculty, students can submit learning essays to be considered for graduate level prior learning assessment and credit toward their degree.

PROGRAM DELIVERY AND TUITION RATE
While most of this program is delivered online asynchronously, some courses may have a small number of synchronous supplemental learning opportunities via webinars or virtual environments. Instructors will make an effort to schedule these activities at times that work for their students. In addition, due to the nature of some courses, students may be required to access or acquire additional software and/or hardware for some course activities. Students will be notified of additional requirements in a course's full syllabus. This program is billed at the non-MBA rate.

ADMISSION

Admission to this program is selective. This program enrolls new students in the fall, spring, and summer terms. Applicants should possess a bachelor's degree.

APPLICATION

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

PROGRAM CURRICULUM

M.A. in Higher Education Curriculum

Code	Title	Credits
ADLC 6020	Approaches to Critical Inquiry & Research	3
EDHE 6031	Administration and Leadership in Higher Education	3
EDHE 6032	Economics and Finance in Higher Education	3
EDHE 6034	History and Philosophy of Higher Education	3
EDHE 6080	Fostering Student Success and Equity in Higher Education	3
Select two of the following courses:		**6**
ADLC 6005	Rethinking Experience & Learning in Adulthood	
or ADLC 6010	Learning & Development in Contemporary Adulthood	
or ADLC 6015	Strategies for Effective Adult Learning	
Higher Education Electives (select two):		**6**
EDHE 6030	Issues in Contemporary Higher Education	
or EDHE 6036	Student Affairs Theory and Practice	
or EDHE 6037	Identity, Intersectionality and College Student Development	
or ADLC 6055	Organizational Development and Change	
or ADLC 6070	Adult Learners in the Community College	
or ADLC 6105	Career Skills Management: Training and Development	
or EDHE 6085	Comparative & International Education	
or EDLC 7014	Immigration and Higher Education	
or EDLC 7013	Data Informed Decision Making in Higher Education	
ADLC 7015	Final Project	3
Total Credits		**30**

Upon successful completion of the program, students will be able to:

- Engage in the public discourse of adult and higher education as writers, speakers, and producers of digital information, the ability to explore adult learning through multiple conceptual lenses, the ability to define problems, ask questions, and find appropriate methods of problem-solving and research in their scholarly inquiry and professional practice;
- Demonstrate the skills of critical analysis, synthesis and evaluation and of informed and effective communication;
- Enhance practices as critically reflective practitioners, developing habits of reflective practice and recursive learning, habits of intentional and ethical practice, awareness of themselves as social actors in their capacities of learners and educators;
- Describe skills in designing, developing, and deploying effective and innovative learning environments and learner supports for adult and higher education audiences with attention to learner needs, respect for the diversity of social and personal experience, and effective program administration;
- Recognize and address the ways in which disparate knowledge claims and discourses intersect with power relationships, including building an awareness of multiple paradigms concerning participation, leadership, service, advocacy, and social and intellectual critique; and
- Demonstrate abilities to work collaboratively with others with differing perspectives and ways of knowing, will gain an appreciation for multiple sources of learning and develop critical perspectives on adult education, including both academic and field-based practices.

Information Technology, Master of Science

The Master of Science (M.S.) in Information Technology program is designed to attract IT professionals in the Science, Technology, Engineering and Mathematics (STEM) fields who wish to advance their career opportunities in information technology industries. (An additional 3 credits may be required for applicants who are unable to demonstrate competencies in the foundation areas.) The mission of the MSIT program is to equip students with the advanced knowledge, skills and IT competencies required to be effective leaders in diverse, multi-disciplinary IT enterprises. This MSIT program offers an in-depth

understanding of information technology and cybersecurity, as well as social, legal, and managerial issues in the field.

The program is ideal for those working or planning to work in the following areas:

- Information Security
- Web Technology
- Digital Forensics
- Web Programming
- Client and Server Site Technology
- Cybersecurity

Program Delivery and Tuition Rate

This program is delivered through online instruction, providing flexibility and convenience for busy individuals balancing work, family and personal obligations. Students may complete the program on a full-time or part-time schedule. Full-time enrollment for students who want to complete the program in 20 months requires enrolling in 9 credits per term and in 3 to 6 credits during the summer terms. Part-time students may complete the program in 24-27 months. The program is billed at the non-MBA rate.

Admission

Admission to this program is selective. This program enrolls new students in the fall, spring, and summer terms. Applicants should possess a bachelor's degree with foundational knowledge or experience in computer programming and computer networks. A candidate who is found to be lacking the proper foundational knowledge may be accepted into the program, but will be required to take the additional 3-credit MSIT foundation course:

Code	Title	Credits
INFT 6122	Essentials of Information Technology	3

Application

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

The MSIT program has seven core courses which emphasize fundamental information technology skills in computer security and web technology, two electives and a project based capstone that includes hands-on, real-world practices in the student's field of interest.

Code	Title	Credits
Foundation Course		
INFT 6122	Essentials of Information Technology [1]	3
Core Courses		
INFT 6127	Information Technology in Organizations	3
INFT 6132	Network Administration	3
INFT 6137	Enterprise Systems Architecture	3
INFT 6142	Computer Systems Security	3
INFT 6045	IT Security Policies & Procedure	3
INFT 6015	Database Design and Management	3
INFT 6040	Advanced Internet Application Development	3
Elective 1		3
Elective 2		3
INFT 7010	Information Integration Strategies	3
Total Credits 30-33 [1]		

[1] Applicants to the MSIT program who cannot demonstrate foundation knowledge in computer programming and computer networks will be required to take the additional 3-credit course INFT 6122 Essentials of Information Technology. This will result in a 33-credit degree.

Upon successful completion of the program, students will be able to:

- Disciplinary Knowledge: Identify and apply IT principles, method and frameworks for the business enterprise and the relevant technology;
- Professional Decision Making: Strategic analysis, design, implement and evaluation of computer technologies, systems, processes, components and/or programs appropriate to a defined task, while analyzing the impact on existing systems and potential future applications;
- Master of Methods and Tools: Critically evaluate relevant technical and business information and emerging industry trends from multiple sources;
- Capacity for Innovation and Collaboration: Implement effective IT solutions that demonstrates appropriate consideration of alternative computer technologies, including networks, servers, programming languages and database systems; Develop, analyze and defend solutions to networking and security problems that demonstrate an appropriate balance among security needs, business concerns, confidentiality, availability and system integrity; and
- Ethics and IT Compliance: Acknowledge and adhere to the Law and Policy Regulation, standards of ethics, including relevant industry and organizational codes of conduct, in the design of technology.

Liberal Studies, Master of Arts

The distinctive feature of the 30-credit Master of Arts (M.A.) in Liberal Studies is that students have the freedom to design a highly individualized, interdisciplinary program in their own focused area of interest. Students can pursue an intellectual or creative interest and develop theoretical understandings by approaching that interest from a variety of disciplinary perspectives. The disciplines must be drawn primarily from the liberal arts (e.g., the humanities, social sciences and/or natural sciences).

Every M.A. in Liberal Studies degree program is unique. Nonetheless, there are some common approaches to designing programs.

- *The Creative Approach* – Students may have a large project in mind and already have some professional experience in a particular creative field. Students may have an idea for a fiction or nonfiction book, or an artistic work that can be produced, performed or exhibited. This program can help students achieve their goal. Students will co-design a set of relevant electives with the guidance of faculty who will help you actualize your culminating creative project. Examples of past projects include a historical fiction novella, exhibit of original works of visual art, and a stage script with performance of a one-act play.
- *The Thematic Approach* – Students may have a topic of special interest. Students may be interested in the lives of college students, Elizabethan England, the study of leisure or the family in contemporary society. Each of the electives can address a different aspect of the theme. For example, students can take electives on the psychology, history, art, biology, philosophy or politics of their theme. The final project for the program can be an in-depth look at some aspect of the theme. Students may not have a definite idea for a final project when they begin the program, but it can emerge as electives are completed.
- *The Professional Approach* – This program is fundamentally liberal and interdisciplinary in nature, rather than professional and applied. Yet some students find that liberal studies can meet their professional needs. There are many graduate programs that will help develop professional skills (e.g., M.Ed., M.B.A., M.S.W.). The M.A. in Liberal Studies is different; it allows you to view a field from a broad social and historical perspective, to explore alternative perspectives, and to draw upon a variety of disciplines to enrich professional practice. Often a final project will be of an applied nature: a practicum on commercial theater, development of an online program or a plan for a holistic health center, to give some examples.

Program Delivery and Tuition Rate

This master's program is delivered through online courses and synchronous, virtual/online meetings, known as residencies, which are attached to specific courses and are a fundamental part of the program. The program is billed at the non-MBA rate.

Prior to graduation, M.A. Liberal Studies students may be considered for the National Honors Society of the Association of Graduate Liberal Studies Programs (http://www.aglsp.org/national-honor-society/). Contact the Liberal Studies program coordinator or advisor for more information.

Admission

Admission to this program is selective. This program enrolls new students in the fall and spring terms. Applicants should possess a bachelor's degree.

Application

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

The M.A. in Liberal Studies program offers four core courses (12 credits), five electives (15 credits), and one capstone (3 credits).

Code	Title	Credits
FOUNDATION AND CORE COURSES		
LACS 6005	Foundations of Liberal Studies [1]	3
LACS 6010	Interdisciplinary Learning Design [1]	3
LACS 6015	Exploring your Field: The Academic Literature Review	3
Models of Critical Inquiry (choose one): [1]		3
LACS 6020	Models of Critical Inquiry: Art Aesthetics & the Body	
LACS 6025	Models of Critical Inquiry: Landscapes of Learning	
LACS 6027	Models of Critical Inquiry: How We Know	
LACS 6030	Models of Critical Inquiry: Relationships to the Past - History & Culture	
LACS 6035	Models of Critical Inquiry: Science & Society	
ELECTIVE COURSES (5)		15
CAPSTONE		
LACS 7025	Capstone Project	3
Total Credits		**30**

[1] This course requires the attendance of a synchronous, virtual/online residency.

Electives

Students design and/or select their electives through a combination of individualized electives, scheduled electives, transfer credit or cross registration.

Individualized electives are those in which students work one-to-one with a faculty member in their field. These electives are designed during the process of planning the degree program in Perspectives on Interdisciplinary Study and focus on a specific area of inquiry. Students interact regularly with a course instructor through face-to-face meetings, the phone and/or email. These electives are an opportunity to delve deeply into a specific topic, to work closely with a faculty member, and to develop habits of close reading and in-depth analysis.

Scheduled electives are offered each semester primarily in online formats. Typically, scheduled electives are structured around a broad theme: creativity, concepts of time and space, the role of culture, gender and sexuality, multiculturalism, social change. Scheduled electives begin with shared readings and assignments. Each student then designs an individual project in a focused area relevant both to the general theme and the student's degree program.

Up to 9 *transfer credits* from previous graduate work can be included in the degree program. These credits must be directly relevant to the student's degree program. (Please see the Transfer Credit Policy located elsewhere in this catalog.)

Students are permitted to *cross register* for courses from another graduate program. This allows students to draw on local academic networks, engage with a local scholarly community, and access local facilities. These opportunities are often particularly important for the technical aspects of a student's degree program such as video production, photographic technique or lab science. (See the Cross Registration Policy located in the Policies and Procedures section of this catalog.)

Degree Program Planning

Since the nature of the M.A. in Liberal Studies program is both interdisciplinary and individualized, students will be given an opportunity to think deeply about how to design a program of study in their own focused area of interest. In the second term of the program, students will engage with their peers, advisor and Perspectives on Interdisciplinary Study instructor as they craft a unique sequence of electives that serve as a scaffold for anticipated culminating final project. Students have the freedom to design all of their electives or choose to mix in some existing scheduled electives (or certificate sequences).

Their academic advisor and Designing Your Degree: Interdisciplinary Study course instructor will have suggestions about the possible shape of the program, and useful research activities students may want to undertake as they explore and develop their degree program plan. By the end of this second-term course, students will have created a detailed degree program plan (with course titles, descriptions and sample readings), and a rationale essay in which they explain how the program is designed to reflect an interdisciplinary plan of study, and how it prepares students to complete an anticipated culminating final project.

Degree Program Plan Content Requirements

In making the final selection of the courses that will comprise their degree program, students must keep in mind a number of criteria set by the School for Graduate Studies for the M.A. in Liberal Studies program. In some cases, the criteria are rather broad and in other cases they are quite specific, but all are criteria upon which the degree program is ultimately judged. Thus, when students have completed a final version of their degree program, they must make sure it meets the following criteria.

- It must be interdisciplinary or multidisciplinary.
- It must be focused in the liberal arts and sciences.
- It must embody breadth and depth.
- It must be coherent.
- At least one proposed course must deal with the broad historical or theoretical background of your field of interest.
- It must contain no more than 9 credits of professional courses.
- It may include no more than 9 credits in a single discipline.
- It may include up to 9 credits of transfer coursework. (Please see the Transfer Credit Policy located elsewhere in this catalog.)
- It may contain no more than 15 credits of transfer and cross-registered credit combined. (Please see the Cross-registration Procedure located elsewhere in this catalog.)
- It should show that the proposed courses together represent a planned progression toward a final project.

- It should be capped by a 3 credit final project that is a significant piece of research in a focused topic within the liberal arts or a creative work of art.

If students are considering doctoral study, they should investigate the requirements of programs that interest them so that they can incorporate the requirements into the M.A. in Liberal Studies degree.

Note: Students may not enroll for more than 21 credits without an approved degree program in place.

Rationale Essay and Literature Review

Designing Your Degree: Interdisciplinary Study provides students with structure and support to design an individualized degree program and rationale essay. Typically taken before or concurrently, students take a study in which they conduct deep research on an aspect of their topic of interest and complete a literature review in Exploring Your Field: The Academic Literature Review. The process and the document complement the design activities in Designing Your Degree: Interdisciplinary Study. The final written work from both studies make up the portfolio of materials that are reviewed by a Degree Program Plan committee of faculty upon completion.

It is important to note that the rationale essay should reflect a level of writing and research that is appropriate to graduate-level study. In addition to being well written, the rationale essay should meet the following objectives.

- It must set a comprehensive framework for the degree program. What is the focus of the area of study? What is its context? Why is it important?
- It should explain the interdisciplinary nature of the program and show how these various courses fit together as an integrative whole.
- It should show where and how the historical and theoretical dimensions of the field of study are incorporated into the program.
- It should contain the reflections upon the contribution of the four required courses to the total degree program.
- It is expected to contain a specific discussion of the remaining courses, showing how they relate to one another, make sense in relation to the selected field of study, and prepare the student for their final project. This discussion is required for courses that may have transferred from other institutions as well as for those proposed to cross register for or enroll in at the college. Students should provide an explicit justification for transferring in, or cross registering for, courses at other institutions.
- The degree program and rationale must be accompanied by a literature review of one topic of central importance to your degree.
- Students should follow appropriate academic conventions in bibliography, documentation and citations.

Degree Plan Mechanics Requirements

- it must include a cover page, list all course titles and number of credits for the degree. The cover page is available through the Graduate Student Center found on the MySUNYEmpire (https://my.sunyempire.edu) portal;
- it must include a summary description of the purpose and intended content of each course including the core courses in the program, including several examples of relevant bibliography, fully cited;
- it must contain no more than 9 credits of professional or applied courses;
- it may include no more than 9 credits in a single discipline;

- it may include up to 9 credits of transfer coursework. (Please see the Transfer Credit Policy located elsewhere in this catalog.); and
- it may contain no more than 15 credits of transfer and cross-registered credit combined. (Please see the Cross Registration Policy located elsewhere in this catalog.)

Submitting the Degree Program, Rationale Essay and Literature Review

The final degree program plan must be electronically submitted on a degree program form available from the School for Graduate Studies Student Portal on MySUNYEmpire (https://my.sunyempire.edu) portal, signed by the academic advisor and submitted to the chair of liberal studies. Once the chair has reviewed the materials, they will be forwarded to the members of the Liberal Studies Degree Program Review Committee. This committee, comprised of members of the graduate faculty, convenes regularly to review proposed degree program materials (detailed degree plan, rationale essay and literature review). Each program and rationale essay is carefully considered and evaluated against the program and rationale criteria listed earlier. Several outcomes of a review are possible:

- The committee approves the program and rationale as is;
- The committee needs additional information before it can approve the program;
- The committee recommends changes that will not affect the basic design of the program;
- The committee approves the general design of the program but requires revisions to the rationale essay and/or the literature review; or
- The committee does not approve the program design and suggests revisions in the program and/or rationale essay.

Students will be notified, in writing, of the committee's decision within two weeks of their meeting.

Changing a Degree Program

If students want to make changes in their degree program after it has been formally approved, students must immediately consult with their academic advisor. After agreement upon the proposed changes, students should prepare a short letter explaining the changes and send it to their academic advisor for their approval and signature. Then the revised degree program will go through a similar process as with the original program: it is sent to the chair of liberal studies, who then forwards it to the Liberal Studies Degree Program Review Committee, which makes the final determination as to whether or not it should be approved. In practice, minor changes are easy to make. To ensure a prompt response, students should provide a brief and clear description of what they want to change and why. If students are making major changes in your program, however, they must submit a more detailed explanation of the proposed changes. Students may even be asked to rewrite the degree program plan and rationale essay and to submit it again for review and approval.

Research Methods

The research methods needed to successfully complete electives and write the final project will depend very much on the topic and on the various disciplines used. There are a number of scheduled electives that focus on a variety of research methods in the humanities and the social sciences. Whether the student includes one of these scheduled electives in the degree program or works with their academic advisor to create an individualized research elective, this study should be completed one or more terms before the final term in which the final project is completed.

The final project proposal, which should be completed and approved a semester before registering for the final project, is one of the outcomes of such an elective.

Final Project Guidelines

No matter the approach a student takes to designing their M.A. in Liberal Studies program, a final project is required as the culminating activity of the degree. Because of the individualized nature of the degree, the sequencing and approval process for the design of the final project has been developed into a set of guidelines for students to follow with the support of their academic advisor. The M.A. in Liberal Studies Final Project Guidelines have been published for student reference in the online Graduate Student Center section of the MySUNYEmpire (https://my.sunyempire.edu) portal. It is recommended that students familiarize themselves with the guidance provided in this document early on, so that a successful, individualized, degree plan can be developed and followed with the support of their advisor.

Upon successful completion of the program, students should demonstrate adequate skills of analysis, critical thinking and/or application of concepts related to each of the following program learning goals:

- Think critically and communicate ideas clearly to individuals and groups.
- Demonstrate skills of close/critical reading of academic literature across appropriate disciplines.
- Locate and utilize relevant academic literature.
- Craft coherent academic arguments, written in clear and well supported prose.
- Use accepted academic formatting styles properly and consistently.
- Demonstrate respect for principles of academic honesty.
- Conceptualize and use disciplinary and interdisciplinary frameworks appropriately.
- Effectively use different methodological approaches related to one's own stated interest/problem/issue/project.
- Apply concepts of paradigms and paradigm shifts.
- Identify and evaluate theory(ies) relevant to own scholarly inquiry and work.
- Demonstrate the ability to make and support a substantive knowledge claim in one's field.
- Focus and clarify own scholarly aims for a program of study.
- Craft a review of literature and identify your potential contribution to the scholarly conversation.
- Identify key thinkers, debates and theoretical frames in one's field.
- Position and articulate one's own scholarly or creative voice clearly within the broader intellectual discourse.
- Demonstrate competency in all methods used for one's project, including ethical procedures, if required.
- Demonstrate mastery of the topic of inquiry or creative medium of one's final project.

Marketing Analytics, Master of Science

The Master of Science (M.S.) in Marketing Analytics is a 30-credit, online program providing students with strategic approaches to marketing decision-making within public and private institutions. These strategic approaches to marketing will be used to develop frameworks for solving analytical problems, decisions on which data needs to be collected, what information systems can be effectively used to collect the data, and what analyses should be performed in order to inform institutional decision-making.

PROGRAM DESIGN

The six core courses (18 credits) will enhance students' data analytics and technology skills. These core courses are supplemented by three specialized courses (9 credits) in decision making and management, in which students will apply the knowledge and skills learned in the core courses to the marketing industry. The experiential learning capstone course (3 credits) allows students to integrate their learning throughout the program and apply it in a real-world marketing setting.

PROGRAM DELIVERY AND TUITION RATE

This program is delivered through online instruction, providing flexibility and convenience for working professionals and adult learners. Students may complete the program on a full-time or part-time schedule. It is billed at the non-MBA rate.

ADMISSION

Admission to this program is selective. This program enrolls new students in the fall and spring terms. To be considered for admission candidates should possess a bachelors degree and the following prerequisites or the equivalent of:

- statistics
- information technology

A candidate who has not completed these prerequisites may be accepted into the program but acceptance will be contingent upon completing the courses within the first year.

APPLICATION

Please see the **Graduate Admission** section of this catalog for a complete listing of materials required to complete a graduate application.

Code	Title	Credits
INFT 6015	Database Design and Management	3
APAN 6015	Data Models and Structured Analysis	3
APAN 6010	Computer Aided Multivariate Analysis	3
APAN 6020	Data Mining & Machine Learning for AI	3
MGMT 6095	E-Commerce Marketing Strategies	3
MGMT 6185	Quantitative Methods for Decision Making	3
MGMT 6155	Strategies for Marketing Research	3
MGMT 7005	Global Marketing Strategies	3
MGMT 7030	Marketing Analytics & Brand Management	3
MKAN 7010	Marketing Analytics Capstone	3
Total Credits		**30**

Upon successful completion of the program, students will be able to:

- Leadership: Evaluate large stores of data as part of database design to discover patterns and trends that go beyond simple analysis to new and industry leading insights;
- Problem Solving Critical Thinking: Apply analytic tools such as machine learning and artificial intelligence to critically evaluate applied research, and develop meaningful insights;
- Disciplinary Knowledge: Analyze descriptive and inferential statistics and interpret the computer-generated statistical results with data visualization in marketing applications using programming languages such as R and Python;
- Ethical Reasoning: Develop ethical decision-making competencies through statistical methods and the application of analytical tools such as Microsoft Power BI;
- Strategic Thinking: Strategize how the issues facing leaders and decision makers, in the marketing field, can be resolved ethically;
- Managerial Communication: Analyze and present big data in order to make strategic decisions including resource allocation. Bridge the communication gap between technical and traditional marketing managers; and
- Teamwork: Collaborate and contribute effectively to the achievement of organizational goals in a team environment.

Nursing Administration, Master of Science

Admission Requirements

M.S. in Nursing Administration program requires:

- A bachelor's degree in nursing (BSN) from a regionally accredited institution with a GPA of 3.0 or above.
- Possession of an active, unencumbered RN license with expiration date.
- A resume showing clear demonstration of clinical practice as a registered nurse (minimum 1 year).
- Applicant meets the M.S. in nursing application requirements (https://www.sunyempire.edu/admissions/nursing-admissions/nursing-application-checklist/).

Program Requirements

The M.S. in Nursing Administration program requires a total of 33 credits, including six core courses, four courses within the nursing administration specialty, and one graduate-level elective course. All courses are 3 credits each.

Code	Title	Credits
Core		
NURS 6005	Theoretical Foundations of Nursing Practice	3
NURS 6010	Professional Role Development & Ethics	3
NURS 6015	Nursing Research & Evidence Based Practice	3
NURS 6020	Contemporary Issues in Health Care	3
NURS 6025	Informatics & Healthcare Technology	3
NURS 6030	Population Health, Human Diversity, & Social Issues	3
Nursing Administration Specialty Courses		
NURS 6065	Healthcare Finance and Budgeting	3
NURS 6070	Organizational Theory & Human Resource Management	3

NURS 6075	Innovative Leadership in Healthcare Organizations	3
NURS 7010	Nursing Administration Capstone	3
Graduate-level Elective Requirement		**3**
Total Credits		**33**

By the end of the program, graduates will be able to:

- Integrate advanced principles and theories from nursing and related sciences to effect changes in health care practices and policies;
- Assume a leadership role on interprofessional teams and facilitate collaboration by using advanced communication skills;
- Critique strategies for ethical decision making in nursing research, education, and clinical practice management;
- Engage in lifelong learning activities that further professional role development (as a nurse educator or a nurse administrator);
- Synthesize evidence to inform decision making and evaluate outcomes in a variety of practice settings;
- Design person-centered and culturally responsive approaches to promote optimal health outcomes;
- Use informatics and health care technologies to enhance practice.

Nursing Education, Master of Science

Admission Requirements

M.S. in Nursing Education program requires:

- A bachelor's degree in nursing (BSN) from a regionally accredited institution with a GPA of 3.0 or above.
- Possession of an active, unencumbered RN license with expiration date.
- A resume showing clear demonstration of clinical practice as a registered nurse (minimum 1 year).
- Applicant meets the M.S. in nursing application requirements (https://www.sunyempire.edu/admissions/nursing-admissions/nursing-application-checklist/).

Program Requirements

The M.S. in Nursing Education program requires a total of 36 credits, including six core courses, three graduate-level courses, four courses within the nursing education specialty, and one graduate-level elective course. All courses are 3 credits each.

Code	Title	Credits
Core		
NURS 6005	Theoretical Foundations of Nursing Practice	3
NURS 6010	Professional Role Development & Ethics	3
NURS 6015	Nursing Research & Evidence Based Practice	3
NURS 6020	Contemporary Issues in Health Care	3
NURS 6025	Informatics & Healthcare Technology	3
NURS 6030	Population Health, Human Diversity, & Social Issues	3
Additional Graduate-Level Courses		
NURS 6080	Advanced Pathophysiology, Health and Physical Assessment, and Pharmacology	3
Nursing Education Specialty Courses		
NURS 6050	Curriculum & Program Development	3
NURS 6055	Instructional Design & Teaching with Technology	3
NURS 6060	Measurement Assessment & Evaluation of Learners & Programs	3
Graduate-level Elective Requirement		**3**
NURS 7005	Nursing Education Capstone	3
Total Credits		**36**

By the end of the program, graduates will be able to:

- Integrate advanced principles and theories from nursing and related sciences to effect changes in health care practices and policies;
- Assume a leadership role on interprofessional teams and facilitate collaboration by using advanced communication skills;
- Critique strategies for ethical decision making in nursing research, education, and clinical practice management;
- Engage in lifelong learning activities that further professional role development (as a nurse educator or a nurse administrator);
- Synthesize evidence to inform decision making and evaluate outcomes in a variety of practice settings;
- Design person-centered and culturally responsive approaches to promote optimal health outcomes;
- Use informatics and health care technologies to enhance practice.

Public Adminstration, Master of Public Administration

The Master of Public Administration (M.P.A.) in Public Administration at Empire State University is designed for civil servants and others who aspire to career advancement in public service or the not-for-profit service sector. Providing students with advanced skill sets that are necessary for supervisory and managerial positions, the M.P.A. will introduce students to the historical development of the field, as well as to recent trends in Public Administration. Through understanding the interplay of governmental interventions, political factors, and ethical implications, students will be able to analyze, evaluate, and formulate policies. Graduates of the program qualify for director, coordinator and management and leadership roles in public and not-for-profit organizations.

Program Delivery and Tuition Rate

This degree program is delivered through online courses and is billed at the non-MBA rate.

The Master of Public Administration program is selective. Students may enroll in the fall and spring terms.

Application

Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

Curriculum Requirements and Course Sequencing

Curriculum Requirements

Code	Title	Credits
PPOL 6007	Policy Process	3
PPOL 6010	History and Social Context of American Policy	3
PPOL 6015	Policy Implementation	3
PPOL 6020	Research Methods	3
PPOL 6030	Public Policy Analysis	3
PADM 6085	Public Administration	3
PADM 6170	Public Finance	3
PADM 6175	Public Sector Decision-making	3
PADM 6180	State & Local Government	3
PADM 7020	Final Project: Professional Project in Public Administration	3
Total Credits		**30**

Transfer Credit

After admission, students should discuss the possibility of transfer credit with their academic advisor. To request transfer credit, students complete the Transfer Request Form available through the Quicklinks box of the Graduate Student Center on the MySUNYEmpire (https://my.sunyempire.edu) portal.

Typically, 9 credits are acceptable for transfer subject to the Transfer Credit Policy (located elsewhere in this catalog).

Final Project

The final project represents the capstone experience in the MPA program. This shall take the form of a Policy Memorandum written by an administrator to a governing board or a government oversight authority. This culminating exercise is designed to support the personal and professional goals and objectives of students. Final project proposals are submitted to the course instructor for consultation and approval.

This assignment is a culminating requirement, which draws on and brings together the skills and concepts learned through the MPA program. It requires identification of an administrative issue or proposal facing a director, coordinator, or CEO. The assignment may be designed to simulate the working environment of public or not-for-profit administrators. The exercise draws on current public policy issues facing administrators, examination and interpretation of various sources of information relating to the issue including scholarly sources, analysis of possible approaches to the issue, and the student's recommendations regarding the issue.

Learning Activities and Course Goals

As the capstone project for the MPA program, the policy memo builds on prior coursework and provides the opportunity for the student to engage in a sustained examination of a major policy issue. The purpose is to reinforce the knowledge and skills required to analyze policy issues, develop defensible positions on policy issues, and clearly communicate a position taken by an administrative leader in the form of a policy memo, which is standard fare in the work of legislators, elected officials, agency heads and other organizational leaders involved in the formation of policy.

The policy memo includes the exploration of a critical issue facing the organization, the development of alternative approaches to the issue and a reasoned, evidence-based, defensible argument about how the issue should be addressed. It is important to keep in mind the distinction between a policy memo and other academic papers. Whereas academic papers build arguments by gradually introducing the least important ideas first, a policy memo uses an "inverted pyramid" of ideas, delivered as efficiently as possible, beginning with the most important. In a policy memo getting at the truth through the exploration and the interpretation of what is known about an issue is more important than developing new knowledge. As such, no thesis statement or theoretical framework underpins a policy memo.

Course goals:

- the ability to clearly identify a critical administrative issue;
- the ability to identify and access relevant information related to the problem;
- demonstration of a nuanced comprehension, evaluation and interpretation of the body of knowledge surrounding the issue;
- exhibition of a disciplined application of knowledge in the formulation of alternative, feasible approaches to the issue; and
- presentation, in tightly-constructed prose, of a well-reasoned defensible approach to the issue that draws on relevant concepts from previously completed coursework.

The student will engage in the relevant readings for this project and prepare drafts of the policy memo. As opposed to preparing the entire memo all at once, the student will develop the memo in sections as follows: Executive Summary (while this appears first in a policy memo,

its exact contents will change as the student progresses through this course); Argument, Counter Arguments, Analysis, Recommendations.

Following instructions in the online course, drafts will be submitted to the instructor for review and comments; the student will revise project drafts and return. This process will be repeated until the draft is accepted by the instructor. While there is no set number of pages for a policy memo, which can range from a page to a hundred pages, for the purposes of this program, 20-30 pages is the target. The specific task should dictate the length. The writer should use a direct, efficient style of writing that results in a "tight" memo that does not ramble or engage in needless repetition.

Upon successful completion of this program, students should be able to:

- Demonstrate knowledge of the historical development of the field and recent trends in public administration.
- Characterize leading theorists and their contributions to the field.
- Differentiate between the structures and functions of bureaucracy.
- Exhibit an understanding of government intervention in the economy.
- Characterize and differentiate taxation, government expenditures, revenue models, program reporting, and budgetary processes.
- Demonstrate a comprehension of federalism and intergovernmental relations.
- Characterize how policy programs create binding relationships between levels of government administration.
- Characterize and differentiate administrative decision-making models: Rational Choice, Incremental, Bargaining, Participative.
- Analyze policy and programs using analytical methods and tools used by administrators.
- Perform cost-benefit/cost effectiveness analysis on government of not-for-profit program.
- Explain political factors in policy formulation and implementation: lobbying, interest group politics, ideology, political pluralism, and elite model.
- Characterize the role and behavior of bureaucrats and end-users in policy implementation.
- Explain ethical implications and approaches to social and public policy issues.
- Articulate views and perspectives based on evidence and data.
- Create sound social science-based study projects. They will be able to articulate clear, concise, persuasive research methods with ethical considerations observed.
- Differentiate between policy formulation and implementation and categorize the range of actors from political appointees to top level administrative decision makes and to civil servants.
- Integrate theories and concepts studied over the course of the program by producing a summative project in the form of a policy memorandum by a program administrator to a governmental oversight committee.

Public History, Master of Arts

Public history is an interdisciplinary pursuit that unites members of the field in "an interest and commitment to making history relevant and useful in the public sphere."[1] Students of public history must learn to use and organize archives, to conceive and erect museum exhibitions, to use historical artifacts and texts as teaching tools within historical organizations, to conduct oral histories and thus co-create historical documents, and to work with various community and historical groups. The Master of Arts (M.A.) in Public History is designed to serve the needs of historical consultants, museum professionals, government historians, archivists, oral historians, cultural resource managers, curators, film and media producers, historical interpreters, historic preservationists, policy advisers, local historians, community activists, and teachers of both history and social studies.

Program Delivery and Tuition Rate

This degree program is delivered through online courses and a required internship and is billed at the non-MBA rate.

[1] "What is Public History? (http://ncph.org/cms/what-is-public-history/)" National Council on Public History

Admission

Admission to this program is selective. This program enrolls new students in the fall and spring terms. Applicants should possess a bachelor's degree.

Application

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

Curriculum

This 33-credit program is comprised of 21 credits of required courses, 6 credits of electives reflecting a student's area of focus, and 6 credits of capstone course work which includes an internship. Below is a listing of the program's required courses as well as examples of some available elective courses.

Program Courses

Code	Title	Credits
Required Courses		
PBHS 6040	Museums and Public History: Theory & Practices	3
PBHS 6025	Public History, Ethics & Professionalism	3
PBHS 6325	Archival Theory & Practice	3
PBHS 6105	Exhibition: Planning & Interpretation	3
PBHS 6215	Oral History: Theory & Methods	3
PBHS 6245	Preservation Material & History	3
PBHS 6240	Preservation Policy & Law	3
Electives (two)		**6**
Capstone Courses		
PBHS 7005	Public History Internship	3
PBHS 7030	Public History Final Project	3
Total Credits		**33**

Electives

To satisfy the 6-credit focus area requirement of the degree, students may choose from a wide variety of elective courses found in the Graduate Course Catalog, or unique courses developed in consultation with their advisor in the form of independent studies. Just two examples of focus areas and the catalog electives that might be chosen, are listed below. Students are not restricted to these examples and should work with their advisor to determine the area they will focus on and the appropriate electives.

Code	Title	Credits
Possible Electives in American History		
LACS 6122	19th Century US Culture & Society	3
LACS 6130	Gender Race & Nation	3
LACS 6160	Literature of New York	3
LACS 6190	American Modernism	3
Possible Electives in Material/Visual Culture		
LACS 6075	Cultural and Visual Studies	3
LACS 6185	American Material Culture	3
LACS 6145	Language & Culture	3

Final Project

Students in the Public History program will complete their degree with a final project. The specific design and focus of your final project will be developed in close consultation with your advisor. There are two main types of final project in the public history program; the traditional Thesis, and the Practice-based project.

Thesis

The thesis is a sustained piece of research-based analytic writing that examines an issue or topic related to your interest in public history. You could use this to expand your topical knowledge and expertise in a particular historical issue or topic. Students have written on such diverse topics as Italian immigration; gender in animated films; specific strikes or labor actions; and the history of particular places such as monuments, parks, or homes. You could also write a thesis that critically evaluates particular practices or issues in museum representation, the politics of particular monuments, or other public history practices. The thesis option is a particularly good option for students considering moving onto PhD work.

Practice-based Project

This approach varies widely depending on your interest and experience in hands-on public history. You might consider options like writing an historical play and staging a performance; mounting an exhibit; organizing a community history project; or creating a public online archive. The approach is very open and you will need to work closely with you advisor to plan and execute the project. As a final part of the project, you will be expected to write a concluding reflective essay that analyzes the practice-based project in terms of the methods, ethics, and best practices of public history that you have been studying over the course of your program. This practice-based approach works particularly well for students who are looking to work in public history directly after graduation from the program or are working to advance a current public history career.

There might be other kinds of final projects, but the key to all final projects is to develop them in close consultation with your advisor and work closely with your advisor as you complete them. What is important

to your successful completion is that you design a final project that is right for you. The final project is a significant piece of scholarship and public history work and one that should have personal meaning and provide a deep sense of accomplishment.

Upon completion of the M.A. in Public History program, students will be able to:

- Define and work within the field of public history;
- Differentiate between the various components of public history and demonstrate an ability to work within several of those areas;
- Assess various public history activities for their completeness and appropriateness;
- Identify public historians and public history institutions within their region, analyze the work those groups have done, and propose new local public history endeavors; and
- Discuss, in analytical and reflective terms, their work within a public history institution.

Social and Public Policy, Master of Arts

The Master of Arts (M.A.) in Social and Public Policy program draws students who are committed to social change who want to address some of the most pressing issues of our time. The program helps prepare graduates for advanced careers within government and nongovernmental settings, including the not-for-profit sector, involving public policy, advocacy, health care, human services, philanthropy, policy research and analysis, policy implementation, and community work.

Students can specialize in any of the following areas which include but are not limited to: human services, health care policy, poverty alleviation, education, restorative justice, child welfare, or aging.

Program Delivery and Tuition Rate

This master's program is delivered through online courses and is billed at the non-MBA rate.

Admission

Admission to this program is selective. This program enrolls new students in the fall and spring terms. Applicants must possess a bachelor's degree.

Application

Please see the Graduate Admissions (p. 616) pages of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

Students in the M.A. in Social and Public Policy program must take 5 core courses, 4 electives, and a capstone course. The required courses are as follows:

Code	Title	Credits
Core Courses		
PPOL 6007	Policy Process	3
PPOL 6010	History and Social Context of American Policy	3
PPOL 6015	Policy Implementation	3
CHOOSE:		
PPOL 6021	Methods for Policy Research (preferred course)	3
OR		
PPOL 6020	Research Methods (if you intend to pursue doctoral studies)	
PPOL 6030	Public Policy Analysis	3
Electives, 3cr (4)		*12*
Capstone Course		
PPOL 7010	Final Project - Professional Project: Social and Public Policy	3
Total Credits		**30**

Electives

Students must complete 12 credits of electives. Examples of electives include but are not limited to:

Code	Title	Credits
PPOL 6070	Race Class & Gender in US Public Policy	3
PPOL 6075	Family Policy	3
PPOL 6055	Human Services Policy	3
PPOL 6035	Advocacy in State & Community-level Government	3

Transfer Credit

After admission, students should discuss the possibility of transfer credit with their academic advisor. To request transfer credit, students complete the Transfer Credit Request Form available through the Quicklinks box of the Graduate Student Center on MySUNYEmpire (https://www.sunyempire.edu/mysunyempire/).

Typically, 9 credits are acceptable for transfer subject to the Transfer Credit Policy (located in the policy section of this catalog).

Final Project

The final project represents the capstone experience in the program. This shall take the form of a Policy Memorandum, which is designed to support students' professional and personal goals. This is a challenging task which draws on and brings together the skills and concepts learned through the master's program. It requires identification of a public policy issue, examination and interpretation of various sources of information relating to the issue including scholarly sources, analysis of possible approaches to the issue and the student's recommendations regarding the issue.

Learning Activities and Course Goals

As the capstone project for the master's program, the policy memo builds on prior coursework and provides the opportunity for the student to engage in a sustained examination of a major policy issue. The purpose is to reinforce the knowledge and skills required to analyze policy issues, develop defensible positions on policy issues, and clearly communicate a position in the form of a policy memo, which is standard fare in the work of legislators, elected officials, agency heads and other organizational leaders involved in the formation of policy.

The policy memo includes the exploration of a critical issue, the development of alternative approaches to the issue and a reasoned, evidence-based, defensible argument about how the issue should be addressed. It is important to keep in mind the distinction between a policy memo and other academic papers. Whereas academic papers build arguments by gradually introducing the least important ideas first, a policy memo uses an "inverted pyramid" of ideas, delivered as efficiently as possible, beginning with the most important. In a policy memo getting at the truth through the exploration and the interpretation of what is known about an issue is more important than developing new knowledge. As such, no thesis statement or theoretical framework underpins a policy memo.

Course goals:

- The ability to clearly identify a critical policy issue related to the student's program;
- The ability to identify and access relevant information related to the problem;
- Demonstration of a nuanced comprehension, evaluation and interpretation of the body of knowledge surrounding the issue;
- Exhibition of a disciplined application of knowledge in the formulation of alternative, feasible approaches to the issue; and
- Presentation, in tightly-constructed prose, of a well-reasoned defensible approach to the issue that draws on relevant concepts from previously completed coursework.

The student will engage in the relevant readings for this project and prepare drafts of the policy memo. As opposed to preparing the entire memo all at once, the student will develop the memo in sections as follows: Executive Summary (while this appears first in a policy memo, its exact contents will change as the student progresses through this course); Argument, Counter Arguments, Analysis, Recommendations.

Following instructions in the online course, drafts will be submitted to the instructor for review and comments; the student will revise project drafts and return. This process will be repeated until the draft is accepted by the instructor. While there is no set number of pages for a policy memo, which can range from a page to a hundred pages, for the purposes of this program, 20-30 pages is the target. The specific task should dictate the length. The writer should use a direct, efficient style of writing that results in a "tight" memo that does not ramble or engage in needless repetition.

Upon successful completion of the program, students will be able to:

- Understand the policy process from formation to implementation.
- Create a paradigm for analyzing public policy.
- Intensively engage with specific policy issues.
- Engage in sustained, disciplined research effort.
- Develop competencies that they are likely to need as professionals in the public policy arena.

Work and Labor Policy, Master of Arts

The Master of Arts (M.A.) Work and Labor Policy program is designed for unionists, human resource professionals, arbitrators, educators, journalists, political activists, lawyers, individuals involved in government or private industry, and anyone in the world of work and labor in the 21st century. While the program provides students with a background in American labor relations, labor history, labor law and collective bargaining, the focus is on current problems and policies generated by changes in the global economy, technology, the workforce and the workplace. This program can increase effectiveness in present positions or prepare students for new positions that deal in labor, government, industrial relations or human resources.

Students are encouraged to use elective courses and produce a final project to develop an area of specialty. Faculty will help students choose elective courses, as well as a final project focused on a policy memorandum.

Program Delivery and Tuition Rate
This master's program is delivered through online courses and is billed at the non-MBA rate.

Admission
Admission to this program is selective. This program enrolls new students in the fall and spring terms. Applicants must possess a bachelor's degree.

Application
Please see the Graduate Admission (p. 616) section of this catalog for a complete listing of materials required to complete a graduate application.

Program Curriculum

In order to complete this 30-credit program, students must take 4 core courses, 5 concentration courses, and the capstone course.

Code	Title	Credits
CORE COURSES		**12**
PPOL 6007	Policy Process	
LABR 6010	Work and Labor Studies	
LABR 6015	Labor Policy in America	
CHOOSE:		
PPOL 6021	Methods for Policy Research (preferred course)	
OR		
PPOL 6020	Research Methods (if you intend to pursue doctoral studies)	
CONCENTRATION COURSES		**15**

Students select one of two concentrations: Workforce Development or the General Concentration. Each concentration requires completion of 5, 3-credit courses. The General concentration allows a student to take scheduled or individualized electives to reflect their interests and to reinforce the individual focus of their degree.

For the General Concentration:

Choose 5 Electives (3cr each)		

For the Workforce Development Concentration:

CAED 6010	Principles of Community & Economic Development	
CAED 6070	Workforce Development Policy	
LABR 6030	Sociology of Work: Human Resources	
ADLC 6040	Learning & Education in the Workplace	
Choose 1 Elective (3cr)		
CAPSTONE		
LABR 7010	Final Project - Professional Project: Work and Labor Policy	3
Total Credits		**30**

Electives

Students are urged to use their electives to build a concentration in such areas as trade union administration, collective bargaining and dispute resolution, or human resource management. Examples of some electives include but are not limited to:

Code	Title	Credits
LABR 6050	Government, Work, & Labor	3
LABR 6070	Theories of the Labor Movement	3

Transfer Credit

After admission, students should discuss the possibility of transfer credit with their academic advisor. To request transfer credit, students complete the Transfer Credit Request Form available through the Quicklinks box of the Graduate Student Center on MySUNYEmpire (https://www.sunyempire.edu/mysunyempire/).

Typically, 9 credits are acceptable for transfer subject to the Transfer Credit Policy (located in the policy section of this catalog).

FInal Project

The final project represents the capstone experience in the program. This shall take the form of a Policy Memorandum, which is designed to support students' professional and personal goals. This is a challenging task which draws on and brings together the skills and concepts learned through the master's program. It requires identification of a public policy issue, examination and interpretation of various sources of information relating to the issue including scholarly sources, analysis of possible approaches to the issue and the student's recommendations regarding the issue.

Learning Activities and Course Goals
As the capstone project for the master's program, the policy memo builds on prior coursework and provides the opportunity for the student to engage in a sustained examination of a major policy issue. The purpose is to reinforce the knowledge and skills required to analyze policy issues, develop defensible positions on policy issues, and clearly communicate a position in the form of a policy memo, which is standard fare in the work of legislators, elected officials, agency heads and other organizational leaders involved in the formation of policy.

The policy memo includes the exploration of a critical issue, the development of alternative approaches to the issue and a reasoned, evidence-based, defensible argument about how the issue should be addressed. It is important to keep in mind the distinction between a policy memo and other academic papers. Whereas academic papers build arguments by gradually introducing the least important ideas first, a policy memo uses an "inverted pyramid" of ideas, delivered as efficiently as possible, beginning with the most important. In a policy memo getting at the truth through the exploration and the interpretation of what is known about an issue is more important than developing new knowledge.

As such, no thesis statement or theoretical framework underpins a policy memo.

Course goals:

- The ability to clearly identify a critical policy issue related to the student's program;
- The ability to identify and access relevant information related to the problem;
- Demonstration of a nuanced comprehension, evaluation and interpretation of the body of knowledge surrounding the issue;
- Exhibition of a disciplined application of knowledge in the formulation of alternative, feasible approaches to the issue; and
- Presentation, in tightly-constructed prose, of a well-reasoned defensible approach to the issue that draws on relevant concepts from previously completed coursework.

The student will engage in the relevant readings for this project and prepare drafts of the policy memo. As opposed to preparing the entire memo all at once, the student will develop the memo in sections as follows: Executive Summary (while this appears first in a policy memo, its exact contents will change as the student progresses through this course); Argument, Counter Arguments, Analysis, Recommendations.

Following instructions in the online course, drafts will be submitted to the instructor for review and comments; the student will revise project drafts and return. This process will be repeated until the draft is accepted by the instructor. While there is no set number of pages for a policy memo, which can range from a page to a hundred pages, for the purposes of this program, 20-30 pages is the target. The specific task should dictate the length. The writer should use a direct, efficient style of writing that results in a "tight" memo that does not ramble or engage in needless repetition.

Upon successful completion of the program, students will be able to:

- Understand the policy process from formation to implementation.
- Create a paradigm for analyzing public policy.
- Intensively engage with specific policy issues.
- Engage in sustained, disciplined research effort.
- Develop competencies that they are likely to need as professionals in the public policy arena.

ADVANCED CERTIFICATES AND MICROCREDENTIALS

American Studies, Advanced Certificate

This graduate certificate is a multi-disciplinary inquiry into the history, literature, art, politics, religion, sociology and culture of the United States from its origins to the present. This interdisciplinary approach to culture and society is valuable not only as part of a general liberal arts education but is of particular importance in our increasingly multicultural society. This certificate exposes students to the foundations of American history and culture with particular attention to issues of race, gender, class and the formation of American identity. Primary and secondary sources are taken from multimedia from historical archives to modern film to advertising to architectural objects to performance art. Students will further develop their graduate level analytic and writing abilities as well as their advanced research skills.

Program Delivery and Tuition Rate

This certificate is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses (LACS 6050 and LACS 6055) and some suggested electives, are listed in the table below. Students should work with their advisor to determine the appropriate electives and enrollment sequencing.

Code	Title	Credits
LACS 6050	Seminar in American Studies	3
LACS 6055	American Studies: Theories & Methods	3
One elective in American culture, arts and history such as:		3
LACS 6180	American History Culture & the Arts	
LACS 6190	American Modernism	
LACS 6090	Culture of the Jazz Age	
Plus one elective in American racial and ethnic diversity or American gender and sexuality such as:		3
LACS 6270	Race and Gender in US History since the Civil War	
LACS 6100	Diagnosing Desire: Gender & Medicine in US History	
LACS 6330	Women & Humor	
LACS 6195	American Women Writers	
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Articulate the theories and methods of American Studies as a discipline over time.
- Examine questions of American identity.
- Articulate issues of racial and ethnic diversity, class difference, and issues of gender and sexuality.
- Broaden cultural literacy in areas of popular culture, material and visual culture, the arts, media, literature, and history.
- Demonstrate graduate level research, writing and analytic abilities.

Child and Family Advocacy, Advanced Certificate

This graduate certificate will provide students with the opportunity to develop skills to better advocate for the families, children and communities they serve. Students will acquire greater knowledge of the regulatory environment and processes (both governmental and private) in the areas in which they work and will be better able to network within those environments. More specifically, students in this certificate should gain analytical skills regarding community and institutional organizations, historical and cultural differences in human development and of power relations and justice. They should be able to apply these skills in a "service-learning" environment, in addition to demonstrating critical thinking and graduate-level writing skills in the online-classroom environment.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 12-credit certificate in the fall or spring terms. The required courses and suggested enrollment sequence are as follows:

Code	Title	Credits
PPOL 6055	Human Services Policy	3
PPOL 6075	Family Policy	3
PPOL 6045	Advocacy for Children	3
PPOL 6035	Advocacy in State & Community-level Government	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Recognize and analyze elements of community and institutional organizations
- Recognize and analyze cultural, historical, and individual differences in human development
- Recognize and analyze differences in power relations, and justice and ethical positions
- Employ critical thinking skills in comparative social analysis
- Apply policy reform concepts in a "service learning" environment

Community Advocacy, Advanced Certificate

This advanced graduate certificate will provide students with the opportunity to develop skills to better advocate for the clients and communities they serve. Students will acquire greater knowledge of the regulatory environment and processes (both governmental and private) in the areas in which they work and will be better able to network within those environments on behalf of specific clients, or to effect change in the policies that impact their communities. More specifically, students in this certificate program should gain analytical skills regarding community and institutional organizations and historical and cultural differences in human development, and of power relations and justice. They should be able to apply these skills in a service-learning environment, in addition

to demonstrating critical thinking and graduate-level writing skills in the online-classroom environment.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested enrollment sequence are as follows:

Code	Title	Credits
PPOL 6055	Human Services Policy	3
PPOL 6070	Race Class & Gender in US Public Policy	3
PPOL 6100	Health, Aging and Social Policy	3
PPOL 6035	Advocacy in State & Community-level Government	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Recognize and analyze elements of community and institutional organizations
- Recognize and analyze cultural, historical, and individual differences in human development
- Recognize and analyze differences in power relations, and justice and ethical positions
- Employ critical thinking skills in comparative social analysis
- Apply policy reform concepts in a "service learning" environment

Cybersecurity, Advanced Certificate

The 12-credit Advanced Certificate in Cybersecurity introduces students to specialized knowledge important in information systems security. It is designed to serve the needs of individuals within the fields of information science and cybersecurity who are planning to advance their career opportunities in those fields. This certificate will give students the advanced skills needed to learn how to protect networks, secure electronic assets, prevent attacks, ensure the privacy of their customers, and build secure infrastructures.

Program Delivery and tuition rate

This certificate is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms.. The required courses and suggested enrollment sequence are as follows:

Suggested Enrollment Sequence

This suggested enrollment sequence is based on a typical, fall term start, part-time schedule. Student should work with their advisor to plan alternate enrollment.

Fall		Credits
INFT 6147	Enterprise Information Security Management	3
INFT 6157	Data and Application Security	3
	Credits	**6**
Spring		
INFT 6045	IT Security Policies & Procedure	3
INFT 6055	Digital Forensics	3
	Credits	**6**
	Total Credits	**12**

Upon successful completion of this program, students should be able to:

- Apply cybersecurity principles, method and frameworks for the business enterprise and the relevant technology.
- Implement cybersecurity solutions in compliance with security policies, standards, and regulations within the organization.
- Classify cybersecurity risks, policies, and audit results to be able to implement a cybersecurity policy in the organization.
- Implement cybersecurity solutions considering the limitations of the computer operating systems, networks, application software, and packages available.
- Discuss relevant laws, regulations, and frameworks as they apply to cybersecurity operations.
- Evaluate relevant technical and business solution from vairous requirements sources.

Emerging Media and Technology for the Arts, Advanced Certificate

A certificate in Emerging Media and Technology for the Arts will provide students with the opportunity to advance their liberal arts education while giving them digital and technological skills for a variety of careers including education, the arts and nonprofit organizations. Students will gain a greater knowledge in performance theory, media arts, educational gaming technologies and cultural contexts using digital tools, communication applications, and other interactive software. Students also may engage in a variety of design tasks that include digital media, human interaction, interface design, learning design and other creative processes/mediums. Students will finish with an interdisciplinary, interactive project that may link to their career focuses or pathways in educational or artistic fields.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the Non-MBA rate. This certificate accepts students for fall and spring terms only.

Students may begin this 12-credit certificate in the fall or spring terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
EDET 6055	Digital Media Arts & Technologies	3
EDET 6065	Emerging Media & the Arts: Theory & Practice	3
Elective		3
Choose 1 (3 credits):		3
EDET 6040	Performance Theory	
OR		
EDET 6045	Digital Games Simulations & Learning	
OR		
EDET 6130	Facilitating Learning with Emerging Technologies in Blended & Online Environments	
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Understand performance theory, media arts, educational gaming technologies and the socio-cultural contexts in which performance or events and installations are designed and delivered.
- Integrate emerging technologies for computer mediated communication.
- Apply interface design within a controlled, yet organic and improvisational creative or digital immersive practice.
- Utilize digital tools that address needs of diverse learners, especially those with disabilities.

Financial Management and Analysis, Advanced Certificate

This graduate certificate will provide individuals who possess professional experience (or academic background) in financial management or financial analysis, with an opportunity to increase their professional competencies and marketability. It is designed for those graduate students who:

- Are interested in mid-level and executive-level positions and seek to strengthen their knowledge of current business practices and theories.
- Wish to maintain currency of knowledge as they prepare for professional certification exams such as the Chartered Financial Analyst (CFA) exam.
- Have limited experience in their professional fields and wish to explore career possibilities in financial management and analysis.

Financial managers, as well as financial or business analysts, work in a broad variety of industries, and are responsible for executing effective decisions with the objective to maximize a company's financial condition and options. The certificate program will provide students with the skills and knowledge necessary to compete in an increasingly challenging business environment.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested enrollment sequence are as follows:

Code	Title	Credits
FSMA 6010	Quantitative Methods in Finance	3
MGMT 6016	Financial Management	3
FSMA 6020	Investment Analysis	3
FSMA 7015	Strategies of Financial Management	3
Total Credits		**12**

Course Materials Fee

Graduate Studies will provide access to required financial data for the Quantitative Methods in Finance course via the London Stock Exchange Group (LSEG) Eikon web application for a fee, charged at the time of course registrations.

Upon successful completion of this program, students should be able to:

- Analyze an organization's financial statements, and assess their value by making an adequate projection of its future earnings or expenses.
- Assess the performance of investments in both tangible and financial assets.
- Evaluate risk in portfolio decisions, project potential losses, and determine how to limit potential losses and volatility using diversification, hedging, and other investment decisions.
- Develop financial management mechanisms that minimize financial risk.
- Understand how new regulations, policies, and political and economic trends may impact the investments they are monitoring.
- Perform budget, cost, and credit analysis.
- Formulate strategic and long-term business plans.
- Understand and consider the ethical implications of financial decision making processes.

Global Brand Marketing, Advanced Certificate

This graduate certificate is designed to provide marketing professionals and managers skills in developing marketing programs for brand management. Specifically, this certificate provides students with critical tools to identify, analyze and solve the complex problems facing managers with respect to the buying behavior of global customers. Students will acquire the skills and knowledge necessary to analyze markets, create marketing programs with a global reach, and develop strategies to position the brand nationally and globally. Students may begin this 12-credit certificate in the fall, spring or summer terms.

The certificate is intended for professionals with management responsibilities in the following areas:

- Advertising and promotions
- Marketing
- Sales
- Public relations

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
MGMT 6040	High Performance Management	3
MGMT 6080	Consumer Behavior: A Global Marketing Perspective	3
MGMT 6155	Strategies for Marketing Research	3
MGMT 7005	Global Marketing Strategies	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Research, evaluate, disseminate market data findings
- Assess the internal and external factors that affect consumer behavior in the global business environment

- Utilize analytical marketing tools in the development of detailed global elements of a product
- Design and plan communications in relation to company's strategic policies and, in particular, its branding strategy

Global Finance and Investment, Advanced Certificate

The Advanced Certificate in Global Finance and Investment (GFI) is a five-course, 15-credit program.

Building on a foundation of international accounting, financial management, quantitative analysis and multinational corporate environments, students will gain the knowledge and skills required to make sound financial decisions at multinational corporations; learn about the impact of worldwide economic, social and political issues on international markets and financial management decisions in a global environment; and, understand the complexity of multi-currency financial markets.

Students will focus on the expanded roles of chief financial officers and financial managers in international business and global investments and will acquire skills that will support both experienced and aspiring financial managers in their efforts to progress with global expansion of their corporations. The certificate is highly specialized, and therefore addressed to a distinctive but very rapidly growing market niche demanding an advanced and distance-learning based educational opportunity to become proficient in international transactions.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 15-credit certificate in the fall or spring terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
FSMA 6080	International Accounting	3
MGMT 6065	Economics for Global Managers	3
MGMT 6075	International Financial Management	3
FSMA 6095	International Financial Law & Regulation	3
FSMA 7020	Global Financial Strategy	3
Total Credits		**15**

Upon successful completion of this program, students should be able to:

- Evaluate risk and funding strategies in international monetary relationships.
- Apply advanced international finance techniques relative to short- and long-term financing and investments.
- Assess the value of securities and methods for managing investment portfolios.
- Evaluate the forces of a global market on international investing.

Healthcare Management, Advanced Certificate

This graduate certificate provides health care professionals, as well as managers seeking to transition into the health care industry, with critical tools to identify, anticipate, analyze and solve the complex problems currently facing managers in health care organizations.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
MGMT 6040	High Performance Management	3
HCLM 6075	Managing Healthcare Systems	3
HCLM 6080	Health Policy & Management	3
HCLM 7005	Healthcare Strategic Communication	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Formulate healthcare system goals and key components of a well-functioning health system.
- Understand the allocation of healthcare resources and their relationship to the delivery of care.
- Identify critical abilities, knowledge areas, and skills required for successful healthcare leadership.
- Apply strategies and methods to inform decisions about the efficiency and allocation of resources to improve healthcare delivery.
- Identify concepts and practices of professional accountability, patients' rights, and code of conduct and relate these concepts to ethical challenges faced by HCOs.
- Identify key trends with significant impact on healthcare industry that may influence the management and outcomes of HCOs.
- Consider the roles and relationships among various functions in HCOs.
- Apply business skills through the translation of strategic goals into operational plans for effective management of HCOs.
- Display critical thinking that requires decision making and problem-solving communication.
- Identify effective communication practices that help improve the patient experience and overall quality of care.
- Promote interprofessional collaboration that improves patient and system outcomes.
- Recognize the significance of provider-patient communication to patient satisfaction scores, willingness to recommend, hospital ratings, and value-based reimbursement.

Heritage Preservation, Advanced Certificate

The Advanced Certificate in Heritage Preservation builds on the idea of public history as the collection, preservation and dissemination of information about the past, beyond the academic program and to the general public. Heritage preservation is dedicated to preserving, conserving and protecting buildings, objects, landscapes and other artifacts of historical significance. Preservationists and conservators (those who actively restore and rehabilitate historic artifacts) work in organizations like archives, libraries, museums, historical societies, public

policy organizations, schools, government organizations and parks, churches, media, and corporations.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and a required internship and is billed at the non-MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
PBHS 6040	Museums and Public History: Theory & Practices	3
PBHS 6245	Preservation Material & History	3
PBHS 6240	Preservation Policy & Law	3
PBHS 7005	Public History Internship	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Have awareness of cultural, technological, economic, geographic and political factors that shape the built environment; of building traditions of cultural groups and historic periods that define the Northeast and the Greater United States.
- Understand heritage preservation terms, concepts, theoretical and methodological foundations; of legal, regulatory, and economic concepts impacting preservation; of treatment standards for historic properties; of cultural resource management business and ethical principles.
- Conduct research using primary and secondary information resources; to survey, document, and communicate cultural artifacts, buildings, sites, districts, and cultural landscapes according to professional (Secretary of Interior) standards5; to interpret the meaning of built environments to a larger audience.

Human Resource Management, Advanced Certificate

Empire State University's Advanced Certificate in Human Resource Management will provide human resource professionals and managers with a strong foundation to advance within the evolving HR profession. Coursework encompasses staffing issues, selection issues, developing internal talent, succession planning, integrating staffing activities with diversity and equal employment opportunity initiatives, total rewards systems, compensation structure and systems, benefit programs, and compensation and benefits legislation. The graduate certificate is in complete alignment with the professional competencies outlined by the Society for Human Resources Management (SHRM). The SHRM competency model is globally accepted as the highest professional standard for the practice of human resources.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
MGMT 6040	High Performance Management	3
MGMT 6125	Managing Human Capital	3
MGMT 6135	Performance Management & Total Rewards	3
MGMT 7045	Strategic Human Resource Management	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Apply principles and strategies for managing and leveraging a diverse workforce for organizational success.
- Utilize positive leadership characteristics and strategies when facilitating change.
- Effectively communicate in a variety of formats including presentations, public speaking, technology, and written.
- Detect behaviors associated with conflict and identify ways in which to manage those situations in an organizational setting as to act as an agent of change.
- Understand the legal and ethical implications of rewarding individuals and teams.
- Understand how current laws and regulations affect businesses and their employees and be able to relay this information to employees and employers alike.
- Develop and implement strategic human resource and change management plans.
- Detect cultural differences and issues that may surround these differences.
- Initiate appropriate team building activities.

Information Technology Management, Advanced Certificate

This graduate certificate is designed to expose learners to a variety of strategic IT topics including designing integrated corporate systems, utilizing e-business technologies and information management, and aligning IT architecture with business strategy and needs. Students will explore the "bigger picture," gaining an appreciation of how information systems and business operating models work together to accomplish a common goal.

The certificate will enable students to:

- Learn to assess information needs at different levels and functional areas of an organization and to create IT architecture that aligns with the business operating model and strategy;
- Expand knowledge of goals, functions, infrastructure and operations of the IT domain in an organization;
- Build skills in the field of IT in various aspects of e-business technologies, systems' design and deployment, information gathering and management, and emerging technology models; and
- Apply analytical and technical tools in: 1) planning and integrating IT resources; 2) evaluating and managing risks and quality associated with IT functions and processes; and, 3) leading IT professionals within an organization.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. Required courses and suggested sequence are as follows:

Code	Title	Credits
MGMT 6030	Management Information Systems & Data Visualization	3
MGMT 6165	System Design & Information Management	3
MGMT 6095	E-Commerce Marketing Strategies	3
MGMT 7050	Strategic Information Technology Management	3
Total Credits		**12**

Program Prerequisites

Acceptance into the certificate program requires a foundational level of knowledge and/or experience in management information systems or the equivalent. Applicant transcripts will be reviewed for relevant coursework to determine eligibility prior to admission.

Upon successful completion of this program, students should be able to:

- Learn to assess information needs at different levels and functional areas of an organization and to create IT architecture that aligns with the business operating model and strategy.
- Expand knowledge of goals, functions, infrastructure, and operations of the IT domain in an organization.
- Build skills in the field of IT in various aspects of the e-business technologies, systems' design and deployment, information gathering and management, and emerging technology models.
- Apply analytical and technical tools in:(1) planning and integrating IT resources; (2) evaluating and managing risks and quality associated with IT functions and processes; and (3) leading IT professionals within an organization.

Innovation Management and Entrepreneurship, Advanced Certificate

This graduate certificate is designed for professionals who seek to extend their learning in the field of business management to supplement their current knowledge in sciences, mathematics and engineering in order to successfully cultivate their innovations in the commercial context. This certificate meets the needs of individuals who have a STEM (Science Technology, Engineering and Mathematics) background and who want to assume an entrepreneurial role in a start-up or established business. The focus of this certificate is on the management of innovation and applications in organizations.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
MGMT 6050	Operations and Supply Chain Management	3
MGMT 6110	Legal Aspects of Entrepreneurship	3
MGMT 6100	Innovation & Global Commercialization	3
MGMT 7035	Strategic Application of Innovation & Planning	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Critical Thinking and Problem Solving: Integrate theory and practice to analyze business problems through inference and evaluation.
- Strategic Thinking: Demonstrate knowledge of theory and application of qualitative and quantitative methods to facilitate problem solving.
- Leadership: Manage organizational processes and transformational change effectively.
- Ethical Reasoning: Apply theory and tools necessary for sound ethical reasoning.
- Managerial Communication: Communicate effectively orally and in writing across managerial contexts and with diverse stakeholders.

Instructional Design and Emerging Technologies, Advanced Certificate

This certificate prepares students for collaborative leadership positions in industry and education where instructional design expertise is needed. Students will develop project management and problem-solving skills, apply learning theory to their projects, integrate media and technology tools with online platforms, and ensure accessible content while reinforcing their abilities to communicate clearly and work productively in teams.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the non-MBA rate.

The certificate is comprised of 5 courses, each worth 3 credits, and can be completed in one to two academic terms. Students may begin this 15-credit certificate in the fall or spring terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
EDET 6015	Instructional Design for Online Learning Environments	3
EDET 6035	Advanced Instructional Design with Multimedia	3
EDET 6075	Accessible Design and Assistive Technologies	3
EDET 6080	Evaluation Assessment and Data Driven Learning Design	3
EDET 6135	Practicum in Learning & Emerging Technology	3
Total Credits		**15**

Upon successful completion of this program, students should be able to:

- Plan, design and evaluate effective learning opportunities in online and blended environments.
- Demonstrate leadership and collaborative management skills for developing instructional design projects.
- Apply instructional design principles to the design and implementation of online and blended projects in workplace settings of all sizes.
- Incorporate tools and processes that support and improve all individuals' ability to access learning opportunities in digital environments.
- Use data-driven decision-making in course design and revision, technology integration and implementation.
- Create instructional environments that apply contemporary theories of learning and design methods.

- Integrate the use of various appropriate emerging technologies to needs in online and blended environments.

Labor Studies, Advanced Certificate

The Advanced Certificate in Labor Studies is intended for people interested in learning about work and labor in historical and contemporary contexts. The program will encompass a range of work and labor topics including the development of free market capital in the United States and how it has shaped work and labor, the role of the state in forming work and labor policy, the role of workers movements, and work and labor issues in historical and contemporary perspectives. The certificate may be of particular interest to those with experience or career goals in the labor movement, labor relations, public advocacy, social justice, or non-profits.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the non-MBA rate.

The certificate is comprised of 4 courses, each worth 3 credits, and can be completed in one to two academic terms. Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
LABR 6010	Work and Labor Studies	3
LABR 6020	Working in America	3
LABR 6034	American Capitalism	3
LABR 6075	Global Work	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Understand and critically analyze the historical context of key issues in labor in the United States.\\n\\n\\n\\n
- Describe current and emerging labor issues in the United States.
- Situate and compare historical and contemporary labor issues within an international context.
- Critically analyze the role of free market capitalism in shaping labor in the United States.

Marketing Analytics and Brand Management, Advanced Certificate

The Advanced Certificate in Marketing Analytics and Brand Management is designed to provide marketing professionals and business leaders big data analytical skills for making strategic marketing decisions. The certificate is comprised of a 12-credit curriculum which integrates core elements of database management, marketing research, and marketing decision-making in order to sustain an organization's marketing position. The four courses focus on skills in information management, decision-making frameworks, applied statistics, marketing analytics and advanced marketing strategies. The first three courses may be taken in any order. It is suggested that the capstone course, "Marketing Analytics and Brand Management," be the last course taken in the sequence.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested enrollment sequence are as follows:

Code	Title	Credits
MGMT 6185	Quantitative Methods for Decision Making	3
MGMT 6155	Strategies for Marketing Research	3
MGMT 6035	Global E-Commerce Strategies	3
MGMT 7030	Marketing Analytics & Brand Management	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Identify and apply decision making frameworks
- Apply quantitative analysis using big data for marketing decisions and brand management
- Apply concepts in system development life cycle, database technology, design of web-based business presence
- Integrate information systems into business processes and understand the organizational implications of said systems
- Make strategic marketing decisions for global markets

Nonprofit Management, Advanced Certificate

This 12-credit graduate certificate addresses knowledge and skills needed by professionals in the nonprofit and public sectors which have been challenged by rapid change and increasing complexity, the growing need for accountability, financial constraints and an aging workforce. In addition, because of an increasing societal commitment to corporate social responsibility and collaborative arrangements among the three sectors, for-profit sector employees increasingly need to understand the nonprofit and public sectors.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested enrollment sequence are as follows:

Code	Title	Credits
MGMT 6040	High Performance Management	3
MGMT 6105	Leadership in Public & Nonprofit Organizations	3
MGMT 6160	Strategic Planning for Public & Nonprofit Organizations	3
MGMT 7055	Strategic Marketing for Nonprofit Organizations	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Apply a variety of leadership and management concepts to real situations

- Assess strategic plans, their ethical issues, and their proper implementation
- Evaluate ethical dilemmas and develop plans for managing these challenges in their own work
- Analyze and respond to a range of external factors that impact not for profit organizations
- Develop marketing and strategic plans in which they integrate the concepts, principles and issues companies face in the current business climate
- Identify organizations that demonstrate corporate responsibility
- Recognize issues and trends that nonprofit and governmental management face
- Demonstrate an understanding of an organization's vision, mission and underlying objectives and create a long-term direction for the organization

Nursing Administration, Certificate of Advanced Study

The Certificate of Advanced Study in Nursing Administration is for nurses holding master's degrees in another specialty field of nursing, such as education who are interested in taking on the role of nurse administrator. A series of four online courses totaling 12 credits will focus on graduate level nursing knowledge to prepare nurses for administrative and/or leadership positions in academic or clinical settings.

Admissions Requirements

1. A completed admission application.
2. An active New York State or state of residence Registered Nurse license.
3. A graduate degree in nursing from a regionally accredited institution.
4. Cumulative GPA of 3.0 or higher.

The Advanced Certificate in Nursing Administration is comprised of courses that are currently in our Master of Science Nursing Administration degree program. The 12-credit certificate contains four, three-credit courses and can be completed in two terms.

Code	Title	Credits
NURS 6065	Healthcare Finance and Budgeting	3
NURS 6070	Organizational Theory & Human Resource Management	3
NURS 6075	Innovative Leadership in Healthcare Organizations	3
NURS 7010	Nursing Administration Capstone	3

Upon successful completion of this program, students should be able to:

- Evaluate the concepts of quality and accountability within the constraints of healthcare finances.
- Analyze data related to fiscal planning and management of human and physical resources.
- Integrate organizational frameworks and perspectives to guide nursing administrative practices.
- Appraise the impact of challenges in designing innovative and sustainable healthcare organizations.
- Use evidence-based practices that promote effective communication and collaboration.

- Assume a leadership role on interprofessional healthcare teams in complex environments.

Nursing Education, Certificate of Advanced Study

The Certificate of Advanced Study in nursing education is for nurses holding master's degrees in nursing who are interested in taking on the role of nurse educator. A series of four online courses totaling 12 credits will focus on graduate level nursing knowledge to prepare nurse educators specifically for teaching positions in academia or practice settings.

This will serve nurses who have completed a master of science in nursing within another specialty who wish to pursue their goal of becoming a nurse educator. These nurses' specialties include but are not limited to nurse practitioners, administrators, informaticists, and midwives. Their previous educational preparation along with the advanced certificate will prepare registered nurses to assume nurse educator roles as instructors in academic and clinical practice settings. Nurse educators are prepared to assume roles as clinical preceptors, staff development educators, and faculty in technical, associate, baccalaureate, and allied health programs.

Admissions Requirements

1. Complete an admission application.
2. Hold a New York State or state of residence unencumbered license as a registered nurse and any other advanced practice license.
3. Submit official transcript(s) from a regionally accredited institution of higher education.
4. Have earned a graduate degree (masters) in nursing with a cumulative GPA of 3.0 or higher.
5. Submit evidence of completing graduate level content for advanced health assessment, pathophysiology and pharmacology.

Program Requirements

The Advanced Certificate of Nursing Education is comprised of the track concentration courses that are currently in the master of science in Nursing Education degree program. The 12-credit certificate contains four, three-credit courses and can be completed in two terms.

Code	Title	Credits
NURS 6050	Curriculum & Program Development	3
NURS 6055	Instructional Design & Teaching with Technology	3
NURS 6060	Measurement Assessment & Evaluation of Learners & Programs	3
NURS 7005	Nursing Education Capstone	3
Total Credits		**12**

Upon successful completion of the certificate, the student will be able to:

- Integrate knowledge of curriculum development by creating: the identification of program goals and outcomes, writing learning objectives, and selecting appropriate learning activities and evaluation strategies.
- Demonstrate comprehensive knowledge of the instructional design process, including analysis, design, assessment and evaluation.
- Apply concepts and principles relevant to assessment, measurement and evaluation.

- Engage in learning activities that further the professional development role as a nurse educator.

The Advanced Certificate of Nursing Education is comprised of the track concentration courses that are currently in the master of science in Nursing Education degree program. The 12-credit certificate contains four, three-credit courses and can be completed in two terms.

Optometry Business Management, Advanced Certificate

This graduate certificate is jointly offered by SUNY College of Optometry and Empire State University, and is, therefore, only available to students currently enrolled in both programs. This certificate provides knowledge and critical tools to identify, anticipate, analyze, and address important economic, policy and organizational challenges that optometry students will confront as they transition into professional roles and progress in their careers. The six-course, 18 credit curriculum focuses on health policy, financial management, practice management, operations management, leadership, interprofessional relations and public health.

Program Delivery and Tuition Rate

The SUNY College of Optometry courses are delivered on an on-site classroom basis and billed at the optometry rate. The SUNY Empire courses are delivered online and billed at the MBA rate.

Students may begin this 18-credit certificate in the fall, spring or summer terms. The required courses and suggested enrollment sequence are as follows:

Code	Title	Credits
SUNY College of Optometry Courses		
Optometric Practice in a Changing Health Care Environment		3
Public Health I: Public Health Practice		1.5
Public Health II: Health Care Policy		1.5
SUNY Empire Courses		
MGMT 6040	High Performance Management	3
HCLM 6030	Quantitative Methods & Healthcare Operations Management	3
HCLM 6025	Healthcare Financial Management	3
HCLM 7005	Healthcare Strategic Communication	3
Total Credits		**18**

Upon successful completion of this program, students will be able to:

- Understand the allocation of healthcare resources based on principles of economics and healthcare financial management.
- Identify critical abilities, knowledge areas, and skills required for successful leadership in a healthcare organization.
- Apply strategies and methods to inform decisions about the efficiency and allocation of resources to improve service delivery.
- Identify concepts and practices of professional accountability, patients' rights, and code of conduct and relate these concepts to ethical challenges.
- Identify key trends with significant impact on healthcare industry that may influence organizational decision-making.
- Apply business skills through the translation of strategic goals into operational plans for effective organizational management.

- Display critical thinking that requires decision making and problem-solving communication.
- Identify effective communication practices that help improve the patient experience and overall quality of care.
- Promote interprofessional collaboration that improves patient and system outcomes.
- Recognize the significance of provider-patient communication to patient satisfaction scores, willingness to recommend, and value-based reimbursement.

Project Management, Advanced Certificate

This graduate certificate provides a broad theoretical framework and practical tools to develop a robust understanding in project management knowledge areas and mastery of advanced project management skills. The curriculum is designed for business leaders, professionals and administrators who are involved in the management of complex projects or who wish to be prepared for managing projects across organizational and functional lines.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
MGMT 6030	Management Information Systems & Data Visualization	3
MGMT 6115	Tools & Processes in Project Management	3
MGMT 6120	Managerial Perspectives of Project Management	3
MGMT 7070	Strategy & Tactics in Project Management	3
Total Credits		**12**

Several courses of this program require access to Microsoft Project software. Empire State University currently provides temporary licensing of this product. This software can only be accessed using a Microsoft Operating System.

Upon successful completion of this program, students should be able to:

- Discuss the roles and functions of the Project Manager in organizations including, but not limited to, behavior knowledge and Project Manager leadership techniques
- Utilize project management tools and systems such as MS Office, MS Project, and web-based applications specific to project management leadership
- Create case study reviews related to core project management knowledge areas and the five process groups
- Apply strategies and techniques of project portfolio planning and integration
- Understand the role and function of information systems and computer business applications in project management practice
- Identify ethical and professional challenges faced by project managers across a variety of projects and develop plans for resolving these challenges

- Display critical thinking skills and employ effective communications within project teams and with key stakeholders
- Articulate principles of strategical and tactical planning processes
- Analyze and discuss the impact of integrated project management strategies to manage multiple projects

Public Administration, Advanced Certificate

The 15-credit advanced certificate in Public Administration prepares students in public and nonprofit organizations to meet the challenges of mid and upper level management and supervisory positions. Students whose careers or prospective careers interact with local, state, or federal government organizations and funding streams, will benefit from this certificate. The certificate is strategic in providing competencies that can be applied to high growth areas of public administration, such as Human Services, Public and Social Policy, Emergency Management, Criminal Justice, Fire Science, Homeland Security, and Public Safety. Similarly, business policy, labor policy, and students interested in private sector employment who expect to interact with government agencies and public sector bureaucracies and funding streams will enhance their potential employ-ability with expertise in public administration. Increasingly, the boundaries between the public sector, not-for-profit, and private sectors are diminishing as the reach and authority of the federal government expands. The Certificate in Public Administration prepares students and future administrators for new intergovernmental relationships that are emerging.

Program Delivery and Tuition Rate

This certificate is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 15-credit certificate in the fall, spring or summer terms. The certificate offers two 3-credit opening courses, two 3-credit functional courses, and a 3-credit capstone course as shown in the suggested enrollment sequence below.

Code	Title	Credits
PADM 6085	Public Administration	3
PADM 6170	Public Finance	3
PADM 6175	Public Sector Decision-making	3
PADM 6180	State & Local Government	3
PPOL 6030	Public Policy Analysis (Capstone)	3
Total Credits		**15**

Upon successful completion of this program, students should be able to:

- Identify relevant historical developments in the field as they affect current practice.
- Articulate prominent theories in the field and relate theory to practice.
- Demonstrate facility with public finance and budgeting methods and techniques.
- Demonstrated ability to analyze and evaluate public finance and budgeting.
- Apply decision-making strategies for government agencies.
- Demonstrate facility with the structures and functions of New York State and local governmental institutions; students from other states

will have the opportunity to apply concepts to their state instead of New York.

Public History, Advanced Certificate

This graduate certificate prepares students for the collection, preservation and dissemination of information about the past to the general public. Public historians use oral history, museums and other sites of exhibition, as well as multimedia to engage popular audiences in discussion and debate around historical issues.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and a required internship and is billed at the non-MBA rate. Additional forms must be submitted before activity in the final course, Public History Internship can begin. Contact your advisor for details.

Students may begin this 15-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
PBHS 6040	Museums and Public History: Theory & Practices	3
PBHS 6105	Exhibition: Planning & Interpretation	3
PBHS 6215	Oral History: Theory & Methods	3
PBHS 6325	Archival Theory & Practice	3
PBHS 7005	Public History Internship	3
Total Credits		**15**

Upon successful completion of this program, students should be able to:

- Demonstrate their understanding and critical appraisal of a broad range of accounts of public history, especially through the interpretation of museums and related exhibitions in multiple presentational forms
- Identify and analyze different interests, the political contexts, and the economic regimes within which public history has been created over an extended period of Western society, and how the concepts of public history and heritage have spread through a globalized world
- Understand and apply accepted practices of creating archives, maintaining them, and making them publicly available all while considering appropriate provisions for outreach and scholarship and observing ethical and legal considerations
- Communicate the purposes, processes, and ethical requirements of doing oral histories and be able to design and carry out such histories with suitable documentation and evaluation of the results
- Appraise and understand the mission and public education strategies of museums and other entities through public exhibition
- Conceptualize and design new exhibits for these settings
- Research, propose, organize, install, maintain, and interpret an exhibition including an evaluation of the public's responses to it

STEM Education and Emerging Technologies, Advanced Certificate

This 12-credit graduate certificate provides science, technology, engineering and mathematics (STEM) professionals, practitioners and educators with opportunities to understand, assess, evaluate and use technologies to enhance and network learning within and about their specific content areas and needs. This certificate meets the needs of

STEM educators in community colleges, higher education, graduate and professional schools also are being challenged to better understand learners, educational theories and methods of assessment and evaluation, as well as to integrate 21st century skills and technologies so they can be more effective in their teaching.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 12-credit certificate in the fall or spring terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
EDET 6005	Learning with Emerging Technologies: Theory & Practice	3
EDET 6125	Developing an Integrated Immersive STEM Learning Environment	3
EDET 6150	STEM Tools Devices & Simulations	3
Choose One (3 credits):		3
EDET 6025	Assessing Learning in Digital Environments	
OR		
EDET 6080	Evaluation Assessment and Data Driven Learning Design	
Total Credits		**12**

Upon completion of this program, students should be able to:

- Have an enhanced understanding of and integration among the many emerging and existing technologies and devices that can acquire data, information, images, ideas, and interactions and can present an increased ability to share this knowledge and information with learners, employees, students, clients, patients, museum visitors, other STEM developers and professional networks.
- Produce a conceptual, educational and psychological framework for learning, particularly when STEM topics are integrated with 21st century skills, technologies and collaborations.
- Understand the ways to assess the learning of individual "students" (students, clients, etc. of the participant) to improve their understanding within a technology-facilitated STEM learning environment and of the analytics and evidence necessary to evaluate program performance within the larger instructional framework.
- Enhance the knowledge-base within this emerging field of study and to develop professional relationships that can continue beyond the certificate courses.
- Identify and incorporate digital tools that address needs of diverse learners, especially those with disabilities.

Teaching and Training with Technology, Advanced Certificate

This 15-credit graduate certificate (formerly Teaching and Learning with Emerging Technologies) is designed to serve K-12 teachers, instructors in higher education, and trainers and educators in corporate, community or other organizations, who have an immediate need to retool their skills and theoretical understandings of how new media tools can enhance students' learning experiences, and how pedagogical approaches need to be adjusted in response. This certificate addresses the increasing need in many school and workplace settings to better prepare staff and professionals at all levels to create technologically enhanced learning opportunities.

Note: This certificate is not a New York State teaching certificate.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 15-credit certificate in the fall or spring terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
EDET 6005	Learning with Emerging Technologies: Theory & Practice	3
EDET 6015	Instructional Design for Online Learning Environments	3
EDET 6025	Assessing Learning in Digital Environments	3
EDET 6130	Facilitating Learning with Emerging Technologies in Blended & Online Environments	3
Choose one (3 credits):		3
EDET 6010	Media Literacies in Emerging Technologies	
OR		
EDET 6045	Digital Games Simulations & Learning	
OR		
EDET 6035	Advanced Instructional Design with Multimedia	
Total Credits		**15**

Upon successful completion of this program, students should be able to:

- Analyze the ways in which different learning theories inform the choices that educators make in planning, creating and facilitating learning experiences with new technologies.
- Demonstrate the ability to use technology tools and skills beyond traditional modes of production (products as material artifacts and commodities) to consider them tools of mediation, collaboration and design development.
- Compare different paradigms of knowledge, authority and control, and how they are manifested in different learning environments.
- Critique/evaluate existing technology and digital tool use.
- Design, disseminate and study the usability of technology tools that will be used by learners in one's own work environment.
- Identify and incorporate digital tools that address needs of diverse learners, especially those with disabilities.
- Demonstrate understanding of issues of copyright, intellectual property rights, and creating work in online environments and open educational resource repositories.

TESOL, Advanced Certificates

The Post-baccalaureate Advanced Certificate and the Post-masters Certificate of Advanced Study (CAS) in Teaching English to Speakers of Other Languages (TESOL) are fully online programs that prepare teachers who hold a valid Initial, Professional or Permanent New York State classroom teaching certificate in another area to gain an Initial or Initial/Professional certificate in TESOL. The programs are grounded in evidence-based practices in the areas of language acquisition and instruction and are situated within a social justice framework that aims to assist limited English proficient students in gaining the necessary skills

to increase their prospects of academic success in English-dominant school settings.

Admission Requirements

Admission to the programs require the applicant to hold a valid Initial, Professional, or Permanent NYS Teacher Certification, 12 credits in a language other than English, 3 credits in Literacy Skills, a 3.0 undergraduate GPA, and submit an official transcript of his or her bachelors and master's degree (if completed) along with a complete application. Visit the Admission (p. 616) page of this catalog for a full list of requirements for admission.

Please Note: The TESOL programs will be accepting students for the Fall and Summer terms only.

Program Delivery and Tuition Rate

These certificate programs are delivered through online courses and are billed at the Non-MBA rate.

Mandatory Professional Licensure Disclosure

New York State takes pride in the high quality of its licensed and certified professionals. For the protection of its citizens, each license and certificate has requirements that individuals must meet in order to be licensed or certified in New York State. SUNY's academic programs leading to licensure or certification are carefully designed to meet and exceed these State requirements. This is a role SUNY plays in protecting the public. Other states frequently have their own requirements, so if your goal is to practice in another state, this disclosure will help you check to see what that state requires. The full details regarding this disclosure related to the applicable SUNY Empire degree programs may be found here (https://sunyempire.edu/online-compliance/licensure/).

Students may begin this 15-credit program in the fall or summer terms. The required courses of these programs and the suggested enrollment sequences are as follows for Fall and Summer.

FALL TERM START

Code	Title	Credits
Fall Term		
EDUC 6080	Second Language Acquisition	3
EDUC 6082	Research-Based Methods for Teaching English Language Learners	3
Spring Term		
EDUC 6081	Linguistics and Grammar for English Teaching	3
EDUC 6083	Teaching English Language Learners in the Content Areas	3
Summer Term		
EDUC 6084	P-12 English as a Second Language Practicum	3
Total Credits		**15**

SUMMER TERM START

Code	Title	Credits
Summer Term		
EDUC 6081	Linguistics and Grammar for English Teaching	3
Fall Term		
EDUC 6080	Second Language Acquisition	3

EDUC 6082	Research-Based Methods for Teaching English Language Learners	3
Spring Term		
EDUC 6083	Teaching English Language Learners in the Content Areas	3
EDUC 6084	P-12 English as a Second Language Practicum	3
Total Credits		**15**

Upon successful completion of these programs, students should be able to:

- Develop instructional and assessment strategies for supporting ELLs in their learning across the content areas.
- Construct meaningful learning opportunities that combine academic language development with lessons that affirm cultural and linguistic diversity.
- Evaluate divergent theories of second language acquisition while connecting them with practices.
- Evaluate how language, as a system of sounds with the purpose of making meaning, connects with disciplines of psychology, sociology, and anthropology.
- Apply the theories, principles, and practices of teaching English to speakers of other languages in the P-12 classroom.

Women's and Gender Studies, Advanced Certificate

This graduate certificate is an interdisciplinary approach to the study of gender and sexuality as social constructs and as objects of cultural analysis and critical discourse. By looking at gender and identity from multiple perspectives of literature, history, sociology, politics, science, cultural studies and the arts, the student will gain a deeper understanding of the construction of gender differences in relation to issues of race, ethnicity, class and sexuality, both in national and transnational contexts. Attention will be paid to the relationship between theory and practice, and historical and contemporary feminist theories will be viewed in terms of issues of social justice, gender equality, power and privilege, resistance and transformation, silence and voice, and national and global change.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested enrollment sequence are as follows:

Code	Title	Credits
LACS 6095	Seminar in Women's & Gender Studies	3
LACS 6115	Feminist Theory	3
Two electives (3 cr. each) in topics in women's and gender studies such as:		6
LACS 6130	Gender Race & Nation	
LACS 6230	Modern Gender & Sexuality Through Science Fiction Literature	
LACS 6100	Diagnosing Desire: Gender & Medicine in US History	
LACS 6330	Women & Humor	

LACS 6195	American Women Writers	
LACS 6060	British Women Writers	
LACS 6135	Global Feminist Movements	
LACS 6270	Race and Gender in US History since the Civil War	
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Understand Women's and Gender Studies as a discipline over time
- Demonstrate knowledge of Feminist Theory, past and present
- Examine gender and sexuality as social constructs/objects in cultural analysis
- Engage in dialogue on current issues of diversity of race, ethnicity, class, and gender
- Apply theory to practice, and engage in social action

Workforce Development, Advanced Certificate

This certificate focuses on workforce development issues. It enables students to become conversant with key theoretical concepts in the workforce development field and to identify, interpret and develop public policies that pertain to workforce development. The certificate emphasizes the role of politics in workforce development. Students completing this program will be able to identify and understand the role of various stakeholder groups involved in the workforce development process, and to communicate the role of training and education in workforce development. Students will be able to identify and interpret statistics and other data that relate to work and employment, and also will be able to identify and understand workforce development issues within regional, national and global contexts.

Program Delivery and Tuition Rate

This certificate program is delivered through online courses and is billed at the non-MBA rate.

Students may begin this 12-credit certificate in the fall, spring or summer terms. The required courses and suggested sequence are as follows:

Code	Title	Credits
CAED 6010	Principles of Community & Economic Development	3
CAED 6070	Workforce Development Policy	3
LABR 6030	Sociology of Work: Human Resources	3
LABR 6015	Labor Policy in America	3
Total Credits		**12**

Upon successful completion of this program, students should be able to:

- Communicate key theoretical concepts in the workforce development field.
- Identify and interpret public policies that pertain to workforce development.
- Emphasize the role politives in workforce development.
- Identify and understand the role of various stakeholder groups involved in the workforce development process.
- Communicate the role of training and education in workforce development.

- Identify and interpret statistics and other data that relate to work employment.
- Identify and understand workforce development issues that particularly pertain to New York state and the north-eastern United States, while also placing these issues within a broader global context.

COMBINED DEGREE PATHWAYS AND PROGRAMS

Adolescent Education, Combined Degree Pathways

Enrollment in a combined pathway allows highly qualified, Empire State University students to work on the **Master of Arts in Teaching** while completing their bachelor's degree. Up to 12 credits of designated master's courses are incorporated into the bachelor's degree program and will count toward both the bachelor's and master's degree.

The Pathways

- B.A./B.S. in Cultural Studies to MAT in Adolescent Education Leading to Initial New York State Teaching Certification in English Language Arts or Spanish
- B.A./B.S. in Science, Mathematics and Technology to MAT in Adolescent Education Leading to Initial New York State Teaching Certification in Biology, Chemistry, Earth Science, Physics or Mathematics
- B.A./B.S. in Historical Studies to MAT in Adolescent Education Leading to Initial New York State Teaching Certification in Social Studies

ADMISSION

Admission into the combined programs is highly selective. To be considered for admission into a combined pathway, applicants must complete an undergraduate application and meet the following requirements:

- Minimum 3.2 GPA (recalculation of up to the last 60 credits earned); and
- Transferring no more than 92 credits at the time of application

In addition to the above, to be offered official admission[1] candidates must have completed 60 or more undergraduate credits including 30 credits in content area requirements with a C or better.

Please see the **Undergraduate Admission page** for a complete listing of materials required to complete an undergraduate application.

[1] Candidates who have less than 60 undergraduate credits and/or still need to complete any of the content requirements can be accepted conditionally. To become officially admitted, conditional admits must maintain a minimum 3.2 GPA and complete all of the content requirements by 108 credits at the latest. Candidates who do not meet the requirements will be dismissed from the combined pathway and allowed to complete the bachelor's portion.

Curriculum

The combined pathway requires 154 credits total, of which 42 are master's credits leading to the MAT. Students must meet all college, AOS and relevant concentration guidelines, as well as the state specified content and liberal arts and sciences general education requirements (different than and in addition to the SUNY General Education Requirements) within the undergraduate credits as follows:

- successful completion of 30 credits in the designated content area (for example: English Language Arts)

With 60 credits in requirements, the program requires careful planning that should begin in the first term of a student's undergraduate career at Empire State University. Advising templates (http://www.sunyempire.edu/MATCombinedCert/) can be found on the School for Graduate Studies (https://www.sunyempire.edu/grad/) website. The teaching content area and the state's requirements for general education are incorporated into the undergraduate degree program based on the certification area that the student intends to seek. The student and the primary mentor should consult with the director of teacher education in planning an undergraduate degree program so that these requirements are met in undergraduate study and that the 12 credits of master's courses from MAT program also are included in the degree plan. Students must meet the graduate requirements for academic progress and minimum grade point average in their master's level courses to remain in the combined program.

The four graduate courses that will be taken during undergraduate study are:

Code	Title	Credits
EDUC 6010	Middle Childhood & Adolescent Development	3
EDUC 6005	US Schools in Social Context	3
EDUC 6015	Exceptionalities: Individualizing Learning	3
Teaching & Learning (choose one):		*3*
EDUC 6020	Teaching & Learning: English	
EDUC 6025	Teaching & Learning: LOTE	
EDUC 6030	Teaching & Learning: Math	
EDUC 6035	Teaching & Learning: Science	
EDUC 6040	Teaching & Learning: Social Studies	
Total Credits		**12**

The remaining required courses of the graduate degree can be found on the MAT in Adolescent Education (p. 538) pages of this catalog.

Adolescent Special Education, Combined Degree Pathways

The School for Graduate Studies currently offers two combined degree pathways to the M.A.T. in Adolescent Special Education.

The Pathways

FOR EMPIRE STATE UNIVERSITY UNDERGRADUATE STUDENTS:
- B.A. or B.S. in Educational Studies to M.A.T. in Adolescent Special Education

Enrollment in the 157-credit combined program allows SUNY Empire undergraduate students to work on the Master of Arts in Teaching Adolescent Special Education while completing the bachelor's degree. Up to 12 credits of designated master's courses are incorporated into the bachelor's degree program and will count toward both the bachelor's and master's degree.

FOR UNDERGRADUATES OF SUNY COBLESKILL:
- B.S. in Applied Psychology (through SUNY Cobleskill) to M.A.T. in Adolescent Special Education

Enrollment in this combined pathway allows highly qualified, current SUNY Cobleskill students to work on a master's degree while completing their bachelor's degree. Up to 12 credits of designated graduate courses are incorporated into the undergraduate degree program and will count toward both the bachelor's degree and the master's degree.

ADMISSION for SUNY Empire Students

Admission into the combined programs is highly selective. To be considered for admission into a combined pathway, applicants must complete an undergraduate application and meet the following requirements:

- Minimum 3.2 GPA (recalculation of up to the last 60 credits earned); and
- Transferring no more than 92 credits at the time of application

In addition, to the above, to be offered official admission[1] candidates must have completed 60 or more undergraduate credits, including 24 credits in content area requirements with a C or better.

Please see the Undergraduate Admission page for a complete listing of materials required to complete an undergraduate application.

ADMISSION FOR SUNY COBLESKILL UNDERGRADUATES

Admission into the combined programs is highly selective. Matriculated SUNY Cobleskill undergraduate students may apply to a combined program through the School for Graduate Studies and will complete the graduate application[2] for the MAT in Adolescent Special Education.

The applicant must have a minimum recalculated GPA of 3.2 (most recent 60 credits earned) and have completed 24 credits in Liberal arts and Sciences for State certification with a B or better.

Please see the **Graduate Admission** section of this catalog for a complete listing of materials required to complete a graduate application.

[1] Candidates who have less than 60 undergraduate credits and/or still need to complete any of the content requirements can be accepted conditionally. To become officially admitted, conditional admits must maintain a 3.2 GPA and complete all of the content requirements by 108 credits at the latest. Candidates who do not meet the requirements will be dismissed from the combined pathway and allowed to complete the bachelor's portion.

[2] SUNY Cobleskill applicants are not required to submit the application essay and may request a waiver code of the application fee at gradpartners@sunyempire.edu.

Curriculum

The combined pathways require 157 credits total, of which 45 are master's credits leading to the M.A.T. in Adolescent Special Education. Students must meet all college, A.O.S. and relevant concentration guidelines as well as the liberal arts and sciences general education requirements (different than and in addition to the SUNY General Education Requirement) within the undergraduate credits as follows:

Successful completion of a total 60 undergraduate credits:

- Of these 60 credits, 24 credits should be in liberal arts and sciences
- Successful completion of 6 credits in additional undergraduate coursework

With 60 credits in requirements, the program requires careful planning that should begin in the first term of student's undergraduate career. Please utilize the degree planning guidelines templates provided on the certification and content area requirements (https://www.sunyempire.edu/graduate-studies/combined-programs/mat-adolescent-special-ed/certification/) page. The student and their primary mentor should consult with the Office of Teacher Education in planning an undergraduate degree program so that these requirements are met in undergraduate study and that the 12 credits of master's courses from the MAT program are also included in the degree plan. Students must meet the graduate requirements for academic progress and minimum grade point average in their master's level courses to remain in the combined program.

The four graduate courses that will be taken during undergraduate study are:

Code	Title	Credits
SPED 6005	Introduction to History of Special Education Law	3
EDUC 6010	Middle Childhood & Adolescent Development	3
SPED 6025	Teaching & Learning Across the Contents: Methods I	3
EDUC 6015	Exceptionalities: Individualizing Learning	3

The remaining required courses of the graduate degree can be found on the MAT in Adolescent Special Education (p. 542) pages of this catalog.

Business Management, Combined Degree Pathways

Enrollment in a combined pathway allows highly qualified, undergraduate students to work on the Master of Business Administration in Business Management while completing the bachelor's degree. Up to 12 credits of designated master's courses are incorporated into the bachelor's degree program and will count toward both the bachelor's degree and the master's degree.

Empire State University currently offers combined pathways to its own undergraduates as well as highly qualified undergraduates of SUNY Canton, SUNY Cobleskill and SUNY Morrisville.

The Pathways

Undergraduate students of **Empire State University** may seek the following combined degree pathways:

- B.A. or B.S. or B.P.S. in Business, Management and Economics to MBA in Business Management
- B.B.A in Business Administration to MBA in Business Management
- B.S. in Business Administration, or Business Management, or Human Resources to MBA in Business Management
- B.S. in Allied Health to MBA in Business Management

SUNY Canton undergraduates may seek the following combined degree pathways to the MBA in Business Management:

- B.B.A. (through SUNY Canton) to MBA in Business Management
- B.S. in Healthcare Management (through SUNY Canton) to MBA in Business Management

SUNY Cobleskill undergraduates may seek the following combined degree pathways to the MBA in Business Management:

- B.B.A. (through SUNY Cobleskill) to MBA in Business Management
- B.S. in Applied Psychology (through SUNY Cobleskill) to MBA in Business Management (Human Resource Management concentration)

SUNY Morrisville undergraduates may seek the following combined degree pathways to the MBA in Business Management:

- B.B.A. (through SUNY Morrisville) to the MBA in Business Management

ADMISSION for SUNY Empire Students

Admission into the combined programs is highly selective. To be considered for admission into a combined pathway, applicants must complete an undergraduate application and meet the following requirements:

- Minimum 3.2 GPA (recalculation of up to the last 60 credits earned); and
- Transferring no more than 92 credits at the time of application.

In addition to the above, candidates must have completed 60 or more undergraduate credits and the following academic prerequisites or their equivalent with a C or better, to be offered official admission[1]:

- Statistics (3 credits);
- Macroeconomics (3 credits);
- Microeconomics (3 credits); and
- Accounting (3 credits).

Please see the **Undergraduate Admission page** for a complete listing of materials required to complete an undergraduate application.

ADMISSION for SUNY CANTON, SUNY Cobleskill & SUNY Morrisville Undergraduates

Admission into the combined programs is highly selective. Matriculated SUNY Canton, SUNY Cobleskill and SUNY Morrisville undergraduate students may apply to a combined program through the School for Graduate Studies and will complete the graduate application[1] for the MBA in Business Management.

The applicant must have a minimum recalculated GPA of 3.2 (most recent 60 credits earned) and have three to five years of managerial or professional experience. In addition to completing the graduate application[2], candidates must have completed the following academic prerequisites or their equivalent with a B or better, to be considered for admission:

- Statistics (3 credits);
- Macroeconomics (3 credits);
- Microeconomics (3 credits); and
- Accounting (3 credits)

Please see the **Graduate Admission** section of this catalog for a complete listing of materials required to complete a graduate application.

[1] Candidates who have less than 60 undergraduate credits and/or still need to complete any of the prerequisites can be accepted conditionally. To become officially admitted, conditional admits must maintain a minimum 3.2 GPA, and complete all of the prerequisites by 108 credits at the latest. Candidates who do not meet the requirements will be dismissed from the combined pathway and allowed to complete the bachelor's portion.

[2] SUNY Canton, SUNY Cobleskill & SUNY Morrisville applicants are not required to submit the application essay and may request a waiver code of the application fee at gradpartners@sunyempire.edu.

Curriculum

The combined pathways leading to an MBA in Business Management require 148 credits total, of which 36 are master's credits leading to the MBA in Business Management. Students must meet all college, Area Of Study (AOS), and relevant concentration guidelines.

These programs require careful planning that should begin in the first term of a student's undergraduate career. The student and their primary mentor should consult in planning the undergraduate degree program so that these requirements are met during undergraduate study and that the 12 credits of master's courses from the MBA in Business Management program also are included in the degree plan. Students must meet graduate expectations for academic progress and grade point average in their master's level courses to remain in a combined program.

Combined Pathway Courses

Each pathway has 4 specific courses (12 credits) that may be included in an approved undergraduate degree plan.

Empire State University Undergraduates

Students accepted to a combined degree pathway will include the following 4 courses (12 credits) in their undergraduate degree plans. Special requests to substitute these courses will be considered by the Business, Management & Leadership chair.

- MGMT 6020 Leadership & Executive Development (3 cr.)
- MGMT 6025 Strategic Perspectives of Global Management (3 cr.)
- MGMT 6030 Management Information Systems & Data Visualization (3 cr.)
- MGMT 6040 High Performance Management (3 cr.)

SUNY CANTON B.B.A. UNDERGRADUATES

The four graduate courses that may be taken during SUNY Canton B.B.A. undergraduate study are outlined below.[1] The choice of courses varies and is determined by the concentration chosen.

Code	Title	Credits
Choose 4 courses from within your area of concentration: General Business; Business Analytics; Finance; Healthcare Management; Human Resource Management; Project Management; or Nonprofit Management.		**12**
MGMT 6016	Financial Management	3

MGMT 6060	Managerial Economics	3
MGMT 6075	International Financial Management	3

Remaining required courses of the MBA degree can be found on the MBA in Business Management (p. 557) page of this catalog.

[1] SUNY Canton, SUNY Cobleskill and SUNY Morrisville students interested in an Empire State University MBA pathway should seek guidance from their undergraduate academic advisor as admission and program requirements may differ.

Dual Degree Program BS/MBA CPA 150 and 150 E Registered Licensure Qualifying Program

Enrollment in this 152-credit dual award program allows highly qualified, Empire State University students to work on the MBA in Business Management (Management or International Business track) while completing the BS in Accounting degree. Up to 9 credits of designated master's courses are incorporated into the bachelor's degree program and will count toward both the bachelor's and master's degrees. Successful completion of this program qualifies graduates to pursue CPA-150 or CPA-150E licensure. The dual award program is listed among the licensure-qualifying programs by **the NYS Education Department's Inventory of Registered Programs CPA 150** and (https://www2.nysed.gov/heds/IRPSL1.html)**CPA 150E (https://www2.nysed.gov/heds/IRPSL1.html).** There is no requirement for an undergraduate concurred degree plan. Upon meeting the program's admission requirements, students may apply directly to the graduate program.

Pathway Options to the CPA Educational Requirements: Qualified SUNY Empire undergraduates may pursue the following dual award degree programs:

- **Dual Program Registered NYS Licensure Qualifying Degree Program:** B.S. in Accounting (p. 17) **to** MBA in Business Management (p. 557).
- **Combined Degree Program**: B.S./B.P.S. In BME Concentration in Accounting Practices (https://catalog.esc.edu/undergraduate/areas-study-degrees-certificates/areas-study-concentration-guidelines/business-management-economics/#Practices) **to** MBA in Business Management (https://www.sunyempire.edu/graduate-studies/combined-programs/mba-business-management/).
- Undergraduate Enrollment in Graduate Courses (https://www.sunyempire.edu/registrar/forms-services/undergrad-enrollment-grad-courses/): To complete the educational requirements for the CPA License. (https://www.op.nysed.gov/professions/certified-public-accountants/initial-license-requirements/)

ADMISSION

New applicants to the University's B.S. in Accounting program or matriculated students in the B.S. in Accounting program will be considered for this dual degree program. Whether new to the University or matriculated, students must apply for the dual degree program. The application process includes a review of all coursework completed, one recommendation, and one application essay. The following are required for unconditional acceptance:

GPA: A GPA of 3.2 is required on the last 60 applicable college credits for unconditional acceptance. Admission is conditional until the student has earned 60 college credits applicable to the dual degree with a minimum 3.2 GPA.

Prerequisite Courses: Applicants to the dual program must include the following undergraduate level or their equivalent in their degree plan: statistics (3 credits), macroeconomics (3 credits), microeconomics (3 credits), and accounting (3 credits). Applicants who do not have the courses completed at the time of application to the dual program may be accepted into the combined pending completion of the courses.

Application

Please see the **Graduate Admission** section of this catalog for a complete list of materials required to complete a graduate application including the **Undergraduate application**.

[1] Candidates who have less than 60 undergraduate credits and/or still need to complete any of the prerequisites can be accepted conditionally. To become officially admitted, conditional admits must maintain a minimum 3.2 GPA, and complete all of the prerequisites by 108 credits the latest. Candidates who do not maintain the requirements will be dismissed from the dual degree and allowed to complete the bachelors portion.

Curriculum

The dual award BS/MBA CPA 150 and CPA 150E program requires 152 total credits of which 36 are master's credits leading to the MBA in Business Management. Students complete up to 9 credits of graduate coursework as undergraduate students that count toward both degrees. Once the undergraduate degree has been awarded, the student may begin the remaining 27 credits required for the MBA. Students must meet master's expectations for academic progress and grade point average in their master's level courses to remain in the combined program. Students may directly apply to the program, when eligible, based on the admission requirements. (p. 608)

DUAL Award DEGREE Program Courses

Before they have completed their undergraduate degrees, students in the Dual Program take the following "combined" graduate courses (9 credits) which count toward both the bachelor's and MBA (General Business Concentration) degrees:

Code	Title	Credits
General Business Concentration		
MGMT 6016	Financial Management	3
or MGMT 6075	International Financial Management	
MGMT 6020	Leadership & Executive Development	3
MGMT 6025	Strategic Perspectives of Global Management	3

MBA (General Business Concentration) Courses

After the completion of their undergraduate degree, students take the following courses (27 credits) required to complete the MBA in Business Management (General Business Concentration). Please note that this dual program does not allow electives and the three courses indicated below take the place of the electives allowed in the stand-alone MBA program.

Code	Title	Credits
APAN 6025	Applied Management Analytics (Takes the place of elective in stand-alone MBA)	3
MGMT 6030	Management Information Systems & Data Visualization	3
MGMT 6040	High Performance Management	3
MGMT 6050	Operations and Supply Chain Management	3
MGMT 6060	Managerial Economics	3
or MGMT 6065	Economics for Global Managers	
MGMT 6122	Corporate Communication and Marketing Strategy	3
or MGMT 7005	Global Marketing Strategies	

FSMA 6060	Strategic Cost Analysis (Takes the place of elective in stand-alone MBA)	3
FSMA 6080	International Accounting (Takes the place of elective in stand-alone MBA)	3
MGMT 7080	Strategic Business Applications	3

For the required undergraduate courses portion of the program (116 credits), please visit the BS in Accounting Combined Program (p. 18) page of the Undergraduate Catalog.

Community and Economic Development, Combined Degree Pathways

Please Note: As of Fall 2024, SUNY Empire is no longer accepting applications to these combined pathways.

Enrollment in a combined pathway allows highly qualified, current Empire State University students to work on the Master of Arts in Community and Economic Development while completing the bachelor's degree. Up to 12 credits of designated master's courses are incorporated into the bachelor's degree program and will count toward both the bachelor's and master's degrees.

The Pathways

- B.A. or B.S. or B.P.S. in Business, Management and Economics to M.A. in Community and Economic Development, or
- B.A. or B.S. or B.P.S. in Public Affairs to M.A. in Community and Economic Development

ADMISSION

Please Note: As of Fall 2024, SUNY Empire is no longer accepting applications to these combined pathways.

Admission into the combined programs is highly selective. To be considered for admission into a combined pathway, applicants must complete an undergraduate application and meet the following requirements:

- Minimum 3.2 GPA (recalculation of up to the last 60 credits earned); and
- Transferring no more than 92 credits at the time of application.

In addition to the above, to be offered official admission[1] candidates must have completed 60 or more undergraduate credits.

Please see the **Undergraduate Admission page** for a complete listing of materials required to complete an undergraduate application.

[1] Candidates who have less than 60 undergraduate credits can be accepted conditionally. To become officially admitted, conditional admits must maintain a minimum 3.2 GPA until they have 60 credits. Candidates who do not meet the requirements will be dismissed from the combined pathway and allowed to complete the bachelor's portion.

Curriculum

Please Note: As of Fall 2024, SUNY Empire is no longer accepting applications to these combined pathways.

The combined degree pathway requires 142 credits total, of which 30 are master's credits leading to the M.A. in Community and Economic Development. Students must meet all college, AOS and relevant concentration guidelines.

In the combined degree pathway, the student may use up to 12 graduate credits (specified below under "Combined Pathway Courses") to complete the 124 credits required for the undergraduate degree. This degree must meet all requirements established by the university, as well as the student's area of study. Once the undergraduate degree has been awarded, the student may begin the remaining 18 credits required for the graduate M.A. in Community and Economic Development degree. The combined degree, culminating in the completion of the master's degree, requires a total of 142 credits. Students must meet master's expectations for academic progress and grade point average in their master's level courses to remain in the combined program.

Combined Pathway Courses

These four graduate courses (12 credits) may be taken as an undergraduate student. The remaining six graduate courses (18 credits) would be taken once matriculated as a graduate student. See the MA in Community and Economic Development (p. 561) program page of this catalog for the remaining graduate course list.

Code	Title	Credits
PPOL 6007	Policy Process	3
PPOL 6030	Public Policy Analysis	3
CAED 6010	Principles of Community & Economic Development	3
CAED 6040	Stakeholder-Sensitive Business Models	3
Total Credits		**12**

Finance, Combined Degree Pathway

Empire State University currently offers a combined degree pathway to the Master of Science (M.S.) in Finance to undergraduate students of SUNY Cobleskill. Enrollment in a combined pathway allows highly qualified, current SUNY Cobleskill students to work on a master's degree while completing their bachelor's degree. Up to 12 credits of designated graduate courses are incorporated into the undergraduate degree program and will count toward both the bachelor's degree and the master's degree.

The Pathway

Undergraduate students of **SUNY Cobleskill** may seek the following combined degree pathway:

- B.B.A. in Financial Services (through SUNY Cobleskill) to M.S. in Finance

Admission

Admission into the M.S. in Finance combined degree pathway is highly selective. Matriculated SUNY Cobleskill undergraduate students may apply to the combined program through the School for Graduate Studies and will complete all of the application requirements for the master's degree program. The applicant must have a minimum recalculated GPA of 3.2 (most recent 60 credit earned).

In addition to completing the graduate application[1], candidates must have completed the following academic prerequisites or their equivalent, with a B or better, to be considered for admission:

- Statistics (3 credits); and
- Financial Accounting (3 credits)

Please see the **Graduate Admission** section of this catalog for a complete listing of materials required to complete a graduate application.

[1] SUNY Cobleskill applicants are not required to submit the application essay and may request a waiver code of the application fee at gradpartners@sunyempire.edu

Curriculum

Students accepted to a combined program will include the following 4 courses (12 credits) in their approved undergraduate degree plans. Special requests to substitute these courses will be considered by the program chairs in consultation with the student's SUNY Cobleskill advisor.

These programs require careful planning that should begin in the first term of a student's undergraduate career. The student and their undergraduate advisor should consult in planning the undergraduate degree program so that these requirements are met during undergraduate study and that the 12 credits of master's courses from the MS in Finance program also are included in the degree plan. Students must meet graduate expectations for academic progress and grade point average in their master's level courses to remain in a combined program.

Combined Pathway Courses

Code	Title	Credits
FSMA 6016	Financial Management	3
FSMA 6010	Quantitative Methods in Finance	3

Choose 2 from the following courses:

FSMA 6050	Financial Analysis & Control	3
MGMT 6065	Economics for Global Managers	3
MGMT 6075	International Financial Management	3

Remaining required courses of the M.S. in Finance degree can be found on the M.S. in Finance (p. 570) degree page of this catalog.

Healthcare Leadership, Combined Degree Pathways

Enrollment in a combined pathway allows highly qualified, undergraduate students to work on the Master of Business Administration in Healthcare Leadership while completing the bachelor's degree. Up to 12 credits of designated master's courses are incorporated into the bachelor's degree program and will count toward both the bachelor's degree and the master's degree.

Empire State University currently offers combined pathways to the MBA in Healthcare Leadership to its own undergraduates as well as qualified undergraduates of SUNY Canton.

The Pathways

Undergraduate students of **Empire State University** may seek the following combined degree pathway:

- B.S. in Allied Health to MBA in Healthcare Leadership

Undergraduate students of **SUNY Canton** may seek the following combined degree pathway:

- B.S. in Healthcare Management (through SUNY Canton) to M.B.A. in Healthcare Leadership

ADMISSION for SUNY Empire Students

Admission into the combined programs is highly selective. To be considered for admission into a combined pathway, applicants must complete an undergraduate application and meet the following requirements:

- Minimum 3.2 GPA (recalculation of up to the last 60 credits earned); and
- Transferring no more than 92 credits at the time of application.

In addition to the above, candidates must have completed 60 or more undergraduate credits and the following academic prerequisites or their equivalent with a C or better, to be offered official admission[1]:

- Statistics (3 credits);
- Microeconomics (3 credits); and
- Accounting (3 credits).

Please see the **Undergraduate Admission page** for a complete listing of materials required to complete an undergraduate application.

ADMISSION for SUNY CANTON Undergraduates

Admission into the combined programs is highly selective. Matriculated SUNY Canton undergraduate students may apply to a combined program

through the School for Graduate Studies and will complete the graduate application[1] for the MBA in Healthcare Leadership.

The applicant must have a minimum recalculated GPA of 3.2 (most recent 60 credits earned) and have three to five years of managerial or professional experience. In addition to completing the graduate application[2], candidates must have completed the following academic prerequisites or their equivalent with a B or better, to be considered for admission:

- Statistics (3 credits);
- Macroeconomics (3 credits);
- Microeconomics (3 credits); and
- Accounting (3 credits)

Please see the **Graduate Admission** section of this catalog for a complete listing of materials required to complete a graduate application.

[1] Candidates who have less than 60 undergraduate credits and/or still need to complete any of the prerequisites can be accepted conditionally. To become officially admitted, conditional admits must maintain a minimum 3.2 GPA, and complete all of the prerequisites by 108 credits at the latest. Candidates who do not meet the requirements will be dismissed from the combined pathway and allowed to complete the bachelor's portion.

[2] SUNY Canton applicants are not required to submit the application essay and may request a waiver code of the application for at gradpartners@sunyempire.edu.

Curriculum

The combined program leading to a MBA in Healthcare Leadership, require 152 credits total, of which 42 are master's credits leading to the MBA in Healthcare Leadership. Students must meet all college and academic program guidelines.

The combined program requires careful planning. It is recommended that this should begin in the first term of a student's undergraduate career. The student and the primary mentor will consult in the planning of the undergraduate degree program so that both the undergraduate degree requirements and the 12 graduate-level credits from the MBA in Healthcare Leadership are included in the degree plan. Students must meet graduate expectations for academic progress and grade point average in their master's level courses to remain in the combined pathway program.

Combined Pathway Courses

The four graduate courses that must be taken during undergraduate study are below. Students accepted to the combined pathway will include these courses in their undergraduate degree plan.

Code	Title	Credits
HCLM 6005	Mastering Leadership in Healthcare Organizations	3
HCLM 6010	Analysis of Healthcare Markets & Health Policy	3
HCLM 6015	Health Information Management and Informatics	3
HCLM Elective		3

Remaining required graduate courses can be found on the MBA in Healthcare Leadership (p. 572) pages of this catalog.

Information Technology, Combined Degree Pathways

Empire State University currently offers a combined degree pathway to the M.S. in Information Technology to undergraduate students of SUNY Cobleskill. Enrollment in a combined pathway allows highly qualified, current SUNY Cobleskill students to work on a master's degree while completing their bachelor's degree. Up to 12 credits of designated graduate courses are incorporated into the undergraduate degree program and will count toward both the bachelor's degree and the master's degree.

The Pathway

Undergraduate students of **SUNY Cobleskill** may seek the following combined degree pathway:

- Bachelor of Technology in Information Technology (through SUNY Cobleskill) to Master of Science (MS) in Information Technology

Admission

Admission into this combined degree pathway is highly selective. Matriculated SUNY Cobleskill undergraduate students may apply to the combined program through the School for Graduate Studies and will complete all of the application requirements for the master's degree program. The applicant must have a minimum recalculated GPA of 3.2 (most recent 60 credit earned).

In addition to completing the graduate application[1], candidates must have foundational knowledge in computer programming and computer networks. Please see the **Graduate Admission** section of this catalog for a complete listing of materials required to complete a graduate application.

[1] SUNY Cobleskill applicants are not required to submit the application essay and may request a waiver code of the application fee at gradpartners@sunyempire.edu.

Curriculum

Students accepted to this combined program will include the following 4 courses (12 credits) in their approved undergraduate degree plans. Special requests to substitute these courses will be considered by the program coordinator in consultation with the student's SUNY Cobleskill advisor.

These programs require careful planning that should begin in the first term of a student's undergraduate career. The student and their undergraduate advisor should consult in planning the undergraduate degree program so that these requirements are met during undergraduate study and that the 12 credits of master's courses from the M.S. in Information Technology program also are included in the degree plan. Students must meet graduate expectations for academic progress and grade point average in their master's level courses to remain in a combined program.

Combined Pathway Courses

Code	Title	Credits
INFT 6127	Information Technology in Organizations	3
INFT 6132	Network Administration	3
INFT 6137	Enterprise Systems Architecture	3
INFT 6142	Computer Systems Security	3

Remaining required courses of the M.S. in Information Technology degree can be found on the MS in Information Technology (p. 575) degree page of this catalog.

Liberal Studies, Combined Degree Pathways

Enrollment in a combined program allows highly qualified, Empire State University students to work on the Master of Arts in Liberal Studies while completing the bachelor's degree. Up to 12 credits of designated master's courses are incorporated into the bachelor's degree program and will count toward both the bachelor's and master's degrees.

The Pathways

Qualified SUNY Empire undergraduates may pursue the following combined degree pathways:

- B.A. or B.S. in Historical Studies to M.A. in Liberal Studies
- B.A. or B.S. in Cultural Studies to M.A. in Liberal Studies
- B.A. or B.S. in The Arts to M.A. in Liberal Studies

ADMISSION

Admission into the combined programs is highly selective. To be considered for admission into a combined pathway, applicants must complete an undergraduate application and meet the following requirements:

- Minimum 3.2 GPA (recalculation of up to the last 60 credits earned); and
- Transferring no more than 92 credits at the time of application.

In addition to the above, to be offered for official admission[1] candidates must have completed 60 or more undergraduate credits.

Please see the **Undergraduate Admission page** for a complete listing of materials required to complete an undergraduate application.

[1] Candidates who have less than 60 undergraduate credits can be accepted conditionally. To become officially admitted, conditional admits must maintain a minimum 3.2 GPA until they have 60 credits. Candidates who do not meet the requirements will be dismissed from the combined pathway and allowed to complete the bachelor's portion.

Curriculum

The combined pathway requires 142 total credits of which 30 are master's credits leading to the M.A. in Liberal Studies. Students complete 12 credits of graduate coursework as undergraduate students that count toward both the 124 credits required for the B.A./B.S. degree and the 30 credits required for the M.A. degree. Students must meet all college, AOS and relevant concentration guidelines. Once the undergraduate degree has been awarded, the student may begin the remaining 18 credits required for the graduate M.A. in Liberal Studies degree. Students must meet master's expectations for academic progress and grade point average in their master's level courses to remain in the combined program.

Combined Pathway Courses

The four graduate courses that will be taken during undergraduate study are listed below. Short 2-3 day virtual residencies are also required during graduate liberal studies. The remaining courses required to complete the graduate degree, can be found on the MA in Liberal Studies (p. 577) page of this catalog, under the Program Requirements tab.

Code	Title	Credits
LACS 6005	Foundations of Liberal Studies	3
LACS 6010	Interdisciplinary Learning Design	3

LACS 6035	Models of Critical Inquiry: Science & Society	
Total Credits		**12**

Nursing, Combined Degree Pathways

The Empire State University School of Nursing and Allied Health offers a multi-award BS in Nursing and MS in Nursing degree to prepare graduates for practice in complex and evolving healthcare environments. The academic content of the program focuses on achieving core competencies identified by the American Association of Colleges of Nursing (2021) and National Academy of Medicine (2021) for nurses to reduce health disparities, achieve health equity, and promote well-being.

In this program, students earn both a Bachelor of Science degree in Nursing and a Master of Science degree in Nursing Education or Nursing Administration. This flexible, comprehensive, and evidence-based program is designed for part-time study and can be completed in three to four years depending on specialization. SUNY Empire has an established infrastructure for distance education which supports this fully on-line program. Students complete their clinical practicum experiences in their local communities.

Admission

To be considered for admission to the RN to MS in Nursing program, (http://suny-empire.esc.edu/degrees-programs/associate-bachelors/rn-to-b.s.-in-nursing/) students must:

- Have an associate degree from an accredited nursing program with a minimum 3.0 GPA.
- Possess an active, unencumbered NY state registered nurse license.
- One year working experience as a registered nurse.
- Be able to pursue college-level work (as evidenced by essay).
- Demonstrate capacity to develop graduate level academic skills.

The nursing program gives preference in the admission decision to candidates residing within New York state.

Application Requirements

To apply for the RN to MS in Nursing degree program, you must submit:

- An online application (https://apply.sunyempire.edu) and a 500-word essay. Guidelines are provided in the online application.
- An official transcript sent directly from the institution where you earned your A.A.S degree or diploma.
- One letter of recommendation from current supervisor.
- Copy of an active, unencumbered NY state registered nurse license.
- Show completion of an associate degree in nursing with a minimum 3.2 GPA.

Curriculum

The combined RN-MS in Nursing degree program is designed for working registered nurses who wish to earn their BSN and MSN degree at the same time. For part-time students, the program can be completed within four years. Students progress through the program by completing 4-8 credits per term. Students must have an overall GPA of 3.2 and must successfully complete 140-143 credits for the RN to MS in Nursing Education or Nursing Administration degree program. Students will be awarded the B.S.N. and the M.S. in Nursing degree at the completion all degree requirements.

Please visit the B.S. in Nursing (p. 101) catalog pages and the M.S. in Nursing Education (p. 582) or M.S. in Nursing Administration (p. 580) catalog pages for more information about each program.

Work and Labor Policy, Combined Degree Pathways

Empire State University currently offers a combined degree pathway to the M.A. in Work and Labor Policy to undergraduate students of SUNY Cobleskill. Enrollment in a combined pathway allows highly qualified, current SUNY Cobleskill students to work on a master's degree while completing their bachelor's degree. Up to 12 credits of designated graduate courses are incorporated into the undergraduate degree program and will count toward both the bachelor's degree and the master's degree.

The Pathway

Undergraduate students of **SUNY Cobleskill** may seek the following combined degree pathway:

- B.S. in Applied Psychology (through SUNY Cobleskill) to M.A. in Work and Labor Policy

ADMISSION

Admission into the M.A. in Work and Labor Policy combined degree pathway is highly selective. Matriculated SUNY Cobleskill undergraduate students may apply to the combined program through the School for Graduate Studies and will complete all of the application requirements[1] for the master's degree program. The applicant must have a minimum recalculated GPA of 3.2 (most recent 60 credit earned).

APPLICATION

Please see the **Graduate Admission** section of this catalog for a complete listing of materials required to complete a graduate application.

[1] SUNY Cobleskill applicants are not required to submit the application essay and may request a waiver code of the application fee at grad@sunyempire.edu.

Curriculum

Students accepted to this combined program will include the following four courses (12 credits) in their approved undergraduate degree plans. Special requests to substitute these courses will be considered by the program coordinator in consultation with the student's SUNY Cobleskill advisor.

These programs require careful planning that should begin in the first term of a student's undergraduate career. The student and their undergraduate advisor should consult in planning the undergraduate degree program so that these requirements are met during undergraduate study and that the 12 credits of master's courses from the M.A. in Work and Labor Policy program also are included in the degree plan. Those courses are listed below. Students must meet graduate expectations for academic progress and grade point average in their master's level courses to remain in a combined program.

Combined Pathway Courses

Code	Title	Credits
LABR 6015	Labor Policy in America	3
LABR 6020	Working in America	3
PPOL 6020	Research Methods	3
or PPOL 6021	Methods for Policy Research	
LABR 6025	Labor & Employment Relations	3
Total Credits		**12**

Remaining required courses of the M.A. in Work and Labor Policy degree can be found on the MA in Work and Labor Policy (p. 589) section of this catalog, under Program Requirements.

Graduate Admission

For application deadlines, please refer to The School for Graduate Studies' Admission *(*https://www.sunyempire.edu/admissions/graduate/*) website page.*

School for Graduate Studies Admissions

Admissions Review for a Master's Program

An application is reviewed when it is complete. A complete application may include:

- Standard biographical information;
- Official transcripts of undergraduate and graduate study from a regionally accredited institution;
- A record of previous experience in employment and/or education (a CV/resume);
- A personal essay describing academic and professional goals;
- An analytical essay (for select programs);
- A copy of active teaching license (for select programs);
- Recommendations from appropriately qualified persons who can attest to the applicant's ability to pursue graduate study (personal references are not appropriate), for select programs; and
- A $50 orientation fee (nonrefundable).

Applications are reviewed regularly throughout the year but only after all required documents have been received (requirements vary by program). You should submit all documents immediately upon applying. It is important to note that the MAT programs, M.Ed in Adolescent Special Education, M.S. in Applied Behavior Analysis only start new students in the fall term.

Transcripts, letters of recommendation, the personal essay, the analytical essay, and employment experience (resume/CV) are all considered in the admission decision. For select programs, applicants may be invited for an interview. (Please see the Graduate Admission Policy located in the Policies and Procedures (p. 710) section of this catalog.)

PROGRAM PREREQUISITES
The M.A.T. programs, M.S. in Finance, M.S. in Information Technology, M.S. in Cybersecurity, M.S. in Applied Analytics, M.S. in Healthcare Analytics, M.S. in Marketing Analytics, and M.B.A. programs have prerequisite requirements. Please refer to the respective program's page for details of the prerequisite requirements.

ENTRANCE EXAMS
Entrance exams (GRE, GMAT) are not required for application to any of the master's programs.

Admissions Review for the Doctoral Program

An application for the Ed.D. in Educational Leadership and Change is reviewed when it is complete. A complete application includes:

- Standard biographical information;
- A record of previous experience in employment and/or education (a CV/resume);
- A personal essay describing academic and professional goals;
- A program research essay;
- Official transcripts of undergraduate and graduate study from a regionally accredited institution;
- Two recommendations from appropriately qualified persons who can attest to the applicant's ability to pursue graduate study (personal references are not appropriate); and
- A $50 orientation fee (nonrefundable).

Applications are reviewed for fall term admission only.

Transcripts, letters of recommendation, personal essay, program research essay, and experience (resume/CV) are all considered in the admission decision. An interview is required for candidates. (Please see the Admission Policy located in the Policies and Procedures section of this catalog.)

Program Prerequisites
The Ed.D. in Educational Leadership and Change has prerequisite requirements. Please refer to the Ed.D program's Admission section (p. 565) for a detailing of the prerequisite requirements.

ENTRANCE EXAMS
Entrance exams (GRE, GMAT) are not required for entrance to the Ed.D. in Educational Leadership and Change.

Admissions Review for an Advanced Certificate

An application is reviewed when it is completed. A complete application includes:

- Standard biographical information;
- A record of previous experience in employment and/or education (a CV/resume);
- A copy of active teaching license (for select programs);
- Official transcripts of undergraduate study from a regionally accredited institution; and
- A $50 orientation fee (nonrefundable).

PROGRAM PREREQUISITES
Advanced Certificates in Financial Management and Analysis, Global Finance and Investment, Information Technology Management, Marketing Analytics and Brand Management, and Teaching English to Speakers of Other Languages have prerequisite requirements. Please refer to the respective program's page for details of the prerequisite requirements.

Admissions Review for a Certificate of Advanced Study

An application is reviewed when it is completed. A complete application includes:

- Standard biographical information;
- A record of previous experience in employment and/or education (a CV/resume);
- A copy of active teaching license;
- Official transcripts of undergraduate and graduate study from a regionally accredited institution; and
- A $50 orientation fee (nonrefundable).

PROGRAM PREREQUISITES
The Certificate of Advanced Study in Teaching English to Speakers of Other Languages has prerequisite requirements. Please refer to the respective program's page for a detailing of the prerequisite requirements.

School of Nursing and Allied Health Graduate Admissions

Both the **M.S. in Nursing Administration** and the **M.S. in Nursing Education** programs require the following when applying:

- A bachelor's degree in nursing (BSN) from a regionally accredited institution with a GPA of 3.0 or above;
- Possess an active, unencumbered RN license with expiration date;
- Resume showing clear demonstration of clinical practice as a registered nurse (minimum 1 year); and
- Must meet the M.S. in nursing application requirements (https://www.sunyempire.edu/admissions/nursing-admissions/nursing-application-checklist/).

The **Certificate in Advanced Study in Nursing Education** has the following admission requirements:

- A complete admission application;
- A New York State or state of residence unencumbered license as a registered nurse and any other advanced practice license;
- Official transcript(s) from a regionally accredited institution of higher education;
- A graduate degree (masters) in nursing with a cumulative GPA of 3.0 or higher; and
- Evidence of completing graduate level content for advanced health assessment, pathophysiology and pharmacology.

Evaluation of Foreign Educational Credentials

All foreign educational documents should be evaluated by World Educational Services, Inc. (WES) or any National Association of Credential Evaluation Services (NACES) member evaluator prior to being submitted to Empire State University. Evaluation reports must be submitted directly from the evaluation service to the university or GradCAS.

Canadian transcripts must be in English and approved by the Association of Universities and Colleges of Canada (AUCC) or Canadian Colleges of Applied Arts and Technology (CAAT). All other transcripts will be required to be evaluated by a NACES member evaluator.

Applicants for whom English is not the first language must submit proof of proficiency. The School for Graduate Studies will accept Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) test scores taken within the last three years. You must score within the range of 79-94 on the TOEFL internet-based test (iBT), 250 on the computer- based test (CBT), or 6.5-7 on the IELTS to be considered for admission to the Empire State University advanced certificate programs. Applicants, who have completed a bachelor's degree from a U.S. institution or from an institution where the instruction was given in English, may be exempt.

Canadian Border Commuter Student Admission

Canadian students who maintain their residence in Canada and travel to the U.S. for required residencies, orientations or meetings with their advisors are considered border commuter students and must apply for admission to the university and meet the following additional admission documentation requirements:

- Students whose first language is not English must demonstrate that they have sufficient English proficiency to study at Empire State University. See above;
- proof of financial ability to pay for tuition; and
- proof of health insurance coverage.

Canadian transcripts must be in English and from institutions approved by the Association of Universities and Colleges of Canada (AUCC) or Canadian Colleges of Applied Arts and Technology (CAAT). All other transcripts from non-U.S. educational documents must be evaluated by any of these approved evaluation services. See above.

I-20 Information

Canadian border commuter students must obtain an I-20 to study in the United States. Canadian citizens are not required to apply for or hold an F-1 student visa in order to enter the U.S., however, permanent residents of Canada who are not Canadian citizens will need to apply for a F-1 student visa at a U.S. Embassy or Consulate once they have applied for and received their initial I-20 from the university.

Canadian border commuter students accepted to the university are entered into the federal Student and Exchange Visitor Information System (SEVIS) (http://www.Ice.gov/sevis/i901/), generating the student's I-20. All international students who are issued an I-20 document are required to pay the federal SEVIS fee. The current fee is $200 and must be paid directly to the U.S. government. Please visit the SEVIS (http://www.Ice.gov/sevis/i901/) website for more information on the SEVIS fee and how to pay it. Students are required to present receipt of this payment when they cross into the United States. Border commuter students are issued a new I-20 each term, but are not required to pay the SEVIS fee for each consecutive term they are in attendance. If a student does not maintain status for each consecutive term, he or she will be required to pay a new SEVIS fee when issued a new I-20.

To cross the border, students are required to have a valid passport, an I-20 issued for the current term, their SEVIS fee receipt and their financial documents.

Citizens and permanent residents of Canada are allowed to attend classes on a part-time basis. However, part-time students should submit new financial documents to the international student liaison every term, in order to receive a new I-20 for that term.

Students should contact the international student liaison once they have registered for their program so that their registration is entered into SEVIS, demonstrating that they are in status. The earliest border commuter student may enter the U.S. is 30 days before the start of the term.

Canadian border commuter students are not eligible for financial aid, university-sponsored scholarships or employment while studying with Empire State University. Border commuter students are always considered nonresidents for tuition purposes. Border commuter students are not allowed to establish a residence in the U.S.

For visa or international student questions, please contact Admissions toll free at 800-847-3000.

Please visit the International Students (http://www.sunyempire.edu/ISS/) webpage for more detailed information on Canadian border commuter student admissions requirements, including demonstration of financial resources and evaluation of non-U.S. credentials. All documents should be mailed to:

Admissions
Empire State University
111 West Ave
Saratoga Springs, NY 12866-4390
Attention: International Student Liaison, U.S.A.

Matriculation

A matriculated student is one who has been admitted for study toward a doctoral degree, master's degree, advanced certificate, or certificate of advanced study program.

State Authorization for Provision of Online Education

Federal regulations require that colleges and universities that participate in Title IV funding and offer degree programming through distance or online education to students in other states, must seek approval from those states to offer such programs.

Empire State University is working to comply with each state's regulations and to maintain the necessary authorizations to continue providing our online degree programs. As a member of the National Council for State Authorization Reciprocity Agreements (NC-SARA), Empire State University is authorized to offer its online degree programs to residents of all other NC-SARA participating states. A complete list of states that are participants of NC-SARA can be found on **their website**.

If a state or U.S. territory is not participating in NC-SARA, please visit our **State Authorization for the Provision of Online Education web page** to check on the status of Empire State University's authorization in your state of residence. All states are considered "registration approved" unless listed otherwise. If your state is not currently approved, we cannot accept your application for admission to an online degree program at this time.

Complaint Resolution

Empire State University, as a provider of distance or online education, is required by the United States Department of Education to provide all prospective and current out-of-state students with contact information for the appropriate agency in their home state that handles complaints against institutions offering distance learning within that state.

Students are encouraged to follow the university's student problem resolution process prior to filing a complaint with a state agency. Please visit Empire State University's Student Problem Resolution Non-New York Residents (https://www.sunyempire.edu/student-affairs/contact-for-support/student-problem-resolution/non-new-york-residents/) webpage for more information.

Tuition and Fees (Graduate)

The School for Graduate Studies has three terms per academic year:

- Fall (15 weeks),
- Spring (15 weeks) and
- Summer (eight weeks) or (15 weeks).

Term schedules and deadlines, plus registration information are located elsewhere in this catalog. Each term also contains two overlapping 8-week express terms. Please see the University Calendar section (p. 154) or the Office of the Registrar's web page (https://www.sunyempire.edu/registrar/) for academic calendar details. Although you may enroll in terms that overlap, you may not receive financial aid for any term that begins during your enrollment in a previous term. Please see the section on financial aid (p. 178) for more information.

Registration and Billing

Students register for the upcoming term by discussing their enrollment plans with their academic advisor and filing an online registration form that indicates what and with whom they will study.

The submission of the online registration form initiates billing and is a business contract between you and the university. It permits you to begin study at Empire State University and obligates you to pay tuition and all applicable fees. This must be completed and submitted online by you before the final registration date for the selected term of official enrollment. The Last Date for Payment for each term can be found on the Payment Due Date web page (https://www.sunyempire.edu/student-accounts/billing-payment/how-you-are-billed/payment-due-dates/). If you register after the payment due date, your payment is due immediately.

Once the online registration information is complete and submitted electronically, a term invoice (bill) will be generated and made available to you online at the MySUNYEmpire (https://my.sunyempire.edu) portal of the university's website under Student Accounts (https://my.sunyempire.edu/studentaccounts/). You should review your Student Account Statement on MySUNYEmpire after registering. If you have any financial aid awards that do not show as pending, you are not eligible for them based on your current enrollment. You are considered enrolled unless you are officially withdrawn. Failure to engage in studies does not relieve you from your financial responsibility.

Tuition and fees are subject to change without prior notice by action of the SUNY Board of Trustees.

[1] Please contact the School for Graduate Studies for updated information about costs. Tuition is charged by the credit.

[2] The college fee and student activity fee are mandatory student charges imposed per term on all students in the State University system. The technology fee is charged to students as part of a comprehensive funding plan to build and maintain an infrastructure that offers students the highest quality learning environment.

[3] The health and wellness fee is $15 per term for enrollment less than 12 credits and $35 per term for enrollments of 12 credits and more.

[4] All nonresident students attending Empire are automatically eligible for an Empire State University nonresident tuition grant to offset their educational costs.

For further information about NYS residency status qualifications, please refer to the Policy on New York State Residency (http://www.sunyempire.edu/NYSresidency/) webpage.

Fee	Description
Mandatory fees per term	
College fee	$1.70 per credit up to $25.00 maximum for 12+ credits
Student activity fee	$8.75 per credit up to $35 maximum
Technology fee	$185 per term
Health and wellness fee	$15 per term for enrollments less than 12 credits
	$35 per term for enrollments of 12 or more credits
Other related fees	
Orientation fee	$50 per application to the university
Residency and Executive Retreat fee	Varies. Certain courses require an additional fee for residency activities.
Service related fees	
Time Payment Plan	$25 nonrefundable application fee per term
Time Payment Plan late payment fee	$30 for each late Time Payment Plan payment
Late registration fee	$50 (each term) if initial registration for a term is submitted once the term begins
Returned Check/Charge	$20
Academic Transcript	$10 per transcript

Additional Fees and Expenses information

Books and Supplies

These costs vary but are approximately $60-$500 per course.

Course Materials Fees

The M.S. in Finance program requires access to online financial data for some of its required courses. The School for Graduate Studies will provide access to this data via Thomson Reuters Eikon web application each term, for a fee. The fee to access this database is listed in the fees tab of the course description. The fee is assessed at the time a student registers for a course that requires it. This is not a one-time fee. It will be assessed once each term, if a student has registered for a course that requires it *in that term*. Students may request reimbursement of the fee if they attain access to the database outside of the Empire State University platform.

Residency and Executive Retreat Fee

There is a fee for each face-to-face residency or executive retreat attended. Depending on the course and the location associated with the residency, the fee may range from $100 to $350. Please refer to the residency-based course posted in the Term Guide (https://banner.sunyempire.edu/StudentRegistrationSsb/ssb/registration/) for the actual fee charged at time of registration.

Transportation, meals, which are not part of the residency, and lodging are not included in this fee. There is no fee for virtual residencies.

University Billing Policy

The university requires that tuition and all mandatory fees be paid or that a Time Payment Plan be established no later than the payment due date for the enrollment term. Your payment is due by the term payment due date. You will not receive a paper bill and may instead view your student account statement in MySUNYEmpire. If you fail to pay, make Time Payment Plan arrangements or have approved financial aid by the last date for payment, your registration may be cancelled and you may lose your place in an online course or study group. If your registration is cancelled and you re-register any time after the payment due date, you will be charged a $50 late registration fee.

Payment Due Dates for 2024-2025*

Term	Payment Due Dates
Fall 2024 and Express Term One	August 30, 2024
Fall 2024 Express Term Two	October 18, 2024
Spring 2025 and Express Term One	January 10, 2025
Spring 2025 Express Term Two	February 28, 2025
Summer 2025 and Express Term One	May 9, 2025
Summer 2025 Express Term Two	June 13, 2025

*   Dates are subject to change. Please visit the Payment Due Dates (http://www.sunyempire.edu/paymentduedates/) web page for the most up-to-date information.

Late Registration Fee

A Late Registration Fee of $50 will be assessed for registrations made once the term begins.

Late Registration Fee Schedule

Term	Add/Drop Period	Late Registration Fee Assessed
Fall 2024 and Express Term One	September 3 - 9	September 3
Fall 2024 Express Term Two	October 21 - 27	October 21
Spring 2025 and Express Term One	January 13 - 19	January 13
Spring 2025 Express Term Two	March 3 - 9	March 3
Summer 2025 and Express Term One	May 12 - 18	May 12
Summer 2025 Express Term Two	June 16 - 22	June 16

Please visit the Student Accounts (http://my.sunyempire.edu/StudentAccounts/) website for additional tuition and fee information.

Payment Procedures

The preferred method of payment is online through MySUNYEmpire (https://my.sunyempire.edu), with a debit or credit card (Discover, MasterCard, VISA or American Express) or by check (credit card checks cannot be processed as e-payments).

You also may pay your bill with a check or money order (do not send cash) made payable to Empire State University. To mail your payment, print your Student Account Statement or include the payment stub from your Student Account Statement and mail it along with your payment to:

Empire State University
Student Accounts
111 West Ave.
Saratoga Springs, NY 12866-6069

Payment must be received by the payment due date to avoid cancellation of your registration.

As a prospective student, you are urged, if you have not done so already, to apply for financial aid at least eight weeks before the payment due date for the term. Students who cannot pay tuition and fees or set up a Time Payment Plan by the payment due date should enroll in a later term.

NYS RESIDENCY FOR TUITION BILLING PURPOSES

A student's initial residency status is determined at the time of entry into the university and monitored thereafter according to SUNY policy. Students must live in and be a domiciled resident of New York state for a period of 12 months prior to the start of a term in order to receive NYS resident tuition rates for that term. You are considered a NYS resident for tuition purposes if you meet the following requirements:

1. If you attest that you are a New York state resident on your admissions (matriculated or nonmatriculated) application
2. You have lived in the state of New York for at least the full prior year and are considered a domiciled resident.

Definition of Domicile: A fixed, permanent home, for legal purposes, to which a person returns after a period of absence.

Please note that living in the state of New York alone does not meet the residency requirements for tuition purposes. If you do not meet the above requirements, you will be considered a nonresident for tuition purposes and charged nonresident tuition rates.

Exceptions to the domicile rule:

1. If you attended an approved New York state high school for two or more years, graduated from an approved New York state high school and applied for admission to the State University of New York within five years of receiving a New York state high school diploma; or
2. If you attended an approved New York state program for a general equivalency diploma exam preparation, received a GED and applied for admission to the State University of New York within five years of receiving the GED.

If you are charged nonresident tuition rates and believe you meet the criteria for NYS residency for tuition purposes, you must apply for a change in residency status using the New York State Residency application form at MySUNYEmpire's Forms and Publications page (http://www.sunyempire.edu/Forms/). You must include at least three documents demonstrating an established domicile in New York state. All documents must be dated one year or prior to the start date of the semester for which you are applying for residency. The burden of proof is upon the applicant to provide documentation that he/she has established a domicile in New York state or meets the eligibility requirements for an exception to the domicile rule. For more information, visit the State University of New York policy titled "Residency, Establishment of for Tuition Purposes (http://www.suny.edu/sunypp/documents.cfm?doc_id=402)."

Completed residency applications must be submitted by the last date of add/drop period for the term in which tuition is due. Applications received after the last date for drop/add will be reviewed and will become effective for the next term, if approved.

Time Payment Plan

Empire State University offers an interest-free, low-cost payment plan, through TouchNet, to pay your charges in convenient installments. The time payment plan has a nonrefundable application fee of $25 per term. There is a $30 late payment fee for each Time Payment Plan payment if it is made after the due date. The minimum amount of eligible charges to enroll in the Time Payment Plan is $100.

To enroll in the plan you must agree to the terms and conditions of the payment plan and also make your first payment by the due date specified in your payment plan agreement. You may get detailed information on the Time Payment Plan on the Time Payment Plan Terms and Conditions web page (https://www.sunyempire.edu/student-accounts/billing-payment/how-to-pay/time-payment-plan-terms/) or call 800-847-3000, ext. 2285. You must enroll in the Time Payment Plan each term you wish to use this as your method of payment. The university reserves the right to deny future payment plan privileges when a student's payments have not been made as indicated in their payment plan agreement.

Third-party Payments

Students may be able to defer payment of tuition and fees if they have sponsorship from a third party such as an employer or union. Students must submit a payment authorization from their sponsor to studentaccounts@sunyempire.edu, fax 518-580-4790 or mail to:

Empire State University
Student Accounts
111 West Ave.
Saratoga Springs, NY 12866-6069

The university will review and if approved, the amount will show as estimated aid on the student's account statement. The university only accepts payment authorizations that are a guarantee of payment to Empire State University. We cannot accept authorizations that are outcome dependent.   For more information, visit the third-party sponsorship web page (http://www.sunyempire.edu/thirdparty/) or contact the 1Stop Student Services at 800-847-3000, ext. 2285.

If a third-party sponsorship is not paid for any reason, or a voucher is not finalized, the student is responsible for any outstanding balance. A credit balance created as the result of a student's withdrawal from any or all courses will be returned in accordance with the terms and conditions of the sponsorship.

Unpaid Accounts

A balance is any charge remaining or created on an account. Once an account is identified as having a past due balance, an accounts receivable financial hold is placed on the student's account and services from the university, including registration and grades, are restricted until the balance is paid in full. Unpaid accounts are forwarded to a third-party collection agency or the Office of the Attorney General at which time interest and/or fees are retroactively assessed based on the date of your first billing statement. The attorney general's office may certify the debt to the New York State Department of Tax and Finance Offset Program. All costs associated with the collection of overdue accounts are the responsibility of the student. Delinquent accounts may be reported to a credit agency. The State University reserves the right to withhold academic records from any student who has not satisfied all obligations. Any student with an outstanding financial balance due at the end of a term will not be able to register for a subsequent term or receive any other services from the university until the balance is paid.

Withdrawal Liability and Refund Policy

To officially withdraw from one or more studies at any point in the term, a student must withdraw online by logging into their MySUNYEmpire (https://my.sunyempire.edu) account. If a student is withdrawing from one or more studies and they have incurred 100% tuition and fee liability the student is required to complete a Withdrawal Form available on the Withdrawal Form and Instructions web page (https://www.sunyempire.edu/registrar/forms-services/withdrawal/) and mail or fax it to the Office of the Registrar for processing. The effective date of the withdrawal will be the postmark date of the envelope or the date the fax is received. Contact the Office of the Registrar at RegistrarsOffice@sunyempire.edu or by phone regarding any questions or concerns. A student is considered officially enrolled for their courses until they have withdrawn online or have submitted a Withdrawal Form to the Office of the Registrar. Liability will be calculated according to the State University of New York withdrawal/refund policy. If a student withdraws before the enrollment start date, then 100% of all tuition and fees are refundable. If a student withdraws on the start date or after, the college fee, the student activity fee and late registration fee are nonrefundable.

For standard 15-week terms, the technology fee, health and wellness fee, and tuition are subject to the following liability schedule:

Effective date of withdrawal	Liability percent
Prior to Term Start	**0 percent** (100% Tuition refund)
Calendar Day 1-7	**0 percent** (100% Tuition Refund)
Calendar Day 8-14	**30 percent** (70% Tuition Refund)
Calendar Day 15-21	**50 percent** (50% Tuition Refund)
Calendar Day 22-28	**70 percent** (30% Tuition Refund)
Calendar Day 29 and After	**100 percent** (0% Tuition Refund)

The first date of the term is Day 1. A liability table for terms other than 15 weeks in length can be found on the Withdrawal Form and Instructions web page, under Student Account.

Additional information about withdrawals:

• Prorated liability applies only for official student withdrawals and are calculated according to the effective date of the student's withdrawal. The liability chart does not apply to Administrative Withdrawals (ZWs) which incur 100 percent tuition liability.

• If a withdrawal creates a credit on a student's account, a refund will be issued within 28 days. Refunds are issued according to the method of payment.

• Withdrawals and Administrative Withdrawals may impact current and future financial aid eligibility. If you receive financial aid and are withdrawing from one or more courses, federal and state aid eligibility may be affected. Please see the sections on eligibility under Federal and New York State Financial Aid in this catalog.

• If you are forced to withdraw from your studies due to unforeseen and extenuating circumstances, you may request an exception to the university's written withdrawal policy from the Office of Administration through Student Accounts. Contact Student Accounts (http://www.sunyempire.edu/AskSA/) for more information.

For complete information about withdrawals, visit the Withdrawal Form and Instructions web page (https://www.sunyempire.edu/registrar/forms-services/withdrawal/).

Financial Aid

The purpose of financial aid is to provide assistance to matriculated students whose financial resources are inadequate to meet the costs of their education. Financial aid is intended to supplement, not replace, a family's resources. A family's resources include the student's resources and spouse's resources, if married at the time of application. For that reason, most families should think of themselves as the first – and probably primary – source of funds for college. Annual family taxable and nontaxable income is not the only factor that is considered in evaluating eligibility for financial aid. A family's assets also are considered, since a family with assets (such as a savings account or investments) is considered to be in a stronger financial position than a family with the same income, but no assets.

Financial aid programs vary widely as to their precise qualifications, but awards are generally determined on the basis of the eligibility criteria of the specific aid program, and without regard to sex, age, race and ethnicity, religion, disability, national origin, sexual orientation, military status, or marital status, although special opportunities for underrepresented student populations do exist. With the exceptions noted, the major financial aid programs are open to part-time as well as to full-time students.

Most programs are open to United States citizens, nationals, and permanent residents who have declared their intent to become United States citizens. Persons holding temporary student, exchange visitor or visitor visas are not eligible.

A student's eligibility cannot be determined until he or she provides full information about financial need by filing the Free Application for Federal Student Aid (FAFSA (https://studentaid.gov/)). All financial aid applications as well as detailed descriptions of financial aid are available on Empire State University's Financial Aid website (https://www.sunyempire.edu/financial-aid/). You are advised to apply for all assistance programs for which you may be eligible at least six weeks before your expected date of enrollment. All financial aid programs must be applied for annually and the FAFSA becomes available the preceding year on Oct. 1.

There are three types of aid available at Empire State University:

1. Grants/scholarships – Money that does not need to be repaid;
2. Loans – Money that students borrow which must be repaid with interest; and
3. Work study – Student employment.

Priority Deadlines
The priority deadline date for applying for financial aid is:

- April 1 for continuing students
- Aug. 2 for new students beginning in the fall
- Dec. 20 for new students beginning in the spring

Note: These students will not be eligible for some scholarship and aid programs unless they apply by April 1.

Financial aid files completed after the financial aid priority deadline date will be reviewed. However, the Office of Financial Aid cannot guarantee that financial aid will be processed in time for the student to register with a financial aid deferral. A federal financial aid file is complete when the college has received valid FAFSA data from the federal processor and all other documentation requested by the Office of Financial Aid. Completed files are reviewed on a first-come, first-served basis.

FEDERAL AND STATE FINANCIAL AID
General financial aid programs available through the college include both federally and state-funded programs.

For graduate students, federal financial aid programs include the Federal College Work Study program; Federal Direct Unsubsidized Loans, Graduate PLUS Loans, and the Teacher Education Assistance for College and Higher Education (TEACH) Grant.

Please note: Students much be enrolled for at least 5 credits per term for the Federal Work Study program and Federal Direct Unsubsidized Loans. At the institutional level, a student may qualify for the SUNY Graduate Diversity Fellowship Program. New York financial aid programs for New York state residents include the Segal AmeriCorps Education Award or the Veterans Tuition Awards. More information about the New York state programs' application process may be found online at www.hesc.ny.gov.

Note: Good academic standing is a requirement for payment and continuation of financial aid. If you fall below the minimum achievement level, payment and continuation of financial aid will be in jeopardy. Students are not eligible for financial aid if they are in default on any student loan or owe a repayment of any federal student aid.

The deadline for applying for the limited funds of Federal Work Study and Federal Perkins Loans for matriculated students is April 1. If funds are still available after those applications are processed, others will be considered.

Summer Aid
Financial aid is available for the summer term. Students who already have a financial aid package will automatically see their package adjusted to include summer financial aid approximately 3 to 4 business days after registering. If students receive aid, the summer term financial aid counts as part of the upcoming academic year (fall and spring terms), and not as part of the preceding academic year (prior spring and fall terms).

Thus, any financial aid awarded for the summer term counts as part of the total aid for which the student is eligible for the entire year.

ELIGIBILITY FOR NEW YORK STATE FINANCIAL AID
Good Academic Standing
Students who receive any NYS financial awards are required to maintain good academic standing as defined by the regulations of the NYS Commissioner of Education in order to remain eligible for state financial aid. The regulations define a student in good academic standing as one who:

- Pursues the program of study in which he or she is enrolled (pursuit of program),
- Makes satisfactory academic progress toward the completion of his or her program's requirements.

In addition, New York State Education Law requires that students maintain a grade point average (GPA) of 2.0 or better after having received four full-time New York state financial aid payments or the equivalent in part-time funds. However, it is important to note that the graduate programs require a minimum grade point average of 3.0.

There are three criteria for maintaining good academic standing: Pursuit of program, satisfactory academic progress, and grade point average.

Students who do not meet the requirements for pursuit of program, satisfactory academic progress, and grade point average lose their eligibility for NYS financial aid. To remain eligible for NYS financial aid, a student must satisfy **all** criteria on the first day of the term.

Pursuit of Program
The first criterion for maintaining good academic standing for eligibility for NYS financial aid is pursuit of program.

To be in pursuit of program, a student must receive either a passing or a failing outcome in a certain percentage of studies each term, depending on the number of state aid payments the student has received (which may be different from the number of enrollment terms at the college). The required percentage is illustrated in the Pursuit of Program Table for full-time students who have received funds under the Tuition Assistance Program (TAP).

An outcome that indicates that the student substantively engaged in a study or course through the enrollment term is necessary to satisfy the pursuit of program requirement. Both passing and failing outcomes are acceptable. However, a withdrawal (WD or ZW) or drop (DR) outcome does not meet the requirement for pursuit of program, because it indicates no substantial engagement in a study or course over the full enrollment term. The progression is based on only the terms a student receives state aid.

Empire State University Pursuit of Program Table[1]

Number of full-time terms in which NYS financial aid has been received (e.g., through TAP)[2]	Must receive a passing or failing letter grade, P, NP or IN[3] for:
1, 2	50 percent of minimum full-time requirement (6 credit hours)
3, 4	75 percent of minimum full-time requirement (9 credit hours)
5 or more	100 percent of minimum full-time requirement (12 credit hours)

[1] The table illustrates expectations for full-time (12 or more credits) enrollment. A student who enrolls on a less than full-time basis must make progress proportionate to what is illustrated in the table. For example, two payments for part-time enrollments equal one payment for a full-time enrollment. Program or staff can advise individual students regarding these calculations.

[2] The number of terms refers to the number of state aid payments the student has received, which may be different from the number of enrollments at Empire State University.

[3] An incomplete (IN) outcome must become a passing or failing outcome by the end of the next term to satisfy the pursuit of program requirement.

A student must earn a passing or failing letter grade, P, NP or IN outcome for the percentage of study designated in the table for each term of enrollment, to be eligible for NYS aid in the next term. For example, a student who has received two N.Y. state aid payments must have outcomes that meet the pursuit of program standard for at least 6 credits in the second enrollment (i.e., 50 percent of the 12 credit minimum for full-time enrollment status), to be eligible for any N.Y. state aid in the next enrollment.

Satisfactory Academic Progress
To achieve and maintain satisfactory academic progress status, a student must accumulate a minimum number of credits over time. See the Satisfactory Academic Progress Policy for complete information.

Students who do not meet the minimum academic progress requirements (on academic warning for unsatisfactory academic progress) are not eligible for NYS financial aid.

Grade Point Average
Students must maintain a 2.0 or better after receiving four full-time New York state financial aid payments. All NYS aid payments are counted regardless of when they were made or what institution the student attended. A student who is new to Empire State University is assumed to meet the minimum GPA requirement. The university uses only Empire State University studies to compute the GPA thereafter.

It is important to note that the graduate programs require a minimum GPA of 3.0.

The Effect of Withdrawal
If a student withdraws from a course, his or her enrollment status, SAP rate, and/or state aid eligibility may be affected, depending on the effective date of the withdrawal and the number of state aid payments the student has already received (see pursuit of program table). A withdrawal is not included in the calculation of the GPA, therefore, it does not affect a student's GPA.

If a full-time student withdraws after day 28 and incurs full tuition liability, he or she may lose aid for the next term if he or she does not meet the pursuit of program standard for the current term.

If the student withdraws before day 28 and tuition falls below the full-time rate, the student's aid award for the current term is cancelled. Further information may be obtained from the Financial Aid office.

The Effect of Administrative Withdrawals
New York state regulations for financial aid establish course completion expectations. If a student receives an outcome of administrative withdrawal (ZW) for a course, his or her SAP rate is impacted and state aid eligibility may be affected for the student's next enrollment depending on the number of state aid payments the student has already received (see pursuit of program table). An administrative withdrawal outcome is not included in the calculation of the GPA, therefore, it does not affect a student's GPA.

A ZW outcome may mean the amount of the student's financial aid award is reduced or the student is required to pay back some or all of the NYS financial aid awarded. The amount depends on the last date of contact or "attendance." Further information may be obtained from the Financial Aid office.

Financial Aid Eligibility Assessment
The university assesses student eligibility for New York state financial aid at two points in each enrollment:

1. On the date the enrollment officially starts, the student must meet citizenship, residency, high school graduation, and good academic standing requirements. If the student fails to meet any of these requirements on the first day of the enrollment, he or she is not eligible for New York state financial aid for the enrollment term.

2. By the 28th day of the enrollment term, the student must meet the full-time study requirements and must be fully matriculated (admitted as a degree-seeking student) at the university. A student who fails to meet enrollment requirements by day 28 is not eligible for NYS

financial aid. A student who is not matriculated by day 28 is not eligible for NYS financial aid.

Regaining Eligibility for New York State Financial Aid
A student may regain eligibility for NYS financial aid through one of the following four methods:

1. Meeting the standard the student failed to meet previously, during an enrollment term in which no state award is paid.

- A student who failed to meet the pursuit of program standard may regain eligibility by meeting the pursuit of program standard in a subsequent term in which the student receives no state aid.
- A student who failed to meet the satisfactory academic progress standard may regain eligibility by accumulating the number of credits required to make satisfactory academic progress, through additional enrollment(s) for which the student receives no state aid.
- A student who failed to meet the grade point average standard may regain eligibility by earning the minimum required grade point average through additional enrollments for which the student receives no state aid.

2. Being readmitted and/or reinstated at Empire State University after an absence of at least one calendar year and after the student provides evidence in writing to the School for Graduate Studies of his or her ability to successfully complete a degree program. A student who is readmitted and/or reinstated after failure to make satisfactory progress must meet the credit accrual requirement the student failed to meet prior to losing eligibility within the next 9 credits of enrollment.

3. Transferring to another institution.

4. Applying for and receiving a one-time waiver.

Students receiving grades must have a cumulative GPA of 2.0 if they have received four or more full-time payments. A student re-positioned on the SAP chart must still meet the minimum GPA requirements for the number of NYS aid payments he or she has received. However, it is important to note that the graduate programs require a minimum grade point average of 3.0.

Eligibility Waivers
One-time Waiver of Eligibility Standards for New York State Awards
A student who fails to meet the state standards for pursuit of program and/or satisfactory academic progress may request a one-time waiver of these standards. A waiver is possible only in extraordinary or unusual situations. A waiver enables the student to receive NYS aid for one additional enrollment term.

New York state permits only one waiver at the graduate level. This applies across all institutions attended. The Mitigating Circumstance Committee may grant a waiver when the student fails to meet the pursuit of program standard, fails to meet the satisfactory academic progress standard, or fails to meet both standards in the same term. However, failure to meet the pursuit of program and satisfactory academic progress may not result in two separate waivers.

The one-time waiver is not automatic. The student may request a waiver for his or her most recent enrollment. Approval of a request for a one-time waiver occurs in two parts:

1. The dean of the School for Graduate Studies verifies the student's academic eligibility.
2. The Mitigating Circumstance Committee determines that the request meets New York state requirements for a waiver of financial aid regulations.

Students must complete the Appeal to Regain Eligibility for Federal and/or New York State Aid form, and submit it with appropriate documentation to the Financial Aid office. If approved academically by the dean, the request is then reviewed by the Mitigating Circumstance Committee to determine eligibility for state aid. In certain instances, a student may regain academic eligibility but continue to be ineligible for state aid.

In the event that the dean reports that a student does not meet academic eligibility requirements, the Mitigating Circumstance Committee cannot approve the waiver.

When a one-time waiver is granted for failure to make satisfactory academic progress, the last term of enrollment does not count negatively in determining satisfactory academic progress for New York state financial aid purposes. The student must meet the credit accrual requirement he or she failed to meet before losing eligibility during the next term.

Repeat of Courses With Credit Awarded
A repeat of any course for which credit has been awarded and that the university does not require the student to repeat may not be considered part of that student's course load for New York state financial aid purposes unless required by the academic program.
If a student is repeating a course in which he or she earned a passing grade initially, the student will not earn credit twice. When a student successfully completes a repeated course, the university uses the most recent grade of the two courses in calculating the student's GPA. However, both courses count as credit attempted in calculating SAP, but only one course counts in the calculation of credits earned.

Notification of Ineligibility for State Financial Aid Awards
The Office of Financial Aid notifies students regarding their ineligibility for further NYS financial aid. Students may obtain information on their financial aid status by contacting the Office of Financial Aid.

Please visit the state's financial aid website (http://www.hesc.ny.gov) for more information.

ELIGIBILITY FOR FEDERAL FINANCIAL AID
Award programs affected by the federal standards include:

- Federal Work Study
- Federal Direct Loans (unsubsidized)
- Federal Graduate PLUS Loans
- TEACH Grant

Good Academic Standing
Good academic standing standards for satisfactory academic progress and grade point average must be met in order to be eligible to receive federal financial aid.

Satisfactory Academic Progress
Students must make satisfactory academic progress to maintain eligibility for federal financial aid. See the Satisfactory Academic Progress Policy for complete information.

Students who do not accumulate the number of credits specified on the graduate SAP table may still receive federal aid. However, if a student does not accumulate the minimum number of credits within the next enrollment, the student loses federal aid eligibility.

A student who is permitted to re-enroll because of an exception to the Satisfactory Academic Progress Policy is not eligible for federal financial aid. However, if there are mitigating circumstances, the student may appeal as described in the mitigating circumstance section.

Grade Point Average

Students who receive grades must maintain a minimum GPA of 2.0. If the GPA falls below 2.0 and the student can restore the GPA within the next term of enrollment, the student is eligible to receive federal financial aid. If the student cannot, or does not, restore the GPA to 2.0 after the next term of enrollment, he or she is ineligible for federal financial aid. Students who receive narrative-only evaluations are not required to meet the GPA expectations.

A student who is permitted to re-enroll because of an exception to the GPA expectations is not eligible for federal financial aid. However, if there are mitigating circumstances, the student may appeal as described later.

It is important to note that the graduate programs require a minimum grade point average of 3.0.

Regaining Federal Financial Aid Eligibility

A student who is academically dismissed and is subsequently reinstated by the university must accumulate the number of credits required to meet the graduate satisfactory academic standards and earn at least a 2.0 cumulative grade point average in order to regain federal aid eligibility. However, it is important to note that the graduate programs require a minimum grade point average of 3.0.

The Effect of Withdrawal and/or Disengaging From Part of the Courses for the Term

If a student withdraws and/or disengages from any or all of their courses, his or her enrollment status (full or part time) and/or SAP rate may be affected, depending on the effective date of the withdrawal and/or disengage.

Withdrawal at any point in the term may result in a reduction of financial aid. If this occurs, students will be required to pay back any funds for which they no longer qualify. Financial Aid calculates such award adjustments individually using federal formulas. Further information may be obtained from the Financial Aid office at FinancialAid@sunyempire.edu.

The Effect of Withdrawal and/or Disengaging From All Courses

Withdrawal and/or disengaging from the college prior to the end of an enrollment term will cause you to use a full financial aid award period's eligibility. You will be ineligible for additional financial aid of the same type if re-enrolling within the same financial aid award period. All financial aid will be adjusted using federal and state guidelines for the cycle in which you withdraw.

In accordance with rules established by the U.S. Department of Education, schools must adhere to provisions regarding the treatment of Federal Title IV Financial Aid for students that withdraw from school completely for any term. These rules govern all federal loan and grant programs, including Federal Direct Loans, Federal Graduate PLUS Loans, and TEACH grants.

In general, the law assumes that a student must earn federal financial aid awards directly in proportion to the number of days of the term attended.

In other words, a student earns financial assistance as they complete their studies throughout a term. If a student completely withdraws and/or disengages from all studies during a term, the university must calculate the portion of the total scheduled financial assistance earned. Earned aid will be applied toward any outstanding charges on your account. **If the student received (or the college received on behalf of the student) more assistance than was earned, the unearned excess funds must be returned to the federal programs.**

The portion of federal loans and grants the student earned is calculated on a percentage basis comparing the total number of calendar days in the term to the number of days completed before withdrawal. (Scheduled breaks of five consecutive days or longer are excluded from the calculation.) The calculation for unearned aid is required for students attending classes less than 60 percent of that term.

For example: A student enrolls with an enrollment period of Sept. 8 to Dec. 8, 2023. The enrollment period is 103 days. The student withdraws from all coursework on Oct. 21, 2023 – which is the 44th day of the enrollment period. The student has earned 43 percent of the Title IV aid awarded (days attended/enrollment period, or 44/103, which equals 43 percent). Whatever percentage of the term the student attends is the percentage of Title IV that is earned. Once the student exceeds the 60 percent point of the enrollment period, the student has earned 100 percent of the Title IV aid. In the above example, if the student withdrew as of Nov. 11, 2023, 100 percent of the aid would be earned and no return calculation is required (Nov. 11, 2023, would be day 65 of the term, so 65/103 equals 63 percent – which is beyond the 60 percent point of the term).

Unearned federal financial assistance must be returned to program funds up to the amount of assistance that the student has received from the program in the priority order established by regulation: Federal Unsubsidized Direct Loan, Federal Graduate PLUS Loan, and TEACH Grant. The school takes the responsibility on behalf of the student to return unearned federal financial aid assistance funds that were applied directly to institutional charges. Institutional charges at the university that are no longer covered by financial assistance immediately become the responsibility of the student. The student also is responsible for return of unearned federal financial funds that were disbursed directly to him or her. To prevent undue hardship, allowances have been made if the unearned assistance repayment owed by the student is due to a loan program. Funds due for repayment to a loan program permit the student to repay according to the terms of the promissory note. In addition, if the student is directly responsible for repayment of unearned assistance to a federal grant program, only one-half (50 percent) of the calculated repayment is required.

The Effect of Administrative Withdrawals

Federal guidelines establish attendance expectations. An administrative withdrawal (ZW) outcome may reduce the student's award or require the student to pay back some of the federal financial aid already received. The amount depends on the last date of contact or attendance and the federal programs involved. Further information may be obtained from the Office of Financial Aid at FinancialAid@sunyempire.edu.

Mitigating Circumstances

Occasionally, students do not meet the good academic standards for reasons beyond their control or because of mitigating circumstances such as serious family problems or extended illness. Under such circumstances, a student may appeal for continued eligibility for federal financial aid.

Approval of a federal financial aid appeal is not automatic. Usually, students may only appeal for his or her most recent enrollment.

Approval of an appeal occurs in two parts:

1. Students must complete the Appeal to Regain Eligibility for Federal and/or New York State Financial Aid form, and submit it with appropriate documentation to the Office of Financial Aid. If approved academically by the dean, then the request is reviewed by the Mitigating Circumstance Committee to determine eligibility for financial aid. In certain instances, a student may regain academic eligibility but not financial aid eligibility.
2. The Mitigating Circumstance Committee determines if the request meets federal requirements for continued eligibility for federal financial aid.

The Mitigating Circumstance Committee has the authority to approve a financial aid appeal request. However, that approval is dependent on the verification of the student's academic eligibility. The dean is responsible for determining the student's academic eligibility. If the dean determines that a student does not meet academic eligibility requirements, the Mitigating Circumstance Committee cannot approve the appeal.

Students are rarely granted more than one appeal for mitigating circumstances.

Note: The financial aid appeal has no direct effect on enrollment eligibility, which is an academic determination.

Federal 150 Percent Rule
Federal regulations limit aid eligibility to 150 percent of the published length of the educational program. For example, an M.A. degree at Empire State University requires 36 credits; an Empire State University student pursuing an M.A. degree cannot be awarded federal aid for more than 54 credits attempted.

Federal guidelines do not allow waivers for mitigating circumstances that would extend a student's aid past the 150 percent limit.

Coursework for the Degree
Students may only receive financial aid for credits included in the current degree program. A student who repeats a study previously successfully completed may only be eligible to receive federal financial aid for one repetition. It is the student's responsibility to notify the financial aid office in this circumstance, as otherwise they may be left with a balance owed upon graduation clearance.

Notification of Ineligibility for Federal Financial Aid
The Office of Financial Aid notifies students regarding their ineligibility for further federal financial aid. Students may obtain information on their financial aid status by contacting FinancialAid@sunyempire.edu.

OTHER SOURCES OF FINANCIAL AID
In addition to federal and state financial aid programs, there are several options available for students who qualify.

Adult Career and Continuing Education Services – Vocational Rehabilitation
Disabled persons with substantial employment handicaps may qualify for assistance through the Adult Career and Continuing Education Services – Vocational Rehabilitation (ACCES-VR, formerly VESID). Eligible students should first explore other tuition assistance programs, but should feel free to contact the nearest ACCES-VR office. Please visit NYSED's Vocational Rehabilitation website (http://www.acces.nysed.gov/vr/)

for more information about this service and a complete list of regional locations.

Teacher Education Assistance for College and Higher Education (TEACH) Grant
Through the College Cost Reduction and Access Act of 2007, Congress created the Teacher Education Assistance for College and Higher Education (TEACH) Grant Program that provides grants of up to $4,000 per year to students who intend to teach in a public or private elementary or secondary school that serves students from low-income families. If you are interested in learning more about the TEACH Grant Program, please review program requirements online at Empire State University's Financial Aid website (https://www.sunyempire.edu/financial-aid/) or contact the Financial Aid office at FinancialAid@sunyempire.edu. Please note that if you receive a TEACH Grant but do not complete the required teaching services you will be required to repay the grant as a Federal Direct Unsubsidized Loan, with interest charged from the date of each TEACH Grant disbursement.

Veterans Administration Benefits
Veterans who attend Empire State University may be eligible for educational benefits provided they have entitlement remaining with the Veterans Administration. A non-matriculated student may receive benefits for a maximum of two terms.

Veterans applying to the university should file their VA paperwork directly with the Office of the Registrar. The appropriate form may be printed from the Veterans Administration website (http://www.gibill.va.gov). Once the form is completed, it should be returned to Office of the Registrar, Empire State University, 111 West Ave., Saratoga Springs, NY 12866-4390.

Empire State University Foundation Funds
The Empire State University Foundation was established in 1974. Its mission is to enhance the quality of the college by augmenting its financial resources. As a separate, not-for-profit, charitable organization, it enables the university to initiate and support programs that would not otherwise be funded. As part of its function, the foundation supports students at the university by providing interest-free loans, grants, fellowships, scholarships and other financial aid programs.

Empire State University Foundation scholarships are available to students as a result of the generosity of alumni, employees, and friends who have chosen to recognize the value of education by establishing and contributing to scholarship funds.

Empire State University Foundation Scholarships and Grants
Scholarships may be awarded to students who have financial need, have earned at least 8 credits at Empire State University and who are in good academic standing. To be considered, students must first submit the Free Application for Federal Student Aid (FAFSA) (http://www.fafsa.ed.gov) for the upcoming year. The FAFSA must be submitted by the April 1 deadline preceding the year for which the funds are to be utilized. Scholarships will be awarded in August for the fall and spring terms.

Although students may contact the Empire State University Foundation or the Office of Financial Aid to seek additional information or express interest in specific scholarships, be assured that all financial aid applicants will be considered for any scholarship for which they are eligible. In order to apply for an Empire State University Foundation scholarship, students must log in to the application portal (http://www.sunyempire.edu/ESCFAST/) and submit an application. The application portal contains information on more than 100 scholarship opportunities, along with the instructions on how to apply for scholarship

funding for the 2024-2025 year. Contact Scholarships@sunyempire.edu with any questions on the application process.

TO FIND OUT MORE

Our 1Stop Student Services and Financial Aid staff members are available to give more detailed information and advice by phone, by mail, or in person.

For further financial aid information contact 1Stop Student Services at 800-847-3000, ext. 2285 or email the Office of Financial Aid at FinancialAid@sunyempire.edu, or visit the Financial Aid website (http://www.sunyempire.edu/FinancialAid/). Our address is Empire State University, 111 West Ave., Saratoga Springs, NY 12866-6069.

For assistance in completing the federal application, call 800-4FED-AID.

There are many private scholarships and grants available to students who meet specific criteria. Check the reference section of your local public library or use a web-based search site linked from SUNY Empire's Financial Aid website (http://www.sunyempire.edu/FinancialAid/) for this information.

Getting Started and Registration

As a student of any Empire State University graduate program you are expected to function independently, both in managing many practical aspects of your education and carrying forward the work in your program(s).

Click on a shortcut link below or scroll through this section to find the subject you are referencing.

Orientation

The School for Graduate Studies has an online orientation and this information is sent at the time of the acceptance notification. If you are attending a program that has a program specific orientation, you will receive notice of that orientation separately.

Academic Advisor

Your academic advisor will be assigned to you at the point of admission. The major criterion for assignment is the academic advisor's expertise, broadly interpreted, in the student's general field of interest, though the academic advisor assignment also can result from regional considerations.

Your academic advisor works with you as a program advisor. You and your academic advisor will discuss your program plans and progress toward degree and/or advanced certificate completion. During each registration period, you and your academic advisor should communicate about your plans for the upcoming term to be certain your enrollments are proceeding in ways consistent with program expectations.

MySUNYEmpire

MySUNYEmpire (https://www.sunyempire.edu/mysunyempire/) is your portal to information and services for students at the university. You will need a user ID and login to access this portal. Through MySUNYEmpire, you can receive announcements and updates (i.e., weather-related notifications, technology upgrades/outages). You can also access all of the services that a student needs such as updating your contact information, registration, financial aid, viewing your account/making a payment, your degree audit, library, academic support, etc.

Graduate Student Center

Information specifically for School for Graduate Studies students is located in the Graduate Student Center on MySUNYEmpire. This page contains announcements, documents/forms, and Quicklinks that are specific to the School for Graduate Studies. Whether you are looking for the transfer request form, residency information or School for Graduate Studies contact information, this is the page you will need. You can access this page by clicking on the Menu found on the upper left-hand side of the MySUNYEmpire screen or by clicking on the link in the Student Resources box.

Degree Works

Degree Works is an audit tool that students matriculated from the fall 2018 term forward can use to monitor academic progress. This tool is used for degree programs (master's and doctorate) and advanced certificate programs. If a student is in more than one program, there is a separate audit for each program. In addition to monitoring academic progress, students, and advisors can use the Plan function to map out enrollments and "lock" a program plan once it is approved. You can access Degree Works through MySUNYEmpire (https://my.SUNYEmpire.edu). Frequently asked questions regarding Degree Works can be found on SUNY Empire's Degree Works FAQs (https://www.sunyempire.edu/registrar/general-information/degreeworks-faq/) webpage.

Registration

To find the courses that you need, review your audit in Degree Works and the enrollment sequence for your program(s), located in the Graduate Programs section of this catalog and the Program Handbook for master's and doctoral programs. If you have any questions, contact your academic advisor. Students register online through MySUNYEmpire (http://my.sunyempire.edu) by clicking on the Registration and Course Offerings icon. When registration is open, you can view the courses offered that term by clicking on the Term Guide link. After you have selected the term, you can enter search criteria to help you find the courses you want. It is recommended that you start your search by clicking in the *School* search criteria box and selecting School for Graduate Studies from the dropdown list. This will eliminate all undergraduate courses from your search. The course numbers for graduate-level courses currently range from 6000 to 8999.

The School for Graduate Studies uses wait lists to manage course section demand. If all of the sections for a course you want are full, add yourself to a course section waitlist. Instructions for how to get on the waitlist are in the student Registration Quick Guide, located on MySUNYEmpire (http://my.sunyempire.edu). Waitlisted students receive an email when they can register.

If you find that you need a course that is not offered through the Term Guide in the term in which you are enrolling, you have other options. With the support of your academic advisor, you may be able to register for a Just In Time Section, an independent study (Totally Independent Study), or a cross registration section. Guided by the definitions of each option below, please reach out to your academic advisor to decide which will work best for your situation.

- **JITS - Just In Time Section** -- This is a course that is listed in the course catalog but is not listed in the Term Guide of the term in which you are registering.
- **TIS - Totally Individualized Study** -- A unique study created for you based upon your particular interests, goals, and learning needs. A TIS may be created if no other course in the course catalog matches your goals or needs and if the appropriate resources are available.
- **Cross Registration Section** -- This is a "placeholder" section for a course being completed at another college/university so that you can also register here at the university.

It is important to note that the above cannot be created without your academic advisor. If approval is granted, your academic advisor will submit the request to create one of these alternate course options to the Registrar's Office. Once the course section is created, you and your academic advisor will receive an email from the Registrar's Office with a unique course registration number (CRN). You must then register for the section using this CRN. Instructions for registering with a CRN will be provided in the email.

When you register during the regular registration period, you will not have to pay your tuition and fees until the payment due date. Registering

early secures your place in courses that reach capacity early, and allows sufficient time to get your books before the start of the term. The submission of an online registration initiates billing and is a business contract between you and the university. It permits you to begin study at the university and obligates you to pay tuition and all applicable fees. Payment must be completed and submitted online by the student by the Last Date for Payment for the selected term. The Last Date for Payment for each term can be found on the Payment Due Dates (http://www.sunyempire.edu/PaymentDueDate/) page of the Student Accounts website. Information on tuition and fees, and enrollment and billing is located elsewhere in this catalog.

Late Registration

Students may register after the regular registration period ends, contingent upon the availability of courses. Students who register after the payment due date must pay their bills at the time of registration or have sufficient financial aid (or combination of financial aid and payment) to cover their bills including a late registration fee. Information on tuition and fees, and billing is located elsewhere in this catalog.

Add/Drop

Students may modify an existing registration for a particular term through the first week of the term. A student may drop one or more of their courses during this period and receive a 100 percent refund in tuition as per the current withdrawal policy. Please note, the university fee, student activity fee, and late registration fees are not refundable if a student withdraws on the start date or after. A student may modify an existing registration, add or replace a course (if available) with no late fee. The student is responsible for any additional tuition and fees that arise from an increase in the number of credits in the enrollment. Payment is due on the normal schedule. Thus, if the add/drop occurs during the first week of the term, any additional payment is due with the registration change.

Registration Holds

Students who have registration holds, which the university puts in place when students do not meet academic or administrative requirements, will not be permitted to register. Students who are not registered will not receive instructional services. Any holds that a student has will appear on the student's registration screen on MySUNYEmpire (http://my.sunyempire.edu). The following listing identifies the most common holds and which office to contact for assistance in resolving the hold:

- **Accounts receivable hold** -- indicates that the student has a past due balance that must be paid before the student may register or receive any other services from the university. If you have any questions, contact the Business Office at 800-847-3000, ext. 2320.
- **Academic dismissal hold** -- indicates that the student has been dismissed for not maintaining good academic standing. The student should contact the School for Graduate Studies at 800-847-3000, ext. 2429.
- **Immunization hold** -- indicates that the student may need one or more required immunizations or waiver information. The student should contact Immunizations@sunyempire.edu or 1 Stop Student Services at 800-847-3000, ext. 2285.

Financial Aid

If you use financial aid to cover your tuition and fees, you must file by April 1 each year. If you do not apply on time, the financial aid that you need may not be in place by the payment due date. If you cannot cover the costs, your registration for the term will be canceled. Students who plan to enroll for the first time (or after a long absence) must allow at least eight weeks for financial aid processing and should plan accordingly. For more information on financial aid, please see the Financial Aid section that is located elsewhere in this catalog.

Registration Cancellation
Nonpayment

The university will cancel a student's registration if he or she does not pay, or have sufficient financial aid to cover the bill by the payment due date. A student who is not registered receives no instructional services. The university will notify the student by email if his or her registration has been canceled.

Academic and Administrative Requirements

The university reviews certain academic and administrative requirements after a student has registered. These include accounts receivable holds, immunization holds, and academic holds (academic standing, etc.). The university will cancel a student's registration for the term if the student does not meet these requirements on the last day of late registration. A student who is not registered receives no instructional services. The university will notify the student if their registration has been canceled.

Registration Information for Non-degree-Seeking (Non-matriculated) Students

People who wish to engage in graduate-level study with no immediate plan to earn a degree/advanced certificate are classified as nonmatriculated students. They may want to take courses at the university to stay current in their field, or earn credit that will count toward a degree at another college or university. The nonmatriculated student application is available through the Empire State University (https://www.sunyempire.edu) website by clicking on the Apply button on the upper right-hand side of the screen and then the Non-Degree Students Programs button. A person seeking to enroll in graduate-level courses should apply as a graduate nonmatriculated student. A person seeking to enroll in undergraduate-level courses should apply as an undergraduate nonmatriculated student. Not all graduate-level courses are open to nonmatriculated students. Please refer to the Nonmatriculated Enrollment Policy located elsewhere in this catalog.

Part-Time and Full-Time Study

At the graduate level, 9 credits per term is considered full time. Therefore, 8 credits or fewer per term are considered part time. The graduate programs are organized around the idea that most students will be studying on a part-time basis.

The number of credits for which you are registered in a term determines:

- Tuition and fees;
- Eligibility for financial aid and some fellowships and scholarships; and
- The pace with which you complete the program.

Residency

Residencies are a part of the M.A. in Liberal Studies (MALS) and Ed.D. in Educational Leadership and Change programs. The MALS residency activities are held in the fall and spring through synchronous, virtual/online meetings. Ed.D residencies are synchronous, virtual/online meetings in the fall term and face-to-face in the summer term. Residency activities may include, but are not limited to, watching and discussing films, analyzing common readings, participating in simulations, listening to lectures, working in small groups, examining cases, and Ed.D dissertation work. These activities help instructors and students form a common understanding of terms and the boundaries of a field, and provide a chance to discuss reasons and dates for specific assignments. A residency fee is added to your account at the time of course registration when you enroll in a residency-based course with a face-to-face residency component. This fee is attached to the course through online registration. This fee is charged per residency, not per course. Funds generated by the residency fee are used to offset the university's costs in offering residency-based courses that are not supported by New York state appropriations or tuition. Transportation, meals (not part of the residency), and lodging are not included in this fee. There is no fee for virtual/online residencies. Residency meetings will be held on a date announced during registration periods.

Residency Attendance Procedure
Expectations

Participation in the residency is an academic requirement that is integral to these programs and the designated course(s).

Students enrolled in a course with a residency requirement who do not attend will be considered not engaged in significant learning activities. In such cases, the course instructor submits a grade of ZW (administrative withdrawal). This grade precludes refunding tuition and fees and negatively impacts the financial aid satisfactory academic progress determination. An appeal from this grade is made in accordance with the Student Academic Appeals Policy and Procedure, found elsewhere in this catalog.

Exceptions

Exceptions are rarely made to the residency requirement. One reason for an exception is for religious observance. (Please refer to the religious observance policy located elsewhere in this catalog.) There may be other reasons that warrant an exception and these will be considered on a case-by-case basis. All requests for exceptions should be made in advance of the residency.

To request an exception, for any reason, the process is as follows:

1. Prior to the start of the term, the student sends the exception request and any supporting documentation to Grad.Services@esc.edu.
2. Grad.Services will forward the request and documentation to the appropriate academic coordinator.
3. The academic coordinator will consult with the course instructor(s), issue a decision, and inform the student, course instructor(s), and Grad.Services:

    - If the student is granted an exception, Grad.Services will have the fee removed and will inform the residency coordinator(s). The course instructor(s) will inform the student of the assignment(s) that must be completed to make up for the work and faculty/student interaction that will be missed.
    - If the student is not granted an exception, then the student must drop the residency course (see above). Failure to do so will result in the issuing of a ZW grade (see above).

4. Requests made on or after the start date of the term will be considered for emergencies and must be approved by the dean or designee. The student sends the exception request and any supporting documentation to Graduate_Deans.Office@sunyempire.edu. When exceptions for late requests are made, the same expectations for making up learning and engagement missed will apply (see above).

Learning Contract/Syllabus

The learning contract/syllabus explains the goals of the course, the learning activities/assignments and the ways in which your course instructor will evaluate your work.

Electives

Some students use electives to broaden their exposure to new areas of knowledge, others to increase their skills or knowledge in a particular field. Please discuss elective choices with your academic advisor.

Please note that if you are in a master's degree program and you want to add an advanced certificate, the certificate courses can usually be used in place of electives in the master's program. Be sure to discuss advanced certificate options with your academic advisor.

Enrollment of Undergraduate Students in Graduate Courses

Empire State University undergraduate students have the opportunity to incorporate a graduate course(s) into their bachelor's degree program. This is an opportunity for undergraduate students to challenge themselves and to enhance their bachelor's degree. Additionally, if the undergraduate student is accepted within two years to one of the university's graduate programs to which the course(s) will apply, the course(s) can then be used in that program. This also is a great way to save time and money.

Interested students should discuss this option with their primary mentor/academic advisor.
The student must be:

- Within 32 credits of completing a bachelor's degree; and
- Have a concurred degree program or be in a structured degree program.

Complete information is available on the Undergraduate Enrollment in Graduate Courses (https://www.sunyempire.edu/registrar/forms-services/undergrad-enrollment-grad-courses/) webpage.

ADLC: Adult Learning (Graduate)

ADLC 6005 Rethinking Experience & Learning in Adulthood (3 Credits)
Course readings and assignments bring students' experiential learning and professional practice into dialogue with academic and scholarly approaches to adult learning. Students engage with theories of experiential learning, explore the multiple social locations within which adult education is practiced, and analyze debates concerning the relationship between experiential and formal learning. Students read broadly in the field, hone graduate level skills of academic and digital literacy, and work via cohort learning and e-portfolios. This course was previously ADL-680100.

ADLC 6010 Learning & Development in Contemporary Adulthood (3 Credits)
This course, taken in the first year in the Master of Arts in Adult Learning program, explores the role of adult development in adult learning. Students will consider questions about whether, and how, different stages of the adult life cycle affect learning and whether, and how, learning impacts development. They will also search the library and develop an empirical research proposal that, if implemented, tests a hypothesis about adult learning and development. This course was previously ADL-680101.

ADLC 6015 Strategies for Effective Adult Learning (3 Credits)
Grounded in theoretical underpinnings of learning and development, students acquire an understanding of the principles and theories of effective design, pedagogy, and curriculum for face-to-face, technology mediated and blended learning environments. Student's projects within the course are based on individual goals and will focus on various pedagogical approaches and learning design methodologies, with multiple opportunities to investigate a range of information and communication technologies.

ADLC 6020 Approaches to Critical Inquiry & Research (3 Credits)
This course focuses on understanding critical and practical connections between research and practice in the field of adult education. Through readings and mini research activities, students will unpack how understanding different types of research can help to ground one's practice and move it forward. Students will understand their practice through the lens of a researcher, conduct a mini research project, and write up results. Students identify topics for research, conduct literature reviews, and identify research methods relevant to their topics, and produce a research proposal. They then draw on the insights gained in the previous three core courses to articulate the focus of their degree. They draft a degree program rationale that identifies their elective studies. This course will help to ground ideas for the final project.

ADLC 6025 Activist Learning & Social Movements in Adult Education (3 Credits)
This course will explore the field's relationship to emancipatory education and social movements. The course will also examine the history that connects adult education to social justice. Finally, the course will look at contemporary social movements (both international and national) and the important impact of popular education within those movements. In this course we will examine what activism has meant historically in this country and elsewhere in the world. We will also look at some historical and current examples of social movements and their implications. We will define activism through examples as well as case studies and explore how people can collectively accomplish social change in society. The course will use mainly a sociological lens to grapple with intersectionalities around theories grounded in social movements. This course was previously ADL-680115.

ADLC 6040 Learning & Education in the Workplace (3 Credits)
The changing nature of work has created the need for lifelong learning in the workplace at all levels of the organization. Workforce development needs range across issues such as literacy, management development, the cultural diversity of the workplace, internationalism and the changes brought about by technological changes. Students explore learning at the workplace from several vantage points: human resource management, work satisfactions and personal development, and public policy, and economic competitiveness. The course also takes a critical historical view of the relationship between knowledge, power, and workplace organization. Following general readings and assignments in which a variety of perspectives are brought into dialogue, students have the opportunity to focus on the needs for education and training in their own workplace. This course was previously ADL-680107.

ADLC 6045 Learning as Transformation (3 Credits)
The goal of this elective is to learn about and critically examine various ideas and arguments about "learning as transformation," that is, about one powerful educational outcome: change. The study will have three basic components. The first will focus on theories of transformational learning as set out in the work of educators such as Mezirow, Freire and Hooks. The second will critically examine various efforts to apply these theories to an array of sites of educational practice. And in the third component, students will be asked to use what they have learned about the possibilities, challenges and drawbacks to learning-as-transformation to explore a topic/question/problem relevant to their ongoing work. At the heart of this elective will be a basic question: What are the ripple effects of suggesting that adult learning is intimately tied to change?

ADLC 6050 Learning Theory & Practice in Adult Education (3 Credits)
This course explores established and emergent theories about learning in greater depth. This will include analysis of learning theories and critiques and also applications of theory to practices in teaching or learner support services. This course will examine learning theory as applied in face to face or technology mediated environments. There will be several synchronous sessions which will be recorded.

ADLC 6055 Organizational Development and Change (3 Credits)
This course examines the specific body of knowledge that relates to organization development and change such as an historical perspective, theoretical foundations, models and areas of practice (application), its purpose and specific issues or challenges related to the function of those practicing in the field, with an emphasis on the role of adult learning. Specifically, students will study an overview of organization development and change; process of organization development; human process, techno-structural and human resource management interventions; and the future direction of organization development. This course was previously ADL-680104.

ADLC 6060 Philosophical Foundations of Adult Learning (3 Credits)
This course will reflect on the ways in which practitioners think about their practice as being part of a larger philosophy. Students will look at six major schools of philosophy in the adult education field and place them in a context of their own site of practice, reflecting upon the origins and reasons behind the way they do things, and also to bring some clarity and purpose to their everyday activities. Students will identify aspects of their practice which are situated in various schools and the implications and worldviews undergirding these schools. This course is intended to support students understanding the different philosophical schools of adult learning and find their place within them. By the end of this course, students should be able to differentiate among various philosophical schools of thought which underline current adult education practice, and begin to formulate a personal philosophy of adult education. Students should also begin to connect adult education philosophies to broader intellectual movements (and situate themselves within those). Students should also begin making connections between various course content and their philosophical underpinnings. This course was previously ADL-680109.

ADLC 6065 Racialized Narrative and Adult Education (3 Credits)
This course will support students in exploring the relationship between critical race theory and adult education. The course will explore the historical development of CRT, from Critical Legal Studies to how it is used in adult education. A key focus of this course is to understand CRT as a theoretical framework, to examine its utility, and consider its potential for student researcher and practice. In addition, the course examines the ways race and education have been constructed in the United States and interrogate questions of color-blindness. The course will examine educational inequalities, as framed through this theory, in the interest of building more just frameworks that uncover oppressive educational practices and philosophies. This course was previously ADL-680120.

ADLC 6070 Adult Learners in the Community College (3 Credits)
This course explores the unique role of the community college in serving adult learners. Students examine these complex institutions, their role and contributions in the community and in serving adult learners. Students consider the resources required to serve the wide range of students who enroll in community college. The course will consider issues of administration, faculty, instruction and student services-including information technology support. This course was previously ADL-680112.

ADLC 6075 Adult Literacy & Social Change (3 Credits)
In this course, students will be introduced to the field of adult literacy and explore some of the current themes and issues within the field. Students will read, write about, and discuss who adult literacy students are, our own and society's assumptions about adult literacy, and strategies and philosophies of teaching. Students will volunteer in a community based program as a way to gain experience in the field. The focus of the course moves between broader issues of literacy, power, privilege, and educational theory (along with more specific questions and issues students encounter in their sites of practice). This course is intended to be a collaborative project where we share, question, and explore issues in the field based on the readings, teaching, and other work we have completed together. This course was previously ADL-680105.

ADLC 6090 Critical Approaches to Adult Learning (3 Credits)
Critical Approaches to Adult Learning is designed to familiarize students with a wide range of contemporary theories of adult learning. Moving beyond the conventional theories that have characterized the field of adult learning, the course focuses on the following topics: the relevance for adult learning of theorists such as Jurgen Habermas and Michel Foucault; feminist approaches to experience and knowledge; and the critique of neoliberalism in adult learning. This course will be of value to students who wish to deepen their theoretical understanding of adult learning and who wish to explore the relevance of contemporary theory to the field. Following a series of discussions and papers on each of the above topics, students will have the opportunity to do further research on a specific topic of their choice. This course was previously ADL-680114.

ADLC 6095 Human Resource Development (3 Credits)
Human Resource Development (HRD) is comprised of planned, structured, institutionally sponsored initiatives designed to facilitate individual, group and organizational learning and growth. These initiatives include skills training, career development, leadership development, and organizational development. Students will learn about each one of these aspects of HRD, and they will learn how these aspects interrelate to form an HRD strategy. This course takes both a practical stance, as well as a critical stance. This means that students will come away from the course with the ability to article the meaning, purpose, and activities of HRD. Additionally, students will acquire a multifaceted understanding of HRD's evolution, which has not been without ambiguity and debate. Students learn about the history of the field, key theorists and debates in the field, and they will be able to identify HRD initiatives within their own professional experiences in order to connect theory with application. This course was previously ADL-680113.

ADLC 6105 Career Skills Management: Training and Development (3 Credits)
There is a growing understanding of the necessity to embed career competencies, individual skills management, and lifelong learning into the design of educational and workforce development programs. The course goal is to guide the student through the development and implementation of a career self-management project aimed at identifying, benchmarking, evaluating, peer-reviewing, documenting, presenting, and improving job-related skills. Throughout the course, students will learn how to use contemporary learning theories and marketing tools and techniques for effective skill-building, self-development, and self-promotion. Besides career builders, this course will also be beneficial for career coaches, advisors, managers, and policy makers, as it is research-based and can provide insights into recent trends in workforce development in a global context in the post-pandemic world.

ADLC 6122 Mentoring Adult Learners (3 Credits)
Mentoring will be explored as it is used in various practice areas of adult education. This study will explore some of the ways in which mentoring has been defined, described, used and critically evaluated. Distinctive Mentoring approaches in practice will be shared, analyzed and/or promoted as an approach for adult learners in different learning environments.

ADLC 6125 Practicum in Adult Learning (3 Credits)
Students have the opportunity to work with advisors to set-up a practicum in a work setting of his or her choice, including areas such as college teaching assistants, student services, training and development areas, adult basic education settings. Planning must begin at least one term in advance with the advisor.

ADLC 6996 Special Topics in ADLC (3 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

ADLC 6998 Individualized Studies in Adult Learning (ADLC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Adult Learning (ADLC). Please contact your mentor/advisor for more details.

ADLC 7010 Project Design (3 Credits)
This course is designed to guide you through the development of a capstone project. The final project is completed over a period of two terms, with the final project capstone proposal developed in one term and the development of the activity in the second. This course deals with the development of a final project capstone proposal for capstone project, which could be a professional project, practicum or a position paper. It assumes ability to identify and locate literature in the field, along with familiarity with research methods and theoretical approaches to inquiry.

ADLC 7015 Final Project (3 Credits)
This is the capstone course in the MA Adult Education program. It is designed to guide you through the capstone project that was developed in Project Design. The final project is completed over a period of two terms, with the final project proposal developed in Project Design. The implementation of the proposal takes place in this course. Registration must be completed through your program mentor. Final Project cannot be taken concurrently with Project Design. Prerequisites: ADLC 6005, ADLC 6010 and ADLC 6015 with a grade of C or better ADLC 6020 and ADLC 7010 with a grade of B or better.

ADLC 7998 Individualized Studies in Adult Learning (ADLC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Adult Learning (ADLC). Please contact your mentor/advisor for more details.

APAN: Applied Analytics (Graduate)

APAN 6010 Computer Aided Multivariate Analysis (3 Credits)
The course was designed to continue statistical application for big data analysis. The analysis of big data provides a challenge for how to best analyze large amounts of data that will aid in decision making. This course will look at how to use regression analysis to test hypothesis and how to select the best type of regression analysis for the decision maker.

APAN 6015 Data Models and Structured Analysis (3 Credits)
This course will look at how to best manage data and will cover topics relating to project management such as: Representation of a real-world situation about which data is to be collected and stored in a database. A data model depicts the dataflow and logical interrelationships among different data elements. The course is designed to provide the business or IT professional with a practical working knowledge of data modeling and structured analysis concepts and best practices, and how to apply these principles in using CA ERwin Data Modeler. Students will build CA ERwin data models, mastering features of CA ERwin Data Modeler. In addition, students will learn to create validation rules and standards. Course Materials: There is free software required for this course: erwin DM for students. The link can be found at: https://www.erwin.com/register/129709/. Please note, this software is designed to run on Microsoft operating systems.

APAN 6020 Data Mining & Machine Learning for AI (3 Credits)
Data mining is the practice of automatically searching large stores of data to discover patterns and trends that go beyond simple analysis. Data mining uses sophisticated mathematical algorithms to segment the data and evaluate the probability of future events. The fundamental algorithms in data mining and analysis are the basis for business intelligence and analytics as well as automated methods to analyze patterns and models for all kinds of data. Data mining is also known as Knowledge Discovery in Data (KDD). The course is designed to provide the business or IT professional with a practical working knowledge of data mining algorithms, concepts, and best practices. Students will use technology to work on real-life data mining tasks, mastering features of technology.

APAN 6025 Applied Management Analytics (3 Credits)
This course was designed to provide an overview of the tools used to make strategic management decisions about the best way to leverage an organization's core competencies for its long-term growth potential. Graduate students with a background in basic research methods will find this course helpful for identifying ways to analyze data in order to make strategic management and resource allocation decisions. The course does not substitute for a basic course in leadership but focuses more on quantitative data analysis and its impact on the viability of the organization. Students apply advanced statistics such as regression analysis and data mining using big, using R software. Case study method and discussions will be used to evaluate an organization's performance. This course is the capstone course in the general management concentration for the MS in Applied Analytics degree.

APAN 7010 Applied Analytics Capstone (3 Credits)
The course was designed as an experiential component centered around at least one capstone project, potentially developed with an employer, supervised collaboratively by faculty, and evaluated by faculty. This capstone practicum integrates the practical application of data analytics and professional knowledge to lead to sound management decisions based on big data analysis. The experiential component may include a structured internship either at the student's current place of employment or a self-directed project based on the selected track of the degree. The final project will include both an oral and written report on the findings and recommendations from a collection of data, analyzed using any contemporary analytics tools & methods.

APPL: Applied Behavior (Graduate)

APPL 6005 Applied Behavior Analysis I (3 Credits)
This course is intended to provide students with an introduction to the concepts of applied behavior analysis (ABA) and the science of human behavior with a focus on the application of behavior analysis for individuals diagnosed with autism spectrum disorder (ASD). Students will gain a strong foundation in the basic principles of ABA and how to apply these principles in school, home, and community settings, including identifying these principles in everyday situations. Students will learn how to identify setting and casual events that may lead to maladaptive behaviors as well as successful learning. Students will also learn evidenced based practices to decrease problem behaviors, identify and teach new behaviors, improve performance, and generalized improved performance to other settings. Topics include selecting, defining and measuring behavior, reinforcement contingencies, functional behavior assessment, social validity, treatment integrity, single subject experimental design, antecedent interventions, shaping, and promoting generalization. Multicultural competency in the application of behavior analysis will be discussed. Students will complete an applied project in which a problem behavior is identified and operationally defined, baseline data are collected, and an intervention designed and implemented. This course will be held as a distance education course involving asynchronous activities.

APPL 6010 Applied Behavior Analysis II (3 Credits)
This course is intended to provide students with an advanced discussion and application of behavior analytic concepts and principles, particularly as applied for individuals diagnosed with autism spectrum disorder. Students will further explore topics such as respondent and operant conditioning, automatic and socially mediated contingencies, stimulus control, motivating operations, and derived stimulus relations, as well as how to apply this learning to affecting socially significant behaviors. This course will be held as a distance education course involving asynchronous activities. Fieldwork is required and will consist of at least six sessions (e.g., class periods, baseline data collection, intervention sessions, etc.) with a learner who displays behavior(s) targeted for change. Permission must be obtained from parents/ caregivers as well as the lead teacher, therapist, etc. Note the amount of time spent completing fieldwork may vary dependent on each student's individual project. Prerequisites: APPL 6005.

APPL 6015 Single Subject Design &Measurement (3 Credits)
This course will provide students with an understanding of the utilization of single-subject research design and the application of single-case research methodology in the behavioral sciences. Students develop valid and reliable systems for measuring behavior, display data using different graphing formats, and engage in databased visual analysis. Students will use single subject methodology to create a research proposal involving individuals with autism. This course will utilize an asynchronous model. Prerequisites: APPL 6005.

APPL 6020 Developing & Increasing Socially Significant Behaviors (3 Credits)
The purpose of this course is to teach students how to : (a) conduct a variety or behavior assessments, (b) utilize initial assessments and continuous data collection in intervention, (c) devise and implement behavior change procedures, systems, and interventions that increase socially meaningful adaptive skills via environmental modifications of stimuli and consequences, and (d) plan for generalization and maintenance. The course will focus on interventions for individuals with autism. Students will also learn ways to train others in the implementation of such procedures and systems. There will be an emphasis on the application of these skills in applied settings (e.g., home, school, adult group homes). This course will be held asynchronously, however fieldwork hours are required. Fieldwork will consist of at least six sessions (e.g., class periods, baseline data collection, intervention sessions, etc.) with a learner diagnosed with autism spectrum disorder. Permission must be obtained from parents/ caregivers as well as the lead teacher, therapist, etc. Note the amount of time spent completing fieldwork may vary dependent on each student's individual project. Prerequisites: APPL 6005 & APPL 6015.

APPL 6025 Functional Behavioral Assessment (3 Credits)
This course will focus on functional assessments to determine the function of challenging and maladaptive behaviors. Students will gain an understanding of the utilization of behavior analytic principles to create behavior change programs, targeting behaviors for increase and corresponding replacement behaviors for increase. Principles to be covered include behavior change procedures such as differential reinforcement, extinction, and antecedent interventions. Students will identify essential components of a behavior reduction program and will implement these in required fieldwork experiences. This class will be held asynchronously, however at least 30 fieldwork hours are required. Prerequisites: APPL 6010 and APPL 6015.

APPL 6030 Ethics in Applied Behavior Analysis (3 Credits)
This course will outline ethical responsibilities in the field of applied behavior analysis and provide students with information to analyze ethical situations and engage in appropriate responses. Students will gain an understanding of historical events in the field of behavior analysis and in working with individuals with developmental disabilities. Students will be asked to analyze case scenarios for potential ethical violations, provide relevant standards to address the violations, and provide recommendations for responses. Students will discuss case scenarios to analyze degrees of harm and will analyze scenarios and their responses through a lens of cultural humility. Students will be encouraged to debate and discuss current ethical scenarios.

APPL 6035 Supervision and Staff Training (3 Credits)
This course is intended to provide students with an understanding of daily responsibilities in obtaining and receiving supervision experience, emphasizing areas of professionalism, skill development, professional development, ethics in supervision, and assessing quality supervision. Maintaining appropriate records documenting supervision, giving and receiving feedback, self-care, and time management will also be discussed. Supervisees will be expected to create a staff training program with objective, measurable goals as well as lead mock supervision sessions for groups and individuals. While the majority of the course will be asynchronous, some synchronous meetings are required. Fieldwork is required throughout the course. Student should secure a site for fieldwork in which behavior analytic interventions are implemented for individuals diagnosed with autism spectrum disorder. Prerequisites: APPL 6005 & APPL 6015 & APPL 6030.

APPL 6040 Maintaining Client Records in Applied Behavior Analysis (2 Credits)
This course will cover applicable NYS and federal laws governing behavior analytic practice. Students will understand which laws supersede others and in which environment (i.e., FERPA laws when practicing in schools). Students will also understand regulations involving ethical maintenance of client records, DOs and DON'Ts for medical billing, and available services in NYS throughout the lifespan. Students will also gain an understanding of maintaining records as per varying agency policies.

APPL 6045 Autism Spectrum Disorder & Evidence Based Practices (3 Credits)
This course is an introduction and overview to Autism Spectrum Disorders (ASD) in which students will understand common characteristics of autism. Students will gain an understanding of resources available to families once their child is diagnosed with ASD, as well as resources available in NYS across the lifespan. Evidence based practices in working with individuals with autism will be reviewed. Students will learn how to evaluate quality indicators in autism research, understand the importance of maintenance, generalization, and planning for a spiral curriculum. Students will also gain an understanding of the principles of ABA and the role of a behavior analyst when working with individuals diagnosed with autism. Students will also explore current issues in autism today.

APPL 7000 Optional Practicum in Applied Behavior Analysis (0 Credits)
This optional practicum course requires ongoing experience hours towards the NYS license in Applied Behavior Analysis. Students must obtain experience hours for a minimum of 10 hours per week across two days with qualified supervisors and practicum sites. Supervisors are responsible for ensuring all clients with whom the candidate works have proper documentation. Students will focus on applying behavior analytic concepts and principles to pedagogy, as well as develop professional, ethical, and culturally responsive repertoires. Students must maintain records for NYS LBA supervision. If students wish to count these hours towards BACB supervision, they must maintain documentation as outlined in the BACB guidelines.

APPL 7001 Applied Behavior Analysis Capstone I (2 Credits)
The purpose of this course is to complete a capstone project of a research thesis or professional development module. The thesis requirement will involve execution of a research project and writing of a thesis that is approved by the student's committee and the School for Graduate Studies. The student will conceptualize socially significant research questions and engage in empirical assessment of these questions using evidenced based behavior analytic interventions. Students will meet with their advisor weekly to facilitate learning and progress. Thesis requirements involve conceptualizing, conducting, and orally defending an original empirical research, as well as writing a scholarly paper pertaining to your research. The project must be accepted by the student's Thesis Committee. The final thesis defense and completed paper must be approved by the student's Thesis Committee and SUNY Empire's School for Graduate Studies for the Masters of Science degree to be granted. A professional development project will focus on identifying areas of greatest need in the local and broader community. Students will prepare and conduct a webinar or module that can be accessible asynchronously on a topic discussed and chosen with the instructor. Examples include best practices in toilet training, utilization of behavior analysis in school based settings, using ACT to decrease parent stress, and evidenced-based strategies to support caregiver training. Both options are weighed equally and hold great import to our field in the contribution to original applied research or knowledge growth for consumers. Students should choose based on their interests and goals for future. Prerequisites: APPL 6005 and APPL 6015 and APPL 6030.

APPL 7002 Applied Behavior Analysis Capstone II (2 Credits)
The purpose of this course is to complete a capstone project of a research thesis or professional development project. The thesis requirement will involve execution of a research project and writing of a thesis that is approved by the student's committee and the School for Graduate Studies. The student will conceptualize socially significant research questions and engage in empirical assessment of these questions using evidenced based behavior analytic interventions. Students will meet with their advisor weekly to facilitate learning and progress. Thesis requirements involve conceptualizing, conducting, and orally defending an original empirical research, as well as writing a scholarly paper pertaining to your research. The project must be accepted by the student's Thesis Committee. The final thesis defense and completed paper must be approved by the student's Thesis Committee and SUNY Empire's School for Graduate Studies for the Masters of Science degree to be granted. A professional development project will focus on identifying areas of greatest need in the local and broader community. Students will prepare and conduct a webinar or module that can be accessible asynchronously on a topic discussed and chosen with the instructor. Examples include best practices in toilet training, utilization of behavior analysis in school based settings, using ACT to decrease parent stress, and evidenced-based strategies to support caregiver training. In this course, students will "run" their study. Students will act as the primary investigator, recruit participants and obtain informed consent, implement their research methodology, collect and graph data on progress, fidelity, and observer agreement, and make decisions as appropriate. Students who choose a professional development project will create all necessary materials for a course that consists of at least 15 hours of training. Prerequisites: APPL 6005, APPL 6015.

APPL 7003 Applied Behavior Analysis Capstone III (2 Credits)
The purpose of this course is to complete a capstone project of a research thesis. The thesis requirement will involve execution of a research project and writing of a thesis that is approved by the student's committee and the School for Graduate Studies. The student will conceptualize socially significant research questions and engage in empirical assessment of these questions using evidenced based behavior analytic interventions. Students will meet with their advisor weekly to facilitate learning and progress. Thesis requirements involve conceptualizing, conducting, and orally defending an original empirical research, as well as writing a scholarly paper pertaining to your research. The project must be accepted by the student's Thesis Committee. The final thesis defense and completed paper must be approved by the student's Thesis Committee and SUNY Empire's School for Graduate Studies for the Masters of Science degree to be granted. A professional development project will focus on identifying areas of greatest need in the local and broader community. Students will prepare and conduct a webinar or module that can be accessible asynchronously on a topic discussed and chosen with the instructor. Examples include best practices in toilet training, utilization of behavior analysis in school based settings, using ACT to decrease parent stress, and evidenced-based strategies to support caregiver training. In this course, students will write their final thesis manuscript and orally defend their thesis to the committee. Students who choose a professional development project will pilot the project with a test group and will make changes based on feedback. Students will have a final module series completed and ready for public consumption. Both options are weighed equally and hold great import to our field in the contribution to original applied research or knowledge growth for consumers. Students should choose based on their interests and goals for future. Prerequisites: APPL 6005, APPL 6015.

APPL 7005 Applied Behavior Analysis Practicum I (3 Credits)
Note: This course requires ongoing fieldwork with individuals medically diagnosed with autism spectrum disorder in authorized settings. Students must obtain fieldwork for a minimum of 10 hours per week. Supervisors are responsible for ensuring all clients with whom the candidate works have proper documentation. The course itself will meet synchronously four times per semester with the instructor, however the candidate MUST meet with their assigned supervisor on a weekly basis as per NYS requirements. This course offers students the opportunity to receive supervision from NYS Licensed Behavior Analysts with clients diagnosed with ASD in the clinic, home, community, and/or school setting. This practicum course will focus on applying basic behavior analytic concepts and principles to pedagogy, as well as develop beginning soft skills such as collaborating on teams. The course instructor, supervisor, and student may meet with one another to come up with a list of applied projects should the referenced projects be inappropriate for the students' clients. Students must maintain records for NYS LBA supervision. If students wish to also count these hours towards BACB supervision, they must maintain documentation as outline in the BACB guidelines. Prerequisites: APPL 7001 or concurrent.

APPL 7010 Applied Behavior Analysis Practicum II (3 Credits)
Note: This course requires ongoing fieldwork with individuals medically diagnosed with autism spectrum disorder in authorized settings. Students must obtain fieldwork for a minimum of 10 hours per week. Supervisors are responsible for ensuring all clients with whom the candidate works have proper documentation. The course itself will meet synchronously four times per semester with the Instructor, however the candidate MUST meet with their assigned supervisor on a weekly basis as per NYS requirements. This course offers students the opportunity to receive supervision from NYS Licensed Behavior Analysts with clients diagnosed with ASD in the clinic, home, community, and/or school setting. Practicum II will focus furthering soft skills through peer coaching, application of pedagogy to practice for behavior reduction programs, advanced behavior analytic programming, advanced data decision analyses, and caregiver training. The course instructor, supervisor, and student may meet with one another to come up with a list of applied projects should the referenced projects be inappropriate for the students' clients. Students must maintain records for NYS LBA supervision. If students wish to also count these hours towards BACB supervision, they must maintain documentation as outline in the BACB guidelines. Prerequisites: APPL 7005.

CAED: Community & Economic Development (Graduate)

CAED 6010 Principles of Community & Economic Development (3 Credits)
This study will incorporate the subjects of two distinct, yet related bodies of literature. One addresses community development and the other economic development. The study will highlight the importance of linking these two concepts in a model that integrates the development of social capital and community capacity and functioning with the economic development of that community. Students will examine theoretical concepts in these two domains as well as real-world economic development models that attempt to move beyond the traditional approaches and examine ways in which real communities have tried to produce positive economic outcomes through community development. This course was previously CAED-611003.

CAED 6030 Overview of Social Entrepreneurship (3 Credits)
This study will provide an overview of social entrepreneurship; different conceptions and approaches to social entrepreneurship; developing competitive advantage; financing, ethical issues and using different forms of organizational structure to address social problems. It will also cover organizing for social entrepreneurship and managing growth. This is a required course of the advanced certificate in Social Entrepreneurship. This course was previously CAED-611011.

CAED 6040 Stakeholder-Sensitive Business Models (3 Credits)
A critical step in strategic management involves scanning the economic environment which, in turn, requires an assessment of an organization's relationships with various stakeholders. Effective decision makers understand the importance of balancing and protecting the interests of various stakeholders, including investors, employees, the community, and local and state governments, suppliers, funding sources, various interest groups and, of course, the client or customer. This course will examine the role that stakeholder analysis plays in all aspects of the management process including the use of resources, capabilities and operations to establish competitive advantage and sustainability. Topics will include the connections between organizations and the natural, social, and financial environments, illustrating how all three must be maintained in balance to sustain current and future generations. The course will also look at the role of leadership in creating value for each stakeholder through strategic alignment and ethical decision making.

CAED 6050 Economics of Poverty & Discrimination (3 Credits)
This study will examine the nature of poverty in the United States; theories pertaining to the distribution of income and wealth; the connections between various factors with an emphasis on discrimination, and poverty; theories from the social sciences pertaining to the origins of discrimination and benefits of eliminating it, and policy issues related to correcting the imbalance caused by discrimination. This course was previously ECO-610573.

CAED 6055 Ethics & Corporate Social Responsibility (3 Credits)
The purpose of this course is to study theories in ethics and apply them to achieve an understanding of moral philosophy with regard to the social responsibility of business and specific problems and issues facing business today. These issues include, among others, the rights and obligations of employers and employees; hiring, firing and discrimination; gathering, concealing and gilding information; issues in dealing with foreign cultures. Students will consider how organizations can be guided toward fulfilling their social responsibilities. This course was previously MGT-651602.

CAED 6060 Macroeconomics for Public Policy (3 Credits)
Students will examine macroeconomic principles and methods and their particular application to public policy with emphasis on policy relating to economic development. The ultimate objective of the course is to understand macroeconomic data, interpret what economic policy suggests about values and direction and the likely impact of macroeconomic policy on communities. This course was previously POL-611009.

CAED 6065 Population Land Use & Municipal Finance (3 Credits)
In this course, students examine the types and spatial distribution of individual, business and community activity and the ways that communities finance their activities. Any change in one of these elements will inevitably change the others and, from an economic planning perspective, each must be considered in contemplation of the other elements. Students will consider basic concepts related to each element (gathering and interpreting demographic information; the fiscal and social impact of land use and land use changes; municipal finance concepts such as the impact of taxation, equity in taxation and tax shifting). Finally, students will complete a comprehensive community plan. This course was previously PAF-611008.

CAED 6070 Workforce Development Policy (3 Credits)
The course considers the diverse purposes of workforce development policy, offers insights into the complexities of public policy in the U.S. federal system and underscores the important role of state and local governments in responding to the demands of a changing economy and workforce. This course will review the evolution of workforce development policy in the United States with particular attention to key federal legislation, the programs and services that create and deliver workforce programs, and the challenges and opportunities that continue to shape workforce development policy and programs. This course was previously POL-611005.

CAED 6998 Individualized Studies in Community & Eco Development (CAED) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Community & Eco Development (CAED). Please contact your mentor/advisor for more details.

CAED 7010 Final Project - Professional Project: Community & Economic Development (3 Credits)
As the concluding study in this Master of Arts program, the student will complete a culminating project, in which the student will engage in a sustained examination of a critical question or issue related to this program. The final project will take the form of a policy memorandum. This course is designed to guide the student through the implementation of a policy memorandum. Policy Memorandums are not published in the ProQuest/UMI service. Prerequisites: PPOL 6007, CAED 6010, CAED 6040, PPOL 6021 (preferred) OR PPOL 6020 (for students who intend to pursue doctoral studies).

CAED 7015 Final Project - Thesis: Community and Economic Development (3 Credits)
In the thesis, the student identifies a critical question, idea or issue relevant to his/her program of study and engages in a disciplined, sustained examination of this topic. This is a scholarly piece of work in which the researcher systematically and analytically explores a topic to begin building a theory or theories or to test a hypothesis. The overarching goal is to contribute new, generalizable knowledge to the student's field. Writers of theses make appropriate inferences based on a deep analysis of the chosen topic or question. The academic thesis may be the best choice of final project if the student has plans to continue studies toward a doctorate. All theses are published in the ProQuest/ UMI service. Prerequisites: Students must have taken all required core courses..

CAED 7998 Individualized Studies in Community & Eco Development (CAED) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Community & Eco Development (CAED). Please contact your mentor/advisor for more details.

CURI: Curriculum & Instruction (Graduate)

CURI 6005 Introduction to Critical Pedagogy (3 Credits)
This course is designed to create a discourse community that questions hegemonic practices, contributing to a larger collective conversation. Through the study of critical ethnographies, students will examine current educational assumptions to develop critically reflective practice and transform thinking. Students will deconstruct dynamics of critical pedagogy through the lenses of diversity including race, gender, and class, developing layered analysis of principles, theorists, and views. This course was previously EDU-661205.

CURI 6010 New Media & New Literacies (3 Credits)
This course is designed to explore educational perspectives and implications of new media and new literacies. Students will investigate theories and research related to meaning-making in and around the contexts of contemporary social media. In addition, students will work collaboratively and collectively to build their knowledge in how these media are created, used, interpreted and re-used by themselves and others. They will explore how affinities for these media enable us to think differently about what it means to read, write, listen, speak, view, and participate in new literacies in educational settings. This course was previously EDU-661202.

CURI 6015 Leading in a Learning Environment (3 Credits)
This course is designed to examine leadership roles and leadership needs in 21st century education. Students will explore various leadership designs and styles in relationship to curricular planning, professional development, and community outreach. Students will examine learning environments to develop strategies and programs around leadership that coincide with the needs of contemporary learners.

CURI 6016 Creating Safe Schools and Communities (3 Credits)
This course will explore school and community safety from a multidisciplinary approach. Drawing on research and theoretical perspectives from the fields of Education, Psychology, Social Work, and Criminology, students will explore both current and historical approaches to the prevention of violence in schools and communities in the United States. With billions of dollars being spent annually in the U.S. to make schools and communities safe, what prevention efforts are actually effective? Students will analyze different strategies that school districts and communities across the country currently utilize to prevent bullying and harassment, physical fights, weapon carrying, gang activity, firearm violence, suicide, and hate speech/crimes. Special attention will be paid to the factors that make violence such a pervasive and persistent issue in the Unites States. Best practices and research-based model programs, from what teachers can do in their individual classrooms to broader community level preventive efforts, will be integrated throughout the course.

CURI 6020 Contemporary Issues in Learning and Teaching (3 Credits)
This course examines current policies that affect learning and instructional practices in educational environments across various settings. Problem-solving strategies are used to identify and develop best practices that respond to challenges arising from contemporary issues in society. This course also reviews changes in federal and state curriculum mandates and examines the theoretical underpinnings of current educational practices and societal dynamics. Students will research the history, current developments, and predictable future developments of a self-chosen issue while also reflecting on effective teaching and learning strategies in response to the issue. This course was previously EDU-661203.

CURI 6030 Foundations of Literacy (3 Credits)
This course will focus on psychological, sociological, linguistic, socio-cultural, and historical foundations of current literacy theory and practice. Theoretical perspectives including behavioral perspectives, semiotic and multiliteracies perspectives, cognitive perspectives, sociocultural perspectives, and critical and feminist perspectives are among those that will inform the integration of literacy and technology as viewed in new literacy studies as well as the global marketplace. Students will research sociocultural-historical perspectives on literacy in order to understand the dominant role cultural belief systems, social rules and conventions, and professional opportunities have in the interconnected process of literacy learning.

CURI 6045 Literacy & Literature (3 Credits)
This course examines ways in which literature, as the written, digital and visual representation of human experience, enhances our ability to make meaning of the processes and products of human thought, feelings and behavior. Characteristics of various genres are explored throughout the course. Ways in which literature opens a dialogue between writer, reader and responder are analyzed. Learning activities serve to expand the understanding of written expression through a survey of literature that uses state literacy standards as a framework. Students will be able to understand the ways in which different genres influence the reading and writing experience, and they will comprehend how K-12 students make meaning from text. Evaluation will encompass online discussions, written reflections, and projects designed to augment individual learning and professional objectives. This course was previously EDU-661206.

CURI 6050 Literacy Assessment (3 Credits)
In this course, students will explore a variety of intervention and assessment models for reading, writing, speaking, listening, and viewing as they apply birth - grade 12 learners. Response to Intervention (RTI) across grade levels, with particular attention to implementing RTI with English learners, will be a primary focus of the course. Case studies will be used to familiarize students with the assessment, diagnosis, and remediation process. Students will administer literacy assessments (including options such as: word study; informal reading inventory (IRI); multimodal reading assessment, and dialogic writing assessments) to K- high school students of their choice and use the information to pair students with appropriate instructional materials. State literacy standards, as well as the International Literacy Association (ILA) standards for assessment and evaluation, will be examined as they pertain to curriculum, evaluation, and assessment. Course learning outcomes reflect ILA Literacy Standard 3.

CURI 6070 Understanding Diverse Learners (3 Credits)
This course addresses diversity in contemporary schools and settings, the ways children and families from various cultures are affected by and affect schools, and the role of the teacher and the curriculum in creating an open and tolerant environment conducive to learning. By the end of this course, it is expected that students will have expanded their understanding of how to differentiate and how to adapt instruction or communication with diverse populations. Topics that will be addressed in this course include: cultural, ethnic, racial, and socioeconomic diversity, related behaviors, bias and attitudes, exploration of social identity, the history of education on dominated cultural groups, gender equity, gender and sexuality, and community engagement.

CURI 6075 Social Foundations of Education (3 Credits)
This course explores the nature of education in the social, economic, and political context of the United States. We will critically examine the philosophic, historic, social and legal foundations of education, as well as contemporary structures, functions and issues in American educational systems. Topics include: historical, philosophical, and social contexts within which American schools developed; historical relationships between schools and communities; diversity, equity, individuality and schooling, schooling, democracy, and citizenship; social emotional learning (SEL), school climate and safety; the profession of teaching and teacher identity; and contemporary debates and alternative visions of schooling. This course was previously EDU-661201.

CURI 6500 Activating the Motivated and Engaged Brain: The SEEKING System (3 Credits)
This course focuses on improving student attention, engagement, and perseverance, by activating the innate SEEKING System that drives the motivated brain. Participants examine the brain science that underlies each processing network of motivation, memory, and higher-level thinking. They learn to design lessons and incorporate activators (or strategies) that support each processing level and maximize the SEEKING System of the motivated brain. This course was formerly EDU-661118

CURI 6501 Adolescent Development Grades 7 - 12 (3 Credits)
This course covers adolescent development as it relates to the 7 - 12 educational context. Topics that are covered include physical development, developmental learning theories, personal, social and emotional development, learner differences, social cognition, behaviorism, information processing, constructing and assessing understanding, and creating positive classroom learning environments. Written assignments will integrate theoretical and research-based concepts with classroom practice. This was formerly EDU-661117

CURI 6502 Adolescent Literacy Grades 7-12 (3 Credits)
This course is designed for classroom teachers in grades 7-12 as well as individuals interested in adolescent literacy. As the course progresses, students will take an in-depth look at what adolescent literacy looks like in the 21st century American classroom, including increased awareness of Common Core Standards as they apply to content area literacy instruction. The role literacy plays in how adolescents construct meaning of the world, and their place in it will forefront instruction, discussions, and assignments. Literacy is no longer the sole responsibility of the reading and English teacher. Research has shown that elevating literacy levels enhances the learning and performance of learners in all of the content areas. It is difficult for students to succeed in any content area if they cannot read instructions, interpret word problems, write up the results of a lab report, or interpret visual texts. Strategies and motivational techniques that encourage native English speakers and students who are learning English as a New Language to develop and refine their proficiency in reading, writing, speaking, listening, and viewing, both in school and in out of school settings, will be explored.

CURI 6503 Brain-based Ways We Think & Learn (3 Credits)
This course is a PLS 3rd Learning course that provides experienced and beginner educators with a comprehensive understanding of the ways in which findings from current brain research can be applied to teaching and learning. Participants will engage in brain-based learning experiences that will take place in a brain-compatible learning environment as they examine the work of a wide variety of experts. Concepts include identifying how the brain receives information and creates meaning from it, understanding the characteristics of a brain-compatible learning environment, studying brain-based instructional strategies, and learning how to create an enriched classroom environment. Throughout the course, class members will also hone their understanding of how to apply four key cognitive processes (induction, deduction, analysis, and synthesis) to their lesson planning and instructional practice in a way that enhances the benefits of brain-compatible learning and further increases student comprehension and achievement.

CURI 6504 Building Mathematical Understanding for Grades 3-5 (3 Credits)
As teachers seek to strengthen their knowledge of mathematics and improve practice, they are surrounded by a system that does not always know or recognize proven practices. This course is intended to help those who teach mathematics in Grades 3-5 understand the mathematical content, how mathematical ideas develop, and how to implement successful teaching practices that make it more likely for students to grasp and be comfortable with mathematics. The course includes research findings on which the teaching of solid mathematics is based. It highlights teacher practices that researchers found to be associated with greater learning of mathematics and that teachers found to be relevant and vital for teaching mathematics in all grades K-12 with a focus on grades 3-5. The course aligns the Ten Principles of Thinking Mathematics, the NYS P-12 Common Core Learning Standards for Mathematics, the Standards of Mathematical Practice and the National Research Council's Strands of Mathematical Proficiency, all vital frameworks for teaching mathematics. The research behind these principles is explained with models and explanations from within multiplicative structures and discusses the implications for teaching multiplication and division which is the essence of the work of Grades 3-5.

CURI 6505 Building Positive Connections with Diverse Families & Communities (3 Credits)
Developing strong and positive connections with families and communities is critical in our educational settings today. This course will explore and discuss perspectives that are critical to school-community relationships. Students will develop a collection of tools, resources, and documents that will be helpful in creating positive collaboration between schools and their communities.

CURI 6506 Bullying: Preventing the Problem (3 Credits)
According to the Centers for Disease Control, schools have a responsibility to prevent aggressive behaviors and an obligation to provide an environment that promotes children's health and safety. However, although anti-bullying education efforts have increased exponentially over the years, recent statistics show that the prevalence of bullying is not declining. This course provides teachers, counselors, administrators and staff with cutting edge developmental and applied research to effectively address bullying in the school context.

CURI 6507 Coaching: Building Capacity Through Professional Conversations (3 Credits)
This course models how coaching relationships enhance professional conversations and communication among educators. It builds teacher capacity and strengthens teacher effectiveness. It integrates national, state, and local standards. It is a comprehensive overview of coaching that addresses: Brain research, adult learning principles, effective communication and the micro-skills of coaching conversations. In addition, structured maps for pre-visit and post-visit meetings for teacher evaluation will be explored. Participants will be immersed in seminal and current research to deepen their understanding of Coaching. The course will address the impact Coaching can have on instructional practice and student outcomes.

CURI 6508 Collaborative Inquiry for Students: Preparing Minds for the Future (3 Credits)
This course provides students with research-based strategies for designing and implementing collaborative inquiry for students. Students will explore and experience the collaborative inquiry models of problem-based learning, hypothesis-based learning, project-based learning, Appreciative Inquiry, and performance-based learning.

CURI 6509 Component One: Pursuing Accomplished Practice: Foundations and Content Knowledge for National Board (3 Credits)
This course is intended for teachers who are committed to pursuing National Board Certification. The primary focus will be centered on increasing the depth and breadth of content knowledge of the teacher within 25 certificate and developmental areas in preparation for the NBPTS Component 1 assessment center exercises. Participants will do an in depth analysis of the Five Core Propositions which is from the NBPTS document What Teachers Should Know and Be Able to Do as well as the NBPTS Standards that are being assessed within the certificate area as the foundation for their preparation. Teachers will collaborate within and across discipline areas and developmental ages to discuss and share best practices and to increase their content knowledge and build professional resources.

CURI 6510 Component 2: Differentiation in Instruction for National Board Certification (3 Credits)
This course is intended for teachers who are committed to pursuing National Board Certification. The primary focus will center on a teacher's ability to describe, analyze and evaluate learning strengths and needs for individual students; plan and implement appropriate differentiated instruction for those students; and analyze and modify instructional strategies and materials based on ongoing assessment. Teachers will collaborate within and across discipline areas and developmental ages to discuss and share best practices in differentiation and instructional strategies all in preparation for completing Component 2: Differentiation in Instruction.

CURI 6511 Component Three: Foundations and Component Teaching Practice and Learning (3 Credits)
This course is intended for teachers who are committed to pursuing National Board Certification. The primary focus of the course will center on a teacher's ability to describe and analyze their instructional planning, teaching practice and learning environment. Teachers will be required to provide evidence of the standards being assessed in two video recordings. For each video, teachers will submit an in-depth commentary that includes description, analysis and reflection of their teaching practice and their pedagogical decision making and the impact on student learning. In addition, participants will engage in peer review of other participants' videos and written commentary in preparation for completing NBPTS Component 3: Teaching Practice and Learning Environment.

CURI 6512 Component Four: Effective & Reflective Practitioner (3 Credits)
This course is intended for teachers who are committed to pursuing National Board Certification. The primary focus of this course will be centered on highlighting the teacher's abilities as an effective and reflective practitioner in developing and applying knowledge of the children they teach.

CURI 6513 Critical & Creative Thinkers for a Global Age (3 Credits)
This course focuses on developing critical and creative thinkers who can operate in and competently address the issues and challenges of a global age. It focuses on the practice of critical and creative thinking through the use of thinking routines and promotes student engagement, understanding, and independence by making thinking visible. Participants examine the standards and dispositions of critical and creative thinkers, as they explore precise and emotive language, effective communication, inferential reasoning, logical fallacies, thinking from multiple perspectives, creative problem solving, and media literacy. Based in the context of global issues and challenges, the course models over 21 critical and creative thinking routines for the classroom that make thinking visible, foster collaboration and communication, and enhance engagement and understanding in a culture of thinking.

CURI 6514 Culturally Responsive Teaching with Diverse Learners (3 Credits)
This course focuses on improving student outcomes by increasing teacher understanding of the impact of race, culture and language in the learning environment. Culturally Responsive Teaching (CRT) is a research-based method designed to enhance student engagement by implementing strategies to develop stronger relationships, culturally-inclusive curriculum and instruction techniques and positive learning environments. Participants examine the elements of Culturally Responsive Teaching through personal reflection and development of culturally competent strategies to effectively differentiate instruction for students from linguistically, culturally and racially diverse backgrounds. Participants deepen knowledge of their own cultural background and the impact on instruction while implementing strategies to increase connections with students and improve learning outcomes through culturally-relevant curriculum and instruction.

CURI 6515 Designing Motivation For All Learners (3 Credits)
This course is a PLS 3rd Learning course that provides educators with specific strategies for creating a motivating learning experience for students. Participants will explore the various dimensions of motivation, beliefs in ability, and self-efficacy as they analyze learner orientations and learning preferences. Participants will evaluate their strengths as motivational leaders and assess the qualities of a motivational classroom environment. A variety of motivational classroom strategies designed to support content and enhance student motivation will be experienced as participants evaluate how educators can positively impact their students' desire to learn and support them in becoming confident, self-directed, and successful learners.

CURI 6516 Developing Innovators & Innovation Skills (3 Credits)
This course focuses on developing innovation capabilities in students by exploring the discovery skills of associating, questioning, observing, networking, and experimenting. Participants learn how to create a culture of innovation and provide learning opportunities that promote perseverance, encourage curiosity, and ignite intrinsic motivation. Participants explore resources, strategies, and ideas for designing content-based lessons that incorporate discovery skills and foster the behaviors students need to be innovation-ready.

CURI 6517 Differentiated Instruction for Today's Classroom (3 Credits)
This course is a PLS 3rd Learning course that equips experienced and beginner educators with the essential knowledge and skills to implement differentiated instruction (DI) successfully in their own classrooms. As a widely respected, research-based instructional approach, DI provides teachers with effective, manageable strategies for meeting the needs of an increasingly diverse student population within the context of today's challenging standards-based curriculum. In a highly interactive learning environment that models the DI principles and processes, class members will gain expertise in understanding and implementing a broad range of strategies associated with three essential, distinguishing components of DI: first, the teacher's role as guide and facilitator in a classroom environment specifically designed to support self-directed student learning and teacher-student collaboration; second, the interdependent nature of flexible grouping and assessment in a DI classroom; and third, the adaptation of curriculum content, processes (activities), and products to provide students with entry points to learning that match their readiness, interests, and/or learning profiles.

CURI 6519 Instructional Planning and Strategic Teaching (3 Credits)
This course is designed to provide participants with instructional strategies that meet the needs of all students at all grade levels. Emphasis will be placed on misconceptions of academic failure; curriculum organization; effective instructional design; curriculum evaluation and instructional strategies that enhance and improve academic performance for all students. The following concepts serve as the basis for the design of curriculum and instruction: core concepts, essential questions, background knowledge, judicious review, strategic integration, cognitive strategies, and mediated scaffolding. Additional strategies and applications introduced in this course include rubrics, graphic organizers, LINCS vocabulary strategy, class-wide peer tutoring, note-taking, paraphrasing, summarizing, reciprocal teaching, questioning, and the Socratic Seminar. The implications of brain research and the use of technology are also components of this course. Additionally, many of the practices examined correlate with the indicators on state and district-wide teacher evaluation rubrics, the New York State Teaching Standards, and the shifts in Common Core Standards implementation.

CURI 6520 Integrated Co-teaching: Strategies Enhancing Student Achievement (3 Credits)
This course is designed for all K-12 educators who are or will be working with a co-teaching model. The course will investigate the pedagogical and practical facets of a co-teaching approach that provides academic instruction to a diverse community of learners (i.e. students within general education, special education, ESL, and gifted programs) so that each student may find success.

CURI 6521 Literacy Instruction in the Elementary Classroom (3 Credits)
Teaching all children to read is a critical responsibility of our elementary teachers. In this course, participants will learn and share the knowledge and skills they will need to be highly effective elementary teachers of literacy. The course will integrate what we have known is good teaching of literacy in the past and will expand the teachers' skills needed to meet the NYS P-12 Common core Learning Standards (CCLS). The inclusion of diverse students with various needs requires teachers of today to team with other professionals to plan and create an instructional environment that teaches all students to read.

CURI 6522 Maximizing the Learning Environment for Increased Student Achievement and Growth (3 Credits)
This course addresses the fundamental aspects of teaching and learning that are relevant for educators in all grade levels and subject areas. It examines proven practices for many of the indicators on state and district-wide teacher evaluation rubrics. Content includes creating a positive classroom environment, increasing student engagement, maximal use of learning time, interactive guided instruction strategies, scaffolding techniques, questioning and feedback skills and using homework to extend learning. Covering core topics critical to successful classroom practice, this course is designed to give educators the knowledge and skills needed to prepare students for college and career. The course is particularly useful for the training of mentor teachers and evaluators, and provides a system of supports for the professional growth of all practitioners.

CURI 6523 Reading Across the Curriculum (3 Credits)
This course provides research-based active reading comprehension strategies that participants can apply to their grade level or content area. By learning how to implement these metacognitive reading strategies, participants will be able to plan lessons more effectively. Participants will also discover how to engage students, deepen their understanding of content, and prepare them for success beyond the classroom. Emphasis is on learning styles, types of text, notation systems, content-area reading, assessments, fluency, motivation, and grade-level vocabulary. Over 40 strategies, activities, and assessments throughout this course align to Common Core State Standards (CCSS).

CURI 6524 Using Multi-tiered System of Supports (MTSS) for School Improvement (3 Credits)
Multi-tiered System of Supports (MTSS) is a framework for school improvement that involves tiers of increasingly intensive interventions. As students are identified by curriculum based measurement as exhibiting risk for school failure, they are instructed using interventions designed to eliminate or correct the cause of failure. Their progress is monitored using simple assessment tools. Participants will understand the MTSS process, its impact upon teaching and learning, and apply strategies and data-based decision-making in process implementation.

CURI 6526 Social Emotional Learning: A New Approach (3 Credits)
This course will introduce participants to the concepts of emotional intelligence and the importance of incorporating social-emotional learning in the classroom in order to create academic environments that cultivate caring, empathic and successful students. Through research-based activities, participants will develop strategies to teach to the "whole child", learn ways to motivate and engage students and promote positive interactions amongst students in order to increase academic achievement.

CURI 6527 Student Engagement & Standards Based Learning (3 Credits)
Using a standards-based approach as its foundation, Student Engagement and Standards-Based Learning is a Performance Learning Systems® course that explores high-impact learning activities designed to help teachers optimize student learning. Participants will use standards as a basis for designing learning activities, assessments, and scoring guides and will prioritize learning based on curriculum. Using alignment criteria and the POINT design components, participants will evaluate, modify, expand, and design standards-based learning activities in order to maximize student learning, engagement, and achievement. A variety of learning activities aligned to standards and the QFL (Questions for Life) Process Skills are featured in this course as participants learn to address the needs of 21st Century Learners and foster progress toward deeper retention and transfer of learning.

CURI 6528 The 21st Century Classroom: How Problem-based Learning w/ Technology Can Transform Student Learning (3 Credits)
This practical course is designed to enable K-12 educators to synthesize newly framed requirements for highly effective teaching (APPR), the 21st Century Skills, the Common Core Standards, existing research on best instructional practices, technology use and assessment into a high performing classroom that can transform their students learning and ready students for college and career success in a global, digital world. The course shows educators how to create innovative but easy to implement standards-aligned, project-based learning (PBL) units that integrate intuitive digital tools into daily differentiated instruction. Participants will learn from doing in the same manner to be expected of students in a 21st Century Classroom. Participants will exit the course having designed three increasingly complex PBL with Technology units (PBL-T) and the ability to create additional PBL-T units for a single discipline or across disciplines. The aim of each standards-aligned unit is to increase student achievement simultaneous with the development of students 21st Century skills beyond traditional gains from more conventional, factory model methods.

CURI 6529 The Role of Data Assessment & Instruction to Raise Student Achievement (3 Credits)
This course will provide students with a better understanding of the realities of data use and will empower users to identify and use data more appropriately to identify school-wide priorities, inform instruction and enhance student learning.

CURI 6530 Digital Literacy (3 Credits)
Digital Literacy is a broad term that encompasses "nuts and bolts of skills and ethical obligations." (Common Sense Media, 2019) In January of 2020, the New York State Board of Regents approved the first ever learning standards for Computer Science and Digital Fluency. In a collaborative process that included an intense needs assessment, the K-12 standards have been organized into 5 categories: Impacts of Computing; Computational Thinking; Networks and Systems Design; Cybersecurity; and Digital Literacy. This course will focus on digital literacy but include a brief introduction to the 4 other components of the new standards. Digital literacy includes both seamless integration of digital tools and skills across content areas as well as purposeful direct instruction on topics that include but are not limited to digital citizenship, safety, etiquette, privacy, laws and wellness. Through the exploration of these topics, participants will acquire skills, tools and knowledge to incorporate digital literacy across content areas and grade levels appropriately to enhance instruction.

CURI 6531 Toolbox for the Inclusion Classroom: Practical Strategies for all Teachers (3 Credits)
This course is designed for all educators, both general and special as well as related service providers, at all grade levels. Participants will develop skills for setting up an inclusive classroom that meets the needs of all the students in their classroom. The course emphasizes many strategies and activities to make inclusive education effective and efficient. Participants will also learn the three principles of universal design for learning (UDL) and how to apply them in an inclusive classroom.

CURI 6532 Childhood Trauma and Classroom Resiliency (3 Credits)
Aversive Childhood Experiences (ACE) may cause a student to have academic problems, acting out behaviors, and poor relationships with classmates and school staff. The negative effects of ACEs lead to deficits in attention, learning and retrieval, language and communication skills, and memory recall, thus affecting students' academic performance and social skills. According to the Center for Disease Control, the number of ACEs one has experienced has a direct correlation to the education level one achieves. When teachers are trauma informed, learn effective responses to student trauma, and how to help foster and instill resiliency skills necessary to thrive in the classroom, children have better learning outcomes: building foundations for better health, success, and positive interactions - in school and in life. This course will present the core concepts of ACEs, stress, trauma, restoration, self-care, and provide research-based strategies and practices to enhance resilience in the classroom environment. Class participants will be taught to avoid secondary traumatic stress or compassion fatigue by being aware of personal self-care. According to the National Child Stress Network, compassion fatigue is "the emotional duress that results when an individual hears firsthand about the trauma experienced by another."

CURI 6533 Reclaiming Personalized Learning (3 Credits)
This class will help educators restore equity and humanity to their classrooms and schools through personalization of education. The lessons will help teachers shape whole-class instruction, leverage small-group interactions, and nurture a student's inner dialogue. It will nurture the cultivation of awareness for students, using thinking routines from Project Zero and protocols of interaction with peers. The class will also help teachers design curriculum with a flexible frame that helps to emphasize the state standards. Teachers will be able to design new lessons that create multiple opportunities for students to become global thinkers and prepare them for a changing world. The overarching goal will be that teachers will reclaim personalized learning for all students that they interact with.

CURI 6534 Enhancing Assessment in Your Classroom with Digital Applications (1 Credits)
This course will cover a variety of digital applications that can be used to facilitate formative assessment practices in the classroom. Several different digital applications will be explored that can be used to increase student engagement in the assessment process, while also providing educators with valuable data that can be used to inform their instruction. Written assignments will integrate these digital applications with theoretical and practical considerations pertaining to best practices in classroom assessment.

CURI 6535 Enhancing Your Classroom Digitally (1 Credits)
Improving instruction to make it relevant, meaningful and engaging should be a goal of every 21st century educator. In this course, we will explore instructional practices, digital tools, platforms and pathways to facilitate meaningful learning experiences in the classroom and beyond. Additionally, there are a variety of contexts and resources in all districts that impact what and how we choose to implement technology in our classrooms. In this course, participants will investigate how to put pedagogy first and add digital resources second. The course will frame instruction with a digital lens that supports the SAMR (Substitute-Augment-Modify-Redefine) model, Bloom's Digital Taxonomy and the New York State K-12 Computer Science and Digital Fluency standards with consideration given to the privacy and educational laws surrounding student use of technology.

CURI 6536 Flipping the Classroom (1 Credits)
This course covers the flipped classroom approach as it relates to teaching the 21st century classrooms. Topics that are covered include the development of a flipped classroom, creating a flipped classroom, the benefits of flipping a classroom, how to implement a flipped classroom, and how to create a positive learning environment in a flipped classroom. Written assignments will integrate theoretical and research-based concepts with classroom practice.

CURI 6537 Managing and Engaging Students in the 21st Century (3 Credits)
In an ever-changing educational landscape that has included remote learning, hybrid learning and technology-rich instruction, the responsibilities and challenges that educators face daily continue to mount and evolve. This course will facilitate investigation into strategies, tools and practices to help manage and engage students in our 21st century K-12 learning environments, while also improving school climate, culture and community partnerships.

CURI 6538 Flipped Classroom to Mastery Flip and Beyond (3 Credits)
This course covers the flipped classroom approach as it relates to teaching the 21st century classrooms. Topics that are covered include the development of a flipped classroom, creating a flipped classroom, the benefits of flipping a classroom, how to implement a flipped classroom, the challenges of a flipped classroom, and how to create a positive learning environment in a flipped classroom. It also explores the flipped mastery model and flipped learning model. Written assignments will integrate theoretical and research-based concepts with classroom practice.

CURI 6539 Establishing Parental Partnerships as a Framework for Student Success (3 Credits)
This course focuses on the family systems theory models as a guide to understanding, appreciating, and supporting diverse families. It introduces the participants to contemporary issues such as working with linguistically diverse and immigrant families. It provides strategies on how to deal with families going through divorce, remarriage, or military employment; families dealing with financial difficulties, natural disasters, and violence. Participants examine families that face hunger, chronic illness, death in the family, and students with parents in prison. They will also examine the use of the latest technology as a communication tool. In this course participants will review the 9 principles of family support in schools. This course is designed to help teachers find ways to partner with parents to help build successful students. Research has clearly shown that parental involvement is a critical variable in a child's education.

CURI 6540 Meaningful Activities to Generate Interesting Classrooms (MAGIC) (3 Credits)
Meaningful Activities to Generate Interesting Classrooms is a 3-credit hour course that shows educators how to design compelling activities that engage students more meaningfully in their own learning while developing practical life skills, as well as critical thinking skills. Throughout the course, participants learn to apply five specific criteria (the SCORE model) that are characteristic of highly effective, brain-compatible activities. Participants use these criteria continuously to analyze the activities in which they participate, as well as those they plan, ensuring that each includes relevant learning and life skills, meets curriculum requirements, addresses organizational issues, plans to meet desired outcomes, and assesses mastery. With a focus on unlocking the creative potential of both teachers and their students, participants learn how to position effective activities—introductory, informational, practice, review, and culminating—throughout the entire learning process, and provide multiple pathways to learning that are highly engaging while promoting depth of knowledge.

CURI 6541 Creating Safer Schools (3 Credits)
Students, parents, and school staff deserve a safe learning environment. Yet headlines of violence, bullying, and drug abuse have shown the vulnerability of schools. This course explores the background and data about the severity of safety issues facing schools today and provides the strategies and tools to address them. This course will provide students with tools, activities, checklists, strategies, and tips. Some issues that will be addressed are bullying, substance abuse, internet safety, violent school issues, suicide, school avoidance, and mental health awareness.

CURI 6542 Creating an Equitable Grading System for All Students (3 Credits)
The purpose of grading is to communicate a mastery or needed improvement of skills to students and their caregivers. But there are many flaws in the traditional grading system that often deviate from good intentions. Participants will examine the historical purpose of the grading system and how it has been used to determine a student's academic potential, before diving into current research on equitable teaching and learning. Participants will have the opportunity to reflect on their current grading practices, questioning how equitable they are for students, and be able to improve ways of assessing students.

CURI 6543 Learning First, Technology Second (3 Credits)
In this course, participants will explore the levels of student engagement and use of technology using a lens of student commitment to learning. The course will focus on a technology framework that prioritizes the science of learning practices rather than specific tools. The Triple E Framework: Enhance, Extend and Engage, facilitates purposeful technology integration that adds value to the learning goals. Understanding how students learn lends itself to choosing the best pedagogical practices around a tool to best meet the instructional needs of the lesson and unit. Pedagogy remains the central force in teaching and learning. Examining our practices around harnessing technology in our classrooms using current research and the Triple E Framework can result in transforming contemporary education.

CURI 6544 Student Insight on Best Educational Practice (3 Credits)
Students learn best when collaborating, talking, and working with their peers. That's what Edutopia blogger and educational expert Heather Wolpert-Gawron discovered when she surveyed students nationwide. Now you can hear from the students themselves and discover 10 comprehensive and fresh ideas on precisely how to capture your students' imaginations and minds for deeper learning every day. This research-based approach provides plentiful lesson ideas, vignettes, videos, and insightful student interviews. Wolpert states she has learned students want to work together, have their teachers be more visual and to use technology, know "why" they are learning, move around in the classroom, have choices, experience their teachers as human, create using what they know, participate with new ways of learning, and learn using a variety of methods.

CURI 6545 Building a Trauma-Informed Restorative Classroom (3 Credits)
"Relationships matter in the classroom, in our families, and in our community organization where children and youth will interact with adults." -Joe Brummer To build a strong and solid school culture, caring, nurturing relationships must be present. When students feel supported, they are more likely to engage fully in their learning. Using restorative practices allows for relationship building and conflict resolution. Participants will explore the foundations and skills of building a restorative classroom and establish practices to put into action with students.

CURI 6546 Empowering Educators: Nurturing Your Best Self for Student Success (3 Credits)
Explore the profound connection between a teacher's inner state and the outcomes in the classroom. From navigating challenging classroom dynamics to fostering a positive learning environment, you will learn strategies that sustain your well-being while enhancing the educational journey of your students. With a continuous infusion of fresh ideas, invaluable tools and evidence-based practices, this course demonstrates that by prioritizing self-care, you amplify your capacity to make a lasting difference in the lives of your students and unlock the full potential to inspire and guide students effectively.

CURI 6547 The Productive Struggle: How Students Can See Themselves as Risk-Takers and Capable learners (3 Credits)
In this course, educators will delve into innovative strategies to inspire students to embrace challenges as opportunities for growth. Participants will learn how to cultivate a classroom culture where productive struggle is not only welcomed but celebrated, fostering a mindset of resilience and continuous improvement. Drawing on research-based methodologies, participants will discover how to design learning environments that normalize challenges and empower students to see themselves as capable learners and risk-takers. Through practical techniques, educators will explore how to craft clear learning intentions and success criteria that guide students through their academic journey. With a focus on authentic classroom scenarios and firsthand insights from educators implementing the 'not-yet approach', participants will gain valuable communication skills to engage with colleagues, students, and parents/guardians effectively. Additionally, they will receive a toolkit of strategies, protocols, and reproducibles to support instruction, reflection, and the seamless integration of the 'not-yet approach' into their teaching practices.

CURI 6548 Transforming the K-12 Classroom with Artificial Intelligence (AI) (3 Credits)
Artificial intelligence has been permeating society for quite some time and has taken a more prominent role in our everyday lives. As we seek to prepare our students for a constantly evolving and changing world, it is critical to learn how AI works and how to leverage its transformational power to make a positive impact on teaching and learning. While AI certainly presents some challenges, this course will explore how to harness AI for good, seeing it as an asset in our profession rather than a threat. Participants in the course will investigate both the opportunities and implications of AI in education as well as the ethical considerations for its effective integration. As educators, we need to continue to re-imagine education, preparing leaders and educators to empower students to thrive in the AI-driven world of tomorrow. Educators are uniquely positioned to shape the future of learning and ensure that AI is harnessed responsibly. For our teaching and learning to be relevant to the future of our students, it is integral to stay informed and continue to develop our own knowledge and skills. In this course, participants will study research, explore tools and strategies and improve practices to utilize in planning and instruction. The course will also include investigating how to create curriculum, school guidelines and policies to create a culture of ethical use of available technological resources with respect to our New York State learning standards in content areas, Computer Science and Digital Fluency Standards, Career Development and Occupational Studies Standards and Social Emotional Learning benchmarks.

CURI 6560 Creating the Dynamic Classroom Environment (3 Credits)
Participants will explore the extensive research base behind classroom management and work to create a classroom management plan that will provide a foundation on which to build instruction for the rest of the school year. They will investigate their curriculum and instruction to find ways to engage students in learning, which will virtually eliminate classroom management issues. Since preventive measures are not a failsafe, participants will explore some minor, escalating, and major behavior problems to better prepare students to address these situations as they arise. Participants will also explore how to address the special needs of inclusive classrooms, as well as technology in the classroom.

CURI 6562 Making Thinking Visible in the Classroom (3 Credits)
This course is an introduction to the theories proposed from the program called Project Zero at Harvard's Graduate School of Education. It is an introduction to the eight cultural forces that are found in educational settings. Specifically focusing on one cultural force which is making a student's thinking visible in the classroom. Participants will learn about thinking involved in understanding and how students think. Specific focus will be on Howard Gardner's "Multiple Intelligence Theory" and the eight intelligences. Participants will also explore how to make thinking visible in a classroom environment. This course will focus on twenty-two different thinking routines. The instructor will demonstrate each thinking routine by first teaching the philosophy of the routine and then how it can apply to all areas of the curriculum. The instructor will teach the setup of the routine and then complete examples of the routine with the participants. The participants will then be encouraged to discuss the benefits of the routine in their classrooms, which curriculum it can be used in, and how the routine creates visible thinking.

CURI 6563 Brain Compatible Learning (3 Credits)
This course extends participants' understanding of "best learning practices" from findings based on brain research and pedagogical theory. Reflections include the impact of enriched environment; the role of emotions; the relationship between brain, mind, and intellect; the connection between memory and learning; the developmental path from novice to expert; and the role of experience in learning. Educators explore how these principles guide their work with children and create brain-compatible classrooms.

CURI 6564 Professional Learning for Teacher Effectiveness (3 Credits)
This course focuses on enhancing teacher effectiveness by exploring research-based theories and best practices that correlate to the New York State Teaching Standards. As participants delve into the elements and criteria delineated in The NYSUT Teacher Practice Rubric and The Framework for Teaching Evaluation Instrument, participants gain an understanding of what is expected of a professional in the classroom and essential for performance reviews. With a spotlight on teacher practice, participants experience the specific methods, strategies, and activities that ensure "Highly Effective" performance in all professional domains.

CURI 6566 Writing As Learning (3 Credits)
The New York State Next Generation Learning Standards will require students to write completely and competently in every subject. This course will help assist teachers in implementing a systematic plan for teaching writing developmentally and consistently in every subject area. It will help students to examine and learn writing strategies that guide them in producing the widest possible range of writing products. Each of the strategies is designed to foster creative thinking, analysis and synthesis. All of the strategies are adaptable from levels K-adults. Participants in the course produce a wide range of written products to provide them the practice in using the strategies. This allows the participants to learn through application and internalize the understanding of each strategy. Writers have opportunities to work solo, in pairs, and in groups, fostering collaboration and cooperation.

CURI 6568 Mindfulness in Today's Classroom (3 Credits)
Healthy stress is natural. Helping students learn how to appropriately deal with the daily stressors throughout their day is important so they can develop this life skill. Left unchecked, stress can reach unhealthy levels and impact all facets of children's development. In our current modern education system, toxic stress can lead to anxiety, depression, health issues, low academic performance, decreased social interactions and other emotional concerns. These negative effects of toxic stress impact both teachers and students thus resulting in an unhappy classroom environment. In this course, participants will examine the causes of toxic classrooms and more importantly learn tools and strategies to address the stress in our schools.

CURI 6569 Active Learning in the Contemporary Classroom (3 Credits)
Do we need active learning in today's classroom? Active learning is a form of learning in which teaching strives to involve students in the learning process more directly than in other methods. Active learning is important in the contemporary classroom. It creates a high level of self-monitoring, checking for understanding, and the application of various strategies. In doing this it helps students distinguish and differentiate between important and unimportant information, analyze, compare and contrast and dig deeper for meaning. This course is designed to help educators determine if contemporary classrooms serve as a context for active learning. In this course, participants will explore various practical active learning strategies and will learn how to successfully implement them into the classroom.

CURI 6570 Eight Cultural Forces to Transform our Schools (3 Credits)
In this course, teachers will learn how to create "cultures of thinking": places where a group's collective as well as individual thinking is valued, visible, and actively promoted every day. They will learn the eight cultural forces that educators must master to transform our schools from the old standard of education to the new model requiring global thinkers, problem solvers, and independent learners. The teachers will learn the eight forces of language, time environment, opportunities, routines, modeling, interactions, and expectations. They will learn the latest research behind each cultural force, techniques to utilize the force in an educational setting, and strategies to change their classroom and school environments. They will also learn and develop the three core ideas based on the cultures: schools must be about developing students' thinking dispositions, the need to make students' thinking visible, and the crucial role of classroom culture in supporting and shaping learning. The course will also contain strategies to move toward transformation in teacher's schools and classroom. They will explore how to collaborate in a positive way with peers, how to build a vision across a school district and how to create opportunities for this transformation.

CURI 6572 Beginning Reading PreK-2 (3 Credits)
Participants will review New York State Learning Standards and what they mean for early readers and writers; read and interpret research related to literacy instruction and emergent literacy components; explore and implement strategies to improve comprehension, vocabulary, and fluency; integrate literacy and content areas; explore activities and examples of effective instruction for each literacy component; assess the effectiveness of instruction; and, design and integrate writing instruction. Participants will review causes of reading difficulties and discuss both the role of differentiated instruction and RTI (Response to Intervention) to promote student reading success. Participants will learn how to use formative and summative assessment data to design instruction to meet student needs. Participants will investigate ways to use technology to support students' literacy skills and teacher professional development. Participants will learn how to create a literacy block that supports individual student needs.

CURI 6573 Developing Executive Function to Empower Learners (3 Credits)
Developing Executive Function to Empower Learners is a three-credit hour course that focuses on the correlation between student learning and the executive function skills of the brain. Strong executive function skills enhance student learning and empower students academically, personally, and professionally. Participants learn strategies and activities that develop and strengthen executive function in the areas of organization and planning; focus and attention; working memory; inhibitory control and self-regulation; self-directedness (self-managing, self-monitoring, and self-modifying); and cognitive flexibility. Participants learn how to make thinking visible in the classroom in a way that fosters problem solving, perspective-taking, and creative cognition skills. Mind matters, and learning how to optimize the air traffic control system of the brain has a powerful impact on learning.

CURI 6574 Equity in All Classrooms (3 Credits)
This course will serve as a blueprint for teachers to alter the all-too-predictable outcomes for our historically under served students. It will make the critical link between social justice and Universal Design for Learning (UDL) so that we can equip students and teachers with the will, skill and collective capacity to enact positive change. This course also gives educators an opportunity to analyze and reflect upon a variety of realistic case studies related to educational equity and social justice. The accessibility of written cases allows educators to practice the process of considering a range of contextual factors, checking their own biases, and making immediate and long-term decisions about how to create and sustain equitable learning environments for all students. The case studies involve classroom issues that are relevant to all grade levels and content areas. Using an equity framework, participants develop a lens for detecting inequity as it occurs in everyday classrooms, become adept at looking at the situation from multiple perspectives, and develop actionable plans to negotiate obstacles to equity in the classroom, the school, and in the community.

CURI 6575 Successful Teaching for Acceptance of Responsibility (3 Credits)
Successful Teaching for Acceptance of Responsibility is a 3-credit hour course designed to empower students to become more self-responsible. Participants learn how to proactively establish classroom structures that support responsibility and learn how to develop student-centered lessons that encourage responsible choices and effective decision-making. Participants explore the signs and symptoms of students who are low in Personal Power or Mental Models and plan appropriate interventions to develop responsibility and strong self-efficacy. In addition to modeling responsibility by using Teacher Talk, participants learn how to develop responsibility in students by implementing strategies that promote self-responsible choices, thinking, communication, actions, interactions, and character.

CURI 6576 Great Teaching by Design: Transform Your Practice by Understanding Your Learners (3 Credits)
Why is empathy important? Empathy allows us to experience the world on a much deeper level. This course focuses on understanding our students better. All learners deserve empathy because it is crucial for any learning or growth. When students enter our classrooms, they are continuing a lifelong journey to excel. Not only should we be teaching the curriculum, but we must also encourage students to pursue excellence. Participants will develop an understanding that empathy is demonstrated both explicitly; how we respond to a student and implicitly; how we plan our curriculum, instruction, assessment, and extracurricular learning opportunities. Participants will examine the DIIE model (Diagnosis and Discovery), (Intervention), (Implementation), and (Evaluation). Participants will answer the question, how do we implement what works best? Great teaching can be designed, and when it is designed well, students learn more.

CURI 6577 REBOUND: Rebuilding Agency, Accelerating Learning Recovery and Rethinking K-12 Schools (3 Credits)
As society explores rebounding from the current Pandemic, schools have been given the unique opportunity to re-imagine education. Participants will investigate and analyze research-based instructional practices that will contribute to accelerating learning recovery, rebuilding student and teacher agency, dismantle inequities and achieve the maximum impact of teaching and learning. Topics include assessment, meaningful feedback, differentiated interventions, prioritizing curriculum, mental health, social emotional learning, trauma informed practices, student and teacher efficacy, technology as a learning tool, student grouping and other concepts to contribute to accelerating learning recovery and rebuilding agency for students and staff. The content is responsive to current educational challenges as a result of the Pandemic. However, the strategies embedded in this course will endure as we re-imagine education in the 21st century to meet the evolving needs of students and staff in today's world.

CURI 6578 The Happiness Classroom: How Teachers and Students Can Improve Their Mental Health (3 Credits)
A happier teacher has a happier class, but unfortunately, mental health issues are front and center for teachers and students who are trying to deal with issues that impact us all daily. Students are missing too much material due to time out of class for various depression-related issues. Teachers are seeking solutions to help, support and encourage the depressed and isolated students of their class. This course will provide answers and solutions (strategies) that are easy and fun to incorporate into any class, academic level, or subject. The strategies will be practiced by each participant with a reflection that will document their personal growth of happiness. In turn, teachers will be able to go back to their classrooms ready to help their students through this difficult time. This course will present the core concepts of happiness, hedonic adaptation, growth mindset, learned helplessness, social investment, and the power of sharing these ideas with others. Every session will provide numerous resources that teachers utilize within their classrooms. The objectives are tangible, measurable improvements in the level of happiness in each classroom and for every student. Taking this course is not intended to be a substitute for professional clinical advice, diagnosis, or treatment. Always seek the advice of your physician or other qualified health provider with any questions you may have regarding a medical or mental condition. Never disregard professional medical advice or delay in seeking it.

CURI 6579 Middle Level Curriculum Instruction and Assessment (3 Credits)
Based on a four-corner framework for quality teaching, Middle Level Education: Curriculum, Instruction, and Assessment examines how to set the climate, teach the content, facilitate the interactions and foster reflection in the middle school classroom. Using brain-based instruction as the basis for powerful learning, processes for making data-driven instructional decisions and for designing curriculum to address the standards are at the forefront of this course. In addition, comprehensive treatment is given to three critical instructional strategies: cooperative group instruction, inquiry-based learning, and higher order thinking. Woven throughout the course content are the concepts of diversity, differentiating instruction and assessment of individual learners.
Attributes: Liberal

CURI 6998 Individualized Studies in Curriculum and Instruction (CURI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Curriculum and Instruction (CURI). Registration for this class must be approved by the student's mentor.

CURI 7030 Final Project - Capstone Project: MEd Curriculum and Instruction (3 Credits)
This concluding course in the M.Ed. allows students to apply contemporary curriculum and learning theories to an educational project that can be implemented upon course completion. Its components include objectives, subject matter, learning experiences and means of evaluation. The culminating project should be situated in a thorough consideration of the changing needs in one's chosen setting, the current policies with impacts on those needs, and the most relevant research in one's subject area. Prerequisites (must complete before registering): Completion of Research Design CURI-7122 with a grade of B or better. This course was previously EDU-661595

CURI 7122 Research Design (3 Credits)
This course introduces students to quantitative, qualitative and mixed educational research methods, procedures, and best practices. This course fosters critical thinking in terms of evaluating the quality and value of different research methodologies and different kinds of research studies in education. This course discusses the importance of high quality research to best determine solutions to educational problems and issues. Topics include an overview and comparison of qualitative, quantitative, and mixed methods; ethics in educational research with human subjects; the development of a research question, including, an introduction to the components of an annotated bibliography and a literature review; statistical techniques; causation, validity and reliability; and testing and assessments relevant to educational settings. This course requires a grade of B or better to pass.

CURI 7998 Individualized Studies in Curriculum and Instruction (CURI) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Curriculum and Instruction (CURI). Registration for this class must be approved by the student's mentor.

EDET: Education in Emerging Tech (Graduate)

EDET 6005 Learning with Emerging Technologies: Theory & Practice (3 Credits)
In this course students examine research, theory, and practice of using technologies for improving teaching, learning, and communications in varied settings, including K-12, higher education, public and private organizations and communities. Students experience and explore how technology can help support social, emotional and motivational learning. This course immerses students in different digital communities and virtual environments and asks them to analyze and apply current technologies to their own personal or professional settings. (Occasional synchronous meetings.)
Cross-listed with LACS 6006.

EDET 6010 Media Literacies in Emerging Technologies (3 Credits)
This course is designed to explore emerging technologies and implications of new media and new literacies in social, political, economic and personal spheres. Students will investigate theories and research related to meaning- making in and around the contexts of contemporary social media. In addition, students will work collaboratively and collectively to build their knowledge in how these media are created, used, interpreted and re-used by themselves and others. They will explore how affinities for these media enable us to think differently about what it means to read, write, listen, speak, view and participate in often over lapping, and at times juxtaposed, communities of practice using emerging technologies. This course will explore the impact new media and the resulting new literacies have on membership in emerging communities of practice. This course was previously EDU-681129.

EDET 6015 Instructional Design for Online Learning Environments (3 Credits)
The collaborative potential of online tools requires instructors to consider shifts in their pedagogy - to more mindfully plan, facilitate and guide. This represents a change in the roles and relationships between teachers and learners, and requires more attention to the instructional design and interactive communicative strategies of virtual learning experiences. In this course, students are introduced to instructional and digital design principles in order to apply them in a project that can be used as a component for their advanced design portfolios, or final capstone projects . Consideration is given to effective visual communication in digital environments. The course explores stages of the instructional systems design (ISD) process, and strategies for designing and developing multimedia instructional materials. An important aspect of online instructional design is understanding and responding to the context in which instructional materials will be delivered, and the needs, expectations and capacities of the participants. Students will explain their thinking during the creation of a project and demonstrate their understanding of these expectations. This is a required course for the Teaching and Learning with Emerging Technologies advanced certificate. This course was previously EDU-681103.

EDET 6020 Issues and Ethics in the Digital Age (3 Credits)
In this course students will explore major issues related to knowledge production and learning in our digital age. Students will be introduced to pressing issues in the use of technology in various learning environments, and reflect on the assumptions we make about knowledge, creativity, and social dynamics based on our choices. Any one of the topics raised is suitable for more in-depth study as an elective. Topics will include: privacy and security, intellectual property rights, the nature of creative commons, access and equity, ethics and legal challenges, digital democracy. Students will consider these concerns as they move into discussions on future trends by reading a variety of current reports, such as: MIT's Technology Review, and the New Media Consortium Educause's annual Horizon Report. This course was previously EDU 681102.

EDET 6025 Assessing Learning in Digital Environments (3 Credits)
Designing, developing, and learning within digital environments presents new challenges to our understanding of knowledge and skills; to the assessment of learning; and to understanding what constitutes effective participation in such environments. Using both collaborative and independent work, within this course, students will study the literature on digital environment evaluation and will seek to explore and define models of interactions and their assessment that can provide direction, support, and insight to designers and instructors of digital environments. Upon studying the rich, diverse, and novel ways in which humans can learn in these environments and the many emerging tools to assess learning, students will consider ways to value, document, capture, analyze, and evaluate the complex formal and informal ways that learners are making meaning within technology-mediated learning-and-communications environments. This course was previously EDU-681104.

EDET 6027 Immersion: Virtual, Augmented, & 360 Realities (3 Credits)
Virtual and augmented realities (VR/AR) and work with 360 cameras are bringing new promise to education, organization and communication venues, industry, particularly retail and tourism, and to museum exhibitions. In this course, students will study and situate this fast-evolving field, developing a basic VR, AR or 360 application thereby giving a perspective on the current state-of-the-art in application development. Students will also research and document ways that immersive virtual and augmented reality and real-world technologies can affect cognition and behavior, considering how these realities could be integrated into a field of professional interest. Occasional synchronous online meetings will be held. No prior knowledge of VR, AR, or 360 technologies is necessary, however, students must have a willingness to work with and explore emerging technologies. This is an 8-week offering.

EDET 6030 Advanced Design Seminar: Portfolio Project (3 Credits)
In this final core course students will continue to deepen their knowledge of theories and practices pertaining to instructional design and emerging technologies. Students will create a body of work that reflects the ability to integrate theory and skills of design and development, learning principles, and assessment methods. This knowledge and skill will be demonstrated in the creation of a comprehensive multimedia project for their ePortfolio or their professional work environment. This project should demonstrate the student's growth as a specialist in emerging technologies as well as incorporate their own past skills, knowledge, and/or interests on their chosen topic. Personal reflection will be used to self-evaluate one's own evidence of learning and to make deeper connections between the concepts learned in the other courses. This course was previously EDU-681105.

EDET 6035 Advanced Instructional Design with Multimedia (3 Credits)
This course focuses on the advanced instructional design techniques and related practices necessary to complete an independent online project in collaboration with a subject-matter-expert. The course will also consider approaches to organizing, scaling and administering instructional design with content developers. The culminating project will demonstrate capacities to work with a subject- matter- expert and to provide potential learners with a collaborative learning environment. Instructional design, project planning, accessibility and universal design principles will be covered and applied in the development of a pilot version of the project. In addition, the project will be contextualized within a larger environment of managing multiple instructional design projects. For students without a connection to a subject-matter-expert, opportunities will be provided for projects. This course was previously EDU 681128.

EDET 6040 Performance Theory (3 Credits)
This study begins from the premise that theory is practice and practice is theory. During the course of the term students will critically think about performance, and make performance in their own contexts. This course engages performance as an object of study, a method of research, and a theoretical paradigm in a range of interdisciplinary contexts with a focus that returns to theatre and media studies. This study is structured in a way that allows students and faculty to connect with each other and the material through readings, discussions, and performance attendance/viewings and critique. We will examine an array of performance theorists, artists, artist/theorists, and theorist/artists in order to practice performance as a way of thinking about the complexities of the world(s) we live in. This course is required for the Advanced Certificate in Emerging Media and Technology for the Arts. This course was previously EDU-681114.

EDET 6045 Digital Games Simulations & Learning (3 Credits)
Games, simulations, game elements and playful learning provide different ways to think about how, when and what we learn. Students will explore the research and theory in game and simulation based learning as well as the related fields of game design, psychology, instructional design and education. This will include the analysis and evaluation of when games and simulations are most effective for learning and the associated recommended supportive practices. The theory and practice of game design will be introduced and applied in the development and creation of digital game and simulation prototypes for instruction and learning. Students will have the opportunity to pursue individual areas of interest in digital game or simulation development. This course was previously EDU-681109.

EDET 6050 Digital Identity & Virtual Communities (3 Credits)
We are increasingly engaged as actors within digital spaces governing critical aspects of our 'physical' lives: our learning, labor, finances, legal transactions, confidential health records, social spheres and the locus of our participation in civil society. We interact within virtual communities, both local and global, many of which are regulated by private corporations rather than through democratic processes. These phenomena raise questions of agency, autonomy, ethical considerations, privacy, security and data protection. Students will examine what constitutes digital identity and virtual communities, and how they blur boundaries between private, public, and personal spheres. They will analyze issues related to digital identity management, such as engaging multiple representations of the self, the ethics and implications of being active in digital social media, and the establishment of telepresence. Readings and research for the course will include historical and current developments in regulatory environments, legislation and policies related to digital identity and virtual communities. Learning activities will include a phenomenological analysis of identity development in virtual worlds, immersive role play, a comparative analysis of two personal digital identities, participant/observation in a virtual community, 'live' roundtable discussions in virtual worlds, and final project that may be creative, a case study, analytical, or research focused. Students will be expected to meet in real-time in virtual worlds such as Second Life. This course was previously EDU-681122.

EDET 6055 Digital Media Arts & Technologies (3 Credits)
This interdisciplinary project-based course applies theoretical learning in digital media arts and technologies to individualized projects that incorporate at least one arts-based technology. Students will have the opportunity to develop their unique aesthetic vision and technical expertise while experimenting with new forms, within the framework of arts-based learning and research. They will design, implement, build, install, program and/or perform for an audience/viewer/learner within the context of their choice, whether this is within mixed media installations, virtual worlds, a live simulcast, or other digital distribution systems. The primary course project will be threaded throughout the course, including processes such as a proposal, storyboard, script, rough cut/dry run, and refined project. The course will include a critical analysis of aesthetic, ethical, social and professional considerations. Students will be expected to use social media, web 2.0 tools, and emerging media environments for course communications and research. This course is required for the Advanced Certificate in Emerging Media and Technology for the Arts. This course was previously EDU-681115.

EDET 6060 Digital Tools for Education & Training (3 Credits)
Educators and training Professionals have access to an overwhelming number of technologies that offer powerful capabilities for creating high-quality digital learning tools. This course will examine and identify effective digital tools to impact participant engagement, meaning-making and improve learner outcomes for individuals with different backgrounds, learning styles, abilities, and disabilities in widely varied learning context. The experience will be hands-on and might include areas such as improving presentations and instructional materials, simplifying record-keeping, performing data analysis and graphic presentation, creating digital stories, use of communications and presentation technology in the classroom or training environment. In addition, digital tools and strategies selected will be assessed in relation to their alignment with standards for teachers and trainers. The students will research, evaluate and analyze digital tools, internet based applications, social media, mobile applications and other technologies that may be adopted for teaching and learning with diverse groups of learners in face-to-face, blended or online learning environments. Students prepare independent projects and share research . This course was previously EDU-681120.

EDET 6065 Emerging Media & the Arts: Theory & Practice (3 Credits)
This course builds on experience in digital media, human interaction, interface design, learning design, performance theory and practice, or any creative process or expression medium. The course explores ways in which digital media alter the potential of human interaction, learning and performance, from virtual immersion, gaming, to stage design and collaborative improvisation. It draws on theories of communication and mutual engagement from performance studies, some psychology, educational theories and applies them to the analysis of interaction in varying contexts. A core intellectual concern is the nature of human engagement – in all its forms – and the use of technology as a means of enriching or enhancing it. The course has multiple strands. One is for arts students who wish to gain additional skills in computer mediated communication, interaction design, media and electronic arts and associated technologies. The other is for technically literate students who wish to be trained in performance theory and practice. The other is for the educator exploring the potential of learning in digital immersive technologies. The course draws upon multimedia systems and interaction design, performance theory and performance practice, learning theory and technology. Group and collaborative projects will use various software applications, with a focus on ISADORA programming and will typically involve the construction of a performance/learning environment. This course was previously EDU-681112.

EDET 6070 Innovation: Meeting the Challenges of Organization or Systems Integration (3 Credits)
Despite the need for the adoption of technology interventions in our expanding and global networks, the integration of technology innovations can be a challenge for both those who create the innovations and the organization or systems that could possibly benefit from the adoption. Within this course, students will begin with the study of large-scale, documented organizational and institutional responses to innovation and change and then they will research responses to change within the specific organization for which they have a professional interest. This study will lead to students' designing and testing an approach to help them gain the entrance and acceptance of an innovation within the environment of their particular interest (Occasional synchronous meetings). This course was previously EDU-681117.

EDET 6075 Accessible Design and Assistive Technologies (3 Credits)
This course is an introduction to the study of Assistive Technology. Students will examine the use of Assistive Technology as it relates to education, communication, vocation, recreation, and mobility for individuals with disabilities. Students will investigate types of assistive technologies, functional assessments, resources, ADA compliance, legal issues, and school and workplace responsibilities. Students will discover the latest technologies to help individuals who struggle with communication, literacy, and learning. The course will feature tools that improve and compensate for challenges relating to speaking, understanding, reading, writing, and thinking and remembering, as well as an examination of strategies to help individuals become more organized and efficient. It will present an overview of the uses of technologies to help students explore specific resources they can use to enhance success in the classroom or workplace. The use of tablets and cloud-based products will be highlighted. Online resources and social networking tools are presented to enable students to learn about innovative products as they become available. Students complete a research project demonstrating their understanding of assistive technology.

EDET 6080 Evaluation Assessment and Data Driven Learning Design (3 Credits)
Due to shifting and emerging professional standards, educators and administrators will need to use tools that will better allow them to gauge the effectiveness of instruction at the student, course, program and institutional level. This often requires the use of data collection or mathematical models and measures to assess effectiveness an educational activities. This course will address the tools instructors and educational assessment professionals use to assess learning, processes for evaluating educational programs, and resources to help make data driven educational decisions with particular emphasis on technology mediated learning environments and tools. This course will also provide an overview the 'big data' driven field of learning analytics and how this may shape the field of educational assessment. This course was previously EDU-681110.

EDET 6085 Field Research in STEM Education (3 Credits)
In this study, students will become familiar with scientific and field research, as well as interdisciplinary collaboration in STEM disciplines. They will participate in the generation of new ideas and information through field data analysis. In addition to the field work, students will continue to connect with workshops presented by visiting scientists, shared field experiences, scientific presentations and diverse workshops that focus on environmental themes, like sustainability. Through discussions, students will cover basic field safety procedures, the scientific method, applied statistics, geology of the area and evolutionary biology. These discussions will help to provide the theoretical framework for conducting fieldwork. Technology instrumentation for field studies and STEM curriculum development will also be explored expended from graduate students. The study is co-taught by three instructors: Kevin Woo (Metropolitan New York), Audeliz Matias (Center for Distance Learning) and Nathan Whitley-Grassi (School for Graduate Studies, MALET program & Niagara Frontier). Students will work online with faculty, before and after the onsite meeting. This course was previously EDU-681123.

EDET 6095 Practicum-Virtual Worlds I: Learn Create Plan (3 Credits)
This course provides participants with opportunities to understand the breath, depth, and applications now available for virtual environments, studying work being done by others and by organizations that are providing software and support to virtual developers. With explicit guidance by tutorials within the course, participants will also develop their own virtual environments using materials of their own creation and materials gathered from the work of other virtual developers (many now available at no cost). Participants will articulate a design framework for the work that they are creating and will consider the activities, curricula, and evaluations, that could suit the purposes for their intended audiences. At the conclusion of the course, participants will determine what they would need to create a pilot of their environment and will consider how they might continue and extend the development work that began within this course.

EDET 6100 Practicum-Virtual Worlds II: Extend Share Pilot (3 Credits)
In this second virtual-development course, participants have opportunities either to extend the work begun earlier or grow in a new direction. Participants also pursue an "outward bound" effort, either disseminating their emerging virtual understanding or reaching out to virtual-reality developers communities. As agreed upon with the instructor, participants extend their virtual work to suit their particular interests, for instance: extending their virtual platform, exploring ways to develop and import other three dimensional objects, designing interactive scripts or pursuing advanced topics. Participants will be encouraged to pilot their emerging island with other visitors, possibly seeking Institutional Review Board approval should the intent be to publish such work. Academic papers developed will address theoretical aspects of design, curriculum, and/or evaluation as appropriate to the participant's need. Later course work will be adapted by the instructor to the academic and development needs of the individual participant.

EDET 6125 Developing an Integrated Immersive STEM Learning Environment (3 Credits)
In a STEM or STEAM (science, technology, engineering, mathematics, possibly enhanced with an arts perspective) learning environment, within an area of your selection (approved by the instructor), you develop a focused learning environment and supportive technologies on a deep level, delineating a cohesive extended project, educational outreach, or professional-development framework and articulating an education and assessment plan. You will enhance your work by preparing for, and possibly even implementing, partnerships and/or grants related to your efforts. You must have a laptop or desktop computer, a Webcam, and a good Internet connection. Three online synchronous meetings are conducted at pre-announced times throughout the semester. (Required for the advanced certificate in STEM Education and Emerging Technologies.)

EDET 6130 Facilitating Learning with Emerging Technologies in Blended & Online Environments (3 Credits)
Students will consider facilitation and teaching approaches that enhance participant learning, engagement, collaboration and success. The seminar will involve engagement in related theory and practice of teaching in online and blended environments. Topics will include new literacies and digital epistemologies, rethinking teaching pedagogy, mediating the co-creation of knowledge within networks, and accessing and creating digital resources. Participants will develop, demonstrate and evaluate learning activities individually and in teams. Topics will include areas such as the use of games, social media in teaching, badging, and critical literacies for all generations of learners. This course is required for the Teaching and Learning with Emerging Technologies Advanced Certificate.

EDET 6135 Practicum in Learning & Emerging Technology (3 Credits)
Advisors and students may arrange a practicum at Empire State College or another site of practice. The practicum requires at least 100 hours of applied work. Practicums may be arranged in instructional technology, educational technology, online teaching assistantships, educational technology management or other related areas. Supervisors and instructors to be determined based on intern's learning needs. Practicums should be arranged at least one term in advance. This course was previously EDU-681126.

EDET 6140 Socially Networked Learning: Understanding Designing Evaluating (3 Credits)
The rapid advances in communication and learning technologies have opened new arenas for educators and communicators, however, a conceptual framework about the value and design of these new and rich types of interaction needs to be developed. Plus, for effective educational uses, one needs to assess what happens to the learners and learning and to evaluate the overall productivity of the socially networked environment itself. In this course, participants will study the research about various aspects of these emerging social networks, considering the sociology and the psychology of the individuals and interactions. Working then with their own needs, they will frame and design a social network to meet a learning or communication goal for their students or clientele, developing an implementation, assessment and evaluation plan and articulating a theoretical/conceptual framework to validate their design. (Participants can also choose to work on a project with the instructor.) Two synchronous meetings.

EDET 6150 STEM Tools Devices & Simulations (3 Credits)
STEM approaches (science, technology, engineering, mathematics), possibly expanded to include arts (STEAM), create problem-solving environments that are often cross-disciplinary, where technology tools can support, share and accelerate learning and where the arts can add to creativity and innovation. Application areas can range from K12, to higher education, to corporate, to healthcare. Students start by overviewing a variety of STEM / STEAM approaches, tools and projects in multiple disciplines. Then selecting several tools relevant to their learner or client needs, they will design an environment that employs the relevant STEM or STEAM tools and that articulates the conceptual, educational, design, and assessment principles employed. Students must have a laptop or desktop computer, a Webcam, and a good Internet connection. Three online synchronous meetings are conducted at pre-announced times; for tools that are not web-based applicants must supply their own devices. (Required for the advanced certificate in STEM Education and Emerging Technologies).

EDET 6996 Special Topics in EDET (4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

EDET 6997 Special Topics in EDET (3 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

EDET 6998 Individualized Studies in Educational Technology and Instructional Design (1-8 Credits)
Students have the opportunity to develop individualized studies with their advisor in Educational Technology and Instructional Design (EDET). Registration for this class must be approved by the student's advisor.

EDET 7020 Capstone Project (3 Credits)
Students who choose the 30-credit Professional focus will complete a capstone project. The capstone allows students to design a specific project, a small program, or a creative endeavor that would meet a clear need in their educational, community, or work environments. Capstone projects must be completed and demonstrated using the instructor-approved student's choice of online or emerging technology(ies), and must have a well-articulated statement of need, rationale, literature review and project design strategies (including a description of formative and summative evaluation techniques to be employed). Upon completion, the Capstone documentation must include a written and video reflective statement on the design process and on the results of evaluation components. Capstone projects may be made accessible through the MALET program's Resource Repository, at the student's discretion, for the benefit of future students, thereby advancing knowledge in the field. Using a Creative Commons license is suggested. At the conclusion of their capstone, students present their projects at the MALET Virtual Showcase. This course is typically offered in the spring and fall. Prerequisites: EDET 6005, EDET 6010, EDET 6015, EDET 6020, and EDET 6025.

EDET 7998 Individualized Studies in Education in Emerging Technologies (EDET) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Education in Emerging Technologies (EDET).Registration for this class must be approved by the student's mentor.

EDHE: Higher Education (Graduate)

EDHE 6030 Issues in Contemporary Higher Education (3 Credits)
This course explores the changing nature and function of higher education institutions in a world where the majority of students are adult learners, and are more diverse. This course will also focus on critiques of contemporary high education as well as the changing demands on post-secondary graduates. The course will explore the internal higher education struggle between mission driven versus market driven.

EDHE 6031 Administration and Leadership in Higher Education (3 Credits)
This course is designed to examine organizational theory, models, polices, governance and management processes, leadership perspectives and leadership theory. A review of research and new conceptual perspectives are included. This course serves as an introduction to the academic study of leadership on university campuses. It assumes some general exposure either to the theoretical concepts and/or the actual practice of leadership. It is not intended for leadership development

EDHE 6032 Economics and Finance in Higher Education (3 Credits)
The purpose of this course is to understand the concepts related to higher education finance and its impact upon the higher education system in the United States. Students will be introduced to financial, economic, and budgetary issues within higher education. The primary focus is on post-secondary education where the primary political, economic, and social issues influencing higher education finance are examined. Students will examine revenue streams and expenditure patterns, survey tuition and financial aid policies, develop the ability to examine and analyze financial information, and assess the budget as an instrument of strategic planning, resource allocation, and control. This course is grounded in literature, theories, and examples specific to higher education.

EDHE 6033 Contemporary Legal and Ethical Issues in Higher Education (3 Credits)
In this course students will critically review current policy, legal and ethical issues in higher education. The general principles of statuary and case law as well as judicial decisions impacting higher education will be covered through a case-study approach. An applied perspective for ethical decision making and leadership will be used.

EDHE 6034 History and Philosophy of Higher Education (3 Credits)
This course is designed for current and prospective faculty, administrators, staff, and community members seeking to learn about the American higher education system. The topics addressed include the history, recent developments, and strategies for future management and administration, finance, organization, governance, and the mission and role of higher education in American society.

EDHE 6035 Administering Adult Learning Programs: Decision Making Evaluation & Financing (3 Credits)

Education and training professionals are introduced to the process of making decisions about developing programs for adults in a variety of settings of practice. Making good decisions about the design of programs involves most importantly understanding the needs and motivations of the learners, but also means making data informed decisions, including critiquing and evaluating assessment and research findings, choosing effective instructional strategies and technologies, making credible arguments for the need and projecting a formal approach for project planning, evaluation and financing. Administrators also effectively manage the human resources of the organization. Current practices will be reviewed, including the use of technology applications for management of these processes. Educators will review best practices and will initiate a proposal for a new program or propose a revision to a program.

EDHE 6036 Student Affairs Theory and Practice (3 Credits)

In this course students explore the theory and practice of college student affairs, covering the role, scope, structures, and functions within American higher education, along with the roles and responsibilities of the practitioner. Students will examine their own purpose, professional identity, practice and professional competence. Topics include the role student affairs in enhancing the growth and development of all students an increasingly complex and diverse higher education system, accountability for student affairs outcomes, and emerging issues and models for student affairs.

EDHE 6037 Identity, Intersectionality and College Student Development (3 Credits)

The course will provide students with a comprehensive understanding of identity development and the student development theories that underpin the holistic growth and experiences of college students. It explores intersectionality: individuals diverse and overlapping social identities, and power structures that affect identities and student development. It will equip students with the knowledge and skills needed to foster diversity, equity and inclusion through supportive campus environments that promote the well-being, sense of belonging, and success of all students.

EDHE 6080 Fostering Student Success and Equity in Higher Education (3 Credits)

The course explores strategies and components that shape and expand institutions' strategic capacities to foster equitable student success in college. With a strong grounding in diversity, equity, and inclusion, and holistic student support, students will examine strategic leadership and leadership models, consider strategic resource allocation and inclusive decision-making, advance effective support frameworks, and use data – all to plan and to drive student success. Prerequisites: 3 graduate higher education courses or permission of the instructor.

EDHE 6085 Comparative & International Education (3 Credits)

Comparative and international education (CIE) is a field that allows educational researchers and practitioners to study theories and methods around the world while also considering connections between the local and the global. This course provides an introduction to the field, and it is available as an elective for all ESC graduate education programs involving degree planning. CIE is useful to all educators because it broadens one's perspective on how a theory, policy, or practice might have similar or different manifestations in another nation or culture. The field involves ongoing study of how local and global patterns of education interact. It examines the social, political, and economic contexts of education from international and intercultural perspectives. As humans continue in the process of globalization, the field of CIE will grow in importance for all in educational professions. This course was previously ADL-680119.

EDLC: Educational Leadership and Change (Graduate)

EDLC 5000 Preparing for Educational Leadership (1 Credits)

SUNY Empire State College values student learning, whether it is reflected on a transcript or demonstrated by lived experience. This one-credit course allows students in the Ed.D. in Educational Leadership and Change to demonstrate their knowledge of one or more of the competency areas required by the content areas recommended by the Council for the Advancement of Higher Education Programs (CAHEP) for master's degrees in higher education administration and this program. In this course, students will have the opportunity to demonstrate their knowledge of: -History and Philosophy of Higher Education -Administration and Leadership in Higher Education Context -Economics and/or Finance of Higher Education -Higher Education Law -Organizational Development and Change Theories

EDLC 6000 Foundational Seminar: Critical Analysis and Communication (3 Credits)

Educational leaders must be able to communicate clearly and persuasively in writing and speech. This course focuses on writing critical reviews and argumentative essays on topics relevant to contemporary higher education. In this study, students will consider the changing environment of higher education nationally and locally. By comparing, contrasting and critiquing emerging issues that impact higher education, they will demonstrate competence in analytic writing and debate. Consideration is given to translating academic writing to more interactive, participatory social media forums. In order to demonstrate their-ability to communicate ideas effectively for different audiences, students will engage in practical workshops to strengthen their skills in becoming compelling public speakers in varied settings. Note: This course requires students to attend one virtual residency. Virtual residencies do not incur a residency fee.

EDLC 6001 Principles of Higher Education Leadership (3 Credits)

This course is designed to examine leadership roles and leadership needs in 21st century higher education. Students will explore leadership principles, designs and styles alone and in relationship to academic planning, institutional advancement, professional development, and community outreach. Consideration will be given to differences in leadership approaches from transformative to transactional. Students will examine their own leadership styles and practice applying strategies to resolve various organizational challenges, particularly resistance to change.

EDLC 6002 Organizational Change Theory and Practice (3 Credits)
Institutions across all industries, particularly education, must find ways to be responsive to increasingly complex and changing environments. In this study, students compare different models and concepts of organizational change including evolutionary, teleological, life cycle, dialectical, social cognition and cultural in order to understand the process of change from different perspectives. Students will critically reflect on the distinctive characteristics of their own educational organizations and how these might impact initiatives for change process. They will use current research to inform their own practice and develop competencies to develop and implement appropriate models of change. Prerequisites: EDLC 6000 and EDLC 6001.

EDLC 6003 Research Methods in Education (3 Credits)
This course will introduce/reinforce quantitative and qualitative educational research traditions, procedures, theories, and methods. Students reinforce their understanding of carrying out ethical research by completing CITI training and critically evaluating IRB applications from the perspective of both researcher and committee member. This course will include practical applications to educational problems. Topics include: -Introduction to quantitative and qualitative research methods in education -Overview and comparison of research processes and methods -Ethics in educational research with human subjects -Development of the research question, the theoretical framework, and the literature review -Statistical techniques -Causation, validity, and reliability -Testing and measurement -Research methods (qualitative, quantitative, action research) Prerequisites: EDLC 6000, EDLC 6001.

EDLC 6004 Qualitative Research Analysis through Applied Research (3 Credits)
This course provides students with the basic competencies necessary to understand and evaluate the research of others, and to plan and conduct their own research with a minimum of assistance. Topics will include the research process from problem formulation, literature review, research design, and qualitative analysis to report writing and dissemination. Qualitative research methods of data collection will be reviewed, and students will be introduced to action research, a form of self-reflective systematic inquiry by practitioners on their own practice. Students will conduct a small action research project over the course of the semester. This process will involve the identification of a specific issue in the student's work setting, researching the literature regarding the issue, designing a proposal to solve the issue, implementing the solution (after the proposal has been approved by the SUNY Empire State College Institutional Review Board), and reporting the results. Prerequisites: EDLC 6003.

EDLC 6005 Quantitative Research Methods (3 Credits)
This course provides the basis for understanding, applying, and interpreting the fundamental concepts and procedures of descriptive and inferential statistics. Students will relate specific quantitative research questions and hypotheses to appropriate statistical procedures, and analyze data sets that apply directly to educational research using SPSS. Prerequisites: EDLC 6003.

EDLC 6006 Ethical Leadership in the Academy (3 Credits)
This study explores the characteristics of ethical leaders in higher education and the frameworks that can guide action in case of breaches of ethical behavior. Students focus on strategies that leaders can use when faced with a variety of ethical dilemmas. Readings include case studies for discussing, debating and suggesting solutions for real-world dilemmas in higher and adult education. Attention is given to the ways in which leaders initiate appropriate strategies that support an ethical institutional culture. Students will reflect upon and reinforce their conceptual understanding of ethical leadership at individual, organizational and societal levels. Team activities will engage students in analyzing various statements of ethical standards, and each student will develop his/her own statement of professional ethics. Prerequisites: EDLC 6002.

EDLC 6996 Special Topics in EDLC (3 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

EDLC 7002 Leadership & Change in Local and Global Context (3 Credits)
This course focuses on education leadership in national and international contexts. Students will explore various key components to leadership and examine case studies where strategies have been implemented. This course will ask students to examine leadership practices in educational and other organizations as well as global leadership practices. The class will explore supports and hindrances in developing and becoming leaders including dynamics related to class, race, gender, location, governmental policies, etc. Students will also review case studies of leadership change in policy and practice and be able to analyze those cases critically. The course will also encourage students to articulate their own leadership style based on literature and practices they have reviewed. Prerequisites: EDLC 6000, EDLC 6001.

EDLC 7003 Models of Organizational Administration and Finance (3 Credits)
In this course students survey a range of topics related to administrative responsibilities and opportunities in higher education. These include governance, accreditation, recruitment and retention, financial management practices including revenue generation, budgeting/resource allocation, and strategic planning particularly around cost containment. Students analyze different models of educational management (formal, collegial, political, subjective, ambiguity, cultural) and consider parallel leadership approaches to support an institution's preferred management model. Attendance of a face-to-face residency is required. Registration of this course will incur a residency fee.

EDLC 7005 Leading Change in Social Justice and Diversity (3 Credits)
At the heart of any educator's practice lies an intertwining web of relationships. Whether in relationship with oneself, one's students, or with the world, one's practice is strengthened by knowing one's location in order to foment change in one's context and site of practice. Positionality, or where one locates his/herself in relationship to race, class, ethnicity and sexual orientation influences their role as adult education practitioners, researchers, and leaders in the field. Students will be asked to reflect on their roles as individuals and group members of their own particular race, gender, class, ethnicity and sexual orientation position. In addition to this, students will examine concepts and perceptions that have influenced them as well as society in terms of both the personal and professional. Students will also critically examine various definitions of diversity and models of diversity training. They will work in teams to consider how to assess and take action for diversity in institutional settings. They will use instruments such as The Diversity Rubric (AACU's 'Self-Assessment Rubric for Institutionalization of Diversity, Equity, and Inclusion in Higher Education') at their own institutions, or ESC to establish and audit relevant accomplishments, challenges and potential action plans. Note: This course requires students to attend one face-to-face residency. Registration of this course will incur a residency fee.

EDLC 7010 Mental Health in Higher Education (3 Credits)
This course will provide an overview of the history, policies, practices and recent trends in college student mental health needs and interventions. Learners will gain a comprehensive understanding of the challenges of supporting college student mental health and how some higher education institutions have chosen to address these challenges. Prerequisites: None. Corequisites: None.
Attributes: Liberal

EDLC 7011 Understanding Adult Education Practice (3 Credits)
The field of adult education is neither finite or static. As a dynamic, continuing and evolving field of practice, it is fraught with tensions, dilemmas, controversies, ethical concerns and connections, not only in the context of one's own practice of adult education but in other practice areas as well, amidst many debates about ethical issues and professionalization of the field. Students will also explore individual and collaborative ways of learning and how those have impacted adult education practice and literature (and their own practice). Palmer in The Courage to Teach(1998) stated that "Teaching, like any truly human activity emerges from one's inwardness, for better or worse. As I teach, I project the condition of my soul onto my students, my subject, and our way of being together...knowing my students and my subject depends and my subject deepens heavily on self-knowledge. When I do not know myself, I cannot know my subject-not at the deepest levels of embodied, personal meaning. I will know it only abstractly, from a distance." This study will also focus on adult education program administration evaluation, theory and evaluation.

EDLC 7012 The Changing Contexts of Adult Learning (3 Credits)
In this course, students will address the current social, political, organizational, and technological climate within which adult learning in higher education is evolving. Course readings will focus on specific forms of structural change effecting adult learning, including globalization, neoliberalism, and the changing financial and organizational structures of higher education. Students will engage with the various social and ideological debates concerning these issues and address the implications for their particular institution of higher education. Students will interrogate political and cultural factors which promote or impede the realization of their commitments and challenges of committed action. Included will be approaches available in political analysis and case studies of activism.

EDLC 7013 Data Informed Decision Making in Higher Education (3 Credits)
Increasingly sophisticated methods and technology that include the capability to collect and store large volumes of data has ushered in a new era of data-informed decision making in higher education. Data analytics is the use of large volumes of data that can be combined or analyzed, often with the use of complex statistical/mathematical models to examine a problem or issue under study. Related to student success and administrative decision making, data analytics can be used to better understand current student, faculty, and staff populations as well as if, how, and in what ways students, faculty, or institutions are achieving success. This course will examine issues related to the increasing use of data in highereducation and how higher education leaders can harness the power of data to ask the right questions that enable better decision making. The course will help students become familiar with definitions of major terms such as Big Data, artificial intelligence, machine learning, and it will discuss the ethical, cultural, and managerial implications for the use of data analytics in higher education decision making. Topics will be discussed broadly and will not include hands-on use of statistics or the generation of computer code. An applied project will be proposed.

EDLC 7014 Immigration and Higher Education (3 Credits)
This course analyzes data, theories, and case studies to frame how immigration and higher education intersect in the contemporary United States. Class members explore key historical, demographic, and legal trends as they consider first, second, and third generation migrants; DACA; international students; and displaced students (including refugees, Temporary Protected Status holders, and others). Readings and assignments include case studies focused on how "brick and mortar" and online higher education institutions support the umbrella category of immigrants and how they engage stakeholders including staff, students, alumni, community members, and government officials. Class members will reflect upon and dissect their understanding of how federal policy, state policy, institutional practice, and higher education leadership practice overlap and reflect distinct approaches to student support.

EDLC 7020 Perspectives on Higher Education Administration, Management and Leadership (3 Credits)
This course will identify the predominant models of administration and management in higher education and the emergent models. Topics will include changing student demographics, financial and budget strategies, and newer models for human resources and administration. The effectiveness of various models will be analyzed. Various theories of leadership are explored to have learners examine their own experience in working as leader, and to have them develop specific leadership skills and approaches as means of interpreting problems from the field and in developing leadership responses to these problems in becoming responsible higher education leaders. Prerequisites: EDLC 6002 and EDLC 7003.

EDLC 7021 Institutional Culture and Strategic Change Management in Higher Education (3 Credits)
This course will address the challenges facing leaders in higher education, as they attempt to implement change within the organization. Topics will include defining what is strategic change and the need for strategic change; what are the obstacles to strategic change; and how to overcome these obstacles. Students will integrate theories from core courses on leadership and change: to develop strategies to overcome the obstacles in Higher Education that prevent change, with a focus on cultural change. Students will study examples of Higher Education Institutions (HEI) that attempted to make changes needed because of the constraints from the evolution of technology, changes in the skills needed by students in the job market; changes in accountability from their Board of Directions; as well as societal changes among others. Students will be able to develop an integrated change management plan in order to overcome these obstacles to change. Prerequisites: EDLC 6002.

EDLC 7022 Student Development & Administration in Higher Education (3 Credits)
Emergent student development theory is explored as it applies to contemporary issues in higher education related to diversity, student retention and student engagement. In addition, this course broadens awareness of student affairs professionals through exposure to new models of student affairs administration in higher education. This course examines competencies for effectiveness in management and integration of student affairs functions. It advances approaches to student development theory particularly from a perspective of using evidence of student learning and development to improve higher education.

EDLC 7030 Integrating Technology: Planning & Practice (3 Credits)
This course explores the planning and required policies needed for the effective integration of the technologies necessary to ensure institutional survival and growth in increasingly global, technology-infused learning environments. General organizational principles as well as guidelines from standards-setting organizations will help frame the changing climate, as students explore, share, and apply these principles and guidelines to learning institutions or education and training functions within more diverse organizations.

EDLC 7031 Current Research Trends in Educational & Emerging Technology (3 Credits)
Rapidly changing trends and methods in educational and emerging technologies require a deliberate, research-based approach to analysis, discovery, experimentation, evaluation and application. This seminar will feature real-time, interactive scholarly dialogue with invited speakers addressing current and emergent topics in the field during virtual "live talk sessions." As the course progresses, students will lead seminar talks and asynchronous discussions on selected trends, and develop a scholarly literature review and research or position paper on their chosen research area.

EDLC 7033 Practicum: Leading in Virtual Environments (3 Credits)
This course provides an overview of virtual environments; including the context, processes, production, and usage of various virtual environments of shared spaces such as MOOs, MUDs, MMORPGs, MUVE, Augmented Reality, Virtual Reality, and Mixed Reality. The course will attempt to survey most of the important conception of virtual environments (VEs). Examples of existing VEs will be shown whenever possible, but students will learn primarily through exploration and collaboration. The course will take on a variety of formats, as the disparate subjects dictate. Examples will be presented in MOOC, video lectures, collaborate tools, demonstrations, and Open Sim. Students will first define, choose, and then use or create a virtual environment as part of their project for the course. Papers and videos will be discussed. Students will present their VEs on a variety of formats, subject to instructor approval.

EDLC 7040 Introduction to Critical Pedagogy: Landscapes of Learning (3 Credits)
This course is designed to create a discourse community that questions hegemonic practices, contributing to a larger collective conversation. Through the study of critical ethnographies, students will examine current educational assumptions to develop critically reflective practice and transform thinking. Students will deconstruct dynamics of critical pedagogy through the lenses of diversity including race, gender, and class, developing layered analysis of principles, theorists, and views.

EDLC 7041 Leadership & Contemporary Issues in Learning & Teaching (3 Credits)
This course will examine current policies that affect learning and instructional practices in higher education and the implications for teachers and faculty as leaders who can shape research, policies and community engagement. Problem-solving strategies will be used to identify and develop best practices that respond to challenges arising from contemporary issues in society. Students will explore contemporary issues in relation to topics such as open education, competency programs, and accreditation reform. Prerequisites: EDLC 6001, EDLC 6002, EDLC 6006.

EDLC 7042 Leadership in Education (3 Credits)
This course is designed to examine leadership roles and leadership needs in 21st century education. Students will explore various leadership designs and styles alone and in relationship to curricular planning, professional development, and community outreach. Students will examine learning environments to develop strategies and programs around leadership that coincide with the needs of contemporary learners.

EDLC 7050 Assessment and Accreditation in Higher Education (3 Credits)
In this study, students will examine assessment approaches from micro (course, program, division) to macro (institutional, system, national/external) levels as an important knowledge base for leaders in higher education. Comparative analysis of standards set by regional higher education accreditation agencies as well as professional associations will be used as a basis for considering appropriate approaches to leading internal assessment planning. Students will develop an assessment plan for institutional effectiveness that aligns with best practices in the field of higher education. Prerequisites: EDLC 6005.

EDLC 7052 Analyzing & Developing STEM Programs & Initiatives (3 Credits)

This course will focus on the development of Science, Technology, Engineering, & Mathematics (STEM) education initiatives or services. The course will build on any earlier identification of organizations that currently provide STEM initiative or services, adding further analysis of those programs. Students in this course will assume the role of a STEM leader of an organization, identify a major focus (i.e. gender, race & ethnicity, etc.), and a lever (i.e. Women, Early Childhood Education, K-16, etc.) and develop an initiative or service for their organization that best responds to the chosen lever, based on a set of provided criteria.

EDLC 7996 Special Topics in EDLC (3 Credits)

The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

EDLC 7998 Individualized Studies in EDLC (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor/advisor in Educational Leadership and Change (EDLC). Please contact your mentor/advisor for more details.

EDLC 8000 Professional Portfolio Seminar (3 Credits)

This study serves as a bridge between the sequence of courses (core, research and leadership electives) taken to this point in the program, and the culminating dissertation writing phase. It offers each student an opportunity to reflect on the body of his/her work and how it supports a potential topic of inquiry. In addition to compiling a reflective portfolio of past work, students draft a prospectus for their proposed dissertation research. Students must give a presentation of their portfolio and receive at least a provisional pass on their prospectus before starting their dissertation sequence. Prerequisites: EDLC 7003, EDLC 7005, EDLC 7020, and EDLC 7021.

EDLC 8001 Advanced Research Methods (3 Credits)

This course provides students with the specific competencies necessary to plan and conduct their own research receiving guidance from a faculty member. This will be an independent or small group study in which students will choose to study in more depth either quantitative or qualitative methods. Topics will include the research process from problem formulation, literature review, research design, and qualitative analysis to report writing and dissemination. Students will practice relevant data collection techniques by conducting a small research project over the course of the semester which will serve as a related pilot for the dissertation. This process will involve the identification of a specific related issue in the student's work setting or another setting, continuing the collection of the literature regarding the issue, designing the methods solve the issue, collecting and analyzing relevant data and suggesting practical solutions based on the results. Prerequisites: EDLC 6003, EDLC 6004, EDLC 6005.

EDLC 8002 Dissertation I (3 Credits)

This course is designed to familiarize students with the academic expectations and requirements for the doctoral dissertation, solidify inquiry skills, and make significant progress toward successful completion of the dissertation. The dissertation proposal is developed and defended as a part of this study and is graded pass/fail. Note: This course requires students to attend one face-to-face residency. Prerequisites: EDLC 8000, EDLC 8001.

EDLC 8003 Dissertation II (3 Credits)

This course is designed to provide doctoral candidates with the knowledge of the dissertation proposal process and assist them in successfully defending the design in a proposal hearing. This course may be repeated for a total of nine (9) hours. Graded pass/fail. Prerequisites: EDLC 8002.

EDLC 8004 Dissertation III (3 Credits)

The doctoral dissertation is the culminating experience of the Educational Doctorate degree involving a scholarly inquiry into an area of professional and intellectual interest. The student will conduct research and complete a report of the findings in the form of a written and oral defense of the research. Students enroll in this course to complete their data analysis and final write-up of their dissertation. They should schedule and successfully complete an oral defense by the end of term. Graded Pass/Fail. Prerequisites: EDLC 8003.

EDUC: Education (Graduate)

EDUC 6005 US Schools in Social Context (3 Credits)

This course critically examines the philosophical, historic, social and legal foundations of education, as well as contemporary structures, functions and issues in American educational systems. Topics include: broad historical and social contexts within which American schools developed; present and historical relationships between schools and communities; diversity, equity, individuality and schooling; schooling and democracy/citizenship; social structures and cultures of schools; teachers as members of learning communities; computer use in schools; rights and responsibilities of education stakeholders; and contemporary debates and alternative visions of schooling. Students complete at least 12.5 hours observing or participating in school and community-based experiences in settings where their schools are located. This course includes up to four required synchronous sessions. This course was previously EDU-660515.

EDUC 6010 Middle Childhood & Adolescent Development (3 Credits)

This course explores theories/research related to middle child and adolescent development and educational psychology within the contexts of families, cultures, communities and schools. The course will focus on physical, cognitive, social and emotional development; theories of learning and teaching; genetic and environmental factors affecting development; individual differences in abilities and developmental patterns; developmental issues and learning needs of students with special needs; and best practices for teaching, assessment, and creating a positive and motivating learning environment. MAT students (who are seeking certification) will be required to complete content specific classroom observation hours with a certified teacher for this course. This course was previously EDU-660511.

EDUC 6015 Exceptionalities: Individualizing Learning (3 Credits)
This course provides an overview of theories and research about students with special needs and a range of exceptionalities, as well as issues and strategies in developing educational programs and adapting instruction to meet the needs of all students. Students develop awareness of and sensitivity to individual differences and learn how to individualize instruction in the context of their certification areas. Topics include: physical, emotional and learning disabilities; gifted and talented students; gifted and talented students and computers; individualizing instruction for all students; uses of assistive and adaptive technologies and computers to meet special needs; inclusion; and assessing behavior problems and planning, implementing, and evaluating interventions. Students complete at least 12.5 hours in a middle or high school classroom (appropriate to the certification area) working with a certified special education teacher to explore the application of what they are studying to a classroom setting. This course was previously EDU-660514.

EDUC 6020 Teaching & Learning: English (3 Credits)
This course examines the complex relationship between teaching and learning in middle and high school; relationships between various teaching strategies and students' learning styles and needs; different teaching strategies that work with children of different ages; and relationships between students' assumptions, beliefs and attitudes and their own teaching styles. The study of teaching methods and preparation of microteaching sessions are related to secondary English language arts instruction. Topics include: theories and research related to teaching and learning; general teaching methods and materials and developing instructional objectives; advantages and disadvantages of various teaching methodologies; instructional and behavioral components of classroom management; techniques of self-assessment and assessment of student learning; and uses of technology to enhance learning, and the cognitive and social aspects of technology mediated learning. This course has four synchronous sessions during which participants will learn about applying for teaching positions, resume writing, and preparing and enacting lessons. This course was previously EDU-660506.

EDUC 6025 Teaching & Learning: LOTE (3 Credits)
This course examines the complex relationship between teaching and learning in middle and high school; relationships between various teaching strategies and students' learning styles and needs; different teaching strategies that work with children of different ages; and relationships between students' assumptions, beliefs and attitudes and their own teaching styles. The study of teaching methods and microteaching sessions is related to the student's area of certification in middle and high school. Topics include: theories and research related to teaching and learning; general teaching methods and materials, and developing instructional objectives; advantages and disadvantages of various teaching methodologies; instructional and behavioral components of classroom management; techniques of self-assessment and assessment of student learning; and uses of technology to enhance learning, and the cognitive and social aspects of technology mediated learning. This course has four synchronous sessions during which participants will learn about applying for teaching positions, resume writing, and preparing and enacting lessons. This course was previously EDU-660509.

EDUC 6030 Teaching & Learning: Math (3 Credits)
This course examines the complex relationship between teaching and learning in middle and high school; relationships between various teaching strategies and students' learning styles and needs; different teaching strategies that work with children of different ages; and relationships between students' assumptions, beliefs and attitudes and their own teaching styles. Topics include: theories and research related to teaching and learning; general teaching methods and materials, and developing instructional objectives; advantages and disadvantages of various teaching methodologies; instructional and behavioral components of classroom management; techniques of self-assessment and assessment of student learning; and uses of technology to enhance learning, and the cognitive and social aspects of technology mediated learning. This course has four synchronous sessions during which participants will learn about applying for teaching positions, resume writing, and preparing and enacting lessons. This course was previously EDU-660507.

EDUC 6035 Teaching & Learning: Science (3 Credits)
This course prepares teacher candidates for the exciting challenge of teaching science in an era of educational reform which takes a three-dimensional approach to science teaching that incorporates disciplinary core ideas, science and engineering practices, and crosscutting concepts. This course integrates science content knowledge, pedagogical knowledge, and curricular knowledge to effectively craft lessons that meet the needs of all learners. The course prepares participants to create effective and engaging lessons using the current standards for science and literacy as instructional frameworks. Participants will connect with the science education community by joining the National Science Teachers Association (NSTA). This course has synchronous and asynchronous components; there are four face-to-face classes held at students' regional college locations during which participants will learn about applying for science teaching positions, resume writing, and preparing and enacting science lessons. This course has four synchronous sessions during which participants will learn about applying for teaching positions, resume writing, and preparing and enacting lessons.

EDUC 6040 Teaching & Learning: Social Studies (3 Credits)
This course examines the complex relationship between teaching and learning in middle and high school; relationships between various teaching strategies and students' learning styles and needs; different teaching strategies that work with children of different ages; and relationships between students' assumptions, beliefs and attitudes and their own teaching styles. The study of teaching methods and preparation of microteaching sessions are related to secondary social studies. Topics include: theories and research related to teaching and learning; general teaching methods and materials, and developing instructional objectives; advantages and disadvantages of various teaching methodologies; instructional and behavioral components of classroom management; techniques of self assessment and assessment of student learning; and uses of technology to enhance learning, including computers as an interactive medium and as a tool, and the cognitive and social aspects of technology mediated learning. This course has four synchronous sessions during which participants will learn about applying for teaching positions, resume writing, and preparing and enacting lessons. This course was previously EDU-660510.

EDUC 6045 Teaching Diverse Learners (3 Credits)
This course addresses diversity in contemporary schools, the ways children and families from various cultures are affected by and affect schools, and the role of the teacher and the curriculum in creating open and safe classroom environments conducive to learning. Students understand how to adapt instruction to the needs of diverse learners. Topics include: cultural, ethnic, racial and diversity issues in education; socioeconomic diversity; teacher cultural bias, attitudes and related behaviors; exploration of social identity; deculturalization and the history of education on dominated cultural groups; curriculum and instruction for the diverse student; gender equity, gender and sexuality; gender bias, caring teaching skills; classroom management; various culturally responsive teaching methods, and the impact of bullying on academic achievement on targeted populations. Additionally, students will reexamine ways to foster family and school community partnerships. This course includes synchronous sessions for webinars and micro-teachings. This course was previously EDU-660512.

EDUC 6050 Content Area Study: English (3 Credits)
This course focuses on literacy and literature in the intermediate and secondary English language arts classroom. A variety of texts and text types will be read and discussed. Different ways of organizing a literature-based curriculum, engaging students, addressing censorship, and reading through different critical lenses will be explored. Reading, writing, speaking, listening, and performing are aspects of literacy students will consider for inclusion in units of study grounded in literature.

EDUC 6055 Content Area Study: Spanish (3 Credits)
An array of content area topics will be available to enable candidates to strengthen their content area background. While learning new content, students will develop lessons, teaching methods and materials for use with their own pupils. Students are encouraged to link their content across disciplines. This course is fully online. This course was previously EDU-660528.

EDUC 6060 Content Area Study: Math (3 Credits)
An array of content area topics in grades 7-12 mathematics will be explored to enable students to strengthen their content area background. While learning new content, students will develop lessons, teaching methods and materials for use with their own pupils. Students are encouraged to link their content across disciplines. The National Council of Teachers of Mathematics (NCTM) six principles for school mathematics will form the foundation of this course with specific attention given to the NCTM content and process standards. In addition the Common Core (CC) learning standards will be used to inform students. This course is fully online. This course was previously EDU-660526.

EDUC 6065 Content Area Study: Science (3 Credits)
This course provides Grades 5-12 science teacher candidates an opportunity to advance in their science education understanding using national, international, and trans-national lenses. Using the National Assessment of Educational Progress (NAEP) results, we will investigate trends in American students' science learning along with contextual factors that impact their performance. Using a comparative approach, we will uncover factors that influence student science performance and science teacher instructional approaches. We will reflect upon science education policy borrowing and lending which results from the use and analysis of large-scale international assessments like the Trends in International Mathematics and Science Study (TIMSS) and Programme for International Student Assessment (PISA). As a course project, science teacher candidates choose and conduct research on an area of interest within their content area's curriculum and investigate a demographic factor, a content-area knowledge factor, and a science practice or disciplinary literacy in the United States and the country of their choice.
Attributes: Liberal

EDUC 6070 Content Area Study: Social Studies (3 Credits)
An array of content area topics will be available to enable candidates to strengthen their content area background. While learning new content, students will develop lessons, teaching methods and materials for use with their own pupils. Students are encouraged to link their content across disciplines. This course is fully online. This course was previously EDU-660530.

EDUC 6080 Second Language Acquisition (3 Credits)
Theory to Practice for Second Language Acquisition introduces the work of teaching children and adolescents English as a New Language (ENL). The course begins with background on how one learns a single native language or bilingualism in early childhood. It continues with an exploration of who the students are and how the acquisition of their first language factors into that of their second. There is an introduction to theories of second language acquisition followed by a focus on practices supported by research and theories. The course ends with a final project that connects theories and research with practice. This course is tailored for educators of ENL students, bilingual students or dual language.

EDUC 6081 Linguistics and Grammar for English Teaching (3 Credits)
Linguistics for English teaching introduces all educators to the study of language in all content areas for literacy development. The course begins with a focus on the sound system of English and then moves to the system of words and sentences. It focuses on making meaning of phonology, morphology, semantics, syntax, and pragmatics, and then concludes with the teaching of grammar as applied to educational settings. This course is tailored for all educators including those who work with ENL, bilingual, dual-language and multilingual students.

EDUC 6082 Research-Based Methods for Teaching English Language Learners (3 Credits)
Research-based Methods for Teaching English Language Learners introduces the goals and strategies of effective teaching for learners of English as a New Language (ENL). The course begins with a focus on the students and their educational needs. It continues with an introduction to methods for effective teaching based on research. Field observations provide opportunities to connect practices with theories and research. Projects include individual lesson planning. This course is tailored for teachers of ENL, bilingual education or dual language.

EDUC 6083 Teaching English Language Learners in the Content Areas (3 Credits)
As English Language Learners (ELLs) gain proficiency beyond the beginner stage, they become prepared to enter mainstream courses in the content areas. This course prepares teachers of content areas, teachers of English as a New Language (ENL), bilingual, and dual language to collaborate in meeting the needs of ELLs who have entered mainstream courses. It offers strategies for helping ELLs reach their potential as they continue to advance in English proficiency while learning in the content courses. Topics include the use of educational technologies and strategies for authentic assessments. This course is tailored for teachers working with language learners in ENL, bilingual, or dual language classrooms.

EDUC 6084 P-12 English as a Second Language Practicum (3 Credits)
At the center of this course is a practicum of at least 20 days with equal parts in both elementary (P-6) and secondary (7-12) classes. A cooperating teacher and an ESC faculty member will share in supervising and mentoring the candidate. This experience enables candidates to apply their knowledge toward developing skills in actual classrooms. All candidates in this course will meet synchronously and asynchronously as a group several times with the course instructor for seminars to discuss their challenges and accomplishments toward professional growth. Course assignments will merge in the construction of a portfolio that documents growth toward competence for teaching English language learners (ELLs). Prerequisites: EDUC 6080, EDUC 6081, EDUC 6082, EDUC 6083.

EDUC 6085 Theory to Practice of Bilingual Education (3 Credits)
The primary objective of this online course is to equip participants with a comprehensive understanding of the theoretical underpinnings of bilingual education. Participants will have the opportunity to evaluate policies that have been developed to address the unique needs of these students. The course aims to impart knowledge regarding various methodologies and techniques that can be utilized to facilitate effective instruction in this field. Additionally, the course seeks to foster an appreciation for the historical, sociological, psychological, ideological, linguistic, cognitive, and pedagogical implications of bilingual education, particularly as they pertain to children belonging to both minority and majority language groups. This examination aims to enhance their understanding of the challenges faced by bilingual learners. Field observations of 25 hours (age groups − P-6 and 7-12) contribute to a theory-practice nexus in students' developing understandings.

EDUC 6086 Bilingual Literacy Instruction: Strategies for Teaching in the Native Language and English Across Co (3 Credits)
Bilingual Literacy Instruction: Strategies for Teaching in the Native Language and English Across Content Areas will emphasize effective educational methodologies and assessments in both Native language and English Language. This study will focus on examining classroom approaches and assessments within the content areas in K-12 settings. By participating in class discussions, readings, and assignments, students will be able to engage in a critical examination of various interconnected perspectives. Review the existing literature and research on bilingualism and then analyze its implications within academic and professional settings. Field observations of 25 hours (age groups − P-6 and 7-12) contribute to a theory-practice nexus in students' developing understandings.

EDUC 6087 A Multicultural Education Approach to Teaching Diverse Learners (3 Credits)
The course is designed to help current and future educators acquire the concepts, paradigms, and explanations needed to be successful practitioners in classrooms and schools that are varied in terms of culture, race, language, and socioeconomic status. The notion of culture will become more complex through new perspectives of teachers, who are additionally going to see race, class, gender, social class, and exceptionality as interrelated ideas rather than as separate and different ones. Teachers will acquire the knowledge, skills, and attitudes necessary to collaborate successfully with students from various ethnic backgrounds as well as support the cross-cultural instruction, values, and competencies of students from dominant groups. The topics included in this course pertain to cultural, ethnic, racial, and diversity matters within the realm of education. These include exploring issues related to socioeconomic diversity, examining the presence of cultural bias among teachers, analyzing their attitudes, and corresponding behaviors, and encouraging teachers to reflect upon their own social identities. Additionally, the conversation delves into the historical context of educational practices that have marginalized certain cultural groups, as well as the development of curriculum and instructional strategies that cater to the needs of diverse students. Gender equity, gender and sexuality, and the presence of gender bias are also explored, along with the importance of nurturing caring teaching skills and effective classroom management. Lastly, the impact of bullying on the academic achievement of LGBTQ individuals is examined, with a focus on targeted populations within this community. Furthermore, students will explore strategies for developing collaborations between families and the school community.

EDUC 6100 Teaching and Curriculum: English (3 Credits)
This course examines research-based approaches to middle and high school curriculum development in the area of English language arts. Students will consider the relationships between curriculum and classroom management and the relationship between the curriculum and students' individual differences and capabilities. Students learn how to use their content knowledge to develop instructional objectives and to develop or adapt instructional materials appropriate to the middle and high school grade levels they are teaching. Students learn how to use technology for both instruction and information management, and to identify, use, and evaluate technologies appropriate to the ELA classroom. The culminating course assignment is to design a four to six week unit plan that aligns with ELA edTPA, and MAT program outcomes. This course was previously EDU-660516. Prerequisites: EDUC 6020.

EDUC 6105 Teaching and Curriculum: LOTE (3 Credits)
This course examines research-based approaches to middle and high school curriculum development, the relationships between curriculum and classroom management, and the relationship between the curriculum and students' individual differences and capabilities. Students learn how to use their subject matter knowledge to develop instructional objectives, and to develop or adapt instructional materials appropriate to the middle and high school grade levels they are teaching. Students learn how to use technology for both instruction and information management, and to identify use and evaluate technologies appropriate to the subjects and levels taught. The study of curriculum is related to the students' areas of certification. Topics include: research and theories related to curriculum and instructional strategies; curriculum construction, development of instructional objectives and materials, lesson planning and presentation; pupil evaluation; and technology mediated methods and materials. This course was previously EDU-660519. Prerequisites: EDUC 6025.

EDUC 6110 Teaching and Curriculum: Math (3 Credits)
This course examines research-based approaches to middle and high school curriculum development, the relationships between curriculum and classroom management, and the relationship between the curriculum and students' individual differences and capabilities. Students learn how to use their subject matter knowledge to develop instructional objectives, and to develop or adapt instructional materials appropriate to the middle and high school grade levels they are teaching. Students learn how to use technology for both instruction and information management, and to identify use and evaluate technologies appropriate to the subjects and levels taught. The study of curriculum is related to the students' areas of certification. Topics include: research and theories related to curriculum and instructional strategies; curriculum construction, development of instructional objectives and materials, lesson planning and presentation; pupil evaluation; and technology mediated methods and materials. This course was previously EDU-660517. Prerequisites: EDUC 6030.

EDUC 6115 Teaching and Curriculum: Science (3 Credits)
This advanced science education course builds upon teacher candidates' prior learning from the Teaching and Learning: Science course. Deepening the best-practice science teaching from earlier coursework, participants will focus on planning for and implementing authentic science practices and disciplinary literacies while creating a learning community that is inclusive. During the course, teacher candidates will engage in discussions and assignments on year-long curriculum planning, technology integration, pre-assessment, differentiation, disciplinary literacy, academic language, and using scientific phenomena and discrepant events. Prerequisite: EDUC 6035. Prerequisites: EDUC 6035.
Attributes: Liberal

EDUC 6120 Teaching and Curriculum: Social Studies (3 Credits)
This course examines research-based approaches to middle and high school curriculum development, the relationships between curriculum and classroom management, and the relationship between the curriculum and students' individual differences and capabilities. Students learn how to use their subject matter knowledge to develop instructional objectives, and to develop or adapt instructional materials appropriate to the middle and high school grade levels they are teaching. Students learn how to use technology for both instruction and information management, and to identify use and evaluate technologies appropriate to the subjects and levels taught. The study of curriculum is related to the students' areas of certification. Topics include: research and theories related to curriculum and instructional strategies; curriculum construction, development of instructional objectives and materials, lesson planning and presentation; pupil evaluation; and technology mediated methods and materials. This course was previously EDU-660520. Prerequisites: EDUC 6040.

EDUC 6122 Teaching and Curriculum: Agricultural Education (3 Credits)
This course is designed to help you build your skills in regards to curriculum and program planning in agricultural education. You will gain experience with aspects of short-term and long-term planning, while refining inquiry-oriented techniques for instruction and classroom management. Prerequisites: EDUC 6127 C or Better.

EDUC 6125 Literacy (3 Credits)
This course is designed for classroom teachers working with students in grades 5-12. Various forms of literacy, including, but not limited to reading, writing, speaking, listening , and digital literacy are explored within a NYS learning standards framework . Units include a critical consideration of theoretical perspectives about language acquisition and the wider social context of literacy in U.S. society in the 21st century. Topics include: developmental issues in language acquisition; instruction for literacy in multicultural classrooms; teaching English as a second language; and reading and writing difficulties with a specific focus on content comprehension strategies that classroom teachers can use to differentiate instruction. This course is fully online. This course was previously EDU-660531.

EDUC 6127 Teaching and Learning: Agricultural Education (3 Credits)
Discussion and practice in planning and presenting instruction in agriculture in formal and informal settings. Principles and application of approaches to teaching and organizing instruction, motivating students, developing instructional objectives, selecting and using teaching techniques, evaluating instruction, and managing classroom and laboratory instruction. This course has four synchronous, online sessions during which participants will learn about applying for teaching positions, resume writing, and preparing and enacting lessons.

EDUC 6130 Literacy Across the Curriculum (3 Credits)
This course examines the role of reading, writing and language within the curriculum and the impact of literacy on specific content areas. Students develop strategies and skills in exploring relevant content literature and using technology to acquire and manage information. Students gain experience in designing and implementing literacy lessons within the content area that meet the needs of all learners. Students will design a community literacy project integrating content area and literacy strategies that address the needs of a variety of stakeholders. This course is fully online.
Attributes: Liberal

EDUC 6132 Content Area Study: Agricultural Education (3 Credits)
This course is designed to build your skills in instructional delivery and youth development via the FFA Chapter found in each agriculture program and the Supervised Agricultural Experience component of the Three Circle Model of agriculture education. Models of youth development will be applied to your lesson planning.

EDUC 6137 Child and Adolescent Development (3 Credits)
This course will focus on physical, cognitive, social and emotional development of children and adolescents. The course explores theories of development within the contexts of families, cultures, communities and schools. It prepares prospective teachers to understand the needs, abilities and behaviors of children and adolescents. The course content will address theories of learning and teaching; genetic and environmental factors affecting child development; individual differences in abilities and developmental patterns; developmental issues and learning needs of students with special needs; and best practices for teaching and assessment. Teacher candidates will learn strategies in creating a positive and motivating learning environment in grades 1-12 classrooms. MAT Agriculture Education teacher candidates will be required to complete 10 classroom observation hours with a certified Agricultural Education teacher in a 1-12 grade classroom.

EDUC 6998 Individualized Studies in Education (EDUC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Education (EDUC). Please contact your mentor/advisor for more details.

EDUC 7001 Teacher Education Clinical Course (0 Credits)
The clinical course is a site-based course situated in the teacher candidate's classroom. It aims to support and advance teachers candidates' classroom practice. Over the course of the term, teacher candidates and supervising MAT faculty mentors engage in a process of formative mentoring that makes use of pre-observation, classroom observation, and post- observation follow-up. This course provides support and guidance to the beginning teacher in establishing classroom expectations, setting attainable teaching and learning goals, developing effective classroom management skills, creating a student-centered learning environment, and developing reflective habits of mind. The course will also allow the candidates to collaborate with one another to learn from each others' perspectives. Corequisites: Students must register for this course when registering for any of the following: EDUC 7005, EDUC 7015, EDUC 7025, EDUC 7026, EDUC 7030, EDUC 7031, EDUC 7045, EDUC 7050, EDUC 7055, EDUC 7063, EDUC 7065, EDUC 7067, EDUC 7069,SPED 6065, SPED 6080, SPED 6086, SPED 6087, SPED 7010, SPED 7015, SPED 7030, SPED 7063, SPED 7067 .

EDUC 7005 MAT Residency Seminar I (6 Credits)
This six credit seminar uses gradual release of responsibility to facilitate collaboration among students, critic teachers, and college faculty. The residency seminar draws on the resident's teaching repertoire and ability to analyze and modify teaching strategies in relation to classroom responsibilities specific to the certification area. In this co-teaching model, the critic teacher is always present to provide feedback and support. All observations are by video recording, which requires permission from the administration at the resident's placement. This course involves five classroom observations. A requirement in this course is attendance in at least four synchronous sessions. The National Board for Professional Teaching Standards' 5 Core Propositions form the foundation of this course. This seminar is only open to students in the MAT residency track. In order to successfully complete the program, this course must be completed with a grade of B or better. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 6020 or EDUC 6025 or EDUC 6030 or EDUC 6035 or EDUC 6040 with a grade of B or better And EDUC 6005 And EDUC 6010 And EDUC 6015.

EDUC 7010 Educational Evaluation (3 Credits)
This course focuses on developing skills and a clear understanding of research-based best practices for evaluating student learning and teaching effectiveness. The course emphasizes the use of research-based theories and practices for assessing student learning, developing assessment strategies and analytical skills in order to modify instruction and adapt instructional materials, utilizing best practices for documenting student learning, and using technology to enhance and improve assessment practices. Students who take this course will need to have access to a classroom where an assessment activity can be planned and implemented, and data can be collected and analyzed. This course was previously EDU-660523.

EDUC 7015 MAT Residency Seminar II (3 Credits)
The residency experience and seminar develop the student's teaching repertoire related to actual teaching responsibilities in their certification area with a continuation of the co-teaching model. The seminar involves collaboration among students, critic teachers and college faculty. Students will draw on their courses and the work they did in Residency Seminar One to plan and successfully implement a teacher performance assessment. This course involves five classroom observations. A requirement for this course is attendance in at least four synchronous sessions. This seminar is only open to students in the MAT residency track. In order to successfully complete the program, this course must be completed with a grade of B or better. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 7005.

EDUC 7020 Residency Capstone (3 Credits)
This course focuses on the Master of Arts in Teaching (MAT) Residency capstone experience. MAT residency students will complete a portfolio that highlights how they have met MAT program standards as well as the standards set forth by their professional organizations. Successful completion of MAT Residency Seminar 2 or Residency Seminar 2B, either with a course outcome of B or better, are prerequisites for this course. In order to successfully complete the MAT program, this course must be completed with a grade of B or higher. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 7015 Residency Seminar 2 or EDUC 7069 Residency Seminar 2B, either with a grade of B or better..
Attributes: Liberal

EDUC 7025 Intensified Mentored Teaching I (6 Credits)
This intensified mentored teaching experience develops the student's teaching repertoire and ability to analyze and modify teaching strategies in relation to their teaching responsibilities and certification area. Students develop and use methods and materials appropriate to their teaching assignments and the certifications sought. Eight observations take place in this course (video permissions must be secured). A requirement in this course is attendance in at least four synchronous sessions. Areas studied include: classroom organization, classroom management, teaching, assessment, school safety. Prior to taking this course, students need to successfully complete Teaching and Learning in their content area, hold an approved teaching position that is guaranteed to last through the duration of the school year (Sept-June), and hold Transitional B teacher certification. Registration must be approved by the Office of Teacher Education (TeacherEducation@sunyempire.edu). A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 6020 or EDUC 6025 or EDUC 6030 or EDUC 6035 or EDUC 6040 with a grade of B or better AND EDUC 6005 AND EDUC 6010 AND EDUC 6015.

EDUC 7026 Intensified Mentored Teaching I: Agricultural Education (6 Credits)

This intensified mentored teaching experience develops the student's Agricultural Education teaching repertoire and ability to analyze and modify teaching strategies in relation to their teaching responsibilities and certification area. Students develop and use methods and materials appropriate to their teaching assignments and the certifications sought. Eight observations occur (permissions must be secured). A requirement in this course is attendance in at least four synchronous sessions. Areas studied include classroom organization, classroom management, teaching, assessment, school safety. Four synchronous meetings are required that will take pace in an online space to be determined by the course instructor. Students must: 1) have successfully completed Teaching and Learning: Agricultural Education, 2) hold an approved teaching position that is guaranteed to last through the duration of the school year (Sept -June), and 3) hold Transitional B teacher certification. Registration must be approved by the Office of Teacher Education (TeacherEducation@sunyempire.edu). A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 6127 with a grade of B or better And EDUC 6005 And EDUC 6137 And EDUC 6015.

EDUC 7030 Intensified Mentored Teaching II (3 Credits)

This mentored teaching experience and seminar continue to develop the student's teaching repertoire related to actual teaching responsibilities and certification area. Students continue to develop and use methods and materials appropriate to their teaching assignments and the certifications sought. Seven mentored teaching observations also are required. A requirement in this course is attendance in at least four synchronous sessions. Students enrolled in this course will be continuing with their Intensified Mentored Teaching One teaching placement. Transitional B certification is required in order to take this course. Successful completion of Intensified Mentored Teaching One and Teaching and Learning are prerequisites to enrollment in Intensified Mentored Teaching Two. In order to successfully complete the program, this course must be completed with a grade of B or better. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 7025 with a B or better.

EDUC 7031 Intensified Mentored Teaching II: Agricultural Education (3 Credits)

This mentored teaching experience and seminar continue to develop the Agricultural Education student's teaching repertoire related to actual teaching responsibilities and certification area. Students continue to develop and use methods and materials appropriate to their teaching assignments and the certifications sought. Seven mentored teaching observations also are required. A requirement in this course is attendance in at least four synchronous sessions. Students enrolled in this course will be continuing with their Intensified Mentored Teaching I: Agricultural Education teaching placement. Transitional B certification is required to take this course. To successfully complete the program, this course must be completed with a grade of B or better. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 7026 with a grade of B or better .

EDUC 7040 Mentored Observations (1 Credits)

Students who are teaching on the Transitional B certificate but not enrolled in a Mentored Teaching course need to be observed by supervising MAT faculty in order to satisfy New York State regulations and must, accordingly, register for this one credit course. This course is intended to be taken once. Special permission from the appropriate Coordinator and Chair would be needed prior to enrolling in this course more than once. This is a one credit, pass/fail course. This course was previously EDU-660537.

EDUC 7045 Mentored Teaching I (3 Credits)

Mentored Teaching I is the first in a four-course sequence of Mentored Teaching courses. Mentored Teaching I is situated in the first-year teacher's classroom and supports classroom practice during new teacher induction. This course involves five classroom observations. A requirement for this course is attendance in at least four synchronous sessions. Mentored Teaching I provides support and guidance to the beginning teacher in establishing classroom expectations, setting attainable teaching and learning goals, developing effective classroom management skills, creating a student-centered learning environment, and developing reflective habits of mind. Students enrolled in this course should have successfully completed Teaching & Learning in their content area, have an approved teaching position, and hold Transitional B certification. Registration must be approved by the Office of Teacher Education (TeacherEducation@sunyempire.edu). A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 6020 or EDUC 6025 or EDUC 6030 or EDUC 6035 or EDUC 6040 with a grade of B or better And EDUC 6005 And EDUC 6010 And EDUC 6015.

EDUC 7050 Mentored Teaching II (3 Credits)

The mentored teaching experience and seminar develop the student's teaching repertoire related to actual teaching responsibilities and the certification area. Students continue to develop and use methods and materials appropriate to their teaching assignments and the certifications sought. The course involves collaboration among students, mentor teachers and Empire State College faculty. In the second in-service term, mentoring and supervision of teaching emphasize analysis and application in the following areas: teaching; curriculum; educational evaluation; literacy; school safety; classroom management, and use of technologies in teaching. This course involves five classroom observations. A requirement for this course is attendance in at least four synchronous sessions. Students must hold an approved teaching placement and Transitional B certification in order to take this course. In order to successfully complete the program, this course must be completed with a grade of B or better. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: A Teaching and Learning course and EDUC 7045 with a B or better final grade.

EDUC 7055 Mentored Teaching III (3 Credits)
This is the third course in the four-course mentored teaching sequence. Students continue to develop and use methods and materials appropriate to their teaching assignments and the certifications sought. The course involves collaboration among students, mentor teachers and MAT faculty. This course involves four classroom observations. A requirement for this course is attendance in at least four synchronous sessions. In addition to reflective practice, this course addresses integration and innovation in the following areas: teaching; curriculum; educational evaluation literacy; school safety; classroom management; and use of technologies in teaching. Students must hold an approved teaching placement and New York State Transitional B certification in order to take this course. Successful completion of Mentored Teaching One and Two are prerequisites to enrollment in Mentored Teaching Three. In order to successfully complete the program, this course must be completed with a grade of B or better. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 7045 with a B or better EDUC 7050 with a B or better.

EDUC 7060 Mentored Teaching Capstone (3 Credits)
This course focuses on the Master of Arts in Teaching (MAT) capstone experience. MAT Transitional B students will complete a portfolio that highlights how they have met the MAT program standards as well as the standards set forth by their professional organizations. Students must be enrolled in the MAT program and hold an approved teaching position to register for this course. The course includes two observations where the student must demonstrate proficiency in all areas on the observation rubric. Successful completions (grade B or higher) of Mentored Teaching One, Two and Three; or Intensified Mentored Teaching One and Two; are prerequisites to taking this capstone course. In order to successfully complete the MAT program, this course must be completed with a grade of B or higher. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: EDUC 7045 and EDUC 7050 and EDUC 7055 OR EDUC 7025 and EDUC 7030 all with a grade of B or better.
Attributes: Liberal

EDUC 7063 Residency Seminar 1A (2 Credits)
The Residency Seminar courses are designed to develop the resident's teaching repertoire and ability to analyze and modify teaching strategies in relation to the resident's classroom responsibilities and certification area. Residents will participate in online discussions, assignments, and at least four synchronous sessions associated with the course modules. This course involves an opening meeting with the resident, the attending teacher, and the field supervisor. Later in the term there are two classroom observations. In this first clinical course in the series, foundational teaching skills are introduced including: classroom management, the instructional cycle, constructivist approaches to teaching diverse learners, instructional planning, teaching dispositions, and reflective practice. Residents will follow the requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are residing. Using a gradual release of responsibility model, residents will begin working with a school-based attending teacher before the first school year begins. Residents will begin the first year in a co-teaching role, gradually assuming a more active role in classroom planning, evaluation, and lead instruction as the school year unfolds. Prerequisites: EDUC 6020 or EDUC 6025 or EDUC 6030 or EDUC 6035 or EDUC 6040 with a grade of B or better And EDUC 6005 And EDUC 6010 And EDUC 6015.

EDUC 7065 Residency Seminar 1B (2 Credits)
The Residency Seminar courses are designed to develop the resident's teaching repertoire and ability to analyze and modify teaching strategies in relation to the resident's classroom responsibilities and certification area. Residents will participate in online discussions, assignments, and at least four synchronous sessions associated with the course modules. This course involves three classroom observations. In this second clinical course in the series, we build on the foundational teaching skills from last semester and focus on planning for immersion, mastering instructional planning, assessment, student perceptions, sequencing and organizing instruction, classroom questioning techniques, and teaching dispositions. Residents will follow the requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are residing. Using a gradual release of responsibility model, residents will begin working with a school-based critic teacher before the first school year begins. Residents will begin the first year in a co-teaching role, gradually assuming a more active role in classroom planning, evaluation, and lead instruction as the school year unfolds. Prerequisites: EDUC 7063.

EDUC 7067 Residency Seminar 2A (2 Credits)
The Residency Seminar courses are designed to develop the resident's teaching repertoire and ability to analyze and modify teaching strategies in relation to the resident's classroom responsibilities and certification area. Residents will participate in online discussions, assignments, and at least four synchronous sessions associated with the course modules. This course involves three classroom observations. This course is the third in the clinical course series and focuses on: edTPA preparation, disciplinary literacy, small group discussions and cooperative learning, inquiry teaching and higher-order thinking. Residents will follow the requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are residing. Using a gradual release of responsibility model, residents will begin working with a school-based critic teacher before the first school year begins. Residents will begin the first year in a co-teaching role, gradually assuming a more active role in classroom planning, evaluation, and lead instruction as the school year unfolds. During the second year in the program there will be a blend of both co-teaching and resident-lead instruction. Prerequisites: EDUC 7065.

EDUC 7069 Residency Seminar 2B (3 Credits)
The Residency Seminar courses are designed to develop the resident's teaching repertoire and ability to analyze and modify teaching strategies in relation to the resident's classroom responsibilities and certification area. Residents will participate in online discussions, assignments, and at least four synchronous sessions associated with the course modules. This course involves two classroom observations and ends with a closing meeting with the resident, the attending teacher, and the field supervisor. This is the fourth and last course in the clinical course series. In this final clinical course, the primary focus is on trauma-informed instruction, and school safety. Residents will follow the requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are residing. Using a gradual release of responsibility model, residents will begin working with a school-based critic teacher before the first school year begins. Residents will begin the first year in a co-teaching role, gradually assuming a more active role in classroom planning, evaluation, and lead instruction as the school year unfolds. During the second year in the program there will be a blend of both co-teaching and resident-lead instruction. Prerequisites: EDUC 7067.

EDUC 7998 Individualized Studies in Education (EDUC) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Education (EDUC). Registration for this class must be approved by the student's mentor.

FSMA: Finance (Graduate)

FSMA 6010 Quantitative Methods in Finance (3 Credits)
The purpose of this course is to expose students to modern data analysis with an emphasis on a specific domain of application: Finance. Students are expected to have an understanding of basic statistics, since concepts such as random variables, expectation, correlation, and statistical inference (estimation, hypothesis testing, and confidence intervals) are fundamental to the analyses addressed in the course. It is also expected that students have a basic understanding of linear algebra. The course relies on real financial data, and uses spreadsheets and statistical softwares to cover a range of topics from exploratory data analysis techniques, simulations, to regression analysis methods, with a strong emphasis on their application. Course Materials Fee: Graduate Studies is pleased to be able to provide access to the Thomson Reuters Eikon online database, a required resource of this course, for a fee which will be charged at the time of registration. This fee is pending approval and subject to change.

FSMA 6015 Financial Economics (3 Credits)
The purpose of this course is to examine the economic foundations of finance with focus on corporate finance and in investment theory, in order to allow a deeper understanding of the connection between financial markets and the real economy. The course provides in-depth examination of financial markets mechanisms, corporate finance models, personal wealth management and the government's role in markets. It also covers financial models for resource allocation and market efficiency; basic tools of microeconomics, including optimization, comparative statics and equilibrium will also be discussed; and applications to finance will be highlighted throughout the course. Course Materials Fee: Graduate Studies is pleased to be able to provide access to the Thomson Reuters Eikon online database, a required resource of this course, for a fee which will be charged at the time of registration. This fee is pending approval and subject to change. This course was previously ECO-655500.

FSMA 6016 Financial Management (3 Credits)
The course addresses three main areas. First, it focuses on how firms assess their performance over time and against an industry benchmark. In addition, it reviews ways of how companies are organized and deal within the financial markets. It also looks at the time value of money and examines the ways of identifying, assessing risk & return, and valuing the bonds and securities. Second, it studies firm's cost of capital, basis of capital budgeting, effects of cash flows and associated risks. Furthermore, it discusses the capital structure formation, concepts and theories. The third area of the the course addresses the diagnostics of working capital, financial planning and forecasting techniques, and finally the financial management of multinational corporations. Prerequisites: MGMT 6010 if not waived.
Cross-listed with MGMT 6016.

FSMA 6020 Investment Analysis (3 Credits)
The purpose of this course is to engage students with procedures and tools necessary to evaluate investment variables, determine value and analyze risk and return characteristics of financial assets namely, equity, fixed income securities, mutual and hedge funds and to study risk diversification and optimum portfolio analysis. The students will develop a better understanding of the investment environment, and the functioning of different asset classes and financial instruments, that include the money market, the bond market, the equity market, and financial derivatives. This course aims at developing a structured framework of investment analysis by requiring students to complete a set of assignments and to undertake a term project of tracking a selection of stocks and presenting a term paper in the context of firm analysis.

FSMA 6025 Advanced Quantitative Methods in Finance (3 Credits)
This course builds on the concepts covered in Quantitative Methods in Finance, and introduces more advanced quantitative methods that are applicable in various areas of finance; applied concepts and methodologies of both univariate and multivariate long term financial data processes. In addition, topics and financial data applications related to stationary processes, co-integration analysis, ARCH and GARCH models, and simulation methods are also covered. Course Materials Fee: Graduate Studies is pleased to be able to provide access to the Thomson Reuters Eikon online database, a required resource of this course, for a fee which will be charged at the time of registration. This fee is pending approval and subject to change. Prerequisites: FSMA-6010.

FSMA 6035 Financial Risk Management (3 Credits)
The purpose of this course is to impart financial risk management concepts and optimal financial risk management practices and strategies in a business environment. The course focuses on methods and processes of assessing a firm's financial vulnerability. Students develop applicable skills and tool sets in risk analysis and management of financial risk, and how measures of risk relate to strategic and tactical business decisions. Course Materials Fee: Graduate Studies is pleased to be able to provide access to the Thomson Reuters Eikon online database, a required resource of this course, for a fee which will be charged at the time of registration. This fee is pending approval and subject to change.

FSMA 6040 Mergers & Acquisitions (3 Credits)
The primary objective of this course is to give students experience in valuing firms. While the primary focus of the course is on mergers and acquisitions, the course will also cover topics such as initial public offerings, leveraged buyouts, spin-offs, and divestitures. This course was previously FIN-655503.

FSMA 6045 Money Banking & Financial Institutions (3 Credits)
This course explores monetary and banking theory. It covers monetary system and financial system, the banking structure and an introduction to international finance with focus on monetary practices, theory and policy. The course puts an emphasis on an analysis of the nature and functions of money, banking operations and other financial institutions, with an overview of the banking system and the structure of the Federal Reserve System. Students also examine the monetary policy as related to the macroeconomic policies, economic activity and international financial activities. Topics covered include: the creation of money, interest rates, inflation, reserves, the time value of money, risk return relationships, informational symmetries and asymmetries, financial transparency, bank performance analysis. Course Materials Fee: Graduate Studies is pleased to be able to provide access to the Thomson Reuters Eikon online database, a required resource of this course, for a fee which will be charged at the time of registration. This fee is pending approval and subject to change.

FSMA 6050 Financial Analysis & Control (3 Credits)
This course provides students the necessary management control tools to make far more persuasive business proposals, business cases and strategic recommendations. A particular focus is on learning to use financial information to support strategic decisions and improve operating results. This includes: how to use financial analysis concepts and methods to help prepare business cases or funds approval requests; how to use decision models for key issues such as: adding or dropping business lines, make or buy decisions, accepting special orders, constrained resource utilization, sell or process further; capital planning and capital asset selection: how to make the right capital investment decisions; preparing financial plans and budgets; and principles that can be used to create accurate budgets. Course Materials Fee: Graduate Studies is pleased to be able to provide access to the Thomson Reuters Eikon online database, a required resource of this course, for a fee which will be charged at the time of registration. This fee is pending approval and subject to change. This course was previously FIN-651648.

FSMA 6055 Financial Instruments & Derivatives (3 Credits)
The course introduces students to financial instruments such as options, futures, swaps and other derivative securities; the course examines institutional aspects of the markets; theories of pricing; discusses simple as well as more complex trading strategies such as arbitrage, hedging and spread; finally the course discusses also the application of these strategies for asset and risk management. Course Materials Fee: Graduate Studies is pleased to be able to provide access to the Thomson Reuters Eikon online database, a required resource of this course, for a fee which will be charged at the time of registration. This fee is pending approval and subject to change.

FSMA 6060 Strategic Cost Analysis (3 Credits)
This course focuses on the analysis and reporting of the cost of obtaining resources and their consumption in a fashion that is explicitly directed at strategic management. It provides managers with critical analytical skills needed to survive in a highly competitive environment. Its main emphasis is on strategically manage the cost to strengthen a business competitive position and increase its value and profitability. The key elements to be studied are cost structure, value chain analysis, strategic cost management, and analysis of cost drivers in support of strategic and operational decisions. Generally, the course is about using accounting-based strategies to control costs, improve performance, justify project outcomes, and create value for the organization. Course material relies on concepts studied in financial and managerial accounting courses, and shows how managers can leverage cost analysis to better influence the outcomes of product/project development and/or management. It covers both, manufacturing and not-for-profit organizations. This course was previously MGT-650618.

FSMA 6065 Portfolio Management (3 Credits)
The purpose of the course is to examine techniques of managing portfolios (constructing, monitoring, rebalancing, and evaluating) of various asset classes. It addresses efficient risk/return allocations, stock selection, market timing recommendations to meet different investors' objectives. Additionally, students will engage in addressing possible portfolio hedging techniques relevant for different risks. This course was previously FIN-655507.

FSMA 6070 Real Estate Finance (3 Credits)
The course discusses approaches to the evaluation of real estate investment opportunities, the identification of the real estate investor's goals, discusses the economic, legal, fiscal and physical environment, and their consideration in the decision making process. The course also discusses real estate financing techniques and the secondary market for real estate financial assets including mortgage-backed securities and mortgage-backed finance. This course was previously FIN-655505.

FSMA 6075 Real Estate Law & Taxation (3 Credits)
The course supplements the real estate track with examination of legal contains of the real estate ownership and transactions affecting the real estate market. It also explores the implication of the regulatory framework of the real estate market, governmental involvement in the real estate market and liability issues related to the real estate investment and development. This course was previously FIN-655510.

FSMA 6080 International Accounting (3 Credits)
The course introduces students to the differences between accounting principles and standards across the world and their impact on decision-making process for multinational corporations and cross-border deals. This is considered essential knowledge for all professional accountants and global managers for better penetration into the world that is dominated by global businesses' competitiveness and cross-border investing and resources needs. It focuses on the enforcement status of various rules and standards and how they shape the analysis and presentation of financial data used for global managerial decisions. It emphasizes the understanding of internal and external financial communications and economics and legal mandates in various countries. In addition, the course introduces students to the international dimensions of accounting, financial reporting and financial control, foreign financial transactions and translations of financial statements, and hedging techniques. More specifically, it discusses various comparative accounting systems, international accounting convergence, and expands to the notions related to international financial reporting standards IFRS, corporate governance, international auditing, reporting and disclosure practices spanning over both developed and emerging market countries. This course is required for the certificate in Global Finance and Investment. This course was previously MGT-651642 Prerequisites: MGMT 6010 if not waived.

FSMA 6085 Behavioral Finance (3 Credits)
The course focuses on the key psychological barriers to value-maximizing behaviors along with options available for managers to mitigate these barriers. It covers the theory and practice of behavioral finance, including a history of financial bubbles, failures, financial market anomalies, and the role of heuristics ('cognitive shortcuts') and biases that drive human behavior. Other topics in this course include prospect theory, common investment mistakes, the role of randomness in finance, and practical applications of behavioral finance. The goal is to help students learn how to benefit the analysis and understanding of financial markets by using additional tools of finance. This course was previously FIN-655508.

FSMA 6090 Financial Engineering (3 Credits)
The course objective is to review and practice the main financial pricing models and optimizing techniques used in financial modeling inpractical business settings. Considerations will be given to stochastic factors, various probability predictions functions and calibration challenges. The course is highly quantitative and engages students with advanced software for simulations and programming. Students will scrutinize the applicability and limitations of the models and techniques for incorporating them into an integrated framework. It will cover the full cycle of modeling, analysis, decision and ex-post evaluation (testing). This course was previously FIN-655509.

FSMA 6095 International Financial Law & Regulation (3 Credits)
The aim of this course is to cover and address topics such as flow of capital in international financial markets, regulatory characteristics of international banking and securities markets, types of financial market transactions, techniques and instruments, banking and securities transactions, securitization and derivatives. This course was previously MGT-650619.

FSMA 6998 Individualized Studies in Finance (FSMA) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Finance (FSMA). Students have the opportunity to develop individualized studies with their mentor/advisor in Finance (FSMA). Registration for this class must be approved by the student's mentor.

FSMA 7015 Strategies of Financial Management (3 Credits)
The purpose of this course is to examine and learn best financial management practices and strategies, through analysis of key finance case studies. Students will be able to integrate best practices in financial analysis, bond and stock valuation, capital budgeting, optimal capital structure, and corporate valuation through analysis of their effectiveness in coping with operational and strategic business challenges, both local as well as global. Course Materials Fee: Graduate Studies is pleased to be able to provide access to the Thomson Reuters Eikon online database, a required resource of this course, for a fee which will be charged at the time of registration. This fee is pending approval and subject to change.

FSMA 7020 Global Financial Strategy (3 Credits)
Global financial strategies enhance business finance to operate in a global platform, make optimal investment decisions, perform valuation under financial distress, and to make value-added strategic decisions for the enterprise. Applications include large-scale investment projects, brand launches, venture capital investments, IPOs, mergers, diversi#cation decisions, R&D, expansion or resource allocation, and international joint ventures. As a capstone, the course will integrate skills required to make coherent decisions about interrelated strategic issues while designing a global financial strategy of MNEs and assessing proposals such as overseas subsidiary investment.This course is required for the certificate in Global Finance and Investment. This course was previously FIN-650620.

FSMA 7998 Individualized Studies in Finance (FSMA) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Finance (FSMA). Registration for this class must be approved by the student's mentor.

HCAN: Healthcare Analytics (Graduate)

HCAN 7010 Healthcare Analytics Capstone (3 Credits)
In this capstone course, students will delve into the complexities of the healthcare sector, applying analytical tools to real-world healthcare data. Students will be required to complete a capstone experience which tests their ability to apply analytical skills using real world data. Projects will emphasize patient outcomes, operational efficiency, and healthcare policy.

HCLM: Healthcare Leadership & Mgmt (Graduate)

HCLM 6005 Mastering Leadership in Healthcare Organizations (3 Credits)
The healthcare system is in a state of substantial change and the need for transformational and transactional skills to meet the challenges for effective organizational transitions is explored in this course. But what is the right balance between management and leadership? The Competing Values Framework (CVF) is employed as the theoretical model for explaining and identifying how tensions between transactional and transformational leadership may be reconciled. The concept of 'exceptional leader' represents an integration of the roles and functions associated with preserving order, stability, and control on the one hand, and constructing a vision, directing change, and inspiring a work force on the other. Exceptional leaders possess the capability, flexibility, and dexterity to implement a broad range of communication options to achieve organizational goals. This course provides an extensive review of the landscape of change confronting healthcare leaders and the implications for leadership roles. It identifies communication orientations and message construction strategies associated with the responsibilities of the exceptional leader in healthcare organizations.

HCLM 6010 Analysis of Healthcare Markets & Health Policy (3 Credits)
This course examines the historical development and current implementation of the United States healthcare market with emphasis on existing federal and state government policies. Emphasis will be placed on understanding the complex policy dynamics and challenges of an industry in a constant state of flux. Through readings, discussions, and written analysis assignments, students will analyze the healthcare industry from a variety of perspectives including but not limited to the development and implementation of Medicare and Medicaid, the Affordable Care Act, Health Management Organizations, and emerging population health models. The course will also allow students to evaluate the influences of private and public stakeholder interest groups on the health care market, the need for change in health care organizations, and changing societal health needs as a whole. Students will gain an understanding of and apply terminology and language essential to effective communication with stakeholders internal and external to the healthcare organization such as employees, health services administrators, and policymakers.

HCLM 6015 Health Information Management and Informatics (3 Credits)

As health care costs continue to spiral upward, healthcare institutions are under enormous pressure to create cost efficient systems without risking quality of care. Health informatics technologies provide considerable promises for achieving this multifaceted goal through managing information, reducing costs/enhancing revenue, and facilitating total quality management, continuous quality improvement programs, optimal clinical patient care and improved patient outcomes. In this course students will be introduced to the concepts and practices of health informatics. Topics include: a) an introduction to information systems and specifically to the health informatics field; b) major applications and commercial vendors; c) decision support methods and technologies; d) systems analysis, design, implementation, and evaluation of healthcare information systems; and, e) new opportunities and emerging trends.

HCLM 6020 Healthcare Economics (3 Credits)

This course is designed to provide an applied approach of economic theoretical concepts to the complex economic forces, dynamics and challenges of healthcare, an industry in a continuous state of flux. Specifically, this course applies microeconomic theory to analyze the healthcare market from the perspectives of those who demand and supply healthcare. The course will analyze the market for physicians and hospital services, as well as the pharmaceutical industry and other related industries. Analysis will focus on key principles related to supply and demand, forecasting, market incentives, pricing, asymmetry, and government intervention and regulation. From an economic perspective, the students will also have the opportunity to evaluate the structure and performance of the United States healthcare system as it compares to that of other countries globally. Discussion of empirical studies, current policy debates, and the relevance and limits of the economic approach will be emphasized.

HCLM 6023 Health Care Delivery & Reimbursement Systems (3 Credits)

This course examines the complex financial systems within today's healthcare environment and provides an understanding of the basics of health insurance and public funding programs, managed care contracting, and how services are paid. This course introduces the student to methods of healthcare reimbursement. An initiation of the student into the language of healthcare reimbursement is also included. Students will explore principles of reimbursement as it applies to various types of health care settings. This course is also designed to familiarize students with the most important principles and applications of healthcare finance, with roughly equal coverage of accounting and financial management, which will provide the student with an understanding of the health system. This perspective will enable students to understand the complex nature of health system organization and to evaluate the financial performance of healthcare firms.

HCLM 6025 Healthcare Financial Management (3 Credits)

Students taking this course will be able to make sound decisions that promote the financial well-being of a health care organization. The course covers essential concepts underlying the preparation and measurement of financial data, measurement of business operations, business valuation, financial reporting, forecasting, cost allocation and pricing, and service and product cost. It also includes examination of special reports for executive review and decisions including financial ratio management and financial condition analysis. It then progresses to the evaluation of principles governing the healthcare industry and rules and regulations in collecting, preparing and presenting financial data for healthcare providers. As students learn to use the accounting and financial reporting aspects of healthcare organizations, they also learn about the financial decisions relevant for operating budgets, capital budgets and working capital management. Issues involving long-term financing and investment as well as risk and return analysis and management, debt and equity financing, managing capital structure and cost of capital, cash flow analysis and capital projects appraisal are also covered in this course.

HCLM 6026 Comparative Health Care Systems (3 Credits)

This course provides a framework for analyzing and comparing the philosophical, policy, and economic foundations of selected health care systems around the world. The history, societal values, financing, and organization of those systems – including those from the highly industrialized sector as well as developing nations – will be examined and compared to that of the U.S. health care system. Students will explore the advantages and disadvantages of the various health care systems, focusing on the role of government; the broad landscape involving the systems' relationships among cost, access, and quality; sociological implications that influence the role of the provider and consumer; effectiveness at serving their populations' health and wellness needs; and their ability to identify determinants of health and strive for continuous improvement in outcomes. Public and social policy implications that have relevance to the U.S. model will be examined.

HCLM 6030 Quantitative Methods & Healthcare Operations Management (3 Credits)

Healthcare organizations are immeasurably complex systems and there is mounting industry-wide pressure to address the challenges of and opportunities for instituting significant operational improvements. Within the healthcare sector, operations management has several goals including reducing costs, increasing patient safety, improving clinical outcomes and quality of patient care, and improving financial performance of the organization. This course is designed to focus on the approaches and strategies for achieving these operational goals to increase the efficiency and effectiveness of healthcare systems. It provides an integrated approach and set of contemporary tools that can be used to improve the management and delivery of healthcare services and the financial performance of a healthcare organization. Topics include challenges and opportunities related to operations management in healthcare, project management, quality management tools with a focus on six sigma and lean thinking, process improvement and patient flow, capacity management, scheduling, forecasting, and supply chain management.

HCLM 6035 Healthcare Accounting (3 Credits)
This course is aimed at providing healthcare industry leaders and executives with the essential tools for setting performance goals and measurement metrics to recuperate and grow in a vast competitive industry that is sustained by high productivity and cost containment strategies. The main focus is on designing and conducting cost-effectiveness analysis in medicine and healthcare fields. It provides students with the opportunity to learn accounting principles applied in healthcare industry with all of its sectors to prepare useful information for financial and operational decision-making. Among topics covered are various healthcare payment systems and measurement, pricing models, operating and capital investments, assets management, facility programming and space management, risk-based contracting with third party payers, recognition of revenues related to various services, strategic decision and opportunity for growth, healthcare services integration versus independence, advanced cost management techniques such as total quality management (TQM); just-in-time (JIT); activity-based-costing (ABC) and process re-engineering (PR). This course was previously MGT-653511.

HCLM 6040 Competencies for Healthcare Ethics (3 Credits)
Healthcare leaders understand that their facility is often judged by how they respond ethically to the issues and conflicts that regularly occur in the delivery of healthcare services. A healthcare facility's mission and values are an integral component of its commitment to provide patient-centered care. Every institution that wishes to thrive in today's highly competitive healthcare market must find a way to incorporate ethical principles into its operation and management. Successful healthcare leaders recognize that the surest way to ensure stability and growth of their organization is to integrate ethical principles into the culture and climate of their organization. This course is designed to provide students with the knowledge, tools, and skills to more effectively address and manage the ethical aspects of healthcare management. The course explores, through real-life case studies, the key role that ethics plays in every area of the healthcare system.

HCLM 6045 Case Studies in Bioethics (3 Credits)
Bioethical conflicts in patient care present some of the most complex and challenging issues for healthcare managers and clinicians. The topics included in the course are cutting-edge issues, such as how to allocate limited healthcare resources, and whether to perform certain tests, procedures, and treatments at the beginning and at the end of life, which often involve emotional and heart-wrenching decisions. Successful healthcare leaders and organizations must be adept at identifying these ethical issues and deftly navigating through often conflicting principles and viewpoints in order to attempt to reach an appropriate and, where possible, consensus-based decision. This course is designed to provide students with a solid understanding of core bioethical principles, and to enable them to utilize their knowledge and skill in applying these ethical principles to real-life situations that arise in healthcare. This course was previously MGT-653514.

HCLM 6050 Healthcare Legal & Regulatory Affairs (3 Credits)
The law permeates every aspect of healthcare. A strong healthcare leader recognizes that he or she must feel competent in understanding how law affects the management and operation of a healthcare facility. Successful leaders in healthcare acknowledge that the surest way to ensure the stability and growth of their organization is not only to comply with legal requirements, but to also proactively identify potential legal problems and risks and undertake timely and appropriate interventions. This course utilizes real-life problems in order to provide students with a firm understanding of the nature of the legal process and the legal issues that are most likely to arise in managing a healthcare facility or department, or in supervising and engaging in clinical care. The topics included in the course cover some of the most interesting and challenging areas that arise in healthcare; however, students do not need to have any background in law to take and appreciate this course.

HCLM 6055 Healthcare Marketing Services (3 Credits)
Healthcare managers must have an understanding of various marketing concepts and tools to successfully accomplish organizational goals. Decisions involving marketing must be based on a manager's ability to link marketing strategy to the organization's products, services, and overall direction and work with managers throughout the organization in a highly coordinated manner. This course is designed to provide an understanding of the complex processes involved in Marketing Strategy. Through readings, lectures, discussions, projects and case analysis, students will learn fundamental principles of marketing planning and how to better utilize planning tools in their own organizations. We will review and analyze branding, consumer behavior, customer loyalty, and marketing segmentation strategies involving the targeting of populations and aligning products and services to meet their needs. This course provides methods to evaluate marketing performance and productivity, analyze internal and external resources, and perform a SWOT analysis; various models and methods for the promotion and positioning of health care services and products are presented. We will then focus on the importance of controlling and monitoring the strategic marketing process to ensure success. The course will also review the importance of marketing research and the analytical tools required to be successful. Students will also learn how to create a marketing plan.

HCLM 6060 Healthcare Quality Control & Compliance Risk Management (3 Credits)
This course introduces students to the unique theoretical, practical and regulatory concepts of quality control and compliance management in the healthcare industry. It focuses on tools and techniques used for quality improvement and patient safety in compliance with external quality mandates. The course explores various quality assessment measures and tools for improving healthcare services with practical real-life cases and recorded episodes for improving and sustaining a quality control system. Among various topics covered are managing the use of healthcare resources and quality management environments, performance improvement tools, quality project teams, measuring and improving patient safety, measuring and evaluating quality performance and continuous improvement.

HCLM 6065 High Performance Leadership (3 Credits)
The rapid change in healthcare and the increasing complexity and size of healthcare organizations require high performance leaders. This course will examine important current issues that will affect healthcare for years to come. Particular areas of focus include (1) leading an organization in the setting of strong tradition and tumultuous change; (2) using data and evidence as bases of managerial decision-making; and (3) using quality as the critical parameter of institutional effectiveness. This course also covers evidence-based and cost-efficiency guidelines and solutions to managing and leading value-based accountable care organizations. The course includes readings, discussion of specific topics related to these broad leadership problems, and preparation of a project that could be implemented in the student's own organization. This course was previously MGT-653513.

HCLM 6070 Human Resources Competencies in Healthcare (3 Credits)
The strategic role of HR is important in complex healthcare organizations in light of the need for improved healthcare delivery models. This course stresses the principles and techniques used in the attraction, retention and evaluation of employees in healthcare organizations. It focuses on the technical, legislative, and strategic issues associated with the effective management of human resources. Using the SHRM Competency Model, the course facilitates the knowledge of concepts, theories and practices of human resources management and provides insights into practices used by various healthcare organizations to deal with challenges in the workplace. Students will learn how HR practices are deployed in an industry characterized by: uncertainty and flux; a highly diverse labor market; realignment of organizational systems; technological advancements which influence the management of information, human capital, and clinical activity; shifts toward systemic integration; and the adoption of best practice models which place an increasing emphasis on quality of outcomes. Major discussion will include strategic human resources management and emerging issues in health care human resources management. Through readings, research, analysis, discussion and assignments, students will acquire skills and develop an in-depth understanding of HR practices and strategic roles in healthcare organizations. This course was previously MGT-653503.

HCLM 6075 Managing Healthcare Systems (3 Credits)
This course surveys the foundation, evolution, direction, and core characteristics of healthcare systems and organizations on the United States. The course examines the management of health systems and organizations. Through the use of active discussions and case study analysis, the course introduces students to key strategies used by healthcare organization to effectively and efficiently manage in a complex modern health system. Students will gain knowledge and skills that will help them to understand, evaluate, and manage decision-making processes in health care organizations. Given the critical importance of communication in leading and managing organizations, particular attention will be on competencies related to the nature of effective and timely communication, strategies for using informal and formal forms of communication, personnel performance management, and communicating with external stakeholders and communities of interest.

HCLM 6080 Health Policy & Management (3 Credits)
Policy and Management explores the complicated underpinnings and current develop of health policy in the United States. Policy as a concept in part is based on the premise of decisions that are made on how best to use valuable and often limited resources. This course evaluates how policy and policy decision- making are fundamentally rooted in layers of politics, overlapping spheres of influence, and cultural considerations. The course ground students with a review of political and cultural ideology in the United States and its historical and current impact on healthcare policy. Through readings, discussions and written assignments, students will develop an applied understanding of the health policy process, how best to improve healthcare quality and access to care, with the aim to improve health outcomes. Some of the topics covered in the course include unearthing the "why and why not" of what policies are working, best strategies to use in policy development, how analysis of determinates of health can guide strategic policy, and whether the U.S. really does spend more money than other countries on healthcare.

HCLM 6085 Governance & Trusteeship (3 Credits)
The governing board of a healthcare organization holds an extraordinary responsibility for establishing the organization's strategic direction and organizing a management structure designed to execute the strategy and align it with the community's healthcare needs. This course focuses on the purpose and key functions of a healthcare organization's governing body, including: establish mission, purpose, vision, and core values; develop a management structure and selection of executive staff; authorize strategic goals and strategies; ensure functional effectiveness of clinical care and quality management systems; establish and implement systems to monitor and evaluate all facets of organizational performance; maintain fiduciary responsibility; evaluate and authorize financial and budget plans; ensure compliance with legal, ethical, and regulatory standards. This course was previously MGT-653509.

HCLM 6998 Individualized Studies in Healthcare Leadership and Management (HCLM) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Healthcare Leadership and Management (HCLM). Please contact your mentor/advisor for more details.

HCLM 7005 Healthcare Strategic Communication (3 Credits)
This course explores corporate communication as a strategic area of healthcare management. The effectiveness of corporate communication is largely determined by the development of an optimal balance between a coordinated, centralized perspective and a network of flexible, decentralized operations. This balance is vital for keeping communication programs and activities consistent across the continuum of care and aligning them with desired patient outcomes. Topics include inter-professional collaboration to improve the patient experience and overall quality of care, managing hospital reputation using effective communication strategies and social media tools, provider-patient communication and hospital ratings, communication with stakeholders, and identifying resilience strategies for disruption management.

HCLM 7010 Evidence-based Decision Making in Healthcare Organizations (3 Credits)

This course is the first in a two part capstone sequence. The field of healthcare is shifting rapidly to an evidence-based paradigm. As such, strategic decisions are increasingly grounded in models of provability. Emerging healthcare leaders are required to demonstrate the workability of their decisions in which they demonstrate an aptitude for forecasting outcomes and measuring results. In this course, students will develop competencies in framing and investigating healthcare management decisions as they initiate the development of a "Master Project" or strategic plan. Students will articulate issues of strategic value as they learn how to use critical evidence to map healthcare problems and develop solutions for their organizations (or an organization of their choice). In this first part of the capstone sequence, students will organize the framework for a final project which will integrate concepts, principles, and methodologies learned in coursework throughout the program.

HCLM 7015 Strategic Executive Leadership for Healthcare Organizations (3 Credits)

This course is the culminating experience for students seeking to earn the MBA in Healthcare Leadership. It is the second in a two-course sequence which provides students an opportunity to integrate knowledge and competency development in leadership, decision making, planning, and managerial skills through the development of a comprehensive strategic plan. The strategic plan will be based on students' (1) learning throughout the program; (2) application experiences; (3) integration of critical leadership prerogatives and management tools; (4) assessment of the healthcare organization in the broader economic and policy environment; (5) analysis of the value of the organization's resources as compared to the competition; (6) identification of alternatives that hold the potential for solving the strategic problem facing the organization; and (7) the selection of the alternative that will best leverage the healthcare organization's core competencies to ensure sustainability. Prerequisite (must complete before registering): HCLM-7010 (Evidence-based Decision Making)

HCLM 7998 Individualized Studies in Healthcare Leadership and Management (HCLM) (1-8 Credits)

Registration for this class must be approved by the student's mentor.

INFT: Information Technology (Graduate)

INFT 6015 Database Design and Management (3 Credits)

This course provides an in-depth treatment of working with Relational DBMS, and manages databases with particular reference to MySQL using PHP, It also provides some coverage of all the developments, issues, challenges and directions in securing databases. Some current trends in database management systems, such as No-SQL database systems will also be discussed.

INFT 6040 Advanced Internet Application Development (3 Credits)

Students will gain hands-on experience with HTML5 and CSS3 in this course and learn how to create and build web sites. They will also learn how to program with JavaScript & jQuery and build interactive web pages and user-centered interfaces that support responsive design. The study will also teach students how to use PHP to create dynamic web sites and provide them with the foundational knowledge in database-driven web sites developed with the help of MySQL and SQL.

INFT 6045 IT Security Policies & Procedure (3 Credits)

The course provides a system and management view of information security policies and methodologies, regulator mandates, business drivers, legal considerations and the evolving role of IT leaders to plan and implement successful sets of systems security procedures and frameworks.

INFT 6050 Mobile Systems Development (3 Credits)

The course provides an in-depth coverage of benefits and challenges of mobile system planning, design, development, and management. Students will learn how to design a mobile business system that motivates business innovation and delight their users, that can be deployed on multiple mobile platforms.

INFT 6055 Digital Forensics (3 Credits)

Identifying, preserving and extracting electronic evidence. Students learn how to examine and recover data from operating systems, core forensic procedures for any operating or file system, understanding technical issues in acquiring computer evidence and how to conduct forensically sound examinations to preserve evidence for admission and use in legal proceedings.

INFT 6065 Ethical Hacking and Network Defense (3 Credits)

This course provides an in-depth analysis of how to effectively protect computer networks. Students will examine tools and penetration testing methodologies used by ethical hackers. In addition, the course provides a thorough examination of what and who an ethical hacker is and how important they are in protecting systems from cyberattacks. An analysis of federal and state computer crime laws will be conducted, as well as changes in penalties for illegal computer hacking. Prerequisites: INFT 6132 Network Administration .

INFT 6070 Cybersecurity Risk Analysis and Management (3 Credits)

This course examines risk management and its application to Cyber Security. The course will help the student identify information security risks, evaluate those risks, and make risk-based decisions given organizational resource constraints. Students will learn foundational concepts in risk management and will be introduced to risk management standards and approaches, both qualitative and quantitative, for risk analysis. In this course we also explore key cyber security frameworks such as the ISO 27001 security standard and NIST, as well as skills relevant to be an auditor. The ISO 27001 is a globally recognized standard for the implementation of cyber security controls. Prerequisites: INFT 6142.

INFT 6122 Essentials of Information Technology (3 Credits)

This first course in information technology develops foundational skills in computer system and basic computer programming. Students will learn Introduction to computer information technology and basic programming: Architecture of digital computers, design of algorithms for solving various problems, and basic skills in computer programming. Algorithm design, flow charting, and debugging; elements of good programming style. Course may be instructed in any programming language.

INFT 6127 Information Technology in Organizations (3 Credits)
In this course, students will learn about the foundations of effectively managing and utilizing information in a business environment. The course will help them gain knowledge and skills to be able to take active roles in making IS decisions. Students will also gain a clear understanding of how information systems can not only support or limit the operations of a business, but also provide the business with new opportunities. IT students need to become knowledgeable and active participants in information systems decisions. The course help student begin to form and point of view of how information systems will help, hinder and create opportunities for any organizations. It is intended to provide a solid foundation of basic concepts relevant to using and managing information.

INFT 6132 Network Administration (3 Credits)
This course focuses on the planning, design, configuration, operation, and management of computer networks containing data communication devices, servers, workstations, and networked applications and support systems. It introduces students to administrative techniques inherent to basic operating systems, and also to enterprise management systems required by larger organizations. Students examine and discuss issues of scalability, performance management, and integration of internal resources with external resources such as cloud-based systems. Plan, prepare, and operate various enterprise-grade network management systems such as virus protection, intrusion detection, and workstation, server, and work performance, and fault-monitoring systems.

INFT 6137 Enterprise Systems Architecture (3 Credits)
The course offers broad systems perspective that provides a holistic approach to systems architecture. The course covers the latest in new and emerging technologies. All instructional contents are designed to give students the appropriate level and coverage of technical topics needed for ongoing professional success. The learning material are in simple terms to provide a holistic approach to both hardware and software.

INFT 6142 Computer Systems Security (3 Credits)
The course covers today's newest technologies, attacks, standards, and trends. The course contents include complete, timely coverage of all aspects of computer security, including users, software, devices, operating systems, networks, and data. Reflecting rapidly evolving attacks, countermeasures, and computing environments. The introduces best practices for authenticating users, preventing malicious code execution, using encryption, protecting privacy, implementing firewalls, detecting intrusions, and more. Students start by mastering the field's basic terms, principles, and concepts. Next, they apply these basics in diverse situations and environments, learning to "think like an attacker" and identify exploitable weaknesses. Then they will switch to defense, selecting the best available solutions and countermeasures. Finally, students will go beyond technology to understand crucial management issues in protecting infrastructure and data.

INFT 6147 Enterprise Information Security Management (3 Credits)
Students will learn about the conceptual foundations and key elements of IT security and look at its various implementations from physical security to application development security in this course. They will gain a clear understanding of how to recognize and address today's IT security vulnerabilities in different platforms from cloud-based to mobile through effective management strategies. The course will also teach students how to develop information governance policies and procedures for companies to help them safeguard their information while conducting their operations.

INFT 6152 Enterprise Web Systems (3 Credits)
The course provides the knowledge and skills you need to know to for scale products and services for any requirement. This course contents covers new technologies, strategies, and lessons, as well as new case studies from the real world IT practice. The impact on scalability, including architecture, process, people, organization, and technology. Students will learn updated strategies for structuring organizations to maximize agility and scalability. Using this guide's tools and advice, students can systematically clear away obstacles to scalability—and achieve unprecedented IT and business performance.

INFT 6157 Data and Application Security (3 Credits)
The course provides an in-depth coverage of all the developments, issues, challenges and directions in securing data and applications. It focuses on threats to data and applications security including access control violations, integrity violations, unauthorized intrusions and sabotage. Students will learn how to choose a security strategy and how to apply it.

INFT 6996 Special Topics in INFT (3 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

INFT 7005 Cyber Security Integration Strategies (3 Credits)
The new emphasis on physical security, resulting from the terrorist threat, has forced many cyber security professionals to struggle to maintain their organization's focus on protecting information assets. In order to command attention, they need to emphasize the broader role of cyber security in the strategy of their companies. Until now, however, most books about strategy and planning have focused on the production side of the business, rather than operations. The required readings in this course will integrate the importance of sound security policy with the strategic goals of an organization. It provides IT professionals and management with insight into the issues surrounding the goals of protecting valuable information assets. The text reiterates that an effective cyber security program relies on more than policies or hardware and software, instead it hinges on having a mindset that security is a core part of the business and not just an afterthought.

INFT 7010 Information Integration Strategies (3 Credits)
Students will develop strategies for the successful adoption of an enterprise 3.0 paradigm and the technical solutions that best apply in specific situations. Students will find clear guidelines for using Web 3.0 technologies and standards in a productive way to align with business goals, increase efficiency, and provide measurable bottom line growth. Foster collaboration and accelerate information dissemination with blogs and wikis Implement strategies to achieve business intelligence, analytics, and semantic web goals.

LABR: Labor Studies (Graduate)

LABR 6010 Work and Labor Studies (3 Credits)
This is a required course available for matriculated Labor Policy students only. The purpose of this course is to introduce students to the study of labor and policy. First, it will introduce students to some of the fundamental characteristics of the American working class and unions. Secondly, it will introduce students to a variety of labor problems that have arisen in the past twenty years due to the global economy, new technology and other developments. Thirdly, the course will develop the students' skills in writing at the graduate level, in doing academic book reviews, and in doing policy analyses.

LABR 6015 Labor Policy in America (3 Credits)
This is a required course available for matriculated Labor Policy students only. This course is designed to familiarize students with the political institutions, processes, and values of the American political system. More specifically, it will use contemporary issues and policies to demonstrate and explore the relationship between the American labor movement, political parties, the electorate, and the national government. The course is also designed to give students experience in researching the formation, implementation and impact of federal labor policy. This course was previously LAB-630542.

LABR 6020 Working in America (3 Credits)
How is labor dealing with the new challenges it faces in organizing, bargaining, servicing members, and acting politically? Among the challenges are those posed by increasing numbers of immigrants, women, and young workers in the workforce. At the bargaining table, the challenges include demands for wage cuts, two-tiered wages and benefits, cuts in healthcare and other benefits. There are new demands from employers and employees for family care and flex-time. There are bargaining partners who face bankruptcy and government and union-sponsored bailouts. The labor movement and its partners thus face a range of new and emerging issues. This is a required course and available for matriculated Labor Policy students only.

LABR 6025 Labor & Employment Relations (3 Credits)
This course explores the development and context of collective bargaining and labor-management relations in the United States. This includes the historical development of the labor relations process, the participants in the process, the legal framework for collective bargaining, and dispute resolution. This course also focuses on the social and economic impact of labor-management relations. This course was previously LAB-630545.

LABR 6030 Sociology of Work: Human Resources (3 Credits)
The course will provide the student with an overview of some of the main topics associated with the social organization of work. We will begin by exploring the historical foundations of the contemporary workplace and draw on the theories of Karl Marx, Max Weber, Frederick Taylor and Harry Braverman, who will provide a conceptual understanding of workplace relations. In the second part of the study, we will look at the question of social class and how this structures one's opportunities in the workplace and outside it. We will also explore the question of the global economy, types of work and the routinization of work. In the third part of the course, we will then turn our attention to exploring contemporary research on the workplace as it affects family life, and think about the ways in which inequality is perpetuated through contemporary arrangements of paid and unpaid labor, as well as more generally, the question of balancing work and family life. A guiding question throughout the course will be to ask what is the impact of work on human relationships, and in particular, how forms of social inequality are produced and perpetuated in the workplace and how human relations are structured in these workplace settings. This course was previously LAB-630507.

LABR 6034 American Capitalism (3 Credits)
This course examines the rise of business and free market capital in the United States from the time of European colonization to the twenty-first century. It covers key themes including the role of the US Constitution in shaping private property rights, the role of slavery in American capitalism, expansion from the Atlantic to Pacific oceans, the development of management, the shift from artisan to industrial productions methods, the creation of consumer culture, and the ongoing relationship between capital and the state. The course will also reveal how those themes were further shaped by gender, race, class, and ethnicity.

LABR 6040 Labor Law (3 Credits)
This course considers the history and principles of federal labor relations law and its relevance to both private and public sector labor relations. The text is prepared by the Labor Law Section of the American Bar Association and is the standard authority in the field. We will gain an overview of the labor law and the parameters of decision making, as established legislatively, and by the National Labor Relations Board and the Courts, which have guided the course of labor law in the United States. This course was previously LAB-630534.

LABR 6050 Government, Work, & Labor (3 Credits)
This course is designed to provide an overview of bargaining in the public sector. It deals with major policy issues related to public sector bargaining, with the environmental factors influencing public sector bargaining, with bargaining techniques, and with dispute resolution in the public sector. This course is required for the Work & Public Policy Advanced Certificate program.

LABR 6060 Policy Formation in Unions (3 Credits)
For the past decade, unions have faced difficult times: declining memberships, corporate re-structuring, demands for concessions, hostile government policies, failures of labor law, open union busting, foreign competition, new technology, and growing numbers of women, minority, and part-time workers. The purpose of this course is to examine some of the recent problems faced by union policy makers and some of the new policies that they are developing to deal with these problems. This course was previously LAB-630503.

LABR 6065 Contemporary Issues in Public Personnel Management (3 Credits)
This course explores current and emerging personnel management issues in the public sector. This includes issues like the public sector budget process, generational change, differences within the public sector workforce, and training and workforce development issues. This course was previously SOC-620572.

LABR 6070 Theories of the Labor Movement (3 Credits)
In this course we will examine a wide variety of theories that attempt to explain why labor unions have arisen, why they take the form they do, why they behave the way they do, and what role they have under capitalism. We will consider such theorists as Karl Marx, V.I. Lenin, John Dunlop, Selig Perlman, Thorstein Veblen and Pope Leo XIII. This course was previously LAB-630539.

LABR 6075 Global Work (3 Credits)
This is an elective course which studies the place of labor within the international economy and the history, development, and formation of that economy since 1945. We will examine the historical development and then look at the consequences for labor of economic development especially as this involves the place of manufacturing in national economics and global investing, especially the current expansion of foreign investment within the United States. This course was previously LAB-630522.

LABR 6998 Individualized Studies in Labor (LABR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Labor (LABR). Please contact your mentor/advisor for more details.

LABR 7010 Final Project - Professional Project: Work and Labor Policy (3 Credits)
As the concluding study in this Master of Arts program, the student will complete a culminating project, in which he/she engages in a sustained examination of a critical question or issue related to this program. The final project will take the form of a policy memorandum. This course is designed to guide the student through the implementation of a policy memorandum. Policy Memorandums are not published in the ProQuest/UMI service. Prerequisites: LABR 6010, PPOL 6007, LABR 6015, PPOL 6021 (preferred) OR PPOL 6020 (for students intending to pursue doctoral studies).

LABR 7015 Final Project - Thesis: Work and Labor Policy (3 Credits)
As the concluding study in the masters' program, students will complete a culminating independent research project in the form of an academic thesis, in which they engage in a sustained examination of a critical question or issue related to their program. In a thesis, the student is expected to make a contribution to the current body of knowledge in a scholarly field. To do that, students may conduct an original investigation or develop an original interpretation of existing research and/or literature. A thesis is a scholarly piece of work that systematically and analytically explores a specific topic or question. It is an in-depth investigation that contributes new knowledge to a field, and can be either theoretical or empirical. Writers of theses make appropriate inferences based on a deep analysis of the chosen topic or question. The thesis is the best choice of final project for students with plans to continue their studies toward a doctorate. Completion of the thesis requires an oral defense. All theses are published in the ProQuest/UMI service. Prerequisites: Students must have taken all required core courses..

LABR 7998 Individualized Studies in Labor (LABR) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Labor (LABR). Please contact your mentor/advisor for more details.

LACS: Liberal Studies (Graduate)

LACS 6005 Foundations of Liberal Studies (3 Credits)
This is a required course available for matriculated MALS students only. In this course, students will explore the history of liberal studies and the controversies surrounding its composition and meaning in American universities and society. Students will have the opportunity to develop their own historically informed approaches to liberal study and apply their learning. Please Note: This course requires attendance of a synchronous, virtual residency usually held on a Friday through Saturday before the term mid-point. The dates of this activity will be announced when the course is offered. This course was previously LIB-640501.

LACS 6006 Learning with Emerging Technologies: Theory & Practice (3 Credits)
In this course students examine research, theory, and practice of using technologies for improving teaching, learning, and communications in varied settings, including K-12, higher education, public and private organizations and communities. Students experience and explore how technology can help support social, emotional and motivational learning. This course immerses students in different digital communities and virtual environments and asks them to analyze and apply current technologies to their own personal or professional settings. (Occasional synchronous meetings.)
Cross-listed with EDET 6005.

LACS 6010 Interdisciplinary Learning Design (3 Credits)
In this virtual residency-based course, students will examine the concept of interdisciplinarity and establish the theoretical frameworks for their educational plans in the MALS program. Their work will culminate in the development of a degree program plan and rationale essay, presenting a coherent program of courses that lead to a tentative capstone focus. The students' activities, supported by their advisors, will enable them to articulate broadly the theoretical and methodological approaches that may be relevant to their respective fields of inquiry; understand research and critical methodology/ies in a field; select and develop skills in appropriate methodologies; and understand what it means to make a substantive knowledge claim in a field. This course was previously LIB-640676 Please Note: this course requires attendance at a synchronous, virtual residency usually held on a Friday through Saturday before the term mid-point. The dates of this activity will be announced when the course is offered. Prerequisites: LACS 6020 OR LACS 6025 OR LACS 6030 OR LACS 6035 AND LACS 6005.

LACS 6015 Exploring your Field: The Academic Literature Review (3 Credits)
In this course, the student will begin to lay the foundation for future work in his or her area of interest through the examination of an individualized topic relevant to the student's focus in the MALS program by means of completing a literature review. The literature review is a critically organized interpretation of secondary criticism on a specific topic; it is not a research paper nor is it an annotated bibliography. The literature review course will help the student develop relevant research, writing and analytic skills in order to define the topic; research and identify relevant sources and journals in the chosen field; identify key thinkers, debates, and the theoretical framework of a topic; develop appropriate methodological and writing skills; follow proper citation form; and develop a critical point of view. It is an important demonstration of graduate level writing and analytic ability that will be reviewed, along with the degree plan developed in Perspectives, by a MALS Program Review Committee before the student proceeds to the next stage of the program. Pre-Requisite: LACS-6005 This course was previously LIB-640682.

LACS 6020 Models of Critical Inquiry: Art Aesthetics & the Body (3 Credits)
This track of Models of Critical Inquiry examines ways in which knowledge is produced and how it has been used, comparing a classic framework from the history of science and ideas with counterpart developments in the Arts. Art's paradigmatic moves in the last 25 years challenge 'high/low' aesthetics, what art is, and the sites of production and reception of the body, in a scene at once localized and distanced via media. This is a required course and is available to matriculated MA Liberal Studies students only. Please Note: this course requires attendance of a synchronous, virtual residency or executive retreat usually held on a Thursday through Saturday before the term mid-point. Dates of this activity will be announced when the course is offered. Corequisites: LACS 6005 or by permission of program coordinator.

LACS 6025 Models of Critical Inquiry: Landscapes of Learning (3 Credits)
This version of Models of Critical Inquiry focuses on the relationship between schooling and society, and introduces students to major competing traditions of educational and social research. Students explore different perspectives on the dynamics of learning, and consider the role of race, class, ethnicity, language and gender on the experience of students and teachers. We learn how the assumptions one makes about the nature of knowledge influence our choices of what to focus a study upon, how we study it, and what interpretive framework we use to draw conclusions. This is a required course and is available to matriculated MA Liberal Studies students only. Please Note: this course requires attendance of a synchronous, virtual residency or executive retreat usually held on a Thursday through Saturday before the term mid-point. Dates of this activity will be announced when the course is offered. Corequisites: LACS-6005 or by permission of program coordinator This course was previously LIB-640505.

LACS 6027 Models of Critical Inquiry: How We Know (3 Credits)
This track of Models of Critical Inquiry will examine questions of epistemology and knowledge through the question of "how do we know?" We will be looking at three broad areas of knowledge production and dissemination: science, story, and art. The course will examine how each of these areas functions as a way through which we know, engage, and understand the world. This is a required course and is available to matriculated MA Liberal Studies students only. Please Note: this course requires attendance of a synchronous, virtual residency or executive retreat usually held on a Thursday through Saturday before the term mid-point. Dates of this activity will be announced when the course is offered.

LACS 6030 Models of Critical Inquiry: Relationships to the Past - History & Culture (3 Credits)
This track of Models of Critical Inquiry will examine the paradigm shifts in how history is understood, constructed, and viewed today as well as considering the concept of social construction in our discussions of history. We will be looking at primary source materials, most often in a comparative manner and will be considering the place of oral history and its related narratives as well. The course will allow each student to follow his/her own particular interests after engaging in reading and discussion of some common resources, both primary and secondary. The key concept guiding this course is that history is really 'story' (history without the 'hi-'), and the question is whose stories from where and when. This is a required course and is available to matriculated MA Liberal Studies students only. There is a residency requirement with this course. Corequisites: LACS 6005 or by permission of program coordinator.

LACS 6035 Models of Critical Inquiry: Science & Society (3 Credits)
This track of Models of Critical Inquiry will study how politics and economics interact with science in the search for and production of knowledge. Some of the questions we will engage include: how do we know, and what can we know? What is objectivity? What is the interaction between knowledge and power? How should we understand current struggles around such issues as intelligent design, stem cell research, invasive species, or the homosexual gene? This is a required course and is available to matriculated MA Liberal Studies students only. Please Note: this course requires attendance of a synchronous, virtual residency or executive retreat usually held on a Thursday through Saturday before the term mid-point. Dates of this activity will be announced when the course is offered. Corequisites: LACS-6005 or by permission of program coordinator This course was previously LIB-640509.

LACS 6050 Seminar in American Studies (3 Credits)
American Studies is an interdisciplinary field of study that looks at the literature, history, art, religion, media, film, policy, face, and culture of the United States. Using critical and cultural theory, the field interrogates what it means to be an American and what it means to understand Americans and the Americas. In this course, we will consider the beginnings of the field of study known as American Studies, as well as several distinct literary and historical moments. Each unit will focus on a different vision of America (and American Studies). The course will also develop students graduate level reading, writing and analytic abilities and familiarize students with resources in the field. This is a required course of the American Studies advanced certificate. This course was previously LIB-640660.

LACS 6055 American Studies: Theories & Methods (3 Credits)
This course is designed to give the student an exposure to the history, theories, and methods of the changing and developing discipline of American Studies. American Studies has evolved to be a dynamic discipline engaging the multiplicity of American identities and the role of shifting global influences on American identity and national formation. In its theoretical approaches and methodological commitments, American Studies exists at the cutting edge of academic work. From its roots in the Myth-Symbol school, American Studies has gone on to embrace developments in literary and cultural theory and adapt them to it subject focus. Through a rich array of readings and engagement with primary sources, this course will help the student develop the skills and background of a practicing scholar in the field. This is a required course of the American Studies advanced certificate. This course was previously LIB-640661.

LACS 6060 British Women Writers (3 Credits)
This course will look at 19th and 20th-century British novels by and about women. How do women reconcile traditional social roles of wife and mother with their personal desires as women, as intellectuals, and as individuals? How do issues of class and gender affect women's sense of identity and self-realization? We will explore themes of identity and difference, resistance and transformation, silence and voice, self-definition and social identity in works by Jane Austen, Charlotte Bronte, Emily Bronte, George Eliot, Mary Shelley, and Virginia Woolf. We will also consider the critical context of such theorists as Elaine Showalter, Sandra Gilbert and Susan Gubar, Nina Baym, Annette Kolodny, Judith Butler, Nina Auerbach and Nancy Miller among others.This course satisfies one 3-credit elective requirement of the Women and Gender Studies advanced certificate. This course was previously LIB-640582.

LACS 6065 Fiction Writing (3 Credits)
The goal of this course is to help students develop and expand their abilities as writers by looking at some of the essential elements of fiction in greater depth. This course is intended to provide advanced students of fiction with the opportunity to diversify, extend and deepen their work. Students in this study will focus on both the craft and process of creating a compelling story, using intuition, attention to detail and fiction writing techniques. Experimentation with language and writing techniques is encouraged. This course was previously LIB-640574.

LACS 6070 Creative Nonfiction Writing (3 Credits)
Creative Nonfiction: Like journalism it traffics in reality, reporting, and facts; unlike journalism, it values honesty over objectivity. Another essential difference is that creative nonfiction writers may not find themselves directed by the requirements of argument, but struggling with metaphor, dialogue, point of view, and other elements of composition associated with poetry, fiction and drama to create and explore their experience. Where standard nonfiction likes explanation or exposition that focuses on concepts, ideas and facts, creative nonfiction uses story, imagery, quotations, descriptions and the personal voice of the engaged author to bring experience to the reader. The assignments are designed to help students learn to function like working writers: that is, as they compose their works, they are also studying other writers and specific sub-genres as well as familiarizing themselves with specific elements of nonfiction (literal vs. invented truth, voice, memory, composing processes, relationship to other genres). This course was previously LIB-640572.

LACS 6075 Cultural and Visual Studies (3 Credits)
The objectives of this course are to acquaint students with the history and approaches that have characterized cultural criticism. Critical studies in this course form an intersection of types, including both cultural studies generally and critical social theory in particular, but with most attention devoted to forms of criticism borrowed broadly from a selection of theories in literature, philosophy, arts, and anthropology. While all students will begin with common, required readings, they will narrow their focus with the mentor's input and guidance and complete a final term project well-integrated with their overall program goals. This course was previously LIB-640550.

LACS 6080 Cultural Theory of Dance (3 Credits)
The goal of the course is to gain a current understanding of modern, postmodern, and contemporary theatrical dance studies from cultural theory, embodiment, and a chronology of social and aesthetic shifts from the 20th century through recent decades. Readings address modernism, postmodernism, difference, and cross-cultural issues of movement in performance. Students write two critical review essays from directed reading sources, also choosing a third project making and analyzing a performance piece, or doing a multiple critical review of several performances with an integral theme. Alternately, they write a research project approved by the instructor.

LACS 6090 Culture of the Jazz Age (3 Credits)
This course will look at the culture of America in the 1920s known as the 'Jazz Age.' We will look at the emergence of what Gertrude Stein termed the 'lost generation' writers after World War I such as Ernest Hemingway, F.Scott Fitzgerald, and T.S. Eliot; the flowering of African-American literature and culture known as the 'Harlem Renaissance' with such writers as Zora Neale Hurston, Langston Hughes, and Countee Cullen; and the artistic contributions of such jazz legends as Duke Ellington, Louis Armstrong, and Dizzy Gillespie and blues singers Bessie Smith, Josephine Baker, and Billie Holiday. This course satisfies one 3-credit elective requirement of the American Studies advanced certificate. This course was previously LIB-640629.

LACS 6095 Seminar in Women's & Gender Studies (3 Credits)
This course offers an interdisciplinary approach to the study of gender and identity from a cultural and sociohistorical perspective. We will look at Women's and Gender Studies as an evolving field of study and explore the multiple voices that have shaped the conversation, past and present. Issues of gender equality, women's suffrage, the women's liberation movement, issues of gender and work, concepts of family, gender and violence, health and reproductive rights, representations of the body, gender and sexuality, gender, race and ethnicity, global feminism and activism will be considered. Authors such as Mary Wollstonecraft, Margaret Fuller, Virginia Woolf, Simone de Beauvoir, Betty Friedan, Kate Millett, Audre Lorde, Adrienne Rich, bell hooks, Angela Davis and Judith Butler will be examined. Attention will be paid to analysis of gender and sexuality in relation to race, ethnicity, class and national and transnational discourse. The student also will develop graduate-level research, writing and analytic abilities and become familiar with resources in the field of women's and gender studies. This course was previously LIB-640654.

LACS 6100 Diagnosing Desire: Gender & Medicine in US History (3 Credits)
From the 19th century on in the U.S., the profession of medicine has played an increasingly important role in naturalizing the social constructions of gender and sexuality. From the development of mid-19th century gynecological surgeries and treatments to curb female sexual drives which were perceived as socially dangerous, through the forced sterilizations of the eugenics movement, to the involuntary treatment of intersex infants in the present, medicine has had an important role in regulating gender and reinforcing social gender roles. At the same time, medicine has had potentially liberatory effects on social sexual restraints and provided a public arena to contest repressive social practices. From the development of birth control to the women's health movement, medicine has been used to reframe social debates on acceptable sexual beliefs and practices. This course satisfies one 3-credit elective requirement of the American Studies or the Women's and Gender Studies advanced certificates.

LACS 6115 Feminist Theory (3 Credits)
This interdisciplinary course explores a selection of issues central to feminist theory, such as ideologies of woman and man, sexual politics, the political economy of patriarchy, the construction of knowledge, and the intersections of gender and sexuality, race, ethnicity, dis/ability, age, nationality, class, queer theory, and other aspects of social identity. We will examine the various strategies of feminist theorists and debates within the field of feminist scholarship. We will develop a strong theoretical base for the analysis of ideology, culture, and texts in order to take action as critical thinkers, and we will apply feminist theory to our daily lives. This course can be taken as one of the core courses in the Women's and Gender Studies Advanced Certificate. This course was previously LIB-640655.

LACS 6120 Consumer Psychology (3 Credits)
Our consumer lifestyle is part of our sense of self, our social identity, and our satisfaction with life. In this study, we will examine psychological aspects of money and how we spend it, materialism, variations among types of consumers as well as different populations of consumers, advertising, the relevance of consumption for self-definition, and the role of consuming in the search for well-being and happiness. There are six sets of readings that are accompanied by an introduction to the topics and questions for students to answer in writing. This course was previously LIB-640662.

LACS 6122 19th Century US Culture & Society (3 Credits)
This course is divided into two parts. In the first part the student will read and respond to several monographs that lay out the larger themes of 19th century US culture and society— the rise of labor; changes in the economy; race and slavery; territorial expansion; changes in the home; and industrialization. We will engage works by scholars such as Ronald Takaki, Nell Painter, David Roediger, Leo Marx, or Stephanie Coontz. In the second half of the study, the student will in consultation with the instructor, develop a research bibliography and produce a polished historical essay on a topic of their own choosing using the first readings as background and contextualization. This study is geared towards public historians, history teachers, historical novelists, and students who are interested in deepening their understanding of American society and culture through historical study.

LACS 6127 Medicine & Cultural Diversity (3 Credits)
This course will build on concerns introduced in the first study. We will aim to develop practitioners' awareness of cultural diversity factors in medicine nationally and internationally, as well as how the legacies of U. S. medicine may still complicate relationships between physicians and patients. Through an examination of historical and contemporary issues, this study seeks to foster an awareness and sensitivity to issues of diversity—locally, nationally, and globally. From the use of slaves as medical test subjects in the U.S. to international issues of surrogacy, this course seeks to explore the complex and sometimes contradictory role that medicine has had as it has shaped and been shaped by social attitudes and politics.

LACS 6130 Gender Race & Nation (3 Credits)
This study will examine the interconnected nature of the ideology of the nation state and its reliance on systems of power based on naturalized hierarchies of gender and race. Students will read the work of such theorists and historians as Anne McClintock, Ann Laura Stoler, and Margo Canaday to gain an understanding of the relationship between feminist theory and praxis while engaging topics that include a critical assessment of the concept of 'universal sisterhood' in the context of colonial power, the politics of the nation-state, and globalization. This course satisfies one 3-credit elective requirement in the Women's and Gender Studies advanced certificate. This course was previously LIB-640514.

LACS 6132 Origins of Inequality: Issues of Race & Immigration in the US (3 Credits)
Geographically based dramatic differences in educational opportunities in the US are no surprise to anyone. We have come to accept these differences as natural and inevitable. However, these differences have a historical and political basis. This study is intended to offer students a historical approach to understanding the roots of educational inequality in the 20th and 21st century United States. The study will begin with general readings exploring immigration and racial issues in US history. The second part of the study will apply these general issues to their specific expression in education. The end of the study will ask the student to reflect on how these issues affect their own district and home.

LACS 6135 Global Feminist Movements (3 Credits)
This course aims to answer the question: how have women organized as women to challenge unequal gender power relations and to promote progressive social change in different global locations? This course explores contemporary global feminist movements from historical, sociological, political and cultural perspectives. We will examine global feminist movements as a particular type of global social movement in theory and practice, and in particular we'll examine how global feminist movements addressed issues of religion and cultural tradition, human rights, and the environment and sustainable development, in global regions including the Middle East, Latin America, and in Africa. We will also examine the role of the United Nations - its forums, special agencies, commissions, and conferences from the 1970s onward - in defining and fostering global feminist movements.This course can be taken as a 3-credit elective in the Women's and Gender Studies Certificate This course was previously LIB-640653.

LACS 6137 Political Ecology (3 Credits)
Climate and the environment are no longer just natural or biological issues, they are also now political and social issues. We have passed the point in the world's natural system where the cessation of human activity would return the world to a previous natural balanced ecology. We are now firmly in the Anthropocene. A period of geological time that is marked by humanity as the main influence on climate and ecology. Terrestrially there are no practically untouched places left in the world. Even Mount Everest is now facing critical issues around trash, waste, and even a serious sewage problem. Any solution to our climate troubles will not just be technical or come through personal action. The climate is now more than ever a political problem and an economic problem. The readings in this study are intended to provide a history and background to the growing crisis and enable students to view the future with a clearer handle on its causes in the past and present.

LACS 6140 Narrative Counseling (3 Credits)
This study will explore narrative approaches to counseling, which view the self as a narrative shaped by society and therapy as a space in which to 're-story' the self. The 'facts' and events that compose a life do not change, but meanings and perspectives can and do. The narrative perspective frames human experience and even the innermost sense of self as an internalized story; thus, counseling may be viewed as a process of story revision. This study will encompass an overview of historical, philosophical, and ideological aspects of narrative and social constructionist perspectives, and a focus on counseling practices that use narrative techniques. Objectives of this study are to become knowledgeable about the perspective of narrative counseling, and to explore possible applications of this perspective in various contexts (personal, academic, professional). This study will be individualized to meet the student's needs and interests. This course was previously LIB-640601.

LACS 6145 Language & Culture (3 Credits)
Language and Culture is a course designed to help students become familiar with the theory and research related to issues such as the ways in which language behavior reflects diverse cultural patterns; the role of language in the processes through which children and adolescents become members of particular groups in society; and the relationship between class, race, gender. In some terms, this study is offered in collaboration with an international partner university group to enhance cross-cultural perspective. This course was previously LIB-640687.

LACS 6147 The Medical Arts (3 Credits)
This course will serve as an introduction to the field of medical humanities, investigating the history, culture, and politics of Western medicine. We will examine the role of medicine in Western art and literature, such as the heroic dissection paintings of Rembrandt and popular TV shows like "The Knick." We will look at how humanities based approaches can enrich our understanding of how medicine has interacted with and influenced other social forces—for instance, class politics in the Rembrandt paintings, or immigration politics in the US, based on ideas of medical and social hygiene—as well medicine's continuing influence on national and global politics, society, and culture. Above all, this course will develop an understanding of the broader social influences on medicine, and in turn analyze its power to shape society.

LACS 6150 Immigrant Literature (3 Credits)
This study will look at the development of immigrant literature in 20th-century America. We will consider themes of assimilation and identity, difference and otherness, ethnic, racial, and gender identity and American national identity. We will consider various genres, including the novel, short story, and memoir, and representative works from different ethnic groups, including Jewish, Irish, Italian, Asian, African, Latino, and Dominican immigrants. Writers may include Anzia Yezierska, Saul Bellow, W.E.B. DuBois, Sandra Cisneros, Julia Alvarez, Maxine Hong Kingston, Amy Tan, and Frank McCourt. This course satisfies one 3-credit elective requirement of the American Studies advanced certificate. This course was previously LIB-640663.

LACS 6152 The Politics and Economics of Class (3 Credits)
This study is intended to provide a background in the figures who have thought critically about the way the world has come to be structured. The study will begin with a general survey of economic philosophers and move on to study the individual works of specific thinkers over time. We will move through dissident economists and economic sociologists such as Marx, Veblen, Polanyi, Selma James, and come to the present with David Harvey, Naomi Klein, and Robert Brenner. All of these thinkers help us to see and question the economic order that is so often portrayed as natural and inevitable in our current social language but is in actuality a system created by specific historical forces and politics. This study is intended to help students interested in both history and current affairs find alternate models through which to view and approach political and economic issues.

LACS 6155 Literary Theory (3 Credits)
Literary Theory will provide an overview of the major schools of thought used in contemporary literary criticism: Formalism, Structuralism, Psychoanalysis, Marxism, Post-Structuralism, Feminism, Queer Theory, and Critical Race Theory. Students will work together to review and apply each school to specific works of literature. They will then work on their own on the major course assignment, either a literature review or a research paper. This course can also serve as a methodology/theory elective for students in appropriate fields of Cultural Studies. This course was previously LIB-640606.

LACS 6160 Literature of New York (3 Credits)
This course will consider the literature of New York City and the Hudson River Valley in its historical, cultural, and sociological context. We will look at themes of regionalism, nature, industrialism, social class, race, gender, immigration, and identity in relation to the historical and cultural context of New York and to theories of urban studies, gender studies, and multiculturalism. Possible writers include Washington Irving, Walt Whitman, Herman Melville, Edith Wharton, Henry James, Langston Hughes, Nella Larsen, Anzia Yezierska, F. Scott Fitzgerald, Dorothy Parker, Audre Lorde, Diane di Prima, Don DeLillo, and Jay McInerney. Students are encouraged to visit related sights such as Irving's Sunnyside estate in Tarrytown, Sugar Hill in Harlem, the garment district of the lower East side of Manhattan, the Brooklyn Bridge, the Museum of the City of New York, the Tenement Museum, or Ellis Island. This course was previously LIB-640584.

LACS 6162 Queer at Work (3 Credits)
While the Supreme Court has made marriage equality the law of the land, workplace equality lags far behind. Queer couples might be able to marry in 50 states, but in 28 states, said couples can be legally fired from their workplace due to their sexual orientation. Fighting for federal employment protection looks to be an even harder road than the fight for marriage. This study looks at the lives and struggles of LGBTQ people in their workplaces and unions, with an emphasis on historical and contemporary issues.

LACS 6175 American Culture & the Cold War (3 Credits)
In this course, students will examine the period that brought America the utopian vision of Disneyland and the anxiety of the 'duck and cover' campaign, the chaos of rock 'n roll and the conformity of Levittown. Exploring such paradoxes in the films, music and literature of the late 1940s-the early 1960s allows students to gain an understanding of how such events as the nuclear arms race, the black freedom movement and the development of a distinct youth culture shaped the lives of Cold War Americans and left a legacy still felt today. This course satisfies one 3-credit elective requirement in the American Studies advanced certificate. This course was previously LIB-640515.

LACS 6180 American History Culture & the Arts (3 Credits)
This study will examine US history since the Civil War through an investigation of US arts and culture. Students will read books and essays that link US history to specific aspects of US art and culture, as a way to examine the construction of American society. This study will explore the critical developments of urbanization, technology, political reform, and the expanding role of the United States internationally. Special attention will be given to issues of US identity and aspects of race, gender, and ethnicity, as Americans have embraced or reacted against the currents of modernism and modern social transformation. In addition to reading a selection of books and critical essays, students will watch films, listen to music, and view art, which will be available during meetings, online, or at local libraries and video stores. This course satisfies one 3-credit elective requirement in the American Studies advanced certificate. This course was previously LIB-640590.

LACS 6185 American Material Culture (3 Credits)
In this study, we will become acquainted with perspectives on material culture and with a theoretical and methodological repertoire. We will begin with common readings and media, followed by choices among such focus areas as museum studies, consumption theories and patters, the concept of cultural property, or a closer focus on a specialty topic, such as a particular type of material or artifact and its history, use, and interpretation. This course satisfies one 3-credit elective requirement of the American Studies advanced certificate. This course was previously LIB-640672.

LACS 6190 American Modernism (3 Credits)
This course will examine the rise of modernism in American history with particular attention to issues of art and culture. The student will explore the critical developments of urbanization, technology, political reform and the expanding role of the United States internationally. Special attention will be given to issues of American identity and aspects of race, gender and ethnicity, as Americans embraced or reacted against the currents of modernism and modern social transformation. By focusing on specific key issues in American history in the late 19th and early 20th centuries, and engaging a broad variety of primary and secondary sources, the student will gain an understanding of the complexities of U.S. culture and society, achieve a deeper appreciation of art and culture, and develop the skills of a practicing historian. This course satisfies one 3-credit elective requirement in the American Studies advanced certificate.

LACS 6195 American Women Writers (3 Credits)
This study will look at the emergence of women writers in late 19th and 20th century American literature and the conflicts confronting the figure of women in literature. How do women reconcile traditional social roles of wife and mother with their personal desires as women, as intellectuals, and as individuals? How do issues of race, ethnicity, class and sexuality affect women's sense of identity and self-realization? We will explore themes of identity and difference, resistance and transformation, silence and voice, self-definition and social identity in works by Charlotte Perkins Gilman, Kate Chopin, Edith Wharton, Zora Neale Hurston, Toni Morrison, Sandra Cisneros, Maxine Hong Kingston, and Audre Lorde. This course satisfies one 3-credit elective requirement of the American Studies and the Women and Gender Studies advanced certificates. This course was previously LIB-640583.

LACS 6210 Native American & US Culture (3 Credits)
This course offers an examination of tribal sovereignty and environmental mores as seen through the divergent lens of Tribal and American cultures. Building on a post-colonial approach to Native American Studies, this course will address, define, and analyze the history of intergovernmental consultations, the complex interactions of non-Indian and Indian worldviews, and the various events and ongoing discussions shaping Indian Country today. As part of this course, students will examine Native American fiction, archaeological studies, ethnographies, documentary film, and other materials as a way to conceptualize American Indian and Native cultures. This course satisfies one 3-credit elective requirement of the American Studies advanced certificate.

LACS 6220 Oral Tradition: History & Narrative (3 Credits)
For most people, it comes as a considerable surprise that writing and texts, the stuff and matter of the modern educational enterprise comprise relatively recent inventions in the overall span of the our species history, the last week of December were we to put them on an annual calendar as John Miles Foley suggests. The rise of studies outside the mainstream of Euro-centric male dominance in the last half century of historical studies has occurred in no small part due to the understanding that oral traditions have been held the history for by far the largest numbers of people of our globe: African, Native American, Pacific peoples, African American, Hispanic, women, and so on, while studies in narrative traditions, lately in writing, have shown a strong oral foundation, even for classics like the Homeric epics and the Bible. Exploring oral history and traditional narrative along with the performance – for orality presumes performance – will provide the substance of this course. This course was previously LIB-640542.

LACS 6225 Performance History: The Twentieth Century (3 Credits)
This course investigates key figures and movements in twentieth-century performance, aesthetics, and culture. The course develops chronologically beginning in the late nineteenth-century, addressing alternative strategies to realism including Symbolism, Expressionism, Futurism, Surrealism, and Constructivism. Our exploration of modernist and postmodernist performance through the twentieth-century includes topics such as the evolution of avant-garde theater, Happenings, Fluxus, body art, and performance art. Throughout, we will consider contested definitions and theories of performance. This course was previously LIB-640512.

LACS 6230 Modern Gender & Sexuality Through Science Fiction Literature (3 Credits)
This course will examine current issues of gender and sexuality in the humanities (literature, philosophy, history, etc.) through the lens of science fiction and fantastic literature (SFF). By focusing on specific key issues and texts in feminist SFF literature, and using additional readings from history and philosophy to put the main texts in an appropriate context, the student will gain an understanding of the complexities of gender and sexuality in U.S. culture and society, achieve a deeper appreciation of the issues of representation in literature, and develop the skills of analysis and interpretation. This course satisfies one 3-credit elective requirement in the Women's and Gender Studies advanced certificate. This course was previously LIB-640554.

LACS 6250 Community Performance (3 Credits)
To engage in this individualized graduate study, the learner should enter having identified a social, cultural, or community topic, issue, or stakeholder constituency's point of view that she will explore through an embodied performance genre. Learners may enter with the intention of furthering their development and background in the literature from the perspective of organizers, writers/designers, or leaders/performers, whether in the performance disciplines of theater, dance, parades, demonstrations, live installations, or other genres. Each learner will first complete a combination of directed and self-directed reading selections and participate in discussions or written short commentaries on theory, concepts, and previous work in this area, building two short essays and then developing a final study project. The project could be a proposal and method design, a realization, or a reflective or comparative commentary as a spectator, participant, or witness. The nature of a second essay and final project depends upon the particular interests, choices, and the competencies that the learner brings to the study. The course cannot be taken as a studio practicum only; critical writing is a required part of the learning activities.

LACS 6255 Psychology of Consumption (3 Credits)
Our consumer lifestyle is part of our sense of self, our social identity, and our satisfaction with life. In this study, we will examine the meanings of money and possessions, the process of shopping and spending, different populations of consumers, advertising, the relevance of consumption for self-definition, and the role of consuming in the search for well-being and happiness. This course was previously LIB-640607.

LACS 6260 Queer Nation: Sexuality Gender & the US State (3 Credits)
The student will read and respond to works that engage particularly the roles of sexuality and gender in the building of US national identity and state production. The student will respond to a number of historical texts and examine queer historical issues and controversies. The student will be expected to apply these historical lessons to a current sociopolitical issue such as marriage, health, adoption, or bathroom access. By focusing on the specific key issues of sexuality and gender in the rise of the modern US state since the Civil War and engaging a broad variety of primary and secondary sources, the student will achieve an understanding of the complexities of US culture and society and develop the skills of a practicing historian. Additionally, by applying history and queer theory to issues in the present, the student will gain an appreciation for the roles of sexuality and gender in current politics and policy. This course satisfies one 3-credit elective requirement in the Women's and Gender Studies advanced certificates. This course was previously LIB-640686.

LACS 6270 Race and Gender in US History since the Civil War (3 Credits)
The intent of this course is to investigate the complex ways in which gender, race and national identity are articulated in U.S. culture and society and to examine how that has historically shaped the social movements that challenged the prevailing order. By focusing on the interaction of race and gender in American history since the CivilWar and engaging a broad variety of primary and secondary sources,the student will achieve an understanding of the complexities of U.S. culture and social change and develop the skills of a practicing historian. This course satisfies one 3-credit elective requirement in the American Studies advanced certificate. This course was previously LIB-640591.

LACS 6275 Race & Representation in US History (3 Credits)
This study is a historical and cultural examination of race and how it came to be codified and organized through cultural representation in U.S. culture, politics, and society. We will start in the 19th century with issues of cultural representation of African Americans through minstrelsy. We will move on to investigate representations of Asian Americans and Native Americans in the 19th and 20th centuries. We will end with the movement of immigrant groups toward mainstream white identity. This study will look at history, and approach literature and art as cultural artifacts and historical evidence in the model of scholars in the field of American Studies. This study is one of the possible electives in the American Studies advanced certificate program and provides useful content for students interested in the cultural or social history of the U.S.

LACS 6280 Readings in Material & Visual Culture Studies (3 Credits)
What does a wooden bowl say about a particular society? How can a photograph be read? In this course, students will examine the manner in which objects and images are used as cultural creations and primary source materials. The theoretical and methodological underpinnings of Material and Visual Culture Studies will be considered, as will the traditions of Culture Studies more generally. Among the texts to be considered are those by John Berger, Arjun Appadurai, Mihaly Csikszentmihalyi and Eugene Rochberg-Halton, Marianne Hirsch, Kristin Hass, Mike Wallace, and Jules Prown. Students will be expected to submit a paper reviewing the research and scholarship of the field midway through the term and a final paper analyzing a particular object or image.

LACS 6285 Revolutionary Learning: Education Culture & Ecology (3 Credits)
Many discerning citizens are becoming increasingly aware that essential work toward ecological sustainability and social justice should be grounded in an understanding of how cultural beliefs and practices frame the world in which we live. They also recognize that cultural institutions, such as formal education, represent a critically important place where cultural beliefs and practices are transmitted to new generations of citizens. This course examines the underlying assumptions that drive curricula of modern educational systems and explores both the process (how we learn) and content (what we learn) of education. How do we teach and learn culturally and ecologically? What constitutes ecological and cultural ways of knowing? How can ecological principles inform curriculum content as well as the process of teaching and learning? How can we move beyond just having ecological ideas to nurturing ecological identities and ecological selves? How do we become, as Arne Naess urges us to do, a member in the council of all beings? This course will draw on domestic and international examples of exemplary models of ecologically sound and social justice oriented educational philosophies and practices, This course was previously LIB-640539.

LACS 6290 Democracy & Education (3 Credits)
In this course, students will develop an understanding of the relationship between democracy and education. What tensions arise between different conceptions of the human condition, the social contract, and the role of education in developing particular behaviors, knowledge and skill sets among citizens in a democracy? What is the role of education in a democracy, and how is this different from other societies? What can schools do- and teach -to support democratic life, especially in our own, diverse society? Students will consider major themes in democracy and education through their readings, to include: John Dewey's Democracy in Education, Amy Gutmann's Democratic Education, S.J. Goodland's edited volume The Last Best Hope: A Democracy Reader, and Walter Parker's Teaching Democracy: Unity and Diversity in Public Life. This course was previously LIB-640516.

LACS 6295 American Queer Sexualities: US History Since the Civil War (3 Credits)
This study is a historical and cultural examination of queer sexualities in U.S. history and society. We will start in the late 19th century, when new patterns of industrial and urban life enabled new forms of community and sexual subcultures in the U.S., and continue through the 20th century and the rise of new organizations and sexual rights movements. This study will look at history, and approach literature and art as cultural artifacts and historical evidence in the model of scholars in the field of American Studies. This study is one of the possible electives in both the American Studies and Women's and Gender Studies certificates, and provides useful content for students interested in art, culture or the history of the U.S. in the 20th century. This course satisfies one 3-credit elective requirement in the American Studies or the Women's and Gender Studies advanced certificates. This course was previously LIB-640680.

LACS 6300 An Interdisciplinary Study of Media Effects (3 Credits)
This course will include current readings on how media impacts our lives, our cultural perceptions and sense of identity. Some attention is given to the psychology of celebrity and fandom as a basis for common reading and discussion. Students research, write and present on a topic of their choice, using theoretical frameworks from a discipline such as communications, psychology or sociology - as introduced in common readings. This course was previously LIB-640658.

LACS 6305 The Global Refugee Crisis: Cases and Controversies (3 Credits)
This study will focus on intersectional identities and the changing nature [as well as the ongoing themes] in regard to bias and prejudice in the 21st century in global refugee policy [as determined at UN] and US refugee policy [as determined by Congress and US immigration law]. Various historic cases will be examined, to provide historical context and perspective on current global refugee cases, and contemporary humanitarian initiatives and public policy debates. This course examines themes such as gendered and racialized features of humanitarian relief; educational provision in resettlement host countries; special needs to support health and wellness of displaced populations. This course was previously LIB-640681.

LACS 6310 The Socially Constructed Body (3 Credits)
This course explores our embodied experience and the ways that culture mediates the way we think about, represent, experience and use the human body. Our bodies and how we experience them are shaped by cultural norms, but the body is also a vehicle for self-expression, which implies innovative use of the body to create individual meaning. Students will develop conceptual tools to analyze the shifting relationships between individual agency and cultural construction, and the multiple meanings of bodies in culture. This course was previously LIB-640657.

LACS 6315 Things of Value: Topics in Material Culture (3 Credits)
This course allows you to become acquainted with perspectives on material culture and a theoretical and methodological repertoire to realize new learning through investigation of particular subjects and issues related to your program. We begin with common readings and media, followed by choices among such focus areas as museum studies, consumption theories and patterns, the concept of cultural property, or a closer focus on a specialty topic, such as a particular type of material or artifact and its history, use, and interpretation. Two substantial reading and writing projects (perhaps also with some observing or making) comprise the scholarly activities, requiring at least one revision each, and at least two informal discussions take place, whether by e-mail with the course instructor or on the supporting Web site with class members. This course was previously LIB-640543.

LACS 6330 Women & Humor (3 Credits)
What is women's humor? Why has humor by women been largely resisted or overlooked? This course will examine women's use of humor as a form of social protest. In particular we will look at the movement away from domestic humor of 19th century writers like Fanny Fern and Francis Miriam Whitcher toward the use of satire by such 20th century women of wit as Dorothy Parker, Mary McCarthy, Edna St. Vincent Millay, Alice Childress, Betty MacDonald, Jean Kerr, and Erma Bombeck. Students will gain knowledge of theories of humor and satire as well as an understanding of the changing role of women in America from the 1850s to the 1960s. This course satisfies one 3-credit elective requirement of the American Studies and the Women and Gender Studies advanced certificates. This course was previously LIB-640576.

LACS 6340 Digital Humanities (3 Credits)
Museum exhibits have increased their online presence thanks to the pandemic, and archives are digitizing their materials for worldwide instant access. Virtual historic environments offer enhanced exploration opportunities for students, and electronically mediated theatrical and musical performances overcome the limitations of space and time. In these and so many other cases, the digital humanities is a rapidly evolving field that defies easy definition or simple categorization. This course will explore the nature of the digital humanities, including some of its benefits and controversies. While students will read in the literature of the field and be expected to become subject experts, they will also be expected to become digital practitioners themselves. They will develop their own digital humanities projects, which could entail archival digitization, developing online exhibits, hosting digital performances, or creating digital materials for workshops and classrooms.

LACS 6400 Topics in Interdisciplinary Studies (3 Credits)
Topics in Interdisciplinary Studies is an umbrella enrollment for matriculated MALS students. Students will arrange this study with an individual mentor and plan the readings, assignments, and evaluation procedures with that faculty member. It reflects an individualized, co-designed study that fits within each student's degree program plan, and is typically conducted as a tutorial. Regardless of chosen subject area, it is key that the student pursue the topic in a multidisciplinary or interdisciplinary method which is at the heart of the program. Students will be evaluated through their writing, participation online (if applicable) and discussion with the mentor. This course was previously LIB-640689.

LACS 6405 Topics in Liberal Studies (3 Credits)
Topics in Liberal Studies is an umbrella enrollment for matriculated MALS students. Students will arrange this study with an individual mentor and plan the readings, assignments, and evaluation procedures with that faculty member. It reflects an individualized, co-designed study that fits within each student's degree program plan, and is typically conducted as a tutorial. Regardless of chosen subject area, it is key that the student pursue the topic in a multidisciplinary or interdisciplinary method which is at the heart of the program. Students will be evaluated through their writing, participation online (if applicable) and discussion with the mentor. This course was previously LIB-640688.

LACS 6996 Special Topics in LACS (1-4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

LACS 6997 Special Topics in LACS (1-4 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

LACS 6998 Individualized Studies in Liberal Studies (LACS) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Liberal Studies (LACS). Please contact your mentor/advisor for more details.

LACS 7010 Topics in Methodology (3 Credits)

This study is available for matriculated MALS students only. The Methodology study is an independent study generally taken with the student's advisor or one of the anticipated readers for the final project. This usually happens one or two terms before the student plans to enroll in the final project. The methodology requirement can however be fulfilled by taking one of the standing electives in the course catalog (eg Feminist Theory, American Studies Theory and Method, Archives, etc) if this is part of the enrollment plan as outlined in the student's approved degree proposal. This course was previously LIB-640510. Prerequisites: LACS 6010 LACS 6015.

LACS 7015 Final Project: Liberal Studies (3 Credits)

This is the capstone course in the MA in Liberal Studies program. Please contact your academic advisor to discuss your project. Once you have an approved Final Project Proposal, you will be eligible to register. The academic advisor will initiate the registration process for this capstone course. This course was previously LIB-640595 Prerequisites: LACS 6005 and LACS 6010 and LACS 6020 and LACS 6025 and LACS 6030 and LACS 6035.

LACS 7025 Capstone Project (3 Credits)

As the concluding study in the Master of Arts in Liberal Studies program, the student will prepare a capstone project based on their approved prospectus developed in LACS 6010 Designing your Degree: Interdisciplinary Study, which is on file at the School for Graduate Studies Office. The student will work with his/her instructor in the final Capstone study to complete the proposed project and a short written or oral self evaluation of their work.

LACS 7998 Individualized Studies in Liberal Studies (LACS) (1-8 Credits)

Students have the opportunity to develop individualized studies with their mentor/advisor in Liberal Studies (LACS). Please contact your mentor/advisor for more details.

MGMT: Management (Graduate)

MGMT 6000 Applied Business Statistics (3 Credits)

This course focuses on the use and application of various statistical techniques and models that will assist students in making business decisions. It will help students to learn how to summarize, analyze and critically evaluate and interpret real-world data. The course covers descriptive and inferential statistics including measures of central tendency, variability, and shape, probability, sampling distributions, confidence intervals, hypothesis testing, regression analysis, and time series analysis. Business applications are used to illustrate these concepts. This course was previously MGT-654500.

MGMT 6001 Dynamics of Corporate Board Engagement (3 Credits)

The success of a corporate board depends on the skills of its members. The governing board of an organization holds an extraordinary responsibility for establishing the organization's strategic direction around stakeholder needs and organizing a management structure designed to execute the strategy that capitalizes on the endeavors of the organization. This course will evaluate the skills needed to secure a successfully functioning corporate board and pathways in which individuals can develop key leadership competencies. Some of the competencies include being able to guide the mission, purpose, vision, and core values of the organization; develop a management structure and select a well-functioning executive staff; drive the strategic goals of the organization; monitor and evaluate all facets of organizational performance; maintain fiduciary responsibility; and ensure compliance with legal, ethical, and regulatory standards.

MGMT 6002 Dynamics of Nonprofit Board Engagement (3 Credits)

The success of a nonprofit board depends on the skills of its members. "The principal roles of the board of directors are to represent the public (or membership) interests in the organization and to represent the organization as its legal voice" (Bryce, 2017 paragraph 1). This will result in duties that include but not limited to obtaining and supporting operations that are consistent with nonprofit organizations, aiding in fund raising for the board, and acting in the best interest of the board and its role in society. Students in this course will study how a nonprofit board operates, the required financial management skills, the ethical values of a nonprofit and its board members, and how nonprofit organizations affect their stakeholders.

MGMT 6003 Pathway for Corporate Board Leadership- Personal Branding (3 Credits)

Serving on a corporate board requires recognition of the key competencies of potential board members. Often selection to serve on a corporate board is based on previously established relationships. This might be one of the reasons that corporate boards have shown a lack of diversity in the past. While there has been a positive trend toward diversifying the corporate board, individuals can take steps to become the next board member. This course will outline the key steps in raising your profile and creating a pathway for corporate board leadership. The course will address why personal-branding is important and how to create your own personal brand. This includes overcoming challenges in communicating your brand and building trust and support through networking. It is also important to learn from successful examples. Panel discussions will illustrate how individuals reached their goals and overcame obstacles. These panel discussions will be part of a residency experience or executive retreat, where participants can interact with women and other underrepresented leaders, who overcame the glass ceiling to serve on corporate boards. This MBA-Business Management elective is also offered as a standalone microcredential.

MGMT 6009 Creating a Diverse Corporate Board (3 Credits)

A diverse corporate board requires the organizational culture and processes that encourage corporate board diversity. Often this requires a change in existing board norms. In order to implement a planned change, several steps need to be taken. The first is an assessment of the current composition of the board and the process by which board members are chosen. This assessment includes the current culture of the organization and how it supports diversity within its leadership. In order to close the gap between what is the current nature of the board and the optimum board, the leadership must first identify its ideal board composition. Then a gap assessment is conducted to assess the difference between the current board make-up and what is ideal. Participants in this course will learn how to conduct a gap assessment and create a plan for change. Key topics covered in this course include organizational culture, organizational change, gap analysis, and creating diversity on corporate boards.

MGMT 6010 Financial Accounting (3 Credits)

The purpose of this course is to provide to students the training necessary to develop the skills needed to use available standardized guidelines, to gather, and summarize financial transaction information necessary in a sound business and economic decision making process. Upon completing this course, students should be able not only to use these standardized guidelines to record and summarize financial transactions, but also to present and prepare financial reports needed by an organization's stakeholders to assess its performance.

MGMT 6015 Principles of Economics (3 Credits)
This core course introduces basic economic principles that help us understand the process of decision making by individuals and societies. We analyze the fundamental economic activities of production, distribution, exchange, and consumption at the micro and macro levels. Students will better understand the functioning of a free market system and the role of the government.

MGMT 6016 Financial Management (3 Credits)
The course addresses three main areas. First, it focuses on how firms assess their performance over time and against an industry benchmark. In addition, it reviews ways of how companies are organized and deal within the financial markets. It also looks at the time value of money and examines the ways of identifying, assessing risk & return, and valuing the bonds and securities. Second, it studies firm's cost of capital, basis of capital budgeting, effects of cash flows and associated risks. Furthermore, it discusses the capital structure formation, concepts and theories. The third area of the the course addresses the diagnostics of working capital, financial planning and forecasting techniques, and finally the financial management of multinational corporations. Prerequisites: MGMT 6010 if not waived.
Cross-listed with FSMA 6016.

MGMT 6020 Leadership & Executive Development (3 Credits)
Success in leading people and managing performance, demands an understanding of how teams and work units operate and what motivates employees, as well as a candid assessment of your own personality traits and leadership style. Topics covered focus on alignment of leadership skills and roles with organizational goals and interests, organizational paradoxes, rationalistic and humanistic structures, gender diversity in corporate leadership, cultural change, communication, personality, engagement, power and influence, conflict management, and ethics. Within these broad categories, we will examine specific theories and models that have been used to describe and explain leadership and organizational dynamics as well as examples of successful leadership practices. Assessment tools for leadership development are also included in this course.

MGMT 6022 Grant Writing for Public and Nonprofit Organizations (3 Credits)
This course will consider the elements of grant writing beginning with funding sources; the process of grant writing from application to budget building to grant management; the particular requirements for nonprofit organizations and agencies; databases and other sources of information available to support grant writing. The student will consider benefits and tradeoffs as well as important trends in both providing and requesting funding.

MGMT 6025 Strategic Perspectives of Global Management (3 Credits)
Strategic Perspectives of Global Management is one of the two introductory courses in the MBA program and focuses on expanding one's perspectives -- strategic, geographic, cultural and ethical. The goal is to enhance our appreciation of the richness of the multinational environments in which many businesses find themselves today. While global environments offer additional dimensions along which executives can add value, it also imposes additional constraints. For example, a supply chain manager faces vastly greater opportunities for value-adding locational investments in global environments, but must navigate complex and varied political and legal issues varying from one locale to another, best treated as constraints on their optimizing efforts. Further, many ethical executives who depend on statutory authorities to level the playing field while requiring ethical behavior of all players at home, find that they must make potentially costly ethical decisions about how and when they will treat their employees, their suppliers, and foreign environments better than those environments demand of them either de jure, de facto or both. Thus, global management often requires an additional layer of ethical reasoning that goes beyond domestic executive decision making. The goal of SPGM is thus to broaden the perspectives of first year MBA students by providing practice with a variety of strategic, geographic and ethical tools in varied case applications involving global business practice.

MGMT 6030 Management Information Systems & Data Visualization (3 Credits)
Management Information Systems explores the technologies and organizational factors that make information systems a vital part of contemporary business. By designing and building software applications, students will become familiar with the unique problems and opportunities that information systems present. The analysis of business cases will enable students to effectively manage both the hard and soft aspects of information systems in the workplace. An important focus of this course is to learn to communicate technical concepts and business decisions clearly and concisely. Therefore, emphasis is placed on written work that clearly states the business case, problem statement, and explains information system technology. Topics included in this course are an introduction to information system analysis and design through the system development life cycle, database technology, design of web-based business presence, integrating information systems into a business process, and the organizational implications of information systems. This course was previously MIS-652521.

MGMT 6035 Global E-Commerce Strategies (3 Credits)
This course provides the conceptual foundation for e-commerce and e-business at the global context. The course focuses on analyzing e-commerce, digital markets, and e-business firms using principles and theory from the fields of economics, marketing, finance, philosophy, and information systems; multiple opportunities for application are provided. In addition to concepts from economics and marketing, the course examines transaction costs, network externalities, perfect digital markets, segmentation strategies, price dispersion, targeting, and positioning. The course also addresses the literature on ethics and society, focusing on concepts such as intellectual property, privacy, information rights and rights management, governance, public health, and welfare.

MGMT 6040 High Performance Management (3 Credits)
This course focuses on the managerial leadership roles and competencies needed to translate strategic visions into tactical and operational plans. It also examines tools and methodologies to improve organizational efficiency and productivity through integration, communication, and the management of knowledge-based organizations. Students identify, develop, and apply competencies associated with the dynamics of change and flexibility and then balance them with the competencies required to lead with stability and control. This course was previously ORG-652591.

MGMT 6045 Global Leadership Competencies (3 Credits)
This course provides an intellectual and experiential forum for developing the interpersonal and intercultural communication and interaction skills necessary for successful development or implementation of international assignments. While learning to identify cultural aspects of verbal and nonverbal behavior of persons from different cultures and themselves, students will come to recognize cultural differences that can cause difficulties in management situations. Other important topics include analyzing the working of multi-cultural teams, dimensions of cross-cultural negotiations and competencies of cosmopolitan leaders. This course was previously MGT-651634.

MGMT 6050 Operations and Supply Chain Management (3 Credits)
This course provides an overview of the most important operations and supply chain issues that manufacturers and service providers should consider when producing goods or delivering services. It also provides the concepts, tools, and methods that managers use to deal with operations and supply chain management problems in the business environment. Through this course, students will develop the ability to apply quantitative and qualitative analytical management tools and techniques in business decision-making. Topics include operations strategy, process strategy and analysis, quality and performance management, lean systems, capacity and constraint management, inventory management, and supply chain management with a particular focus on supply chain design, integration, and sustainability. Prerequisites: MGMT-6000 if not waived This course was previously MGT-654556.

MGMT 6055 Global Supply Chain Management (3 Credits)
Effective management of operations and supply chain is of great importance for organizations to survive and remain competitive in a global environment. This course focuses on understanding the principles related to managing operations and supply chains with an emphasis on key tradeoffs and risks. The course will introduce the basic concepts of logistics and supply chain management and the various logistic and supply chain strategies that companies employ in order to compete within an increasingly complex and dynamic global environment. It will also discuss the tools and strategies used to design and manage operations and supply chains across an organization in the global context. A range of international case studies will be used to illustrate key concepts, reinforce the material's application in practice and extend learning. This course was previously MGT-651656.

MGMT 6060 Managerial Economics (3 Credits)
The purpose of this core course is to engage students in a problem-solving analytical approach to understand how concepts and fundamental economic theory can be applied to decision making within a firm. The main goal of this course is to make students, in today's contemporary environment, aware that an understanding of the economic forces at a national and global level, through a dynamic interplay of firms, consumers, and investors wherein market forces play a central role in the production, valuation, and allocation of scarce resources, including goods, services, and financial capital, that are vital towards strategic managerial decision-making. This course was previously ECO-652551 Prerequisites: MGMT6015 if not waived.

MGMT 6065 Economics for Global Managers (3 Credits)
The purpose of this course is to engage students with the challenges of international economics in the modern age of technology and globalization. The course seeks to provide procedures and tools to evaluate impact of these forces on markets, prices and the operations for global managers. Topics include comparative advantage, terms of trade, macroeconomic indicators, theories of trade, gains from trade, tariffs and trade regulation, industrial policies, policies for economic development, regional integration, multinational corporations, capital and labor mobility, balance of payments, exchange rate systems, and current events. Prerequisites: MGMT 6015 if not waived.

MGMT 6070 Strategic Marketing Management (3 Credits)
Strategic Marketing Management examines marketing from a variety of perspectives: students learn advanced marketing principles, apply them to a variety of situations, and expand their awareness of the complexities of a marketing perspective. The course includes some consideration of ethical issues; introduces organizational issues that influence the effectiveness of a firm's marketing strategy; the relationship between the marketing strategy and the organization's strategic plan, and global implications of the dimensions of decision making for marketing managers.

MGMT 6075 International Financial Management (3 Credits)
The purpose of this course is to engage students with the challenges of global financial management. The course develops analytical skills to evaluate foreign exchange rates and risk management involving transaction, operating, and translation exposures, and evaluation of multi-national capital budgeting and investments, including using case studies in international financial management. Prerequisites: MGMT 6010 if not waived.

MGMT 6080 Consumer Behavior: A Global Marketing Perspective (3 Credits)
This course will focus on the advance study of the buying behavior of customers in the consumer market. Drawing on previous studies of the role of consumer behavior on marketing strategies, the student will identify the effect on strategy and policy based on the buying process of various market segments. Further in-depth analysis of both internal and external influences on the buying process will be applied to changes in strategy and outcomes in the global market environment. Emphasis will be placed on cultural variations in consumer behavior, changing demographics, the impact of reference groups, and prior customer attitudes and learning on the buying process. Research and Position Papers will be used to apply these concepts to strategy development and subsequent marketing programs. Ethical and legal implications on strategy and the marketing mix will be emphasized. This course was previously MGT-651557.

MGMT 6095 E-Commerce Marketing Strategies (3 Credits)
This course covers emerging online technologies and trends and their influence on the electronic commerce marketplace. The course emphasizes the three major driving forces behind e-commerce: business development and strategy, technological innovations, and social controversies and impacts. Students will learn an in-depth introduction to the field of e-commerce and various revenue models including cloud computing models and delivery methods, and how to market on the Web. Next, the course covers up-to-date coverage of the key topics in e-commerce today, from privacy and piracy, to government surveillance, cyberwar, social and ethical issues, local and mobile marketing, Internet sales taxes, intellectual property. Finally, students learn how to plan for electronic commerce and apply analytical skills using Microsoft Power BI.

MGMT 6100 Innovation & Global Commercialization (3 Credits)
This course focuses on opportunities to utilize technology transfer within a global business to meet the goals of the strategic plan. This course is an introduction to the multidisciplinary aspects (including legal issues such as intellectual property ownership and rights of discovery), involved in the process of bringing technical developments, particularly research emanating from partner organizations, into commercial use. The course considers the challenges and regulations required for transitioning new developments into capital ventures created by the sale or lease of commercially viable processes and products. Finally the course looks at the complexity of new product development and commercialization, and the role of marketing programs on the successful commercialization of new products. This course was previously MGT-651653.

MGMT 6105 Leadership in Public & Nonprofit Organizations (3 Credits)
In this course, students will explore leadership in public and nonprofit organizations. The course begins with a consideration of the nature of leadership, the tasks of leaders, and the traits of effective leadership. Next, students examine leadership theories, their particular application to the public and non-profit sectors and the challenges facing these sectors. Finally, students will complete an independent research project dealing with leadership in public and nonprofit organizations. This course was previously MGT-651620.

MGMT 6110 Legal Aspects of Entrepreneurship (3 Credits)
This study will survey the legal field and the parameters the entrepreneur must be mindful of in order to effectively initiate and develop a new venture, including business ethics and social responsibility as reflected through rules and regulations; statutory versus common law and its impact on the entrepreneur; dispute resolution; torts, crime and international law and its effects on the entrepreneurial scene and of course constitutional law and how it permeates essentially every aspect of American commerce and enterprise. The increasingly emerging areas of Cyberlaw and Environmental Law will also be studied. This course was previously MGT-651627.

MGMT 6115 Tools & Processes in Project Management (3 Credits)
This MBA course introduces modern tools and techniques for planning, scheduling, reporting, controlling, and managing business related projects. The students will study and analyze the project life cycle and the core project management processes (scope, time and cost). The students will gain knowledge of the concept of Work-Breakdown Structure (WBS) and different approaches to project screening and selection, and will utilize those techniques in the project planning process. The students will learn financial analysis to evaluate and select a project using Excel, plan a project, estimate duration and setup project schedule, allocate resources using MS Project, and communicate project information using electronic and e-collaborative tools. Course Materials: Graduate Studies is pleased to be able to provide licenses of the required software (MS Project) for this course. Please note, this software is designed to run on Microsoft operating systems.

MGMT 6120 Managerial Perspectives of Project Management (3 Credits)
A true understanding of project management comes not only from knowing all project management knowledge areas and all process groups, nor how to partner with contractors, stakeholders or users, but from understanding how different elements of project management systems interact to determine the fortune of the project. Project management success is established upon mastering the technical, socio-cultural and leadership dimensions of project management. The course learning activities are about the impact of project management on: organizational strategy and decision-making practice; advancement in corporate operations and global competition; and improvement of products and services. The course critically addresses these project success issues and intertwines all ten project management knowledge areas: project integration; scope; time; cost; quality; human resource; communications; risk; procurement; and stakeholders' management; and all five process groups: initiating; planning; executing; controlling; and closing. The course exposes and addresses the major aspects and issues of the managerial project management process and provides a theoretical foundation and practical solutions to these increasing challenges. Course Materials Fee: Graduate Studies is pleased to be able to provide licenses of the required software (MS Project) for this course. Please note, this software is designed to run on Microsoft operating systems.

MGMT 6122 Corporate Communication and Marketing Strategy (3 Credits)
This course explores corporate communication and marketing as closely related strategic areas of great concern to management and as an academic field of study.It also shows the increasingly close relationship between the reputation management function ofCorporate Communication and the Marketing of brand and customer experience, as both are heavily dependent on a rapidly changing media environment that is approached differently. This environment is also illuminated to provide students with basic news literacy. What was once a theoretical model is now the dashboard for increasingly automated (or "programmatic") corporate responses to the organizational stakeholders. This process is anticipated to have a tremendous impact across the Human Resource functions with attention to ethical issues and brand impact.

MGMT 6125 Managing Human Capital (3 Credits)
Beginning with an overview of HR roles in addressing the strategic needs of an organization, students explore topics that include workforce planning and talent management, thinking strategically about staffing and selection issues, developing internal talent through training, development and education, applying human resource information systems, succession planning, employment testing, successful employment interviewing, and organizational entry and socialization (on-boarding) processes.

MGMT 6127 Entrepreneurial Finance (3 Credits)
The purpose of this course is to impart key financial management skills for entrepreneurship and innovation management through a systematic study of key analytical tools necessary for entrepreneurs to start and manage a successful venture. The course discusses development of a business plan, financial requirements of small businesses projects, through angel investors and venture capital and debt, investment and risk evaluation of project ventures, valuation of project ventures, and raising capital through IPOs and exit strategies for strategic financial management of a business venture. Students in this course should have completed an undergraduate course in Financial Accounting.

MGMT 6135 Performance Management & Total Rewards (3 Credits)
Performance management and total rewards systems provides a value proposition to both the organization and its employees by offering a package that should result in satisfied and productive employees that deliver organizational goals and objectives. This course examines how managing individual and organizational performance coupled with a total rewards system can play a strategic role in organizational effectiveness. The study includes an examination of performance management systems, compensation structure and systems design, benefit programs, and an examination of compensation and benefits legislation. The course will also include examination of the contrast between employee and labor relations, employment law and challenges associated with managing a diverse workforce. Managing change to ensure individual and organizational performance to maximize business results through effective change management will also be explored.

MGMT 6155 Strategies for Marketing Research (3 Credits)
This three-credit elective in marketing research will examine the research process as it relates to the specific problems faced in the marketing arena. The study will enable the student to understand and apply the basic concepts of marketing research as a component of business strategic decision-making. The purpose of this course is to introduce the student to the methodology of market research. By the end of this course, the student will be able to analyze data from a marketing research case study and make relevant brand decisions based on this data. Topics include the research process, methods of gathering primary and secondary data from both internal and external sources, designing and testing survey instruments, sample method design, interviewing techniques, and presentations of results, from tabulating and analyzing data.

MGMT 6160 Strategic Planning for Public & Nonprofit Organizations (3 Credits)
Strategic planning and management are increasingly essential in a world of rapid change and complexity, relentless competition for funding, and increasing demands for accountability. In Strategic Planning for Public and Nonprofit Organizations, students explore the process by which organizations gain competitive advantage and optimal long-term performance in such an environment. This process is rooted in the organization's mission and values, is dynamic and changes with changing circumstances, integrates plans and actions, and leverages strengths and resources to take advantage of the organization's opportunities. This course was previously MGT-651617.

MGMT 6165 System Design & Information Management (3 Credits)
This course covers the foundations, concepts, tools, and techniques involved in system analysis, design, implementation, and maintenance of enterprise computer applications. Topics include systems' life cycle concepts; tools and techniques to manage information systems projects; introduction to the management of system investigation and analysis; determining system requirements using process, logic, and data modeling; conceptual and detailed design of system key components; criteria for optimum hardware selection; systems implementation and maintenance. Further, the course addresses information management, data warehouse and data mart utilization, information security and data quality concepts, and how to leverage data and modern business intelligence to deliver RIO for a business. This course was previously MGT-651661.

MGMT 6175 Women in Management (3 Credits)
This course is aimed at examining how perspectives and perceptions of male and female managers affect the workplace. This course will examine gender inequality and stereotypical biases in organizations, career options and upward mobility, work-life integration issues, inclusion and social networks, mentoring, sponsorship of women and participation in TMTs. In addition, the role of women in multinational corporations and startups will be explored. This course was previously MGT-651605.

MGMT 6185 Quantitative Methods for Decision Making (3 Credits)
This course will help students to get acquainted with various quantitative analysis tools and techniques that are used for enhanced business decision-making. Throughout this course, students will learn how to model real-life decision-making problems and methods of their solving. Topics include decision analysis, project management, forecasting, inventory control models, statistical quality control, linear and integer programming methods and applications, waiting lines and queueing theory, simulation modeling, and Markov analysis. A sound knowledge of basic statistics and algebra as well as Excel skills are essential for the course. This course was previously MGT-652561.

MGMT 6215 Failure & Crisis (3 Credits)
This course will examine evidence describing how and why even good and earnest decision makers fail to do well in the face of complex problems. The course is rooted in theory and evidence drawn from recent extensive simulations, and examines a wide range of problems and cases involving both public and private sector judgments, ordinary managers, chief executives, and political leaders and their staff. This course was previously MGT-651631.

MGMT 6996 Special Topics in MGMT (3 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

MGMT 6998 Individualized Studies in Management (MGMT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Management (MGMT). Please contact your mentor/advisor for more details.

MGMT 7005 Global Marketing Strategies (3 Credits)
This course explores the different economic, social changes that have occurred over the past decade and their impact on marketing. As global economic growth occurs, understanding marketing in all cultures is increasingly important. The course examines global issues and describes concepts relevant to all international marketers, despite the extent of international involvement. The course will analyze marketing strategies including pricing, legal and ethical issues, regulations, integrated marketing communications, multicultural research, and global brand management. This course is required for the Global Brand Marketing advanced certificate program.

MGMT 7030 Marketing Analytics & Brand Management (3 Credits)
This course was designed to provide an overview of the tools used to make strategic marketing decisions about the firm's brand and its customers. Graduate students with a background in basic research methods will find this course helpful for identifying ways to analyze data in order to make strategic marketing and resource allocation decisions. The course does not substitute for a basic course in marketing but focuses more on quantitative data analysis and its impact on the competitiveness of the firm. Students apply advanced statistics such as cluster analysis and conjoint analysis using big data for marketing decisions and brand management. Case study method and discussions will be used to evaluate competencies in these areas. This course is the capstone course in the Marketing Analytics and Brand Management Certificate. Students in this course should have completed a statistics course such as MGMT 6000 or equivalent. It is advisable that students take MGMT 6155 prior to taking this course.

MGMT 7035 Strategic Application of Innovation & Planning (3 Credits)
This course covers the critical skills for strategic leadership, strategy development, including environmental scanning, competitive assessment, entrepreneurial vision and communication, and management of human capital. The study enables students to understand and apply the basic concepts of a learning organization as a component of business strategic decision-making process. By the end of this course, the student will be fluent with the ideas and language of applying innovation and strategic planning for sustainability, and essential management skills such as leading innovation teams and building communication strategies from a stakeholder perspective to facilitate the process of innovation management and strategic planning.

MGMT 7045 Strategic Human Resource Management (3 Credits)
The role of HR and human capital in organizations today is one of strategic value and change agent in which HR members participate in developing the strategic direction for the organization. Emphasis in this course is placed on the way in which the global economy, technology, and business activities such as joint ventures and mergers and acquisitions impact the allocation and deployment of human resources including recruitment and selection, employee training and development, performance management, and career development. Other topics include developing HR strategy, measuring HR outcomes, applying Human Resource Information Systems (HRIS), exploring the role of HR in downsizing and mergers and acquisitions, examining the role of HR in the global environment, and examining HR challenges relating to applications of information technology. This is the capstone course for the HRM advanced certificate.

MGMT 7050 Strategic Information Technology Management (3 Credits)
This course provides knowledge and competency-based framework related to Information Technology (IT) strategic planning, implementation and management. The curriculum is designed for general and technology managers as well as business leaders involved in strategic planning, designing, and implementing IT projects. The focus of the course is on the role of Information Systems and, particularly, integrating Information Technology components in the modern organization, and how IT leaders design and implement IT-dependent strategic initiatives. The course learning activities focus on the impact of IT on operating business models and how IT strategy should be aligned with the business strategy and decision-making practices; the impact of IT architecture to the organizational Socio-Technical System, and the importance of designing and building reliable and secure operational enterprise systems; the significance of IT leadership and the importance of fostering key IT capability and linking IT to business metrics. Prerequisites: MGMT 6165 and MGMT 6030, may be waived with permission.

MGMT 7055 Strategic Marketing for Nonprofit Organizations (3 Credits)
Students will examine marketing issues in the larger context of the strategic planning process and apply marketing principles to a variety of situations relevant to nonprofit and government agencies. Students will consider ethical issues of strategic value and social responsibilities of marketing professionals.

MGMT 7070 Strategy & Tactics in Project Management (3 Credits)
This Project Management certificate capstone course builds on the pre-requisite project management certificate courses. This course integrates the concepts and processes discussed in earlier courses by relating them to evaluating and implementing multiple projects within the framework of portfolio management, project management offices (PMOs), virtual project management, and project monitoring and assessment (Lean and Six Sigma). Students will also learn more about the human side of project management, including team building, managing virtual teams and developing and implementing effective project communications. They will do this by completing a variety of individual assignments, class discussions and a final capstone project. Special Course Materials: Graduate Studies is pleased to be able to provide required software (Microsoft Project) for this course. Please note that this software is designed to run on Microsoft operating systems. Prerequisite: MGMT-6120 Managerial Perspectives of Project Management or instructor permission.

MGMT 7075 Women & Leadership: Strategies for Success (3 Credits)
This capstone course identifies leadership and communication strategies to enable women to communicate with higher levels of confidence and self-belief. Networking and self-promotion strategies to help overcome corporate barriers that limit or inhibit women's access to upper level positions are examined thoroughly. The course also includes topics about ethical leadership, moral courage, and organizational integrity as important factors characterizing women's leadership. A competency framework will be used to highlight the relationships between hierarchical levels and executive roles and responsibilities, and examples of successful women executives will be used to illustrate the efficacy of the different strategies.

MGMT 7080 Strategic Business Applications (3 Credits)
This capstone course is the culminating experience for students in the MBA in Business Management program. It is designed to integrate students' competencies in leadership, strategic management, ethical decision making and managerial communications, and apply the functional and professional skills they have gained throughout the program to formulate and implement successful strategic plans in the competitive global environment. This course will cover: integration of leadership competencies and functional knowledge; application of strategic management tools and analytical frameworks used to scan the global business environment; assessment of the value of an organization's resources and capabilities as compared to the domestic and international competition; identification of alternatives that could resolve the strategic problems facing an organization; and selection of well justified alternative that will best leverage the firm's core competencies to ensure sustainable competitive advantage. Any exceptions require permission of the instructor and the BML chair.

MGMT 7998 Individualized Studies in Management (MGMT) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Management (MGMT). Please contact your mentor/advisor for more details.

MKAN: Marketing Analytics (Graduate)

MKAN 7010 Marketing Analytics Capstone (3 Credits)
This capstone course focuses on students gaining real world project experience in marketing analytics. Students will explore consumer data, market trends, and campaign efficacy. Students will be required to complete a capstone project. The emphasis of the project will be on leveraging data to inform marketing strategies, audience segmentation, and campaign performance evaluation.

NURS: Nursing (Graduate)

NURS 6005 Theoretical Foundations of Nursing Practice (3 Credits)
This course explores the evolution of knowledge development in nursing. Theory is analyzed as a foundation for nursing practice, research, administration and education. Students will discover strategies to facilitate the process of theory development. Course topics include nursing's metaparadigm, philosophy of nursing, philosophy of science, nursing's unique body of knowledge and ways of knowing. Students will synthesize what they have learned about nursing knowledge development to create a personal nursing practice framework. This course was previously NUR-50000.

NURS 6010 Professional Role Development & Ethics (3 Credits)
Students explore bioethics and integrate principles of ethical decision making and professional behaviors into leadership roles. The roles to be identified, critiqued and evaluated are clinician, advocate, educator, researcher, expert, leader, manager, innovator and consultant. Traditional ethical systems and historic perspectives are examined in light of bioethical decision making and contrasted with practice-based ethics. Students learn how to objectively and systematically make and validate bioethical decisions in the nursing and health care environment. Scope of practice legalities and advanced ethical decision making from a practice-based perspective will be introduced and discussed as it relates to various roles and leadership as a master's prepared nurse. This course was previously NUR-50100.

NURS 6015 Nursing Research & Evidence Based Practice (3 Credits)
This course will focus on the knowledge required by nurses to utilize research findings, to provide high-quality health care, initiate change and improve nursing practice. Examination, analyses and evaluation of ethical principles, current literature, research designs and methodologies including quantitative, qualitative perspectives will be discussed. The investigation of scientific inquiry, problem identification, use of theoretical frameworks, ethics, measurement, data collection and analysis and dissemination will be integrated into a research proposal based on a specific health care issue of interest. This course was previously NUR-50200.

NURS 6020 Contemporary Issues in Health Care (3 Credits)
This course explores social, economic, and political trends impacting health care delivery and practice. Policy, management, education, technology, and regulatory perspectives will be included when examining a broad variety of current and emerging challenges facing health professionals at the international, national, regional and local levels. Students will appraise literature and engage in discussions and learning activities to create strategies to support health reform. This course was previously NUR-50400.

NURS 6025 Informatics & Healthcare Technology (3 Credits)
This course covers the evolution and theoretical basis of nursing and healthcare informatics, including concepts of data, information, knowledge and wisdom. The course explores applications in healthcare informatics, the use of technology and implications for clinical practice, administration, education and research. Concepts and application of relational database technology are introduced. Interprofessional issues in healthcare informatics are examined. Students will develop competencies in information management for knowledge-based practice in various healthcare settings to enhance patient care and nursing practice. This course was previously NUR 50300.

NURS 6030 Population Health, Human Diversity, & Social Issues (3 Credits)
This course will advance understanding of population health in the United States and globally from an interprofessional perspective. Students will explore determinants of health and health care disparities using a variety of conceptual frameworks, models and theories. Distributions and patterns of health outcomes across populations will be analyzed. Responsibilities of the master's prepared nurse in addressing health policy issues and employing advocacy strategies to promote optimal health outcomes will be examined. This course was previously NUR 50500.

NURS 6050 Curriculum & Program Development (3 Credits)
Nursing curricula and program development are dynamic and ever changing processes. A nursing program of study is responsive to internal and external stakeholders where individual courses represent an integrative whole curriculum. This graduate level course examines curriculum history in nursing education, development, and future trends. Course activities focus on curriculum design, including the development of an undergraduate or graduate nursing program of study. An in-depth review of professional nursing evaluation and accreditation processes is provided. Dialogue pertaining to curriculum development and evaluation will take place via asynchronous discussions and collaborative learning activities. This course was previously NUR-560000.

NURS 6055 Instructional Design & Teaching with Technology (3 Credits)

Instructional design and teaching with technology can be simplified as how we teach and how we learn. This graduate level course prepares students to apply theoretical concepts of education and learning to teaching in nursing. Course topics will include fundamentals of instructional design, theories of teaching and learning, instructional design models, technology use in education, and learner diversity. Design considerations for technology-based instruction will be addressed in this course. This is a web-enhanced course and learners will be able to adapt course material to a classroom setting. This course was previously NUR-560100.

NURS 6060 Measurement Assessment & Evaluation of Learners & Programs (3 Credits)

Measurement, assessment, and evaluation in nursing education are the focus of this course. Students will learn methods to assess and evaluate learning in multiple ways. Various approaches to program evaluation will be explored as well as legal and ethical issues relevant to assessment and evaluation processes. This course was previously NUR-560200.

NURS 6065 Healthcare Finance and Budgeting (3 Credits)

This course will focus on the influence of financial and economic factors in the delivery of healthcare services. Components of financial management such as budget development for operational and capital budgets, cost analysis, human resource allocation and staffing, and payment systems will be discussed. The role of the nurse leader as a fiscal manager will also be explored. This course was previously NUR-560300.

NURS 6070 Organizational Theory & Human Resource Management (3 Credits)

This is a course designed for nursing administration students to explore, critique, and analyze organizational behavior and human resource management. Using a multidisciplinary approach, students in this course will draw on both the literature and their experience to better understand the value that differing organizational structures and processes have on an organization's performance and outcomes. Students will interpret the political and cultural dynamics inherent to all organizations with an emphasis on strategically managing human relations and leading organizations. A combination of probing discussion questions, case study analysis, and reflective journal writing will be utilized as learning methods in this course. This course was previously NUR-560400.

NURS 6075 Innovative Leadership in Healthcare Organizations (3 Credits)

This course will focus on innovative design and leadership strategies to create and improve healthcare organizations. Within the context of the Patient Protection and Affordable Care Act, the course examines current trends in the design of healthcare systems across the healthcare continuum. The course builds on an understanding of organizational theory and healthcare finance to highlight how best practice leadership strategies can promote sustainable organizations in a dynamic healthcare environment. This course was previously NUR-560500.

NURS 6080 Advanced Pathophysiology, Health and Physical Assessment, and Pharmacology (3 Credits)

This course integrates principles of pathophysiology, health and physical assessment, and pharmacotherapeutics to improve health outcomes across the lifespan. Using a cultural and ethical framework, complex case studies will be analyzed. This course does not satisfy requirements for advanced practice registered nurses.

NURS 6998 Individualized Studies in Nursing (3 Credits)

Students have the opportunity to develop individualized studies with their mentor in Nursing (NURS). Please contact your mentor/advisor for more details.

NURS 7005 Nursing Education Capstone (3 Credits)

This course engages students in didactic and online activities as a culminating program requirement. Together these experiences provide a framework for examining the Nurse Educator role and responsibilities. The student will engage in a 45-hour practicum experience collaborating with nurse faculty in various aspects of the practice environment. Synthesis of curriculum, instructional, and evaluative theories and knowledge is emphasized through learning activities. Focus is placed in the application of teaching and nurse educator competencies. This course was previously NUR-560900.

NURS 7010 Nursing Administration Capstone (3 Credits)

The Nursing Administration Capstone course integrates program objectives, didactic online activities, and an administrative practicum experience as a culminating program requirement. The student will engage with a Nurse Administrator in a 45-hour practicum to explore leadership roles and to complete a meaningful capstone project. Synthesis of course objectives from previously completed coursework is expected, along with a focus on leadership in complex healthcare systems. This course was previously NUR-561000.

PADM: Public Administration (Graduate)

PADM 6085 Public Administration (3 Credits)

This graduate level course provides a historical, case-study, and theoretical approach to the study of public administration. Students of social and public policy, organized labor, human services, higher education and business examine the history of the field and its most prominent theorists and practitioners. The course traces the modern development of the field beginning in the 19th Century with the work of Max Weber and examines its evolution during the 20th Century through the works of Frederick W. Taylor, Mary Parker Follett, Chester Bernard, Herbert Simon, Charles Lindbloom and others. Concepts and theory are understood through reading, researching, and writing about significant case studies in various realms of public administration. Students conduct independent research on topics relevant to their own professional development and career objectives. Students interested in the public, private, or not-for-profit sectors interact during the course through structured, focused discussion. Students from any graduate program benefit equally from the study of public administration as applied to their field of study. The course is especially useful for those who aspire to management or supervisory positions.

PADM 6170 Public Finance (3 Credits)

The objective of this course is for students to gain a comprehensive understanding of the nature and scope of governments' role in the economy. This course will provide students with knowledge and an analytical toolset to comprehend concepts and trade offs entailed in public finance policy alternatives. Topics covered: Public Goods and Externalities; Cost-Benefit Analysis of Government Expenditures; Social Security, Health Insurance and Welfare; and Taxation's Impact and Efficiency.

PADM 6175 Public Sector Decision-making (3 Credits)
This study explores various decision making models that are applicable to public sector decision making, including, but not limited to: rational choice, organizational process, and bureaucratic politics models of decision-making. The course is intended to highlight political and governmental influences on decisions and to distinguish where applicable the differences between public policy decisions and private sector decision-making.

PADM 6180 State & Local Government (3 Credits)
State and Local Government is an introductory level graduate course designed for students interested in professional development in public administration, public affairs and public policy. The course focuses on politics and administration at the state level and on the relationships between states and the federal government and states and local governments. The concept of federalism is central to the study and specifically the dynamics of intergovernmental relations relevant to specific areas of public policy in which state funding is derived from and directed by the federal government.

PADM 6190 Grant Writing (3 Credits)
Grant Writing is a graduate level course aimed at students seeking grant opportunities in the not-for profit sector, through government agencies, as well as individual grants. Students will learn key elements of effective grant application and management, including how to identify funding sources, write a grant proposal (including executive summary, statement of need, project description, evaluation, conclusions, statement of sustainability), build a budget, identify funder evaluations of proposals, and learn strategies to maximize grant success and for effective grant management. Strategies for effective grant writing techniques and proper format will be addressed and sample grants will be evaluated. While students will draft individual grant applications, a collaborative process of learning will be approached through group discussions and shared process. Prerequisites: None. Corequisites: None.

PADM 6195 Organizational Behavior: Theory and Practice (3 Credits)
Organizational Behavior: Theory and Practice examines the fundamental concepts, ideas, techniques, and applications required to understand governmental intervention, political factors, and ethical implications in organizations. The course also focuses on the behavioral skills and competencies to be an effective manager and leader in a public service environment. Emphasis on the interpersonal skills that will provide individual, group and organizational effectiveness, as will issues of motivation, leadership, organizational design in public administration are also examined. Prerequisites: None. Corequisites: None.
Attributes: Liberal

PADM 7020 Final Project: Professional Project in Public Administration (3 Credits)
The final project for the Masters in Public Administration program is a policy memorandum written from the perspective of an executive level program administrator to a governmental oversight committee. The memorandum addresses program planning, evaluation measures, and performance indicators. The memorandum requests funding for the program for the next fiscal year. The simulated exercise can be undertaken at any level of government appropriate for the personal and professional goals and objectives of the student with the approval of the course instructor. The assignment may also be adapted for the not-for-profit sector to meet the needs of students interested in professional career opportunities in that sector. The student shall demonstrate integrative learning acquired during the program of study based on coursework undertaken during the degree program. Prerequisites: PPOL 6007, PPOL 6010, PPOL 6020, and PPOL 6030.

PBHS: Public History (Graduate)

PBHS 6025 Public History, Ethics & Professionalism (3 Credits)
This course was designed to offer students the chance to delve into the field of public history, as it exists in the public and university sector. Students will consider ethical and professional standards in the field, using their experiences and course materials to analyze and assess various public history activities.

PBHS 6040 Museums and Public History: Theory & Practices (3 Credits)
This course takes up historical and cultural theory to examine how museums co-create history and public memory with communities. Through readings, research, discussion, and use of on-line resources, students explore institutional histories and current trends in the thinking and practices of academic and museum professionals, with a focus on identity, authority, and representation. They trace shifts in correspondent communities' and public expectations, with comparative views of venues and performance that represent history outside established institutions, including cross-cultural examples. They also consider how technology has changed certain museum practices and functions, in particular through the appraisal and comparison of on-line virtual museums and live visits to museums. This course is required for the Public History advanced certificate and the Heritage Preservation advanced certificate. This course was previously LIB 640628.

PBHS 6105 Exhibition: Planning & Interpretation (3 Credits)
Exhibitions serve as vehicles for the interpretation and presentation of historic objects and images. Whether it is hosted by a traditional museum, an online collection, or a governmental office, an exhibition offers a material version of history that is often far more accessible than a scholarly article or monograph. That accessibility makes exhibitions especially valuable to public historians. Building on the theory and practice learned in Museums and Public History, this class will ask students to work within a history museum (or equivalent collection) to produce an exhibition. This course is required for the Public History advanced certificate program. This course was previously LIB 640635.

PBHS 6215 Oral History: Theory & Methods (3 Credits)
Oral history is the process of interviewing people to record their memories of events that occurred in the past and to analyze the meaning and value of those memories. In one sense, an oral history interview is a primary document much like newspapers, photographs, or diaries. As with all documents, the oral historian must take care to critique the interview and put it in context with other data and documents. In another sense, the oral history is very different in that the oral historian and the interviewee are creating an historical document that did not exist before. This course is required for the Public History advanced certificate program. This course was previously LIB 640625.

PBHS 6240 Preservation Policy & Law (3 Credits)
This course asks students to learn about preservation policies and laws. Questions of intellectual and cultural property, as understood within the United States and throughout the world, will be considered through study of the Convention Concerning the Protection of the World Cultural and Natural Heritage, the National Historic Preservation Act of 1966 (including Section 106), the International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM), the US National Trust for Historic Preservation, the National Register of Historic Places, the Native American Graves and Repatriation Act (NAGPRA), and the National Park Service. Students will also learn about the history of the preservation movement and the process of nominating properties for inclusion on the National Register of Historic Places. This is a required course of the Heritage Preservation advanced certificate. This course was previously LIB 640674.

PBHS 6245 Preservation Material & History (3 Credits)
This course allows students to become acquainted with perspectives on heritage preservation and a theoretical and methodological repertoire to realize new learning through investigation of particular subjects and issues. The study focuses on the intersections between heritage preservation and material culture (including art and architecture). Questions related to museum studies, consumption theories and patterns, the concept of cultural property, or a closer focus on a specialty topic, such as a particular type of material or artifact and its history, use, and interpretation will be considered. This is a required course of the Heritage Preservation advanced certificate. This course was previously LIB 640673.

PBHS 6325 Archival Theory & Practice (3 Credits)
This course will introduce students to the history of archives and the basic theories and practices of administering archives and manuscript collections (appraisal, acquisition, arrangement and description, reference, and preservation). As well, the course will address the public dimension of archives and their use in research, outreach programs, and historic editing and publishing. Finally, the course will cover ethical and legal issues and the ways new information technologies affect archival administration and use. This course is required for the Advanced Certificate in Public History. This course was previously LIB 640634.

PBHS 7005 Public History Internship (3 Credits)
In this course, students find a public history and/or heritage preservation site at which they may put their theoretical and methodological knowledge to work. The internship site must be approved by the Coordinator of the program and by the college's Career Services Office. All students registering for an internship or field/clinical experience must complete form PFC-001 and submit it to the Office of Career Services (https://careerhub.sunyempire.edu/channels/search-for-an-internship/) before activities begin. The Public History Internship is the final course in both the Advanced Certificates in Public History and Heritage Preservation and a required course of the MA in Public History degree.

PBHS 7030 Public History Final Project (3 Credits)
As the concluding study in the Master of Arts in Public History program, the student will prepare a capstone project in close consultation with their advisor and instructor. The student will work with his/her instructor in this final capstone study to complete the proposed project and a short written or oral self evaluation of their work.

PPOL: Public Policy (Graduate)

PPOL 6007 Policy Process (3 Credits)
The purpose of this course is to provide students with an understanding of how government can influence the progress toward improving social conditions. Students will examine the processes and tensions that characterize the formulation, adoption, and implementation of government policies and programs and how they are affected by a diverse range of values and priorities in a democratic context. Students will examine their own values and explore how they affect their views of social problems and proposed policy solutions.

PPOL 6010 History and Social Context of American Policy (3 Credits)
This course examines the development of American social policy. It considers definitions of social policy and a systematic framework for policy analysis of service delivery systems. We consider American individualism and its relationship to the development of social policy from the 1930s, through the Great Society programs of the 1960s, to contemporary social issues. This course was previously SOC-620501.

PPOL 6015 Policy Implementation (3 Credits)
This study of policy implementation deals with what happens after policy is formulated through legislation, executive action, or organizational governance. Implementation is often bureaucracy-driven, especially in the United States where virtually any domestic policy implementation is dependent upon multiple layers of federal, state and local governments and their agencies and where other types of organizations are hierarchically structured. The course includes the analysis of theories and their application to case studies in an effort to understand the reasons for the success and failure of implementation. This course was previously SOC-620601.

PPOL 6020 Research Methods (3 Credits)
Research in the public sector serves to inform new policies and evaluate existing ones. Conducting meaningful research is truly a process. This course will provide a framework for initiating, developing, and implementing research methodologies to answer context-appropriate policy questions. The course will focus on the fundamentals of quantitative and qualitative analysis and the elements of research design necessary to conduct policy-relevant public sector research. Quantitative and qualitative research approaches will be examined through the lenses of formulating a research question, research design, the identification of key variables, establishing appropriate measurement devices, and carrying out appropriate methods of data collection. The course will also discuss research ethics and help students identify and comply with ethical concerns in conducting research with human subjects. This course was previously RAM-620591.

PPOL 6021 Methods for Policy Research (3 Credits)
This course will introduce policy studies students to the requirements of conducting graduate level research. It will emphasize qualitative methodology (meaning non-statistical data) while also discussing how to identify and use good quantitative research sources. Topics that will be covered include how to identify bias in sources, different types of sources, how to properly integrate research sources into graduate research, and the processes involved with human subject research.

PPOL 6030 Public Policy Analysis (3 Credits)
The purpose of this course is to provide students with an understanding of the methods and techniques of analyzing, developing and evaluating public policies and programs. Emphasis will be given to benefit-cost and cost-effectiveness analysis and concepts of economic efficiency, equity and distribution. Methods will include problem solving, decision making and case studies. Examples will come from human resource, environmental and regulatory policy. This course was previously SOC-620565.

PPOL 6035 Advocacy in State & Community-level Government (3 Credits)
The emphasis of this course is on gaining the knowledge and skills required for effective advocacy in state and community-level government. Students will focus on learning activities that promote efficiency in individual and organizational advocacy for social change and meeting the needs of marginalized populations. The course will consist of a mini-study in state and local community government; and case studies in community advocacy. This course is required for the Advanced Certificate in Community Advocacy. This course was previously SOC-620518.

PPOL 6045 Advocacy for Children (3 Credits)
This course will examine the broad array of state and federal policies for children, youth, and their families, with a particular emphasis on understanding policies and services for populations involved with child-serving systems. The course will also examine the historical foundations of these policies and how they have evolved over time in response to unmet needs. Students will develop critical frameworks for assessing the strengths and weaknesses of these policy interventions and of the delivery of child-oriented social services based on social and behavioral science research evidence and through the lens of multiculturalism and social justice values. This is a required course in the Child and Family Advocacy advanced certificate.

PPOL 6055 Human Services Policy (3 Credits)
In this course, students will examine how social policy influences, and is influenced by, the way in which human service functions, service populations, outcomes, and resources are publicly and privately defined, identified, secured, and measured. Students will examine the interactional effects of social policy and human services at organizational, and professional levels.   For example, at the community level, local funding agencies such as the United Way often act as gatekeepers controlling community resources. At the organizational level, this might be expressed as a conflict between the stated mission of an organization and actual practices necessitated by the requirements of its funding sources. An example at the professional level is the socialization of human service workers which often includes membership in professional associations. These associations serve as interpreters of state-of-the-art practices and attitudes and lobby for their expression in social policy, law and regulation. By semester's end, students should be capable of effectively analyzing or deconstructing any human services agency or concept in current social policy. This course is required for the Advanced Certificate in Community Advocacy and the Advanced Certificate in Child and Family Advocacy. This course was previously SOC-622535.

PPOL 6070 Race Class & Gender in US Public Policy (3 Credits)
This course is designed to develop understanding of the implications of race, class, and gender for U.S. public policy. We will consider both social structural and cultural dimensions of this question, and we will examine a range of policy areas from domestic policy and civil rights to international affairs and foreign policy. We will investigate the political and theoretical basis of policymaking as it reflects and affects social-structural relations between social groups, especially relations of gender, race, and class. We will seek to understand the social relations that systematically disadvantage some social groups and privilege others. We will explore how these social relations shape policy processes and how this influences how governments respond to public problems.

PPOL 6075 Family Policy (3 Credits)
In this course, students examine the institution of the family through the lens of cultural values and as an area for policy decisions. More generally, this course will explore the reciprocal linkages between family functioning and public and private policies in this country. Topics raised in the course consider how the family unit has evolved over time, the cultural values that shape not only how family is viewed but also how that view shapes policy decisions that affect the family and the impact that these policy decisions have upon both families and the larger society. This course is required for the Advanced Certificate in Child and Family Advocacy.

PPOL 6100 Health, Aging and Social Policy (3 Credits)
This study examines social policy regarding the aged in American society. Students examine the social construction of aging in American society and current policies applying to the aged at both the federal and local levels. Among specific policies considered are those related to employment and retirement, income maintenance, health insurance, health care, institutionalization and family support systems. Cross-cultural national and historical variations in social policy are also considered.

PPOL 6996 Special Topics in PPOL (3 Credits)
The content of this course will vary by term and section. Students may repeat this course for credit as long as the topic differs. Please refer to the Term Guide for course topic offerings.

PPOL 6998 Individualized Studies in Public Policy (PPOL) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Public Policy (PPOL). Please contact your mentor/advisor for more details.

PPOL 7010 Final Project - Professional Project: Social and Public Policy (3 Credits)
As the concluding study in this Master of Arts program, the student will complete a culminating project, in which he/she engages in a sustained examination of a critical question or issue related to this program. The final project will take the form of a policy memorandum. This course is designed to guide the student through the implementation of a policy memorandum. Policy Memorandums are not published in the ProQuest/UMI service. Prerequisites: PPOL 6007, PPOL 6010, PPOL 6015, PPOL 6021 (preferred) OR PPOL 6020 (for students intending to pursue doctoral studies), and PPOL 6030.

PPOL 7015 Final Project - Thesis: Social and Public Policy (3 Credits)
As the concluding study in the masters' program, students will complete a culminating independent research project in the form of an academic thesis, in which they engage in a sustained examination of a critical question or issue related to their program. In a thesis, the student is expected to make a contribution to the current body of knowledge in a scholarly field. To do that, students may conduct an original investigation or develop an original interpretation of existing research and/or literature. A thesis is a scholarly piece of work that systematically and analytically explores a specific topic or question. It is an in-depth investigation that contributes new knowledge to a field, and can be either theoretical or empirical. Writers of theses make appropriate inferences based on a deep analysis of the chosen topic or question. The thesis is the best choice of final project for students with plans to continue their studies toward a doctorate. Completion of the thesis requires an oral defense. All theses are published in the ProQuest/UMI service. This course was previously SOC-620595 Prerequisites: Students must have taken all required core courses..

PPOL 7998 Individualized Studies in Public Policy (PPOL) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Public Policy (PPOL). Please contact your mentor/advisor for more details.

SPED: Special Education (Graduate)

SPED 6005 Introduction to History of Special Education Law (3 Credits)
This course will provide a comprehensive overview of the history of education law and the history of education of students with disabilities, advocacy, and disability laws from the mid-20th century. Students will be introduced to the role and responsibilities of the special education teacher in their legal obligation to the exceptional student, parents, and school. Particular emphasis will be placed on federal and New York State Education Department Law- Part 200 mandates and current special education laws and core issues that developed from the disability movement: Individuals with Disabilities Education Act – IDEA (PL 94-142), No Child Left Behind Act (NCLB), Individualized Education Programs (IEP), Parental Rights and Procedural Safeguards, Due Process, introduction to initiatives such as PBIS, FBA and RTI, and future litigation as it comes into effect. Students must complete at least 10 hours (non-certified teacher candidates) or 5 hours (certified teachers) in a classroom observing/assisting a certified special education teacher to explore the relevance of the topics to a classroom setting. Observation assignments will integrate theoretical and research-based concepts with classroom practice. This course was previously EDU-663100.

SPED 6010 Child and Adolescent Development (3 Credits)
This course will focus on physical, cognitive, social and emotional development of children and adolescents. The course explores theories of development within the contexts of families, cultures, communities and schools. It prepares prospective teachers to understand the needs, abilities and behaviors of children and adolescents. The course content will address theories of learning and teaching; genetic and environmental factors affecting child development; individual differences in abilities and developmental patterns; developmental issues and learning needs of students with special needs; and best practices for teaching and assessment. Teacher candidates will learn strategies in creating a positive and motivating learning environment. MAT program teacher candidates will be required to complete 10 classroom observation hours with a certified teacher in their content area in a PK-12 grade classroom.

SPED 6025 Teaching & Learning Across the Contents: Methods I (3 Credits)

This methods course examines the complex relationship between teaching and learning across the contents of Social Studies, Math, Science and English Language Arts to prepare the teacher candidate for the general education classroom, in grades 1-12. Teacher candidates will examine the relationships between various teaching strategies and diverse students' learning styles and needs; individualize instruction; explore the relationships between teacher candidates' assumptions, beliefs and attitudes and their own teaching styles; and reflect on their own experiences as learners to gain insight into these issues. The study of teaching methods and micro-teaching sessions will relate to the four content areas. Teacher candidates will study issues related to child and adolescent development; develop lessons based on the Common Core Standards, NY Next Gen. Standards or relevant standards, theories and research related to teaching and learning; content specific teaching methods and materials, and instructional objectives; advantages and disadvantages of various teaching methodologies; techniques of teacher candidates' self-assessment; uses of technology to enhance learning as an interactive medium and as a teaching tool, and the cognitive and social aspects of technology mediated learning. MAT program students will complete at least 10 hours of classroom observations with a certified special education teacher. Observation assignments will integrate theoretical and research-based concepts with classroom practice. The students will teach two peer instructed micro teaching lessons. M.Ed. program students will complete at least 5 observation hours with a certified special education teacher. The students will write two lesson plans, teach using those plans and write a reflection for each lesson taught. Prerequisites: EDUC 6010 if not waived.

SPED 6040 Children with Disabilities: Moderate and Severe (3 Credits)

This course prepares teacher candidates to teach children with moderate and severe disabilities in a variety of classroom settings. This course is comprised of an overview of developmental disabilities, etiology, characteristics, instructional services and behavior interventions, and findings of current research. This course will provide an introduction to curricula pertaining to students with severe disabilities. Emphasis will be placed on family-centered planning, team approaches, access to the general education curriculum, activity-based instruction, and community-based instruction. Specific information on curriculum and instructional strategies related to communication, motor and self-care skills will be included. Students must complete at least 10 hours (non-certified teacher candidates) or 5 hours (certified teachers) in a classroom observing/assisting a certified special education teacher to explore the relevance of the topics they are studying to a classroom setting. Observation assignments will integrate theoretical and research-based concepts with classroom practice. Prerequisites: SPED 6005 and EDUC 6015.

SPED 6045 Behavioral Management & Intervention (3 Credits)

This course is designed to help pre-service and in-service teachers identify, record, evaluate, and intervene with students who are displaying behavioral difficulties in the classroom. The course teaches universal and targeted behavior management assessments, techniques, and interventions for special educators within school-wide, classroom, and individual settings. This course focuses on both low and high-incidence emotional and behavioral problems encountered in general and special education environments. Specific emphasis will be placed on understanding the characteristics and interventions that work with the most challenging students, and assessment and intervention techniques for students with intensive behavioral needs will be emphasized. Intervention techniques will include functional behavior assessment, positive behavior support, crisis management, and applied behavior analysis. Students will learn how to develop classroom and individual behavior management plans. Students must complete at least 15 hours (non-certified teacher candidates) or 5 hours (certified teacher candidates) in the classroom working with a certified special education teacher to explore the relevance of the topics they are studying to a classroom setting. This course was previously EDU 663105. Prerequisites: SPED 6005 EDUC 6015

SPED 6050 Teaching Exceptional Adolescents in Inclusive Settings: Methods II (3 Credits)

This course prepares secondary pre-service and in-service teachers to provide modifications for exceptional students in English Language Arts, Math, Science, and Social Studies. The focus of this course is on planning instruction and assessments to meet the needs of all students including those with disabilities. During the course, students will examine the particular learning needs of students with learning and, emotional disabilities, and giftedness. Students will also explore practical aspects of collaborating with general education content teachers in inclusive settings. Specifically, students will receive instruction and practice in modifying lesson plans of general education content teachers so that they meet the learning needs students with specific exceptionalities. The course will also review various assistive technologies available to students with physical and intellectual disabilities. Teacher candidates will then be prepared to use various instructional models to address the needs of students with these exceptionalities. Among the instructional models to be examined are backwards planning, differentiated instruction, culturally responsive teaching, brain based and cooperative learning, and the Universal Design for Learning. The course focuses on evidence-based strategies in teaching students with disabilities in a number of areas including reading, writing, spelling, math, and study skills. Students must complete at least 10 hours (non-certified teacher candidates) or 5 hours (certified teacher candidates) in the classroom working with a certified special education teacher to explore the relevance of the topics they are studying to a classroom setting. Observation assignments will integrate theoretical and research-based concepts with classroom practice. This course was previously EDU-663107. Prerequisites: SPED 6025.

SPED 6055 Teaching Exceptional Children in Inclusive Settings (3 Credits)

This course is designed to prepare teacher candidates in instructional planning, management, and delivery of instruction to students with disabilities in grades 1-6. It also addresses classroom management and organization practices designed to establish optimal learning environments for all students. Teacher candidates will learn about instruction planning utilizing evidence-based practices in special education, universal design principles and assistive technology, providing meaningful access to general education classrooms and curriculum for students with disabilities. The candidates will learn about designing and delivering appropriate accommodations and modifications to students with disabilities in grades 1-6. Emphasis will be placed on diversity issues,federal and state legislative mandates pertinent to nondiscriminatory assessments, parental involvement and individualized educational plans; and professional practice in special education. Teacher candidates will explore historical and current research in special education, primary models of curriculum and pedagogy in the field, and the relationship between critical aspects of the development of children with disabilities and the creation of inclusive learning opportunities for all children. The course will address the collaborative roles of a multidisciplinary approach to supporting children with disabilities in inclusive or self-contained classrooms. Teacher candidates must complete a minimum of 10 hours in a classroom observing or assisting a certified special education teacher to explore the relevance of the topics they are studying in this course to a classroom setting. Course discussions and assignment will integrate instructional planning and evidence-based practices in special education. Prerequisites: SPED 6025.

SPED 6060 Psychoeducational Assessment Practices & IEP Development (3 Credits)

This course focuses on special education processes, including screening, assessment, Individualized Education Program (IEP) development/monitoring, and evaluation. Referral and assessment for special education eligibility, norm-referenced and teacher-developed assessments, legal and procedural issues in IEP development, and strategies for assessing students from culturally and linguistically diverse backgrounds will be included. The course will include discussion and practice of the components of effective assessment, including examination of evaluation procedures, from pre-referral intervention, eligibility/placement decision making to progress monitoring of scientifically-based instructional interventions based on Response to Intervention (RTI) and Positive Behavioral Interventions and Supports (PBIS). Focus will include academic, affective, behavioral, adaptive functioning, and environmental measures. Students also will learn how to interpret and evaluate the psychometric properties of psycho-educational assessments as part of choosing valid and reliable assessment tools. Additional course topics will address emerging evaluation trends, test modifications/accommodations, parent involvement in the IEP process, and progress monitoring and reporting. Students must complete at least 10 hours (non-certified teacher candidates) or 5 hours (certified teacher candidates) in the classroom working with a certified special education teacher to explore the relevance of the topics they are studying to a classroom setting. Observation assignments will integrate theoretical and research-based concepts with classroom practice. This course is typically offered in the spring. Pre-Requisite: SPED-6005 AND EDUC-6015

SPED 6065 Special Education Mentored Teaching I (3 Credits)

Special Education Mentored Teaching I is the first in a series of 4 mentored teaching courses in the MAT Trans B Special Education program. The course is designed to develop special education teacher candidates' repertoire in working with students with disabilities. The candidates will follow requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are employed. The teacher candidates will be expected to use evidence-based practices in working with students with disabilities and use methods and materials appropriate to their teaching assignments. The course involves collaboration among students, course instructors, and supervising faculty. In this first in-service term, mentoring and supervision of teaching and the course content emphasizes analysis and application in the following areas: preparing the classroom; advance lesson planning; writing IEP annual goals; classroom management; incorporating technologies in classroom instruction and the use of assistive technology for students with disabilities. A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED 6040.

SPED 6070 Successful Transitioning Through Partnership and Collaboration (3 Credits)

This course prepares pre- and in-service special education teachers to assist exceptional students with postsecondary planning. It is critical that students with exceptionalities receive explicit support from various educators, in addition to school counselors and psychologists, in making various essential life choices as they move from late adolescence to dealing with the challenges of adult life. Therefore, this course is designed to provide the pre-service special education teacher with various methods in developing partnerships on behalf of the exceptional student. To this end, the course will address how to assess the severity of a student's disability, understand the various needs for support at a postsecondary institution, discuss programmatic differences at colleges and universities, comply with testing accommodations for required examinations enlist community agencies, counsel for the transition to independent living, explain the implications of changes to classification status, and work through complex application procedures. In an effort to foster and develop a culturally competent framework, participants will learn through a variety of readings, activities, reflections, and online discussions concerning how to foster positive relationships between the school and the family, the special education student and the school, and explore critical perspectives on the school and community relationship. Particular attention will be given to developing collaborative and co-teaching skills and experiences in the inclusive classroom. Students must complete at least 10 hours NT/ 5 hours CT in the classroom working with a certified teacher to explore the relevance of the topics they are studying to a classroom setting. Observation assignments will integrate theoretical and research-based concepts with classroom practice. Pre-Requisite: SPED-6005.

SPED 6075 Foundations of Educational Action Research (3 Credits)
This course provides students with the basic competencies necessary to understand and evaluate the research of others, and to plan and conduct their own research with a minimum of assistance. Topics will include the research process from problem formulation, literature review, research design, and statistical analysis to report writing and dissemination. Both qualitative and quantitative research methods of data collection will be reviewed, and students will be introduced to action research, a form of self-reflective systematic inquiry by practitioners on their own practice. Students will conduct a small action research project over the course of the semester. This process will involve the identification of a specific issue in the student's work setting, researching the literature regarding the issue, designing a proposal to solve the issue. Students are expected to have regular access to a classroom to plan or conduct action research. Students must complete at least 10 hours NT/ 5 hours CT in the classroom working with a certified teacher to explore the relevance of the topics they are studying to a classroom setting. Observation assignments will integrate theoretical and research-based concepts with classroom practice. A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. This course is typically offered in the fall. This course was previously EDU 663108 Prerequisites: EDUC 6015.

SPED 6080 Special Education Mentored Teaching II (3 Credits)
Special Education Mentored Teaching II is the second in a series of 4 mentored teaching courses in the MAT Trans B Special Education program. The course is designed to develop special education teacher candidates' repertoire in working with students with disabilities. The candidates will follow requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are employed. The teacher candidates will be expected to use evidence-based practices in working with students with disabilities and use methods and materials appropriate to their teaching assignments. The course involves collaboration among students, course instructors, and supervising faculty. In this second in-service term, mentoring and supervision of teaching and the course content emphasizes analysis and application in the following areas: instructional strategies for exceptional learners, classroom management practices, global perspectives in education and collaborating with school professionals and parents of students with disabilities. A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED 6065.

SPED 6085 Collaboration in Special Education (3 Credits)
This course is designed to develop knowledge, skills and abilities related to collaboration and teamwork. It provides special education teacher candidates with the information and skills necessary to collaborate and consult with other professionals, families, and support agencies regarding the design and implementation of educational programs for students with disabilities. The course also focuses on developing the communication skills needed to implement the range of collaborative service delivery options for students with disabilities. Candidates will develop foundational knowledge and skills in research-based processes for effective instruction of students with special needs and collaboration with other educators, administrators and parents to improve student learning. Teacher candidates must complete at least 10 hours in a classroom observing/assisting a certified special education teacher to explore the relevance of the topics they are studying in this course to a classroom setting. Course discussions and assignment will integrate child development issues to classroom practice. Prerequisites: SPED 6005 and EDUC 6015.

SPED 6086 Special Education Intensified Mentored Teaching I (6 Credits)
SPED Intensified Mentored Teaching I is the first in a two-course sequence of Intensified Mentored Teaching courses. IMT I is a site-based course situated in the teacher candidate's classroom. The course aims to support and advance first-year teachers' classroom practice during a period and process known as new teacher induction. IMT I is structured around classroom observations conducted by supervising Special Education faculty mentors. Over the course of the term, beginning teachers and supervising faculty mentors engage in a process of formative mentoring that makes use of pre-observation, classroom observation, and post-observation follow-up. This course provides support and guidance to the beginning teacher in establishing classroom expectations, setting attainable teaching and learning goals, developing effective classroom management skills, creating a student-centered learning environment, and developing reflective habits of mind. Registration to this course must be approved by the Office of Teacher Education. A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED 6025. Corequisites: SPED 6050.

SPED 6087 Special Education Intensified Mentored Teaching II (3 Credits)
SPED Intensified Mentored Teaching II is the second in a two-course sequence of Intensified Mentored Teaching courses. IMT II is a site-based course situated in the teacher candidate's classroom. The course aims to support and advance first-year teachers' classroom practice during a period and process known as new teacher induction. IMT II is structured around classroom observations conducted by supervising special education faculty mentors. Over the course of the term, beginning teachers and supervising faculty mentors engage in a process of formative mentoring that makes use of pre-observation, classroom observation, and post-observation follow-up. This course provides support and guidance to the beginning special education teacher in establishing classroom expectations, setting attainable teaching and learning goals, developing effective classroom management skills, creating a student-centered learning environment, and developing reflective habits of mind. A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED 6086.

SPED 6998 Individualized Studies in Special Education (SPED) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Special Education (SPED). Please contact your mentor/advisor for more details.

SPED 7001 Teacher Education Clinical Course SPED (0 Credits)
The clinical course is a site-based course situated in the teacher candidate's classroom. It aims to support and advance teachers candidates' classroom practice. Over the course of the term, teacher candidates and supervising MAT faculty mentors engage in a process of formative mentoring that makes use of pre-observation, classroom observation, and post- observation follow-up. This course provides support and guidance to the beginning teacher in establishing classroom expectations, setting attainable teaching and learning goals, developing effective classroom management skills, creating a student-centered learning environment, and developing reflective habits of mind. The course will also allow the candidates to collaborate with one another to learn from each others' perspectives. Corequisites: Students must register for this course when registering for any of the following: SPED 6065, SPED 6080, SPED 6086, SPED 7010, SPED 7030, SPED 7063, SPED 7067.

SPED 7005 Special Education Masters Capstone Final Project (3 Credits)
The Special Education Masters Capstone Final Project course guides students through the process of disseminating their action research proposals developed in the Foundations of Educational Action Research course. Gaining experience in action research dissemination prepares students for communication with other special education professionals at the state and national level. Guided by the instructor, students will refine and complete their action research. Further, students will write a reflective Special Education Teacher Identity and Philosophy that is a culmination of their observation experiences, research, theoretical framework and growth. Students are expected to have regular access to a classroom to carry out action research. A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED 6075.

SPED 7010 Special Education Residency I: New Teachers (3 Credits)
The Special Education Residency I is a clinically rich course that places the Resident into the classroom under the direct supervision of a Special Education critic teacher throughout the term. This blended course provides special education teacher interns with mentoring and support throughout their first term in the classroom. Mentoring is primarily situated in the classroom, supplemented with online discussions, course assignments and monthly webinars. This course is only open to students in the MAT special education residency track. In order to successfully complete the program, this course must be completed with a grade of B or better. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED-6050.

SPED 7015 Special Education Residency II: New Teachers (3 Credits)
The Special Education Residency II is the second course in the clinically rich program that places the Resident into the classroom under the direct supervision of a Special Education critic teacher throughout the term. This blended course provides Residents with mentoring and support throughout their second term in the classroom. Mentoring is primarily situated in the classroom, supplemented with online discussions, course assignments and monthly webinars. Eight weeks of this term will be devoted to a Student Teaching experience with the Special Education critic teacher. This course is offered in the spring. This seminar is only open to students in the MAT special education residency track. In order to successfully complete the program, this course must be completed with a grade of B or better. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED 7010, SPED 6050.

SPED 7020 Special Education Residency Seminar: Certified Teachers (3 Credits)
The Special Education Residency Seminar is a clinically rich course that places the certified teacher resident into classrooms of a variety of content areas under the direct supervision of a Special Education critic teacher throughout the term. This online course provides special education teacher Residents with mentoring and support throughout the term. Mentoring is primarily situated in the Resident's classroom, supplemented with online discussions and course assignments. Twenty days during the Special Education Residency Seminar will be a Student Teaching experience with the Special Education critic teacher. Successful completion of SERS, and other relevant requirements, will lead to NYSED Initial certification in Student with Disabilities Generalist, 7-12. This course is typically offered in the summer 8-week term. This course was previously EDU-664104.

SPED 7030 Special Education Mentored Teaching III (3 Credits)
Special Education Mentored Teaching III is the third in a series of 4 mentored teaching courses in the MAT Trans B Special Education program. The course is designed to develop special education teacher candidates' repertoire in working with students with disabilities. The candidates will follow requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are employed. The teacher candidates will be expected to use evidence-based practices in working with students with disabilities and use methods and materials appropriate to their teaching assignments. The course emphasizes analysis and application in the following areas: lesson planning; teaching; classroom management involving students with disabilities. This course involves collaboration between the student, course instructor, and supervising faculty for in-service mentoring and supervision of teaching. A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED 6080.

SPED 7035 Special Education Mentored Teaching Capstone (3 Credits)
Special Education Mentored Teaching Capstone is the final course in a series of four mentored teaching courses in the MAT Trans B Special Education program. The course is designed to develop special education teacher candidates' repertoire in working with students with disabilities. The candidates will follow the requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are employed. The teacher candidates will be expected to use evidence-based practices in working with students with disabilities and use methods and materials appropriate to their teaching assignments. This course involves collaboration between the student, course instructor, and field supervisor for in-service mentoring and supervision of teaching. In addition, the course guides students through the process of developing and conducting action research. Guided by the course instructor, students will conduct action research centered around a topic involving students with disabilities. Further, students will write a reflective special education teacher identity and philosophy that is a culmination of their clinical experiences, research, theoretical framework and growth in their teacher education program. Students will articulate and demonstrate their understanding of ethics in assessment and research, critical laws in special education, pedagogical knowledge of teaching exceptional students, behavior management, the role of the special education teacher and collaboration with general education teachers and other school professionals. A final grade of B or better is required to pass this course. A result of less than a B will require a repeat of the course in accordance with the Graduate Evaluation and Grading Policy. Prerequisites: SPED 7030 or SPED 6087.

SPED 7063 Special Education Residency Seminar 1A (1 Credits)
The Special Education Residency Seminar 1A is the first clinical course in a series of four clinical courses in Special Education MAT program at SUNY Empire State College. It places the teacher candidates into special education or general education classroom under the direct supervision of a certified Special Education critic teacher throughout the term. This online course provides special education Residents with mentoring and support throughout the term. Mentoring is primarily situated in the Resident's classroom, supplemented with online discussions. The Special Education Residency Seminar 1A is designed to develop the residents' teaching repertoire and ability to analyze and modify teaching strategies in relation to the resident's classroom responsibilities. Residents will follow requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are residing. Using a gradual release of responsibility model, residents will begin working with a school-based critic teacher before the school year begins. Residents will utilize co-teaching strategies, gradually assuming a more active role in classroom planning, evaluation, and lead instruction as the semester unfolds. They will participate in online discussions and synchronous webinars associated with each course module. The residency seminar involves collaboration among students, critic teachers and Empire State College faculty. This one-credit course will involve 2 on-site classroom observations by a Special Education field supervisor. Students are required to complete a pre-and post-observation reflection for each observation. They will also provide a lesson plan to the observing supervisor based on the program benchmarks for that observation. Prerequisites: SPED 6050 Grade of B or better.

SPED 7065 Special Education Residency Seminar 1B (2 Credits)
The Special Education Residency Seminar 1B is the second clinical course in a series of four clinical courses in Special Education MAT program at SUNY Empire State College. It places the teacher candidates into special education or general education classroom under the direct supervision of a certified Special Education critic teacher throughout the term. This online course provides special education Residents with mentoring and support throughout the term. Mentoring is primarily situated in the Resident's classroom, supplemented with online discussions. The Special Education Residency Seminar 1B is designed to develop the residents' teaching repertoire and ability to analyze and modify teaching strategies in relation to the resident's classroom responsibilities. Residents will follow requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are residing. Using a gradual release of responsibility model, residents will begin working with a school-based critic teacher before the school year begins. Residents will utilize co-teaching strategies, gradually assuming a more active role in classroom planning, evaluation, and lead instruction as the semester unfolds. They will participate in online discussions and synchronous webinars associated with each course module. The residency seminar involves collaboration among students, critic teachers and Empire State College faculty. This two-credit course will involve 3 on-site classroom observations. Two of these observations will be conducted by the field supervisors and one will be conducted by the critic teacher. Students are required to complete a pre-and post-observation reflection for each observation. They will also provide a lesson plan to the observing supervisor based on the program benchmarks for that observation. Prerequisites: SPED 6050 with a grade of B or better.

SPED 7067 Special Education Residency Seminar 2A (2 Credits)
The Special Education Residency Seminar 2A is the third clinical course in a series of four clinical courses in the MAT Special Education program at SUNY Empire State College. It places the teacher candidates into special education or general education classroom under the direct supervision of a certified Special Education critic teacher throughout the term. This online course provides special education Residents with mentoring and support throughout the term. Mentoring is primarily situated in the Resident's classroom, supplemented with online discussions. The Special Education Residency Seminar 2A is designed to develop the residents' teaching repertoire and ability to analyze and modify teaching strategies in relation to the resident's classroom responsibilities. Residents will follow requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are residing. Using a gradual release of responsibility model, residents will begin working with a school-based critic teacher before the school year begins. Residents will utilize co-teaching strategies, gradually assuming a more active role in classroom planning, evaluation, and lead instruction as the semester unfolds. They will participate in online discussions and synchronous webinars associated with each course module.   The residency seminar involves collaboration among students, critic teachers and Empire State College faculty. This two-credit course will involve 4 on-site classroom observations. Two of these observations will be conducted by the field supervisors, one will be a video observation by a content area faculty in special education and one will be conducted by the critic teacher. Students are required to complete a pre-and post-observation reflection for each observation. They will also provide a lesson plan to the observing supervisor based on the program benchmarks for that observation.

SPED 7069 Special Education Residency Seminar 2B (1 Credits)
The Special Education Residency Seminar 2B is the last clinical course in a series of four clinical courses in the MAT Special Education program at SUNY Empire State College. It places the teacher candidates into special education or general education classroom under the direct supervision of a certified Special Education critic teacher throughout the term. This online course provides special education Residents with mentoring and support throughout the term. Mentoring is primarily situated in the Resident's classroom, supplemented with online discussions. The Special Education Residency Seminar 2B is designed to develop the residents' teaching repertoire and ability to analyze and modify teaching strategies in relation to the resident's classroom responsibilities. Residents will follow requirements for New York State Initial Teacher Certification as well as the curricular and professional development programs of the school district where they are residing. Using a gradual release of responsibility model, residents will begin working with a school-based critic teacher before the school year begins. Residents will utilize co-teaching strategies, gradually assuming a more active role in classroom planning, evaluation, and lead instruction as the semester unfolds. They will participate in online discussions and synchronous webinars associated with each course module. The residency seminar involves collaboration among students, critic teachers and Empire State College faculty. This one-credit course will involve 4 on-site classroom observations. Two of these observations will be conducted by the field supervisors, one will be a video observation by a content area faculty in special education and one observation will be conducted by the critic teacher. Students are required to complete a pre-and post-observation reflection for each observation. They will also provide a lesson plan to the observing supervisor based on the program benchmarks for that observation. Prerequisites: SPED 6050 with a grade of B or better .

SPED 7998 Individualized Studies in Special Education (SPED) (1-8 Credits)
Students have the opportunity to develop individualized studies with their mentor/advisor in Special Education (SPED). Please contact your mentor/advisor for more details.

Online Library

Empire State University's Online Library (https://www.sunyempire.edu/library/) is staffed by librarians who provide the following educational services:

- 24/7/365 help via live chat, email, and online form at Ask a Librarian (https://askalibrarian.sunyempire.edu/), or by phone at 800-847-3000, ext. 2222;
- live, online, library skills workshops (https://subjectguides.sunyempire.edu/workshops/); and
- support for accessing materials.

The SUNY Empire librarians have also created and curated the following resources:

- 1.5 million+ digital works of art
- 250,000+ ebooks
- Full-text journals and newspapers to support programs and courses at SUNY Empire
- Tens of Thousands of streaming films
- Many guides focused on course assignments, research help, subjects or majors, and other topics such as citation or how to find academic journals
- 75+ search tools encompassing millions of full-text articles, reports, and other research materials
- hundreds of online tutorials and FAQs to guide students through the research process and the library's many resources

Normal office hours are:

Immediate assistance is available Monday-Friday, typically until 7:00 p.m.

Live chat is always available through our partnership with the AskUs 24/7 consortium of academic librarians.

For additional resources specific to graduate study, please visit the Library's Graduate Resources (https://www.sunyempire.edu/library/graduate-students/) webpage.

Graduate Student Services

Functional support for students in the School for Graduate Studies is provided through the school's administrative offices located in Saratoga Springs. Student Services can be reached at 800-847-3000, ext. 2429 or Grad.Services@sunyempire.edu.

1Stop Student Services (https://www.sunyempire.edu/1-stop-student-services/)

Empire State University believes students should be only one step away from obtaining easy access to the information they need to move forward with their student business. Whether in person, by phone, by chat, or through virtual self-service support, students can obtain consistent and timely information related to financial aid, student accounts, billing, and registration and records. 1Stop also provides connections to academic support, accessibility resources and services, library services and technical support.

Your 1Stop Options

- Virtual Self-Service Support 24/7/365 online at the 1Stop Student Services web page (https://www.sunyempire.edu/1stop/).
- Blue our AI Chatbot (https://www.sunyempire.edu/1stop/#bot) with Live Agent Support.
- Phone at (800) 847-3000, ext. 2285, weekdays, from 8:30 a.m. to 5:00 p.m.
- Email at 1Stop@sunyempire.edu

Health And Wellness

Good health is critical to academic success. SUNY Empire offers students a wide array of services, funded by the student health and wellness fee, to help promote student physical and emotional health during their enrollment at the institution. For more information on health and wellness services and programs offered by SUNY Empire, visit the university's Student Health and Wellness web site (https://www.sunyempire.edu/student-affairs/student-life/health-wellness/), email at healthandwellness@sunyempire.edu, or phone 518-587-2100, ext. 2201.

Health And Wellness Events through SUNY Empire Connects

Weekly Health and Wellness programs are available to all students, faculty, and staff attending one of our SUNY Empire Connects (https://www.sunyempire.edu/connects/) events. A weekly schedule is available on the SUNY Empire Connects website (https://www.sunyempire.edu/connects/).

Counseling

Counseling resources for students can be found on the Student Health and Wellness web site (https://www.sunyempire.edu/student-affairs/student-life/health-wellness/).

Consulting Services

Resources for free legal and financial advice consultations for students can be found on the Student Health and Wellness web site (https://www.sunyempire.edu/student-affairs/student-life/health-wellness/).

Accessibility Resources And Services

A qualified person with a disability who meets the academic and technical standards required to enroll in and participate in the Empire State University program shall be provided an equal opportunity to obtain a degree in the most integrated setting appropriate to that person's needs. SUNY Empire will make reasonable accommodation to meet the needs of students with disabilities. Each student's needs are considered on an individual basis.

The flexible nature of our degree programs make SUNY Empire an ideal place for a motivated, independent learner with a disability to obtain a degree. Accommodations are implemented to ensure that students are afforded access to the university's programs, courses and services. To request accommodations, please contact Accessibility Resources and Services: 518-587-2100, ext. 2244, Disability.Services@sunyempire.edu.

SUNY Empire complies with Section 504 of the Rehabilitation Act of 1973 and the Americans With Disabilities Act of 1990. No otherwise qualified individual with a disability shall be excluded from participation in, be denied the benefits of, or be subject to discrimination under any activity of the university solely by reason of his or her disability. Please visit the Office of Accessibility Resources and Services website (http://www.sunyempire.edu/accessibility/) or see the Student Affairs Policies (https://www.sunyempire.edu/policies/) website for further information.

Bookstore

The Empire State University Bookstore (http://www.sunyempire.edu/Bookstore/) is available on the university's website for students in all university locations. Books are stocked at the request of programs or individual instructors for study groups and tutorials.

To order books online, students need to know the term, department, course number, and section of their course.

Links are available on the web page to help students find this information. Course materials orders must be placed on the website (http://www.sunyempire.edu/Bookstore/). Phone and fax orders are not accepted. Books are shipped via UPS directly to a home or business address. Domestic shipments take two to seven business days via UPS.

We are here to serve you; please let us know if you have comments, ideas, or problems when using the bookstore's web page (http://www.sunyempire.edu/Bookstore/) by emailing bookstore@sunyempire.edu. The hours of operation are 8:30 a.m. to 4 p.m., Monday through Friday.

Online book orders
Book orders can be placed through the bookstore web page (https://www.sunyempire.edu/bookstore/).

fax 518-587-5483
Facebook (http://www.sunyempire.edu/MilitaryFanpage/)

Student Veterans and Military Club: ESCMilitaryClub@sunyempire.edu

Student Computing And Technology Services

SUNY Empire provides various technology resources to meet the educational needs of its students. General information about technology at SUNY Empire is available on the Student Technology web page (https://www.sunyempire.edu/service-desk/student-technology/).

Student Login And Password

Every enrolled student is assigned a username and password that provides access to all secure information on the web. Students receive an email with their username and password when accepted to the university. Students can create a secure permanent password and security questions to manage future password resets at the Self Service Password Management web page (https://www.sunyempire.edu/service-desk/password-management/).

Privacy And Security

To protect students' privacy, many SUNY Empire web services are password-protected and restricted to enrolled or admitted SUNY Empire students. Students should take precautions to protect their login and password information. Our university's privacy policy and security practices outline how we protect your personal information. For more information, please see the university's Web Privacy policy (https://www.sunyempire.edu/policies/?search=cid%3D35655).

Students who believe their password has been compromised should immediately change it at the Self Service Password Management web page (https://www.sunyempire.edu/service-desk/password-management/) or contact the IT Service Desk (https://www.sunyempire.edu/service-desk/).

Web-Based Student Services And Information - MySUNYEmpire

The MySUNYEmpire (http://my.sunyempire.edu/) website provides students with a single point of access to online services, information, and learning resources. With a university login, students can register for studies, view personal academic and account information, complete financial aid requests, update address and email information, change passwords, order books, and build their personal degree programs. MySUNYEmpire connects students to resources to support academic endeavors, including library services, learning supports, information about study opportunities, and sources of student support. Key announcements and news items are posted on MySUNYEmpire and university offices maintain information and contact numbers through this site.

Student Computers

Most Empire State University locations maintain desktop and laptop computers (PCs) for student use. Students without home access can use these computers to access their personal records through MySUNYEmpire. Computers at our New York state locations also may be equipped with academic software for student use. These computers can be used for a variety of learning activities, including degree planning; access to the university library website; computer literacy; computer programming; business computer applications (spreadsheets, word processors, and database management); computer-mediated instruction; and for studies requiring computation such as statistics, social science research and business quantitative methods. In addition to onsite computers, the university also offers a laptop loan program (https://www.sunyempire.edu/student-affairs/student-life/laptop-loan-program/) for eligible students.

Each location also maintains a kiosk computer for students to connect with MySUNYEmpire (http://my.sunyempire.edu/)services.

Email

Email is a very important communication method in the university. Every university community member has a university email address, and every administrative office uses email to communicate with students. Empire State University students must have a private email account and maintain a valid email address for online registration in our student information system. Students who do not have an email account can find information on how to establish a free service on the IT Service Desk website. Students must report changes in their email addresses to the university. This can be done online at MySUNYEmpire (http://my.sunyempire.edu/) in Self-Service Banner (SSB).

Upon being admitted, students receive a university email address, which is the official communication channel for the university. Students are responsible for any email sent to the university email address. Students who would like to request to forward their university email to a personal email account must accept the risk at SUNY Empire Student Email Forward Settings. Students may also update their personal email addresses on file on this same site.

Online Tools

Many instructors use technology tools to support learning and to promote collaboration. Students may participate in online discussions and submit online assignments through the university's web-based Learning Management System. Web conferencing is used to connect students and faculty at a distance. Students have access to electronic portfolio space to collect and share their work.

Student, Faculty And Staff Web Pages

The university provides resources for Empire State University students, faculty, and staff to explore individual and professional web publishing for sites that are not considered official university content but related to the author's role and affiliation with the university.

Enrolled students can request an FTP account on a university server to host a site for course-related purposes. All users agree to follow the university's web and (https://www.sunyempire.edu/policies/?search=cid%3D35658)technology user policies (https://www.sunyempire.edu/policies/?search=cid%3D35658).

For more information about individual Web publishing at the university, please refer to the IT Service Desk web site (https://www.sunyempire.edu/service-desk/).

Getting Help

The university's technology website, (https://www.sunyempire.edu/service-desk/) has the most current information about all of the university's technology tools and offers online assistance.

Students needing technical assistance in using SUNY Empire technology applications can contact the IT Service Desk online (https://www.sunyempire.edu/service-desk/) or by phone at 800-847-3000, ext. 2420 or 888-HELP009. Please check the IT Service Desk website (https://www.sunyempire.edu/service-desk/)for the most current hours of operation.

Student Identification Numbers And ID Cards

When you enroll at Empire State University, you will be assigned an ID number that will be used to identify your records at the university. This number is assigned so that you do not have to use your Social Security number. If you don't know your SUNY Empire ID, check with your mentor or the student success coordinator at your program.

The university issues ID cards to students upon request. Most students need ID cards to check out books or use library facilities at SUNY or CUNY colleges and universities.

Request A Student ID Card

The university provides student ID cards at no cost to the student.

Students should send a digital or scanned 2" x 2" photograph as a .jpeg attachment to the email listed below, and an identification card will be mailed to you after the term begins. Please include the address where you would like the ID mailed and the SUNY Empire ID number. Alternatively, you can mail your request for an ID card to:

Student Problem Resolution

While Empire State University strives to ensure a positive educational experience, there are staff to promote student success, connect students to resources and facilitate conflict resolution. We work with students in person and online. The student success professional serves not as an advocate for either party, but rather as a neutral investigator and facilitator.

Students are responsible for understanding and abiding by the policies and procedures of the university. For more information on university policies and procedures, see the Policies (p. 214)section, and Student Affairs Policies (https://www.sunyempire.edu/policies/) website, which include the policies on student conduct, grievances, academic appeals and accommodations for students with disabilities.

Students should contact the student success professional based on their school from the chart below.

UNIVERSITY STUDENT SERVICES

Students should first attempt to resolve a concern with the student success professional, faculty or staff at their program. In the event that a student complaint is unable to be resolved, the student may then contact:

Dan Greer
Executive Director for University Student Services
UniversityStudentServices@sunyempire.edu
680 Westfall Road
Rochester, NY 14620
518-587-2100 x2389

Religious Observance

In compliance with Section 224-a of the Education Law, students unable, because of religious beliefs, to engage in learning activities – classes, examinations, study or work requirements – on a particular day or days will not be penalized and will be provided with means to make up for any study opportunities that may have been missed because of absence for religious reasons. Since most study arrangements at Empire State University are individually made between student and faculty, students may schedule meetings and other academic activities so they do not conflict with their religious observances. In cases where group meetings are arranged (e.g., classes, seminars, special examinations such as College Level Examination Program or College Proficiency Examination Program), students who wish to avail themselves of these opportunities but are unable to participate at certain times because of religious beliefs should consult with their mentors prior to the established meeting times to make alternate arrangements. No adverse or prejudicial effects shall result to any student because of his or her religious beliefs.

`

Student Activities

Alumni Student Association

There are over 97,000 SUNY Empire alumni worldwide representing all 50 states and 96 countries. Through the Alumni Association, former students can stay connected to the university and fellow graduates. Our alumni attend social, networking, and educational events, share their stories in university publications, join online groups, and volunteer at commencement ceremonies and recruitment events. Many alumni participate in career fairs and mentoring activities and provide philanthropic support to the university and its programs.

The Alumni Student Federation Board of Governors oversees the Alumni Association. The Federation Board serves as a liaison with the university, acts as an advocate for students and alumni, and provides programs to engage alumni and advance the university and its mission. The board is made up of alumni from different locations and programs and includes an international representative. In addition, the student representative from the University Council and the president of the Student Government Association are both standing members of the board.

If you are interested in learning about more ways to stay connected, contact the Office of Alumni Engagement at alumni@sunyempire.edu 518-587-2100, ext. 2344.

Student Activity Fee Committee

The Student Activity Fee Committee is made up of students representing various organizations, schools, and programs of the university. The committee convenes annually to review all student activity fee dollars proposals and decide the allocations. The Office of Student Engagement oversees the committee.

Student Governance Association

The mission of the SUNY Empire Student Governance Association (SGA) is to ensure that the student experience at SUNY Empire is excellent. The Student Senate is the legislative body of the SUNY Empire Student Government, comprised of students elected to represent their school of study and the student body at large. As student leaders and advocates, they are tasked with making decisions about important topics that directly impact students.

The SUNY Empire Student Government Association (SGA) Executive Board consists of the SGA president, vice president, treasurer, and secretary. In addition, the SGA Executive Board has also established office hours to serve students better and answer their questions.

More information about SGA and how students can participate, along with links to the SGA Executive Board office hours, can be found on the SGA website. (https://www.sunyempire.edu/student-affairs/student-government-association/)

Student Representation in University Governance

The SGA President is a member of the University Senate. Additionally, students may be added to Senate standing committees. A student must be enrolled during the term of service.

SUNY Student Assembly

Each SUNY campus has elected student representatives to the SUNY Student Assembly. This governance body represents the interests of SUNY students statewide. Per the current bylaws, the Student Government Association selects the Empire State University student representative to the SUNY Student Assembly.

Student Awards

Each year the Office of Community Standards and Engagement oversees the application and nomination process for the Chancellor's Awards, the Bluebird Award, and others as needed. Information on these awards can be found on the Awards and Fellowship website (https://www.sunyempire.edu/student-affairs/student-life/awards-fellowships/).

Graduation and Commencement

The university holds annual commencement activities across the state where all who have completed their degree requirements during that year are honored. Check the commencement website (https://www.sunyempire.edu/commencement/) for more details. Empire State University takes great pride in its graduates and their accomplishments. Our staff dedicates themselves to ensuring that our ceremonies are memorable occasions for our graduates and their families. The ceremony is a formal event with speakers, regalia, and an academic procession and is a wonderful opportunity for our students to celebrate earning their degrees.

UNIVERSITY Council

The University Council:

1. Provides advice to the president and administration.
2. Represents the State of New York and its taxpayers in affirming that the university is fulfilling its public mission.
3. Receives information about university programs, budgets, enrollments, facilities, and student learning.

One member of the College Council is an Empire State University student recommended by faculty and staff and serves on a rotating basis.

Student Conference

The Student Conference brings together students from all geographic and academic areas of the university to focus on personal and professional development. The conference seeks to provide an arena for developing the professional and leadership skills needed to advance in one's chosen field. The student activity fee funds this event.

Student Clubs and Organizations

Empire State University recognizes that co-curricular activities greatly enhance students' academic experience. To that end, we have a growing group of clubs and organizations at the university open to all students; you can find a listing of these on the Student Clubs website (https://www.sunyempire.edu/student-affairs/student-life/clubs-and-organizations/). Current clubs promote academic, social, and cultural activities for students throughout the university.

Students are encouraged to join existing clubs or explore the creation of a new club. Please contact the Office of Student Engagement with questions at 518-587-2100, ext. 2201. Below are the recognition policies that give you an overview of starting a new club. For more information about student clubs, including a current list of active clubs, please

visit the Student Clubs web page (https://www.sunyempire.edu/student-affairs/student-life/clubs-and-organizations/) and review the university's Student Clubs and Organizations Procedures (https://www.sunyempire.edu/policies/?search=cid=36991).

Policies and Procedures

These policies and procedures align with the mission of the university, and have been developed with appropriate consultation across the university. They are intended to mitigate institutional risk, enhance effectiveness, and support the university's compliance with federal, state, SUNY, and local laws and regulations.

As an institution of higher education that receives funding under Title IV; a state entity; and an institution of SUNY; Empire State University adheres to all federal, state and SUNY regulations. Where the university does not have a policy specific to a situation, additional references are listed that direct users to resources for regulations outside of the university's publications. Additionally, individual policies reference state and SUNY regulations for information and guidance beyond that provided in the policy.

Please Note: This catalog is a static document published once a year, whereas policies and procedures are subject to change periodically throughout the year. The policies, procedures and guidelines in this section were current at the time of this catalog's publication and are pertinent to students of the School for Graduate Studies and graduate students in the School of Nursing and Allied Health. Please refer to the Policies webpages *(*https://www.sunyempire.edu/policies/*) of the SUNY Empire website for the most up-to-date, comprehensive listing of SUNY Empire's policies that may not be included here.*

STUDENT ACADEMIC APPEALS POLICY AND PROCEDURES
Purpose
The purpose of the Student Academic Appeals Policy and Procedure is to provide equitable and orderly processes by which to request reconsideration of an academic decision.

Definitions
Appeal -- petition to change a decision rendered about an academic matter. The basis for a student's appeal of an academic decision may be either that the academic judgment was unfair in the view of the student or that the university's academic policies were applied incorrectly in the view of the student.

Academic Appeals and Honesty Committee (AAHC) -- a faculty committee convened to hear appeals. This committee shall consist of no fewer than three faculty members and no more than five. Each school establishes procedures for constituting an AAHC and for establishing a chair. If a member of the AAHC is a party to the appeal, a substitute is designated if necessary to bring the membership to a minimum.

Business days – Monday through Friday excluding university holidays.

Dean – refers to the dean of the student's school/program or an academic administrator designated by the Provost for the School of Undergraduate Studies. Collectively referred to as dean in this document.

Faculty – mentors, instructors, evaluators and others who make academic decisions. Collectively referred to as faculty in this document.

Unfairness – a decision or behavior that is arbitrary or capricious.

Statements
Students are responsible for reviewing and abiding by the university's academic policies and procedures. Students are responsible for their academic choices and for meeting the standards of academic performance established for each study or course in which they enroll.

Faculty are responsible for establishing methods and criteria for evaluation and evaluating a student's performance in learning contracts, courses, final projects, exams, prior learning assessments, etc. Evaluations of students, awards of academic credit and other academic judgments are based upon academic performance and the application of relevant academic policies.

Academic judgments made by faculty and other academic professionals are recorded in university documents, such as:

- course outcomes, and grades;
- evaluations of prior learning; and
- written academic decisions made by assessment committees, academic review committees, or other academic staff.

Students may appeal an academic decision if they believe that an academic judgment was unfair or that the university's academic policies were not followed or were applied incorrectly. Both student and instructor or decision-maker involved in the appeal have a right to a meaningful opportunity to be heard and to respond to information and documentation presented.

Grades on individual assignments may not be appealed.

Procedures for Appeals of Academic Decisions

The dean or designee for the program where an academic decision was made is responsible for administering the appeals process.

If the relevant administrator made the original academic decision while serving in the role of mentor, instructor, or evaluator, an appropriate administrator will be assigned to the administrative role in the appeals process.

The locus of appeal is with the program or academic unit where the original academic decision was made. For example, if a student enrolls in a Nursing course and appeals the course outcome, the appeal is reviewed by the School of Nursing and Allied Health. Questions about the appropriate locus of an appeal are resolved by the provost or designee.

The university appeals process includes an informal resolution procedure as well as a procedure for formal appeal of an academic decision. The university expects the student to attempt an informal resolution before making a formal appeal.

A. Procedure for Informal Resolution

The informal resolution process includes two possible steps:

1. The student should discuss the matter directly with the party who made or represented the academic decision (instructor, mentor, assessment committee representative, assessment professional, etc.) and make a reasonable effort to resolve the issue. The student must begin such an informal resolution process within 20 business days of receiving the academic decision.
2. If no resolution is reached through the first step, or if the student is uncomfortable trying to resolve the issue directly with the appropriate party, the student should request informal resolution by the relevant dean or associate dean. This step must occur within 30 business days of the student's receipt of the original academic decision. The dean or associate dean does not play a decision-making role; rather, he or she facilitates a resolution when possible.

B. Procedure for Formal Appeal

1. A student may initiate a formal appeal of an academic decision within 40 business days of receipt of the decision. The student submits a written appeal to the school's dean or designee or program administrator and includes in it:

- a full description of the academic decision and the basis for the student's appeal for reconsideration,
- a statement of the remedy the student is seeking,
- any supporting documents, such as
  - learning contract/syllabus, and course outcomes and evaluations;
  - evaluations of prior learning; and
  - written academic decisions made by assessment committees, academic review committees, center or program administrators, or other academic staff.
- information on when and with whom the student attempted an informal resolution.

2. Initial Review

1. Based on its initial review, the school's dean or designee may return an appeal to the student for further information or clarification. If the appeal is returned for further information or clarification, the student must submit the requested information or revision within 10 business days for the appeal to be heard.
2. Upon review of the initial or resubmitted appeal, the dean or designee may determine that there is no claim of unfairness or incorrect application of university policies is made or information to support such a claim is not included and rejects the appeal and/or refers the student to more appropriate policies, copying the primary mentor/ academic advisor
3. The dean or designee should convey a decision not to hear an appeal within 5 business days of receiving the initial or resubmitted appeal.
4. If the appeal is accepted, the Dean or designee transmits the appeal to the school's AAHC and provides a copy to any other relevant parties. The dean or designee should take these steps within 5 business days of receiving a complete appeal. He or she ensures that the AAHC review takes place in a timely manner

3. AAHC Hearing

1. Each school will ensure a fair and timely hearing of the information and produce an accurate record of the hearing. AAHC consideration of the appeal focuses only on the student's claim of unfairness or incorrect application of university policies.
2. The AAHC may obtain additional relevant information before or after a hearing.
3. The AAHC should schedule a hearing within 20 business days of the acceptance r of an appeal to consider information relevant to the appeal. A hearing may take the form of a meeting, conference call or videoconference, at the discretion of the AAHC
4. The chair of the AAHC ensures a fair and timely consideration of the information and provides an accurate record of the hearing to the dean or designee.
5. The student may participate in the hearing and present his or her case directly to the AAHC. Likewise, the faculty or staff member responsible for the original decision may also participate in the meeting and present relevant information. The student and the faculty/staff member meet separately with the committee.

6. A student may have an advisor at the meeting; however, the advisor may not participate in the hearing.

4. Following a hearing, the AAHC deliberates in closed session. Decisions are made by majority vote unless otherwise noted. The AAHC may:

- uphold the original decision,
- refer the decision back to the individual or committee making the original academic decision for reconsideration based upon AAHC findings regarding fairness and/or application of university policy, or
- revise or overturn the original decision, which requires a unanimous vote by the AAHC.
- Refer to an appropriate content expert for evaluation, which require a unanimous vote by the AAHC.

The AAHC should provide a written report to the dean within 5 business days of the hearing.

The dean notifies the student of the decision, copying the primary mentor/academic advisor, and includes a brief explanation.

5. Reconsideration by original decision-maker. If this is the outcome of the hearing, the dean refers the decision back for reconsideration, the individual or committee making the original decision reviews the situation and may either affirm the original decision or issue a new decision. The individual or committee should convey the result in writing to the student and other relevant parties within 20 business days of the referral.

6. Appeal of an Academic Appeals and Honesty Committee decision. Decisions made by the AAHC may be appealed to the provost or designee.

1. The student must submit any further appeal in writing to the provost within 20 business days of transmittal of an AAHC decision or a reconsideration decision, and must include an explanation or justification for the appeal.
2. The provost or designee should notify the other relevant parties within seven days of receiving an appeal. Those parties normally provide any written response within 10 business days.
3. The provost or designee should provide a written decision and rationale within seven days of receiving responses to the appeal. The written decision is conveyed to the student with copies to the other relevant parties.
4. The provost's decision is final.

7. A student's status does not change while an appeal is under consideration. If a student was dismissed, he or she remains dismissed. If he or she is in academic warning, the warning stands.

Academic Honesty Policy and Procedures (https://sunyempire.edu/ policies/?search=cid%3D37970)

ACADEMIC HONESTY POLICY AND PROCEDURES
Purpose
The purpose of the Academic Honesty Policy and Procedure is to set the expectations for honest academic work and provide fair and equitable administrative procedures for addressing breaches of those expectations and include options for handling incidents.

Definitions
Academic Appeals and Honesty Committee (AAHC) – a faculty committee convened to hear cases of serious dishonesty that may warrant academic warning or dismissal. This committee shall consist of no fewer than three faculty members and no more than five. Each school/program establishes procedures for constituting the AAHC and for establishing a chair. If a member of the AAHC is a part of the matter at hand, a substitute is designated if necessary to bring the membership up to the minimum.

Academic dishonesty – includes cheating, plagiarism, forgery, fabrication or misrepresentation, such as the following:

- claiming the work or thoughts of others as your own
- copying the writing of others into your written work without appropriate attribution
- writing papers for other students or allowing them to submit your work as their own
- buying papers and turning them in as your own
- having someone else write or create all or part of the content of your assignments
- submitting the same paper for more than one study or class without explicit permission from the faculty members
- making up or changing data for a research project
- fabricating and/or altering documents and/or information in support of the degree program.

Business days – Monday through Friday excluding university holidays.

Dean – refers to the dean of the student's school/program or an academic administrator designated by the Provost for the School of Undergraduate Studies. Collectively referred to as dean in this document.

Faculty – mentors, instructors, evaluators and others who make academic decisions. Collectively referred to as faculty in the remainder of the document.

Statements
When facing a breach of academic honesty expectations, a faculty member exercises her/his academic judgment in light of the particular circumstances and the student's academic history. Consultation with the dean, associate dean, chair and/or primary mentor/academic advisor throughout the process is encouraged.

When faced with a potential breach of academic honesty, the faculty member:

1. reviews this policy and procedures statement
2. documents the concern to the extent possible
3. consults student academic services, or equivalent, to ascertain if there were previous incidents
4. raises the concern quickly and directly with the student in writing, outlining how the student has breached the academic honesty standards, and copying the student's primary mentor/advisor and

student academic services, or equivalent. This should typically occur within 20 business days.
5. determines the appropriate response, which may include responding to the breach while continuing to work with the student in the course, assigning an F grade, or not providing a credit recommendation for a PLA component.

If the faculty member continues to work with the student in the course, s/he may also do one or more of the following:

1. provide developmental advice to the student on academic expectations
2. require that the student consult specific research writing or other academic skills development re-sources
3. require that the student rewrite the assignment(s), meeting standards for academic honesty
4. require that the student complete additional assignment(s) that meet standards for academic honesty
5. deduct points or fail the student on the assignment

Having provided guidance to the student, the faculty member remains alert to the possibility of further breaches.

If the faculty member determines that the appropriate response is to assign an F for the course, the student loses access to academic services related to the course including the online learning site for the course. A student who is denied a credit recommendation for dishonesty for a PLA may not resubmit the same or similar component for evaluation. A student who receives a grade of F for a course or does not receive PLA credit may appeal that decision through the university's Student Academic Appeals Policy and Procedures.

Serious Acts of Dishonesty

Serious acts of dishonesty include but are not limited to plagiarism, stealing, selling, or buying of an examination or paper; the presentation of the work of another as one's own, copying examination answers from another source or individual, having someone else do your work either on or off-line, and repeated acts of plagiarism, cheating, misrepresentation and misappropriation.

Possible Penalties.

Serious or continued breaches of academic honesty may constitute grounds for academic warning or dismissal from the university. The following penalties may apply:

Academic Warning: An academic warning for academic dishonesty is a formal written notice from the dean to the student providing conditions for continued enrollment in the university. It describes the nature of the breach of academic honesty standards, expectations for future behavior and any specific educational requirements. The academic warning for academic dishonesty is included in the student's official university record. A breach of academic honesty expectations after an academic warning for academic dishonesty normally leads to dismissal.

An academic warning for academic dishonesty remains active on the student's academic record until graduation. While the university retains information internally about the academic warning after graduation, the university clears the official record. If the student pursues additional study with the university, the information is available to university personnel who may consider it if the student breaches academic honesty expectations again.

Academic Dismissal: An academic dismissal for academic dishonesty is an indefinite separation from the university. The formal written notice describes the nature of the breach of academic honesty expectations. The academic dismissal for academic dishonesty is included in the student's official university record.

Review of Serious Cases of Dishonesty.

If a breach of academic honesty is reported, and if the faculty member, primary mentor/advisor, or dean or designee believes that it is serious enough to warrant an academic warning or dismissal, s/he refers the case to the dean or designee of the student's home school or program. He/she may:

1. refer the case to the academic appeals and honesty committee (AAHC) for a recommendation on academic warning or academic dismissal
2. recommend, in consultation with the student's primary mentor/advisor, additional educational activities and/or provide developmental advice.

Academic Appeals and Honesty Committee Procedures.

AAHC procedures are as follows:

1. When the dean or designee refers the case to the AAHC, he/she notifies the student in writing within 10 business days of receiving the copy of the notice to the student from the faculty member. The dean's notice provides the student the opportunity to respond in writing to the AAHC.
2. The student has 10 business days to submit any written response to the AAHC.
3. The AAHC considers the student's response in its review. The AAHC may obtain additional relevant information before or after the committee meets to review the case.
4. The AHC should schedule a meeting to consider relevant information within 20 business days of receiving an academic dishonesty case. A meeting may take the form of a face-to face meeting, conference call or videoconference, at the discretion of the AAHC.
5. The chair of the AAHC ensures a fair and timely consideration of the information and provides an accurate record of the meeting to the dean.
6. The student may participate in the meeting and present his or her case directly to the AAHC. Likewise, the individual(s) referring the case also may participate in the meeting and present relevant information. The student and the individual referring the case meet separately with the committee.
7. A student may have an advisor at the meeting; however, the advisor may not participate in the meeting.
8. Following the meeting, the AAHC deliberates in closed session. Decisions are made by majority vote. The AAHC may:
   - decide that a penalty is unwarranted
   - recommend that the dean or designee issue an academic warning
   - recommend that the dean or designee dismiss the student from the university.
9. Within 5 business days of the hearing, the AAHC transmits its recommendation and brief rationale in writing to the dean or designee.
10. After reviewing the AAHC's recommendation the dean or designee may decide to issue an academic warning or dismissal as appropriate to the situation, or may issue another decision.

11. The dean or designee provides to the student a written notice of her/his decision in the case within 5 business days of receiving the AAHC recommendation, copying the primary mentor/academic advisor. The written notice specifies the effective date of the action and a copy is retained.

Reinstatement after Dismissal for Academic Dishonesty

For the dean or designee to consider reinstatement, a student must present convincing written evidence that s/he has come to value the standards for academic honesty and a written affirmation that s/he agrees to follow the university's Academic Honesty Policy.

The dean or designee of the student's school or program is responsible for acting on requests for reinstatement after academic dismissal. Students are not eligible for reinstatement for at least 16 weeks or one term, whichever is longer, after an academic dismissal.

Students who are academically dismissed a second time for academic dishonesty are not eligible for reinstatement.

- If the dean or designee reinstates a student, he/she places the student in warning status. The dean or designee also may establish terms and conditions for re-enrollment.

Written Notice. The dean or designee sends a copy of any written notice of reinstatement to the student's primary mentor/advisor and retains a copy.

Student Appeals

Students may appeal any decision made about academic honesty as outlined in the academic appeals policy and procedures.

Applicable Legislation and Regulations
Federal Regulations: 4 CFR 602.16(a)(1)(ix) and 34 CFR 668.43(b)

Middle States (https://www.msche.org/)

ADDING AN ADVANCED CERTIFICATE PROCEDURE
The university offers many advanced (graduate) certificate programs. While a certificate can be completed as a standalone program, you may want to complete a certificate while completing a master's degree as a way of enhancing your master's and earning two credentials at the same time. If considering adding a certificate program, you should discuss this with your academic advisor. Some, or all, of the certificate courses may be used in your master's degree depending on which degree you are in and how close you are to completion.

It is important to note that if completing both an advanced certificate and a master's degree at the same time, financial aid is not available for credits taken beyond the total number required for the master's degree.

To add an advanced certificate program, you must apply (http://www.sunyempire.edu/GradApply/) and pay the $50 orientation fee.

COPYRIGHTED MATERIALS: THEIR REPRODUCTION AND USE
USE OF COPYRIGHTED MATERIALS
Empire State University complies with the U.S. Copyright Act of 1976 and the Digital Millennium Copyright Act of 1998.

The university respects the intellectual property rights of those who create and/or publish original works of authorship in any tangible medium of expression, whether physical or digital media, and regardless of format or genre. The university, therefore, authorizes use of copyrighted materials only under the following conditions:

- When permission is obtained from the copyright owner; or
- When reproduction, dissemination, creation of derivative works, performance or display of copyrighted materials falls within Fair Use guidelines, which are explained on the library's copyright website (http://www.sunyempire.edu/library/); or
- When performance or display of copyrighted materials in a face-to-face classroom environment falls within Educational Use guidelines.

The library has answers to questions about Fair Use, Educational Use, the Digital Millennium Copyright Act and when it is necessary to get permission to use a copyrighted work. **The librarians cannot obtain copyright permission on behalf of faculty, staff, or students, and are not qualified to give legal advice.** The bookstore manager can provide information on how to obtain permission.

USING COPYRIGHTED WORKS ONLINE
Reproduction, dissemination, performance, display, and creation of derivative works from copyrighted works **may be** permitted under the Fair Use Exemption of the Copyright Act of 1976, if it passes the Four Factor Test.

Neither the nonprofit status of the university nor the educational nature of the endeavor are sufficient to automatically judge something Fair Use. There is no set guideline for number of words, number of pages or percentage of a total work that can be used.

It should be noted that the online environment reduces or eliminates barriers to unauthorized copying and redistribution of copyrighted works, which means that an online use is less likely to be a Fair Use than the same kind of use in a physical environment. The presence of password protection and/or digital rights management technologies **may not be** sufficient to consider the use a Fair Use.

In order to decide if a use is Fair Use, the library provides a downloadable worksheet on its website (http://www.sunyempire.edu/library/). You should fill it out in order to help make your decision, and then save the completed worksheet as proof of your good-faith effort to comply with the law.

MAKING COPIES IN A FACE-TO-FACE CLASSROOM SETTING
Making photocopies or other reproductions of copyrighted works to be distributed to students in a face-to-face classroom **may be** permitted under the Fair Use Exemption of the Copyright Act of 1976, if it passes the Four Factor Test.

Neither the nonprofit status of the university nor the educational natures of the endeavor are sufficient to automatically judge something Fair Use. There is no set guideline for number of words, number of pages or percentage of a total work that can be used.

In order to decide if a use is Fair Use, the library provides a downloadable worksheet in its website (http://www.sunyempire.edu/library/). You should fill it out in order to help make your decision, and then save the completed worksheet as proof of your good-faith effort to comply with the law.

PERFORMANCE AND DISPLAY IN A FACE-TO-FACE CLASSROOM SETTING
Performance and/or display of copyrighted works in a face-to-face classroom is permitted by the Educational Use Exemption of the Copyright Act of 1976.

There are certain restrictions: The university must be accredited and not for profit; the use must be part of teaching and learning, not for entertainment, extracurricular activities, or other university business.

As long as those requirements are met, the Educational Use Exemption allows the instructor and/or students to perform musical works, poems, plays, or speeches; others to come into the classroom to perform musical works, poems, plays, or speeches; display of images, whether in physical or digital media; and playback of audio or video recordings of any kind.

FOR COPYRIGHT INFORMATION AND HELP, CONSULT THE LIBRARY
Information on copyright can be found on the Library's copyright information (http://www.sunyempire.edu/Copyright/) pages. Copyright questions can be directed to Librarian@sunyempire.edu.

GRADUATE ACADEMIC STANDING POLICY
Purpose
This policy establishes the academic conditions under which a graduate student, or undergraduate student enrolled in a course(s), may remain enrolled.

Definitions
Graduate Cumulative GPA:

- is based on graduate level courses enrolled in at Empire State University;
- includes courses regardless of program and matriculation status;
- does not include transfer credit or credit awarded through assessment; and
- based only on Empire State University courses in which a letter grade is assigned

Statements
This policy statement describes the academic conditions under which a graduate student, or an undergraduate student enrolled in graduate courses, is eligible to remain enrolled in graduate courses at the university and specifies procedures for warning and dismissing students.

This policy defines whether a student is in good academic standing. It does not determine if a student is eligible for financial aid.

The cumulative grade point average is the criterion that establishes the student's academic standing with the university. A student who meets this criterion is in good academic standing and therefore maintains her/his eligibility to reenroll. Cumulative GPA and other criteria apply to eligibility to receive financial aid. See the Graduate Satisfactory Academic Progress policy and the statements on Eligibility for NYS and Federal Financial Aid. Sometimes a student's cumulative GPA falls below the minimum satisfactory cumulative GPA. When this occurs, the university notifies the student with an academic warning or dismissal.

Academic Warning
A student is placed on academic warning when s/he has a cumulative GPA below 3.00.

- A student on academic warning has 6 additional credits of enrollment to return to a cumulative GPA of 3.00 or higher

• An academic warning is in effect until it is rescinded or the student is academically dismissed

Rescinding an Academic Warning.

An academic warning is rescinded if a student's cumulative GPA raised to 3.00 or greater within the additional 6 credits coursework allowed under academic warning.

Academic Dismissal

• A student is academically dismissed if they are on academic warning and do not achieve a cumulative GPA of 3.00 or greater after attempting 6 additional credits of applicable coursework at Empire State University.

• A student concurrently enrolled in two or more graduate programs at the time of dismissal, is dismissed from all active graduate programs when they meet the criteria for dismissal.

• An undergraduate student enrolled in a combined bachelor's degree and master's degree program is dismissed from the combined program when they meet the criteria for dismissal. The student may continue in the bachelor's degree program provided that they meet the requirements for that program.

Reinstatement after Academic Dismissal.

In order to be reinstated, a student must present written evidence to the dean or designee of the appropriate school, that the student is ready and able to make satisfactory progress. The student should address the problems that led to the dismissal and what s/he has done to correct those problems. The dean consults with program faculty in making this determination.

The dean or designee, of the appropriate school considers requests for reinstatement after academic dismissal, and grants reinstatement at his or her discretion. If the dean, or designee, reinstates a student, s/he may establish terms and conditions that promote future academic success. For example, the dean may impose specific conditions for subsequent enrollments, such as requiring a reduced academic load or requiring enrollment in courses to build academic skills.

If the student is dismissed from her/his program and wishes to apply to a different program, the student must complete a new application. The student should address the problems that led to the dismissal, what s/he has done to correct those problems, and how s/he expects to achieve success in the new program.

Students are not eligible for reinstatement or readmission for at least one term after an academic dismissal. Students who are academically dismissed for a second time are not eligible for reinstatement or readmission.

A student dismissed from a combined bachelor's degree and master's degree program may not request reinstatement to the combined program, but may apply to the master's program directly following the standard master's admissions process.

Other Reasons for Academic Dismissal

Students may also be academically dismissed when they fail to meet the expectations of other academic policies. For example, students may be dismissed when they are unable to retake a required program course after two unsuccessful attempts under the Graduate Evaluation and Grading Policy or when teacher education students fail to meet the professional expectations described in the Teacher Professional Expectations Policy.

Appeals

A student may appeal a grade, an academic warning or dismissal, or other academic judgment, as provided in the Student Academic Appeals Policy.

Appendix A
Policy Sponsor School for Graduate Studies and School of Nursing and Allied Health
Policy Contact Graduate Student and Academic Services
Policy Category Graduate Studies
Policy Number 310.007
Review/Effective Date 9/1/2022
Implementation History First approved in September 1993 and updated in 2003, 2011, and 2012. Split into separate Academic Standing and Satisfactory Academic Progress Policies in 2019. Minor changes made in 2020.

GRADUATE ADMISSION POLICY
Purpose
To establish policy on admission to the graduate degree programs and advanced certificates.

Definitions
Academic Program: defined in the New York State Education Regulations as the "formal educational requirements necessary to qualify for certificates or degrees [and] …includes general education or specialized study in depth in a particular field, or both." These academic programs are represented by the program titles under which the state education department has registered the university's degree programs.

Degree Programs: Academic programs in which the end result is a graduate degree. This definition applies to degrees at the Master's and Doctoral levels.

Advanced Certificates: A post-baccalaureate certificate composed of graduate level coursework. Advanced certificate study is separate from that of study in preparation for a degree in that a student must apply separately for degree program study.

Certificates of Advanced Study: Post-master's certificate that permits students to further their knowledge through detailed study.

Statements
A. Degree Programs

Admission to the graduate degree programs at Empire State University is selective. Criteria for admission includes:

Documented completion of a bachelor's degree from a regionally accredited institution.

• Documented completion of a master's degree from a regionally accredited institution for doctoral degree consideration.
• An appropriate correlation between the candidate's objectives and the particular graduate program to which they are applying.
• Evidence of the candidate's preparation to pursue the subject matter and the ability to meet the academic demands of the program

to which they are applying, including completion of any required prerequisites, entrance exams, and licenses.

The dean of the appropriate school, upon the recommendation of the graduate faculty, makes the final decision regarding admission.

B. Advanced Certificates

Criteria for admission includes:

- Documented completion of a bachelor's degree from a regionally accredited institution.
- Applicants to the advanced certificate programs will be admitted once all required application materials are submitted.

C. Certificates of Advanced Study

Criteria for admission includes:

- Documented completion of a master's degree from a regionally accredited institution.
- Additional documentation including any required licenses or entrance exams.
- Applicants to the certificate of advanced study programs will be admitted once all required application materials are submitted.

It is the policy of Empire State University, State University of New York, to provide equal opportunity in education and employment for all qualified persons and prohibit discrimination on the basis of race, color, national origin, religion, age, sex, sexual orientation, disability, veteran status or marital status.

Applicants must complete the admissions process within one year of submitting an application. After one year, any application materials received by the Admissions Office will be purged.

Applications must be completed and submitted by the published deadline in order to be considered for admission to an upcoming term unless extended by the appropriate school. All graduate programs are term based. Term options for initial enrollment are specific to the degree or certificate to which a student has been accepted (fall, spring, summer).

An applicant who is denied admission may apply again (to any Empire State University graduate degree program) after a period of one year from the prior date of application. Applicants who wish to appeal denial of admission may do so in a letter to the dean or designee of the appropriate school.

For most programs, admitted applicants may enroll initially in the graduate program within three calendar years from the date of admission. Those who wish to initiate enrollment after this time must reapply for admission.

In some cohort-based or limited-seat enrollment programs, applicants must enroll in the program within one year, otherwise they must reapply. These programs are identified in the graduate catalog, on the website and by the admission letter.

For programs with one-year acceptance polices, one-year deferrals are granted on a case-by-case basis for extenuating circumstances. Deferral requests must be submitted in writing to the appropriate graduate dean by July 15. There is no guarantee that the deferral request will be approved. Applicants whose requests are denied may reapply for

admission. Students approved for a one-year deferral are required to confirm intention for fall enrollment by January 31 of the following year.

GRADUATE ADMISSION PROCEDURE
Graduate Degree Programs
It is the applicant's responsibility to gather supporting credentials and submit them to Admissions. Applicants must apply using the online applications (http://www.sunyempire.edu/GradApply/). Once all application materials are received by Admissions, the completed application will be sent to the School for Graduate Studies for review.

A complete application consists of the following:

1. Application Form
2. Official transcripts – Official undergraduate and graduate transcripts from all institutions attended are submitted to the Admissions office. Transcripts from a non-U.S. institution must be evaluated by a member organization of the National Association of Credential Evaluation Services (NACES). Empire State University graduates do not need to request a transcript. One will automatically be placed in their application folder.
3. Essays – Required essay(s) specific to the degree program.
4. Resume – A resume including previous experience, education, and other achievements.
5. Recommendations – Select programs require letter(s) of recommendation from appropriately qualified persons. Personal references are not acceptable. The School for Graduate Studies Recommendation Form must be used. Letters of recommendation may be attached to the form.
6. English Language Proficiency – Applicants for whom English is not the first language must submit proof of proficiency. The School for Graduate Studies will accept the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) test scores taken within the last three years. You must score within the range of 79-94 on the TOEFL internet-based test (iBT), 250 on the computer-based test (CBT), 600 on the TOEFL paper-based test (PBT), or 6.5-7 on the IELTS to be considered for admission to the Empire State University graduate degree programs. Applicants, who have completed a bachelor's degree from a U.S. institution or from an institution where the instruction was given in English, may be exempt.
7. Orientation fee – $50 nonrefundable.

Advanced Certificates

Applicants must apply using the online application (http://www.sunyempire.edu/GradApply/). A complete application consists of the following:

1. Application Form
2. Official transcripts – Official undergraduate transcript is submitted to the Admissions office. Transcripts from a non-U.S. institution must be evaluated by a member organization of NACES. Empire State University graduates do not need to request a transcript.
3. English Language Proficiency – Applicants for whom English is not the first language must submit proof of proficiency. The School for Graduate Studies will accept TOEFL or IELTS test scores taken within the last three years. You must score within the range of 79-94 on the TOEFL internet-based test (iBT), 250 on the computer-based test (CBT), 600 on the TOEFL paper-based test (PBT), or 6.5-7 on the IELTS to be considered for admission to the Empire State University advanced certificate programs. Applicants, who have completed a bachelor's degree from a U.S. institution or from an institution where the instruction was given in English, may be exempt.
4. Resume – A resume including previous experience, education, and other achievements.
5. Orientation fee – $50 nonrefundable.

Admissions: Appealing a Denial Procedure

Applicants wishing to appeal an admission decision must do so in a letter to the dean or designee of the appropriate school. The letter should indicate important qualifications, which the student feels they demonstrated in their application, that show strong potential for success in graduate study. This reason alone can be used to appeal an admission decision. The appeal can request that the dean or designee review the application or that the one-year waiting requirement be waived so the applicant can apply for the next available term. If the applicant feels they can develop a stronger application with more time, they should request a waiver of the time period. Requests for both will not be considered. Therefore, the applicant must specify whether they are appealing the decision or the waiting period for reapplication.

GRADUATE EVALUATION AND GRADING POLICY AND PROCEDURES
PURPOSE
To define the evaluation and grading system for graduate students.

DEFINITIONS
n/a

STATEMENTS
Graduate Evaluation and Grading

Empire State University features student-centered, mentored learning in all of its modes of study, from guided independent study to residency-based courses and online or blended courses. Regardless of the method of study:

- The learning experience effectively supports the student's active engagement with the subject of study.
- The course instructor guides, responds to and evaluates students throughout the learning experience.
- In independent studies, evaluation procedures_ are targeted to the needs of the particular individualized study.

Learning Contract/Syllabus

The learning contract or syllabus defines the learning objectives of the course, the learning activities to be completed, and the methods and criteria for evaluating the student's performance. A well-designed learning contract /syllabus lays the foundation for effective student evaluation by clearly outlining learning objectives and activities and methods and criteria for evaluation. The course instructor evaluates the student's work in light of these elements throughout the learning experience. Thus, the course instructor's feedback to the student is rooted in the learning contract /syllabus itself and occurs throughout the course.

Evaluation

Grades issued at Empire State University document students' academic growth. At the same time, students need to meet the minimum performance standards established for each course for credit to be awarded. To support student achievement, SUNY Empire faculty may afford students opportunities to revise work during a course in order to meet performance standards at the minimum or a higher level. Nevertheless, a student who works hard and shows progress, and is still not able to meet the stated criteria for evaluation, does not earn graduate credit.

Grades

The university uses a 4.00 grading scale. The grade assigned to a graduate course completed at Empire State University may be any of the following:

Grade	Quality Point
A	4.00
A-	3.67
B+	3.33
B	3.00
B-	2.67
C+	2.33
C	2.00
F	0.00

Pass (P) - This grade is awarded for specific courses in which the student has performed at the B or better level.

No Pass (NP) - This grade is awarded for specific courses in which the student has performed at the 8- or lower level.

NP does not count as credit earned and therefore may negatively impact satisfactory academic progress. Please refer to the Graduate Satisfactory Academic Progress Policy.

Incomplete (IN) - When extenuating circumstances arise, a student may request an outcome of incomplete (IN) from the course instructor. The course instructor may submit an incomplete only when the student has consistently engaged in ,learning activities and has successfully completed at least 50 percent of the work before the end of the term. The course instructor is not obligated to grant_an incomplete.

A student who receives an IN grade must complete the course within 15 weeks of the end date of the term, or earlier if the course instructor has specified an earlier completion date.

If the course is not completed within the incomplete period, the IN automatically converts to F.

IN does not count as credit earned and therefore may negatively impact satisfactory academic progress. Please refer to the Graduate Satisfactory Academic Progress policy.

Administrative Withdrawal (ZW) - If a student registers for a course, does not withdraw, and does not engage in significant learning activities throughout the term, the course instructor may submit a grade of administrative withdrawal (ZW).

ZW does not count as credit earned and therefore may negatively impact satisfactory academic progress. Please refer to the Graduate Satisfactory Academic Progress policy.

Withdrawal (WD) - A withdrawal (WD) is initiated by the student status.

A student may withdraw form a course on or before the end of the 10th week of a 15-week term or the end of the 5th week of an 8-week term.

Evaluated Credit (EV) - In master's programs that provide an opportunity for assessment, an EV denotes credit awarded through the assessment process.

Grades of NP, IN, ZW, WD and F have specific implications for financial aid eligibility. For an explanation, see the Empire State University Statements on Eligibility for New York State Financial Aid and Federal Financial Aid.

Grade Point Average (GPA) Calculation

Graduate Cumulative GPA

- is based on graduate level courses enrolled in at Empire State University;
- includes courses regardless of program and matriculation status;
- does not include transfer credit or credit awarded through assessment;
- based only on Empire State University courses in which a letter grade is assigned; and

Graduate Program GPA

- is based on courses in the active academic program(s) and calculated by active program (e.g. advanced certificate or degree);
- based only on courses enrolled in at Empire State University that are a part of the active academic program(s);
- does not include transfer credit or credit awarded through assessment;
- based only on Empire State University courses in which a letter grade is assigned; and
- is used to determine recommendation for graduation.

The following letter grades are included in the GPA:

Grade	Quality Point
A	4.00
A-	3.67
B+	3.33
B	3.00
B-	2.67
C+	2.33
C	2.00
F	0.00

Repeated Courses

A student may repeat a graduate course only once. When a student repeats a course, the highest grade will be used for purposes of the calculation of a grade point average. Grades of IN, ZW, and WO do not replace the original grade in the calculation of the grade point average. The original course remains a part of the transcript . Note that both the original and the repeated course must still be included in the satisfactory academic progress calculation. Since a course can only be repeated once, if a student is not successful when attempting to repeat a required course, the student is dismissed from her/his academic program.

Minimum Grade Point Average Requirement

Empire State University graduate students must maintain a program GPA of at least 3.00. A program GPA of at least 3.00 is a requirement for graduation.

Master of Arts in Teaching students must maintain a program GPA of at least 3.00 in order to be recommended for and maintain NYS transitional B certification.

Please refer to the Graduate Academic Standing Policy for details regarding warning and dismissal.

Procedure for Retroactive Assignment of Grades

Prior to July 1, 2007 the university provided narrative evaluations without grades. On occasion, a student who received narrative evaluations would later request that the university assign grades to the narratives. When such a request was received, the university, where possible, added grades to the narratives.

For students matriculated in a graduate program at Empire State University before July 1, 2007, the university will continue to respond to student requests, consistent with the procedure detailed below. For students who re-matriculate after that date, there will be no later assignment of letter grades to narrative evaluations.

The procedure for retroactive assignment of grades is as follows:

- For each Empire State University course for which the original course instructor is available, the course instructor is responsible for assigning a grade based on the contract evaluation and the instructor's records and recollection of the student's work in the course. If the course instructor is no longer available, or if the course instructor is not able to make a letter grade judgment, no grade is assigned. In exceptional circumstances, this procedure cannot fully meet a student's needs. In such a case, the dean of the appropriate school consults the provost on appropriate alternatives.
- The dean of the appropriate school forwards the grades to the university registrar.
- The registrar adds the grades to the narrative evaluations, and thereby includes them in the student's official transcript.

Appeal of Grades

A student may appeal a grade as provided in the Student Academic Appeals Policy.

APPLICABLE LEGISLATION AND REGULATIONS
n/a

RELATED REFERENCES, POLICIES, PROCEDURES, FORMS AND APPENDICES
Transfer Credit, Academic Appeals Policy and Procedures, Satisfactory Academic Progress Policy, & Graduate Academic Standing Policy

GRADUATE FINANCIAL AID SATISFACTORY ACADEMIC POLICY
Purpose
Academic conditions under which a graduate student may remain eligible for financial aid.

Definitions
Statements
This policy statement describes the academic conditions under which a graduate student is eligible for financial aid.

A student is expected to complete courses, accumulate credit in proportion to the credit attempted (i.e. meet academic progress expectations), and meet the grade point average (GPA) requirement to make progress toward a degree/certificate.

Sometimes a student makes less academic progress than expected. When this occurs, the university notifies the student with a satisfactory progress or GPA warning or dismissal.

Satisfactory Academic Progress Determination
1.   A student is making good satisfactory academic progress when s/he maintains a cumulative GPA of at least 3.00 and consistently earns credit toward the degree or certificate sought, which is defined as successfully completing 67% of attempted credits.
2.   Academic progress is monitored at the end of each term.
3.   Academic progress is cumulative across graduate programs at the university.
4.   Completion of prerequisite/deficiency requirements for admission to a master's program does not count toward the credit required to earn a master's degree. Therefore, these credits do not count toward meeting satisfactory academic progress expectations.

5.   Academic progress advances only when a student earns credit toward the degree or certificate sought. A student earns no graduate-level credit and makes no progress academically when the student receives any of the following grades for a graduate course:
•   Incomplete (IN)
•   F

•   No Pass (NP)
•   Administrative Withdrawal (ZW)
•   Withdrawal (WD)

These grades count in the determination of credits attempted, and thus affect the calculation of the student's cumulative rate of progress and GPA.

Financial Aid Warning
A student is placed on financial aid warning after the student earns credit for less than 67% of the student's attempted credits, or falls below the minimum required 3.0 GPA.

Rescinding a Financial Aid Warning
A financial aid warning is in effect for one term until it is rescinded or financial aid eligibility is lost. A financial aid warning is rescinded when the student's progress rate or GPA returns to a satisfactory level.

Financial Aid Suspension
1.   A student loses their financial aid eligibility when after one subsequent term of enrollment after being placed on financial aid warning, the student's progress rate or GPA does not return to a satisfactory level.
2.   A student who has lost financial aid eligibility may continue to take coursework without financial aid as long as s/he maintains satisfactory academic standing

Appeal of Financial Aid Suspension
A student may appeal the loss of financial aid eligibility by submitting a written appeal to the Financial Aid Office. Appeals are granted at the discretion of the dean, or designee, of the student's school and the Financial Aid Office. If approved, the Financial Aid Office, in conference with an appropriate representative of the student's school, will grant a specific number of terms by which a student must return to good satisfactory academic progress or the required minimum GPA, detailed in an individualized Academic Plan or Probation Agreement. If the student meets the terms of the Academic Plan or Probation Agreement signed upon approval of the appeal and thus returns to the minimum 67% successful completion rate or 3.0 cumulative GPA by the end of the designated number of terms, the student restores his/her good satisfactory academic progress. If the student does not meet the terms, the student will once again lose financial aid eligibility.

A student who has lost financial aid eligibility for a second time is not eligible to receive financial aid for graduate study at Empire State University in the future.

Appeals
An explanation of the appeals process is in the Academic Appeals Policy and Procedures

Applicable Legislation and Regulations
N/A

Related References, Policies, Procedures, Forms and Appendices
Graduate Evaluation and Grading Policy, Graduate Academic Standing Policy, financial aid policies

GRADUATE FRESH START POLICY
Purpose
To identify conditions under which a student may have courses from previous matriculations excluded from Graduate Grade Pont Averages (GPA).

Definitions
Fresh Start - when course outcomes from prior matriculations are excluded from current graduate cumulative GPA and program GPA.

Statements
In certain circumstances, a graduate student who performed poorly in a previous matriculation may request a Fresh Start when matriculating in a new degree or certificate program. To be eligible for a fresh start, a student must be applying for, or matriculated in, a new graduate degree or certificate. A student must request a Fresh Start at the time of application or during the student's first term of enrollment in the new degree or certificate program from the appropriate school's dean, or designee. Approval of a Fresh Start is at the sole discretion of the dean, or designee. Additionally, the dean of the appropriate school, or designee, may at his or her sole discretion grant a Fresh Start at the time of reinstatement for students who are being reinstated into a degree or certificate program after an academic dismissal. It is important to note that the Fresh Start policy does not impact calculations for Satisfactory Academic Progress related to financial aid eligibility.

Appeals

An explanation of the appeals process is in the Academic Appeals Policy and Procedures.

Applicable Legislation and Regulations
n/a

Related References, Policies, Procedures, Forms and Appendices
Graduate Evaluation and Grading Policy, financial aid policies, and Graduate Academic Standing Policy

GRADUATE MEDICAL OR COMPASSIONATE WITHDRAWAL POLICY
Purpose
To identify conditions under which a student may receive a medical or compassionate withdrawal from graduate courses.

Definitions
n/a

Statements
A student who experiences a serious and unexpected medical issue or has an immediate family member die or experience a serious and unexpected medical issue that prevents the student from completing their coursework may request a medical or compassionate withdrawal from the dean, or designee, of the appropriate school. Medical or compassionate withdrawal requests must be made during the term of enrollment. They may not be requested or granted retroactively after the last day of a term. Requests for medical or compassionate withdrawals should be supported by appropriate medical or other documentation. Medical or compassionate withdrawals are granted at the sole discretion of the dean, or designee. Courses from which a student is medically or compassionately withdrawn do not count toward attempted courses for the purposes of the Course Repeat Limit. It is important to note that a medical or compassionate withdrawal does not exclude courses from the Satisfactory Academic Progress calculations for financial aid eligibility.

Appeals
An explanation of the appeals process is in the Academic Appeals Policy and Procedures.

Applicable Legislation and Regulations
n/a

Related References, Policies, Procedures, Forms and Appendices
Graduate Evaluation and Grading Policy, financial aid policies, and Graduate Academic Standing Policy

GRADUATE MINIMUM STUDY POLICY
Purpose
To define active graduate status and how a student requests to return to a graduate program.

Definitions
Designee: person designated by the school's dean to make certain administrative decisions
Active: The status of a student who meets the requirements of the minimum study policy
Inactive: The status of a student who does not meet the requirements of the minimum study policy

Statements
To remain active, a student must enroll for a minimum of one credit-bearing course during an academic year. If a student has not enrolled in a credit-bearing course and has not been granted a leave of absence by the dean of the school, or designee, the student will be considered inactive and administratively withdrawn from the program.

If a student has been administratively withdrawn from a program and wishes to return, the student must reapply to the university. The student's application will be reviewed for admission under the admission standards that are current at the time of the new application.

Students can also be administratively withdrawn for failure to pay the tuition and/or fees required by the program or academically dismissed for failure to meet the expectations of the Graduate Evaluation and Grading Policy, Graduate Academic Standing Policy, or Teacher Professional Expectations Policy.

Applicable Legislation and Regulations
Not applicable.

GRADUATE NONMATRICULATED ENROLLMENT POLICY
Purpose
Defines enrollment for student not seeking a degree

Definitions
Nonmatriculated: nondegree study; not admitted to a graduate program

Statements
A student may wish to engage in graduate-level study with no intention to earn a degree. For example, a student may want to stay current in the field or earn credit that will count toward a degree at another college or university.

Policy

1. The following applies to nonmatriculated study:
   a. Study is limited to two graduate courses in the School of Nursing and Allied Health if the student is in good academic and financial standing.
   b. Students may complete as many courses as they wish in the School for Graduate Studies. However, the number of courses taken as a non-matriculated student that can later be applied to a degree or advanced certificate program is limited by the Graduate Transfer, Cross-Registration, Nonmatriculated, & Evaluated Credit Policy.
   c. The student may enroll in a limited selection of courses offered each term.
   d. An official transcript must be provided verifying completion of a bachelor's degree or higher level degree from a regionally accredited institution prior to registration as a nonmatriculated student.
2. If a student begins as nonmatriculated and is later admitted to a degree or certificate program, only those courses appropriate to the degree or certificate program are eligible to be counted toward degree or certificate program.

3. Although successful completion of courses as a nonmatriculated student will be considered in admissions decisions, it does not automatically qualify an individual for admission.
4. Nonmatriculated students are not eligible for financial aid.
5. Active status is determined by the Graduate Minimum Study Policy.

GRADUATE SATISFACTORY ACADEMIC PROGRESS
Purpose
Academic conditions under which a graduate may remain eligible for financial aid.

Definitions
n/a

Statements
This policy statement describes the academic conditions under which a graduate student is eligible for financial aid.

A student is expected to complete courses, to accumulate credit in proportion to the credit attempted (i.e. meet academic progress expectations), and to make progress toward a degree/ certificate.

Sometimes a student makes less academic progress than expected. When this occurs, the university notifies the student satisfactory progress warning or dismissal.

Satisfactory Academic Progress Determination

1. A student is making satisfactory academic progress when s/he consistently earns credit toward the degree or certificate sought, which is defined as earning 67% of attempted credits.
2. Academic progress is monitored at the end of each term.
3. Academic progress is cumulative across graduate programs at the university.
4. Completion of prerequisite/deficiency requirements for admission to a master's program does not count toward the credit required to earn a master's degree. Therefore, these credits do not count toward meeting satisfactory academic progress expectations.
5. Academic progress advances only when a student earns credit toward the degree or certificate sought. A student earns no graduate-level credit and makes no progress academically when the student receives any of the following grades for a graduate course:
   - Incomplete (IN)
   - F
   - No Pass (NP)
   - Administrative Withdrawal (ZW)
   - Withdrawal issued on or after 29th day of term (WD)

These grades count in the determination of credits attempted, and thus affect the calculation of the student's cumulative rate of progress.

Financial Aid Warning

A student is placed on financial aid warning the student earns credit for less than 67% of the student's attempted credits.

Rescinding an Financial Aid Warning

A financial aid warning is in effect until it is rescinded or financial aid is suspended. A financial aid warning is rescinded when the student's progress rate returns to a satisfactory level.

Financial Aid Suspension

1. A student receives a financial aid suspension when after one subsequent term of enrollment after being placed on financial aid warning the student's progress rate does not return to a satisfactory level.
2. A student who is on financial aid suspension may continue to take coursework without financial aid as long as s/he maintains satisfactory academic standing.

Appeal of Financial Aid Suspension

A student may appeal Financial Aid Suspension to the dean, or designee, of the appropriate school. An appeal of a Financial Aid Suspension must present written evidence that the student is ready and able to make satisfactory progress and include an academic plan co-developed with the student's academic advisor, which includes the number of terms within which the student will return to satisfactory academic progress. Appeals of financial aid suspension are granted at the discretion of the dean, or designee. If approved, the dean, or designee, will grant a specific number of terms by which a student must return to satisfactory academic progress. If the student returns to satisfactory academic progress by the end of the designated number of terms, the student returns to good standing. If the student does not return to satisfactory academic progress by the end of the designated number of terms, the student will be placed on Financial Aid Suspension.

A student placed on Financial Aid Suspension for a second time, is not eligible to receive financial aid for graduate study at Empire State University in the future.

Appeals

An explanation of the appeals process is in the Academic Appeals Policy and Procedures.

GRADUATE SUBSEQUENT PROGRAMS AT THE SAME CREDENTIAL TYPE POLICY
PURPOSE
Defines and details the percentage of graduate credits a graduate student must complete at Empire State University to earn a subsequent graduate-level degree or certificate of the same credential type as a previously earned credential.

DEFINITIONS
Degree Program: Academic program in which the end result is a graduate degree. This definition applies to degrees at the doctoral and master's level.

Advanced Certificate: A post-baccalaureate certificate composed of graduate level coursework. Advanced certificate study is separate from

that of study in preparation for a degree in that a student must apply separately for degree program study.

Certificates of Advanced Study: Post-master's certificate that permits students to further their knowledge through detailed study.

STATEMENTS
Students who have completed a degree program, advanced certificate, or certificate of advanced study and are accepted into a subsequent graduate program of the same credential type (e.g., master's degree/master's degree or advanced certificate/advanced certificate) must follow the requirements below:

- Students can only be active in one program at the same credential type at a time. The completion of a subsequent program at the same type must be done sequentially, not concurrently.
- No more than 50% of the credits toward a subsequent program at the same credential type may have been used to fulfill the requirements of the first program at the same credential type. Schools and individual programs may set lower limits. See the graduate catalog for individual program limits.
- Students cannot use credits older than 6 years in the subsequent program. The age of the credit is determined by the term of enrollment.
- Evaluated credit earned in the any prior program may not be used in any subsequent programs.
- Transfer credit used in the any prior program may not be used in any subsequent programs.

Students may appeal any decision made about the use of credit in a subsequent graduate program in accordance with the Student Academic Appeals Policy and Procedure.

See the Graduate Transfer, Cross-Registration, and Evaluated Credit Policy for specific rules on the use of transfer, cross-registration, and evaluated credit to meet advanced certificate, degree program, and certificate of advanced study requirements.

SUNY Awarding of Two Degrees at the Same Level Policy (https://www.suny.edu/sunypp/documents.cfm?doc_id=161)

RELATED REFERENCES, POLICIES, PROCEDURES, FORMS AND APPENDICES
Graduate Transfer, Cross-Registration, & Evaluated Credit Policy (https://sunyempire.edu/policies/?search=cid%3D121107)

Student Academic Appeals Policy and Procedures (https://sunyempire.edu/policies/?search=cid%3D37972)

GRADUATE TIME LIMIT FOR PROGRAM COMPLETION POLICY
Purpose
To specify the time period for the completion of a graduate program and how to request a waiver.

Definitions
Graduate Program: An advanced certificate, master's degree, certificate of advanced study or doctoral degree.

Statements
A graduate program must be completed within six years of initial enrollment for an advanced certificate, certificate of advanced study or master's degree, and eight years of initial enrollment for a doctoral

degree. If a student exceeds the time limit, they may be permitted to continue if a waiver is granted.

A waiver of the completion rule is granted by the dean or designee of the appropriate school. The student needs to make this request in writing and in consultation with their academic advisor and the head of the student's program. While waivers are rare, the dean or designee will consider the request based upon factors such as special hardship, excellence of work and closeness to completion.

Applicable Legislation and Regulations
Related References, Policies, Procedures, Forms and Appendices
- Graduate Minimum Study Policy (https://sunyempire.edu/policies/reg-docs/reg-docs-html/graduate-minimum-study-policy.php)
- Graduate Leave of Absence Procedure

GRADUATE TRANSFER, CROSS-REGISTRATION, AND EVALUATED CREDIT POLICY
Purpose
To define requirements for the acceptance of graduate transfer credit and the total number of graduate transfer, cross-¬registration, and evaluated credits that may be applied to a graduate program.

Definitions
Degree Programs: Academic programs in which the end result is a graduate degree. This definition applies to degrees at the master's and doctoral levels.

Advanced Certificates: A post-baccalaureate certificate composed of graduate level coursework. Advanced certificate study is separate from that of study in preparation for a degree in that a student must apply separately for degree program study.

Certificates of Advanced Study: Post-master's certificate that permits students to further their knowledge through detailed study.

Cross Registration: The act of enrolling in a course(s) at a different institution of higher education while matriculated at Empire State University via the approved cross registration process.

Evaluated Credit: At the graduate level this is credit earned via assessment or prior learning assessment. The ability to earn/use evaluated credit is limited to those graduate programs that permit evaluated credit.

Shared Credit: Credit earned in one Empire State University graduate program that can be used in a different/subsequent Empire State University graduate program.

Transfer Credit: Credit earned at an institution of higher education other than Empire State University used in a SUNY Empire graduate program.

Statements
Students may transfer, cross register, and/or earn evaluated credit for up to a combined total of 12 credits into master's programs, 6 credits into doctoral programs, and up to 3 credits into advanced certificate programs and certificates of advanced study. Students must complete at least 50% of credits toward a degree or certificate of advanced study while a matriculated student in a degree or certificate of advanced study in the School for Graduate Studies or School of Nursing and Allied Health.

To be eligible for consideration, transfer or cross-registration credits must:

- be graduate level, and 7000-level or above for doctoral programs;
- be from a regionally accredited college or university;
- have a final grade of B or better;
- be related to the student's program/content area; and
- be no more than six years old at the time of the student's admission to the graduate program.

A student begins the transfer request process by having an official transcript sent to the university and course syllabus of all credit they wish to be considered sent to the appropriate school:

- For master's programs that require an approved formal degree program (DP), the student discusses transfer credit during degree planning with their advisor. Transfer credit approval is at the discretion of the program faculty.
- For all other programs, requests for transfer credit must be discussed with the student's advisor. Transfer credit approval is at the discretion of the program faculty per the procedures of the relevant school.

Before cross-registering for a course, students should receive approval. Approval is at the discretion of the student's advisor in the School of Nursing and Allied Health. In the School for Graduate Studies, approval varies by division:

- Business, Management and Leadership – At the discretion of the program coordinator, or division chair for programs without a coordinator, in consultation with the advisor.
- Education – At the discretion of the advisor.
- Graduate Liberal Arts and Science – At the discretion of the advisor.

The ability to earn credit by evaluation is determined at the program level. Individual programs that allow for credit by evaluation are identified in the graduate catalog.

See the Graduate Subsequent Programs at the Same Credential Level Policy for specific rules on the use of shared credits from a previously awarded graduate credential.

Schools and individual programs may set lower limits for transfer, cross registration, nonmatriculated, and evaluated credit. See the graduate catalog for individual program limits.

Students may appeal any decision made about transfer credit as outlined in the academic appeals policy and procedures.

Applicable Legislation and Regulations

Cross Registration Procedure

Academic Appeals Policy and Procedures (https://sunyempire.edu/policies/reg-docs/reg-docs-html/student-academic-appeals-policy-and-procedure.php)

INCOMPLETE PROCEDURE
When extenuating circumstances arise, a student may submit a request an outcome of incomplete (IN) from the course instructor. The course

instructor may approve an incomplete request only when the student has consistently engaged in learning activities and has successfully completed at least 50 percent of the work before the end of the term. The course instructor is not obligated to grant an incomplete.

A student who receives an IN grade must complete the course within 15 weeks of the end date of the term, or earlier if the course instructor has specified an earlier completion date. If the course is not completed within the incomplete period, the IN will systematically be converted to the default grade the instructor provided at the time of the incomplete approval. An incomplete does not count as credit earned and therefore may negatively impact satisfactory academic progress.

It is important to note the following regarding IN outcomes:

- An incomplete period will include the break period between terms but exclude any no appointment periods.
- An IN outcome does not count as credit earned and, therefore, may negatively impact satisfactory academic progress. Please refer to the policy on financial aid satisfactory academic progress.

To submit an Incomplete Grade Request, the student logs in to MySUNYEmpire, clicks on Self-Service Banner, the Student link and then the Incomplete Grade Request link. The student must provide:

- A rationale for the request.
- A plan for completion that includes a list of all work due.
- A check in the box stating that the student agrees to the incomplete conditions as stated in the graduate catalog.

An email will be sent to the student after the course instructor has approved or denied the request. If approved, the email will contain:

- The default grade that will be issued if no work is completed.
- List of outstanding work to be completed.
- The work due date.

LEAVE OF ABSENCE PROCEDURE
A leave of absence should be requested if a graduate student will be out of their program (not taking courses) for two or more consecutive terms. If the student plans to skip an enrollment (not take courses) for only one term, then there is no need to request a leave of absence. By being on an approved leave of absence, the student is able to maintain active status without enrolling in courses.

It is very important to note that a leave of absence does not extend the time period for program completion (see Graduate Time Limit for Program Completion Policy located elsewhere in this catalog). It is also important to note that a leave of absence does not cancel a registration, grant an incomplete for a course or extend an existing incomplete.

Before requesting a leave of absence, the student should withdraw from courses if enrolled. The leave request should include the length of time (leaves are typically granted for one year) and the reason for the request. The request should be submitted to the student's school:

- School for Graduate Studies – complete the form in the Graduate Student Center on MySUNYEmpire (https://www.sunyempire.edu/mysunyempire/)
- School of Nursing and Allied Health – send an email to SONAH.Services@sunyempire.edu

NON-DISCRIMINATION/ANTI-HARASSMENT POLICY
Purpose
SUNY Empire State University (University) is an equal-opportunity employer committed to an educational and employment environment in which all individuals (faculty, staff, students and visitors) are treated with respect and dignity. Each individual has the right to work or study in a professional atmosphere that promotes equal treatment and addresses discriminatory practices, including harassment. The university expects that all relationships among persons at the university are professional and free of bias, prejudice and harassment.

Sexual harassment, specifically, is addressed in SUNY Empire policy 100.014 Sexual Harassment Response and Prevention Statement.

Definitions
Harassment: Under this policy, harassment is verbal or physical conduct that denigrates or shows hostility or aversion toward an individual because of his/her race, color, creed, national origin, sex, age, disability, sexual orientation, gender identity, marital status, domestic violence victim status, or any other characteristic protected by law or that of his/her relatives, friends or associates, and that:

1. has the purpose or effect of creating an intimidating, hostile or offensive work or study environment
2. has the purpose or effect of unreasonably interfering with an individual's work or study performance
3. otherwise adversely affects an individual's employment or learning opportunities.

Harassing conduct includes, but is not limited to epithets, slurs or negative stereotyping; threatening, intimidating or hostile acts; denigrating jokes and display or circulation on the campus of written or graphic material that denigrates or shows hostility or aversion toward an individual or group (including through email).

Protected Categories of Discrimination: Discrimination can take many forms. For the purpose of this policy, the protected categories under discrimination are race, color, national origin, religion, creed, age, disability, sex, gender identity or expression, sexual orientation, familial status, pregnancy, predisposing genetic characteristics, military status, domestic violence victim status, or criminal conviction.

Statements
It is the policy of Empire State University to provide an educational and employment environment free from all forms of intimidation, hostility, offensive behavior and discrimination and harassment, including sexual harassment. Such behavior or tolerance of such behavior on the part of an administrator, supervisor, faculty or staff member violates this policy and may result in administrative action, civil and/or legal action. The university will not tolerate retaliation against any individual who makes a complaint of discrimination, harassment or who participates in an investigation. Concerns of retaliation will be investigated and are subject to disciplinary action.

Individuals and Conduct Covered
This policy applies to faculty, staff and students, and prohibits harassment, discrimination and retaliation with respect to applicants, employment, programs or activities at the university whether engaged in by fellow employees, faculty, supervisors or administrators, or by someone not directly connected to the university (e.g., an outside vendor, consultant or customer).

Conduct prohibited by these policies is unacceptable in the workplace/academic class and in any university-related setting, including business trips, meetings and university-related social events.

Retaliation is Prohibited
It is unlawful to retaliate against an individual when it comes to any aspect of employment, including hiring, firing, pay, job assignments, promotions, layoff, training, fringe benefits and any other term or condition of employment. In addition, it is illegal to retaliate against any individual who reports acts of discrimination or harassment or participates in an investigation of such reports. Retaliation against an individual for reporting harassment or discrimination or for participating in an investigation of a claim of harassment or discrimination is a serious violation of this policy and, like harassment or discrimination itself, will be the subject of disciplinary action.

Information and Reporting
Employee questions regarding harassment, sexual harassment or discrimination may be addressed to the Office of Human Resources, 2 Union Avenue, Saratoga Springs, NY 12866-4391 (518) 587-2100, ext. 2240 or (800) 847-3000, ext. 2240 or TitleIX@esc.edu

Student questions can be directed to Lindsay Holcomb, Director of Human Resources and Interim Title IX Director, 518-581-2239 or TitleIX@sunyempire.edu (TitleIX@esc.edu)

All allegations of harassment or discrimination are taken very seriously. The university will act positively to investigate alleged harassment and to affect remedy when an allegation is substantiated. Supervisors and other university officials are required to report any known or perceived incidences of harassment or discrimination to the affirmative action officer.

Applicable Legislation and Regulations
Empire State University complies with state and federal laws prohibiting discrimination and sexual harassment including Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendment of 1972, Sections 503 and 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act of 1990, New York's Human Rights Law, Governor's Executive Order No. 33 prohibiting discrimination on the basis of gender identity, and the Age Discrimination Act.

Related References, Policies, Procedures, Forms and Appendices
Discrimination and Sexual Harassment Compliant Procedure: Policy 900.017.

The university's Affirmative Action Plan describes initiatives undertaken to prevent discrimination and harassment and nurture an inclusive, respectful and collegial environment among employees, students and visitors. The Affirmative Action Plan has been prepared in accordance with State University of New York policy and the regulations promulgated by the Office of Federal Contract Compliance Programs (OFCCP), U.S. Department of Labor, 41 CFR Chapter 60 and Executive Order 11246, Governor's Executive Order No. 28 that prohibits discrimination relating to employment based on sexual orientation, Executive Order 19 pertaining to victims of domestic violence, and the State University of New York's Policies of the Board of Trustees.

TITLE IX GRIEVANCE POLICY
Purpose
Title IX of the Educational Amendments of 1972 prohibits any person in the United States from being discriminated against on the basis of sex in seeking access to any educational program or activity receiving federal financial assistance. The U.S. Department of Education, which enforces

Title IX, has long defined the meaning of Title IX's prohibition on sex discrimination broadly to include various forms of sexual harassment and sexual violence that interfere with a student's ability to equally access our educational programs and opportunities.

In recent years, "Title IX" cases have become a short-hand for any campus disciplinary process involving sex discrimination, including those arising from sexual harassment and sexual assault. But under the Final Rule, SUNY Empire must narrow both the geographic scope of its authority to act under Title IX and the types of "sexual harassment" that it must subject to its Title IX investigation and adjudication process. *Only* incidents falling within the Final Rule's definition of sexual harassment will be investigated and, if appropriate, brought to a live hearing through the Title IX Grievance Policy defined below.

SUNY Empire remains committed to addressing any violations of its policies, even those not meeting the narrow standards defined under the Title IX Final Rule.

Specifically, our campus has a Sexual Violence Prevention and Response Policy that addresses the types of sex-based offenses constituting a violation of campus policy and the procedures for investigation and adjudicating those sex-based offenses.

To the extent that alleged misconduct falls outside the Title IX Grievance Policy, or misconduct falling outside the Title IX Grievance Policy is discovered in the course of investigating covered Title IX misconduct, the institution retains authority to investigate and adjudicate the allegations under the policies and procedures defined within the Sexual Violence Prevention and Response Policy through a separate grievance proceeding described in the Discrimination Complaint Procedures and Student Conduct Policy and Procedures.

The elements established in the Title IX Grievance Policy under the Final Rule have no effect and are not transferable to any other policy of the University for any violation of the Code of Conduct, employment policies, or any civil rights violation except as narrowly defined in this Policy. This Policy does not set a precedent for other policies or processes of the University and may not be cited for or against any right or aspect of any other policy or process.

Our existing Title IX office and reporting structure remains in place. What has changed is the way our Title IX office will handle different types of reports arising from sexual misconduct, as detailed in full throughout Section 2.

Definitions

Covered Sexual Harassment: For the purposes of this Title IX Grievance Policy, "covered sexual harassment" includes any conduct on the basis of sex that satisfies one or more of the following:

1. An employee conditioning educational benefits on participation in unwelcome sexual conduct (i.e., quid pro quo);
2. Unwelcome conduct that a reasonable person would determine is so severe, pervasive, and objectively offensive that it effectively denies a person equal access to the educational institution's education program or activity;
3. Sexual assault (as defined in the Clery Act), which includes any sexual act directed against another person, without the consent of the victim including instances where the victim is incapable of giving consent;
4. Dating violence (as defined in the Violence Against Women Act (VAWA) amendments to the Clery Act), which includes any violence committed by a person: (A) who is or has been in a social relationship of a romantic or intimate nature with the victim; and (B) where the existence of such a relationship shall be determined based on a consideration of the following factors: (i) The length of the relationship; (ii) The type of relationship; (iii) The frequency of interaction between the persons involved in the relationship.
5. Domestic violence (as defined in the VAWA amendments to the Clery Act), which includes any felony or misdemeanor crimes of violence committed by a current or former spouse or intimate partner of the victim, by a person with whom the victim shares a child in common, by a person who is cohabitating with or has cohabitated with the victim as a spouse or intimate partner, by a person similarly situated to a spouse of the victim under New York domestic or family violence laws or by any other person against an adult or youth victim who is protected from that person's acts under the domestic or family violence laws of New York.
6. Stalking (as defined in the VAWA amendments to the Clery Act), meaning engaging in a course of conduct directed at a specific person that would cause a reasonable person to-- (A) fear for their safety or the safety of others; or (B) suffer substantial emotional distress.

Note that conduct that does not meet one or more of these criteria may still be prohibited under the Student Conduct Policy and Procedures.

Consent: Consent is a knowing, voluntary, and mutual decision among all participants to engage in sexual activity. This definition is consistent with that of the Sexual Violence Prevention and Response Policy and the Student Conduct Policy and Procedures.

1. Consent can be given by words or actions, as long as those words or actions create clear permission regarding willingness to engage in the sexual activity. Silence or lack of resistance, in and of itself, does not demonstrate consent. The definition of consent does not vary based upon a participant's sex, sexual orientation, gender identity, or gender expression.
2. Consent to any sexual act or prior consensual sexual activity between or with any party does not necessarily constitute consent to any other sexual act.
3. Consent is required regardless of whether the person initiating the act is under the influence of drugs and/or alcohol.
4. Consent may be initially given but withdrawn at any time.
5. Consent cannot be given when a person is incapacitated, and a reasonable person knows or should have known that such person is incapacitated. Incapacitation occurs when an individual lacks the ability to knowingly choose to participate in sexual activity. Incapacitation may be caused by the lack of consciousness or being asleep, being involuntarily restrained, or if an individual otherwise cannot consent. Depending on the degree of intoxication, someone who is under the influence of alcohol, drugs, or other intoxicants may be incapacitated and therefore unable to consent.
6. Consent cannot be given when it is the result of any coercion, intimidation, force, or threat of harm.
7. When consent is withdrawn or can no longer be given, sexual activity must stop.

Education Program or Activity: For the purposes of this Title IX Grievance Policy, SUNY Empire's "education program or activity" includes:

- Any on-campus premises
- Any off-campus premises that SUNY Empire has substantial control over. This includes buildings or property owned or controlled by a recognized student organization.
- Activity occurring within computer and internet networks, digital platforms, and computer hardware or software owned or operated by, or used in the operations of SUNY Empire's programs and activities over which SUNY Empire has substantial control.

Formal Complaint: For the purposes of this Title IX Grievance Policy, "formal complaint" means a document – including an electronic submission - filed by a complainant with a signature or other indication that the complainant is the person filing the formal complaint, or signed by the Title IX Coordinator, alleging sexual harassment against a respondent about conduct within SUNY Empire's education program or activity and requesting initiation of the procedures consistent with the Title IX Grievance Policy to investigate the allegation of sexual harassment.

Complainant: For the purposes of this Title IX Grievance Policy, Complainant means any individual who has reported being or is alleged to be the victim of conduct that could constitute covered sexual harassment as defined under this policy.

Relevant evidence and questions: "Relevant" evidence and questions refer to any questions and evidence that tends to make an allegation of sexual harassment more or less likely to be true.

"Relevant" evidence and questions do not include the following types of evidence and questions, which are deemed "irrelevant" at all stages of the Title IX Grievance Process:

- Evidence and questions about the complainant's sexual predisposition or prior sexual behavior unless:
  - They are offered to prove that someone other than the respondent committed the conduct alleged by the complainant, or
  - They concern specific incidents of the complainant's prior sexual behavior with respect to the respondent and are offered to prove consent. 34 C.F.R. § 106.45(6)(i).
- Evidence and questions that constitute, or seek disclosure of, information protected under a legally-recognized privilege.
- Any party's medical, psychological, and similar records unless the party has given voluntary, written consent. 85 Fed. Reg. 30026, 30294 (May 19, 2020).

Respondent: For the purposes of this Title IX Grievance policy, Respondent means any individual who has been reported to be the perpetrator of conduct that could constitute covered sexual harassment as defined under this policy.

Privacy vs. Confidentiality: Consistent with Sexual Violence Prevention and Response Policy, references made to *confidentiality* refer to the ability of identified confidential resources to not report crimes and violations to law enforcement or university officials without permission, except for extreme circumstances, such as a health and/or safety emergency or child abuse. References made to *privacy* mean SUNY Empire offices and employees who cannot guarantee confidentiality but will maintain privacy to the greatest extent possible, and information disclosed will be relayed only as necessary to investigate and/or seek a resolution and to notify the Title IX Coordinator or designee, who is responsible for tracking patterns and spotting systemic issues. SUNY Empire will limit the disclosure as much as practicable, even if the Title IX Coordinator determines that the request for confidentiality cannot be honored.

Statements
Making a Report Regarding Covered Sexual Harassment to the Institution

Any person may report sex discrimination, including sexual harassment (whether or not the person reporting is the person alleged to be the victim of conduct that could constitute sex discrimination or sexual harassment), in person, by mail, by telephone, or by electronic mail, using the contact information listed for the Title IX Coordinator, or by any other means that results in the Title IX Coordinator receiving the person's verbal or written report.

Contact Information:

Lindsay Holcomb, Director of Human Resources and Interim Title IX Director

518-581-2239

2 Union Avenue, Saratoga Springs, NY 12866

or email: TitleIX@esc.edu

Such a report may be made at any time (including during non-business hours) by using the telephone number or electronic mail address, or by mail to the office address listed for the Title IX Coordinator.

Confidential Reporting

The following Officials will provide privacy, but not confidentiality, upon receiving a report of conduct prohibited under this policy:

- Title IX coordinator, TitleIX@esc.edu;
- Office of Campus Safety and Security, 518-587-2100, ext. 2800, 8:00AM- 5:00PM, Monday – Friday
- Associate Vice President of Human Resources
- Responsible Employees as listed on Appendix A - Responsible Employees and Campus Security Authorities (https://sunyempire.edu/media/administration/compliance/Appendix-A---Responsible-Employees.pdf)(PDF 126kB)

The following Officials may provide confidentiality:

Off-campus counselors and advocates**.

Crisis services offices will generally maintain confidentiality unless you request disclosure and sign a consent or waiver form. More information on an agency's policies on confidentiality may be obtained directly from the agency.

New York State Coalition against Sexual Assault at http://nyscasa.org

Sexual Assault Nurse Examiner (SANE) at local hospitals and programs

Refer to SUNY's list of off-campus resources at: http://www.suny.edu/violence-response

Off-campus healthcare providers

Medical office and insurance billing practices may reveal information to the insurance policyholder, including medication and/or examinations paid for or administered. The New York State Office of Victim Services may be able to assist in compensating victims/survivors for health care and counseling services, including emergency compensation.

More information may be found at http://www.ovs.ny.gov/files/ovs_rights_of_cv_booklet.pdf or 800-247-8035. Options are explained at http://www.ovs.ny.gov/helpforcrimevictims.html.

* Note: These outside options do not provide any information to the campus.

** Note that even individuals who can typically maintain confidentiality are subject to exceptions under the law, including when an individual is a threat to him or herself or others and the mandatory reporting of child abuse.

Non-Investigatory Measures Available Under the Title IX Grievance Policy

Supportive Measures

Complainants (as defined above), who report allegations that could constitute covered sexual harassment under this policy, have the right to receive supportive measures from SUNY Empire regardless of whether they desire to file a complaint, which may include those listed below, as appropriate. Supportive measures are non-disciplinary and non-punitive.

As appropriate, supportive measures may include, but not be limited to:

- Referrals to counseling
- extensions of deadlines or other course-related adjustments
- modifications of work or class schedules
- campus escort services
- restrictions on contact between the parties (no contact orders)
- leaves of absence

See 85 Fed. Reg. 30401.

Interim measures will not disproportionately impact the complainant. Interim measures for students may include, but are not limited to, information about how to obtain counseling and academic assistance in the event of sexual assault, and steps to take if the accused individual attends class with the complainant. Interim measures involving employees in collective bargaining units will be determined in consultation with the office of human resources.

To obtain reasonable and available interim measures and accommodations that effect a change in academic, employment or other applicable arrangements, in order to ensure safety, prevent retaliation and avoid an ongoing hostile environment. Parties may request a prompt review of the need for and terms of any interim measures and accommodations that directly affect them. While reporting individuals may request accommodations through any of the offices referenced in this policy, the following office can assist with these measures:

Director of Human Resources, 2 Union Ave., Saratoga Springs, NY 12866; 518-581-2239; or email: TitleIX@esc.edu

To obtain effective intervention services

When the accused is a student, they may request to have the university issue a "No Contact Order," consistent with university policy and procedure, meaning that continuing to contact the protected individual is a violation of university policy, and subject to additional conduct charges. If the accused and a protected person observe each other in a public place, it is the responsibility of the accused to leave the area immediately and without directly contacting the protected person. Both the accused/respondent and the reporting individual may request a prompt review of

the need for and terms of a No Contact Order, consistent with university policy. Parties may submit evidence in support of their request.

Interim Suspension

SUNY Empire retains the authority to issue an interim suspension to a respondent from SUNY Empire's program or activity on an emergency basis, where the university (1) undertakes an individualized safety and risk analysis and (2) determines that an immediate threat to the physical health or safety of any student or other individual arising from the allegations of covered sexual harassment justifies a removal.

Interim suspension is used only in the following circumstances:

- to ensure the safety and well-being of members of the community or preservation of university property
- to ensure the student's own physical or emotional safety and well-being
- if the student poses a definite threat of disruption of or interference with the normal operations of the university.

The dean or vice provost for academics' designee may place a student on interim suspension upon making a determination that such an action is necessary to maintain safety and order. The dean or vice provost for academics' designee normally consults with the vice provost for academics and/or judicial officer before taking such action. The interim suspension remains in effect until responsibility and sanctions have been determined and any appeals have been resolved.

Upon placing the student on interim suspension, the dean or vice provost for academics' designee immediately forwards a formal complaint to the judicial officer. Consequently, the dean or vice provost for academics' designee is a party to the complaint.

The judicial officer assembles a student conduct committee as outlined and conducts the hearing within 15 calendar days of the notice to the student of the interim suspension.

A student placed on interim suspension may request reconsideration in writing to the dean or vice provost for academics' designee. The student must provide evidence that s/he is not a risk to safety and order. The dean or provost's designee reviews the request and considers the information the student provides. If the dean or vice provost for academics' designee reconsiders and sustains the suspension, the student may appeal to the vice provost for academics.

Administrative Leave

SUNY Empire retains the authority to place a non-student employee respondent on administrative leave during the Title IX Grievance Process, consistent with applicable collective bargaining agreements, employee handbooks and Empire State University policies and rules.

When the accused is not a member of the university community, parties may request to have assistance from the Office of Campus Safety and Security or other university officials in obtaining a persona-non-grata letter, subject to legal requirements and university policy.

The Title IX Grievance Process

Filing a Formal Complaint

The timeframe for the Title IX Grievance Process begins with the filing of a Formal Complaint. The Grievance Process will be concluded within a reasonably prompt manner, and no longer than ninety (90) business

days calendar days, not counting university no-appointment periods, after the filing of the Formal Complaint, provided that the Process may be extended for a good reason, including but not limited to the absence of a party, a party's advisor, or a witness; concurrent law enforcement activity; or the need for language assistance or accommodation of disabilities. The procedure for applying for extensions is described below.

To file a Formal Complaint, a complainant must provide the Title IX Coordinator a written, signed complaint describing the facts alleged. Complainants are only able to file a Formal Complaint under this Policy if they are currently participating in, or attempting to participate in, the education programs or activities of SUNY Empire, including as an employee. For complainants who do not meet this criteria, the University will utilize existing Sexual Violence Prevention and Response Policy (https://sunyempire.edu/policies/?search=cid%3D80187) and procedures in the Student Conduct Policy and Procedures. (https://sunyempire.edu/policies/?search=cid%3D37969)

If a complainant does not wish to make a Formal Complaint, the Title IX Coordinator may determine a Formal Complaint is necessary. SUNY Empire will inform the complainant of this decision in writing, and the complainant need not participate in the process further but will receive all notices issued under this Policy and Process.

Nothing in the Title IX Grievance Policy prevents a complainant from seeking the assistance of state or local law enforcement alongside the appropriate on-campus process.

A complainant who files a Formal Complaint may elect, at any time, to address the matter through the Institution's Informal Resolution Process. Information about this process is available here: Sexual Violence Prevention and Response Policy and Student Conduct Policy and Procedures.

Multi-Party Situations

The institution may consolidate Formal Complaints alleging covered sexual harassment against more than one respondent, or by more than one complainant against one or more respondents, or by one party against the other party, where the allegations of covered sexual harassment arise out of the same facts or circumstances.

Determining Jurisdiction

The Title IX Coordinator will determine if the instant Title IX Grievance Process should apply to a Formal Complaint. The Process will apply when all of the following elements are met, in the reasonable determination of the Title IX Coordinator:

- The conduct is alleged to have occurred on or after August 14, 2020;
- The conduct is alleged to have occurred in the United States;
- The conduct is alleged to have occurred in {institution's} education program or activity; and
- The alleged conduct, if true, would constitute covered sexual harassment as defined in this policy.

If all of the elements are met, SUNY Empire will investigate the allegations according to the Grievance Process.

Allegations Potentially Falling Under Two Policies

If the alleged conduct, if true, includes conduct that would constitute covered sexual harassment and conduct that would not constitute covered sexual harassment, the Title IX Grievance Process will be applied to investigation and adjudication of only the allegations that constitute covered sexual harassment.

Mandatory Dismissal

If any one of these elements are not met, the Title IX Coordinator will notify the parties that the Formal Complaint is being dismissed for the purposes of the Title IX Grievance Policy. Each party may appeal this dismissal using the procedure outlined in "Appeals," below.

Discretionary Dismissal

The Title IX Coordinator may dismiss a Formal Complaint brought under the Title IX Grievance Policy, or any specific allegations raised within that Formal Complaint, at any time during the investigation or hearing, if:

- A complainant notifies the Title IX Coordinator in writing that they would like to withdraw the Formal Complaint or any allegations raised in the Formal Complaint;
- The respondent is no longer enrolled or employed by {the institution}; or,
- If specific circumstances prevent SUNY Empire from gathering evidence sufficient to reach a determination regarding the Formal Complaint or allegations within the Formal Complaint.

Any party may appeal a dismissal determination using the process set forth in "Appeals," below.

Notice of Dismissal

Upon reaching a decision that the Formal Complaint will be dismissed, the institution will promptly send written notice of the dismissal of the Formal Complaint or any specific allegation within the Formal Complaint, and the reason for the dismissal, simultaneously to the parties through their institutional email accounts. It is the responsibility of parties to maintain and regularly check their email accounts.

Notice of Removal

Upon dismissal for the purposes of Title IX, SUNY Empire retains discretion to utilize Sexual Violence Prevention and Response Policy (https://sunyempire.edu/policies/?search=cid%3D80187) and procedures in the Student Conduct Policy and Procedures (https://sunyempire.edu/policies/?search=cid%3D37969) to determine if a violation of Sexual Violence Prevention and Response Policy (https://sunyempire.edu/policies/?search=cid%3D80187) and Student Conduct Policy and Procedures (https://sunyempire.edu/policies/?search=cid%3D37969) has occurred. If so, SUNY Empire will promptly send written notice of the dismissal of the Formal Complaint under the Title IX Grievance Process and removal of the allegations to the conduct process.

Notice of Allegations

The Title IX Coordinator will draft and provide the Notice of Allegations to any party to the allegations of sexual harassment. Such notice will occur as soon as practicable, but no more than 15 calendar days after the institution receives a Formal Complaint of the allegations, if there are no extenuating circumstances.

The parties will be notified by their institutional email accounts if they are a student or employee, and by other reasonable means if they are neither.

The institution will provide sufficient time for the parties to review the Notice of Allegations and prepare a response before any initial interview.

The Title IX Coordinator may determine that the Formal Complaint must be dismissed on the mandatory grounds identified above, and will issue a Notice of Dismissal. If such a determination is made, any party to the allegations of sexual harassment identified in the Formal Complaint will receive the Notice of Dismissal in conjunction with, or in separate correspondence after, the Notice of Allegations.

Contents of Notice

The Notice of Allegations will include the following:

- Notice of the institution's Title IX Grievance Process and Sexual Violence Prevention and Response Policy and a hyperlink to a copy of the process.
- Notice of the allegations potentially constituting covered sexual harassment, and sufficient details known at the time the Notice is issued, such as the identities of the parties involved in the incident, if known, including the complainant; the conduct allegedly constituting covered sexual harassment; and the date and location of the alleged incident, if known.
- A statement that the respondent is presumed not responsible for the alleged conduct and that a determination regarding responsibility is made at the conclusion of the grievance process.
- A statement that the parties may have an advisor of their choice, who may be, but is not required to be, an attorney, as required under 34 C.F.R. § 106.45(b)(5)(iv);
- A statement that before the conclusion of the investigation, the parties may inspect and review evidence obtained as part of the investigation that is directly related to the allegations raised in the Formal Complaint, including the evidence upon which the institution does not intend to rely in reaching a determination regarding responsibility, and evidence that both tends to prove or disprove the allegations, whether obtained from a party or other source, as required under 34 C.F.R. § 106.45(b)(5)(vi);

Ongoing Notice

If, in the course of an investigation, the institution decides to investigate allegations about the complainant or respondent that are not included in the Notice of Allegations and are otherwise covered "sexual harassment" falling within the Title IX Grievance Policy, the institution will notify the parties whose identities are known of the additional allegations by their institutional email accounts or other reasonable means.

The parties will be provided sufficient time to review the additional allegations to prepare a response before any initial interview regarding those additional charges.

Advisor of Choice and Participation of Advisor of Choice

SUNY Empire will provide the parties equal access to advisors and support persons; any restrictions on advisor participation will be applied equally.

The university has a long-standing practice of requiring students to participate in the process directly and not through an advocate or representative. Students participating as Complainant or Respondent in this process may be accompanied by an Advisor of Choice to any meeting or hearing to which they are required or are eligible to attend. The Advisor of Choice is not an advocate. Except where explicitly stated by this Policy, as consistent with the Final Rule, Advisors of Choice shall not participate directly in the process as per standard policy and practice of SUNY Empire.

SUNY Empire will not intentionally schedule meetings or hearings on dates where the Advisors of Choice for all parties are not available, provided that the Advisors act reasonably in providing available dates and work collegially to find dates and times that meet all schedules.

SUNY Empire's obligations to investigate and adjudicate in a prompt timeframe under Title IX and other university policies apply to matters governed under this Policy, and SUNY Empire cannot agree to extensive delays solely to accommodate the schedule of an Advisor of Choice. The determination of what is reasonable shall be made by the Title IX Coordinator or designee. SUNY Empire will not be obligated to delay a meeting or hearing under this process more than five (5) days due to the unavailability of an Advisor of Choice, and may offer the party the opportunity to obtain a different Advisor of Choice or utilize one provided by the university.

Notice of Meetings and Interviews

SUNY Empire will provide, to a party whose participation is invited or expected, written notice of the date, time, location, participants, and purpose of all hearings, investigative interviews, or other meetings with a party, with sufficient time for the party to prepare to participate.

Delays

Each party may request a one-time delay in the Grievance Process of up to five (5) days for good cause (granted or denied in the sole judgment of the Title IX Coordinator, Director of Student Conduct, or designee) provided that the requestor provides reasonable notice and the delay does not overly inconvenience other parties.

For example, a request to take a five day pause made an hour before a hearing for which multiple parties and their advisors have traveled to and prepared for shall generally not be granted, while a request for a five day pause in the middle of investigation interviews to allow a party to obtain certain documentary evidence shall generally be granted.

The Title IX Coordinator shall have sole judgment to grant further pauses in the Process.

Investigation

General Rules of Investigations

For employees in collective bargaining units the Associate Vice President for Human Resources, or for matters involving students, the Title IX Coordinator, will perform an investigation. In both situations, investigations will occur under a reasonably prompt timeframe of the conduct alleged to constitute covered sexual harassment after issuing the Notice of Allegations.

SUNY Empire and not the parties, has the burden of proof and the burden of gathering evidence, i.e. the responsibility of showing a violation of this Policy has occurred. This burden does not rest with either party, and either party may decide not to share their account of what occurred or may decide not to participate in an investigation or hearing. This does not shift the burden of proof away from SUNY Empire and does not indicate responsibility.

SUNY Empire cannot access, consider, or disclose medical records without a waiver from the party (or parent, if applicable) to whom the records belong or of whom the records include information. SUNY Empire will provide an equal opportunity for the parties to present witnesses, including fact and expert witnesses, and other inculpatory and

exculpatory evidence, (i.e. evidence that tends to prove and disprove the allegations) as described below.

Inspection and Review of Evidence

Prior to the completion of the investigation, the parties will have an equal opportunity to inspect and review the evidence obtained through the investigation. The purpose of the inspection and review process is to allow each party the equal opportunity to meaningfully respond to the evidence prior to conclusion of the investigation.

Evidence that will be available for inspection and review by the parties will be any evidence that is directly related to the allegations raised in the Formal Complaint. It will include any:

1. Evidence that is relevant, even if that evidence does not end up being relied upon by the institution in making a determination regarding responsibility;
2. inculpatory or exculpatory evidence (i.e. evidence that tends to prove or disprove the allegations) that is directly related to the allegations, whether obtained from a party or other source.

All parties must submit any evidence they would like the investigator to consider prior to when the parties' time to inspect and review evidence begins. See, 85 Fed. Reg. 30026, 30307 (May 19, 2020).

The institution will send the evidence made available for each party and each party's advisor, if any, to inspect and review through an electronic format or a hard copy. The Institution is not under an obligation to use any specific process or technology to provide the evidence and shall have the sole discretion in terms of determining format and any restrictions or limitations on access.

The parties will have ten (10) business days to inspect and review the evidence and submit a written response by email to the investigator. The investigator will consider the parties' written responses before completing the Investigative Report.

The institution will provide copies of the parties' written responses to the investigator to all parties and their advisors, if any. See, 85 Fed. Reg. 30026, 30307 (May 19, 2020).

The institution will provide the parties up to ten (10) days to provide a response, after which the investigator will not be required to accept a late submission. Investigator has 10 business days to generate a report or, alternatively, may provide the parties with written notice extending the investigation for 10 business days and explaining the reason for the extension.

Any evidence subject to inspection and review will be available at any hearing, including for purposes of cross-examination.

The parties and their advisors must sign an agreement not to disseminate any of the evidence subject to inspection and review or use such evidence for any purpose unrelated to the Title IX grievance process. See, 85 Fed. Reg. 30026, 30435 (May 19, 2020).

The parties and their advisors agree not to photograph or otherwise copy the evidence. See, 85 Fed. Reg. 30026, 30435 (May 19, 2020).

Inclusion of Evidence Not Directly Related to the Allegations

Evidence obtained in the investigation that is determined in the reasoned judgment of the investigator not to be directly related to the allegations in the Formal Complaint will not be disclosed, or may be appropriately

redacted before the parties' inspection to avoid disclosure of personally identifiable information of a student. Any evidence obtained in the investigation that is kept from disclosure or appropriately redacted will be documented in a "privilege log" that may be reviewed by the parties and their advisors, if any. See, 85 Fed. Reg. 30026, 30438 (May 19, 2020).

Investigative Report

The Title IX Coordinator will create an Investigative Report that fairly summarizes relevant evidence and provide that Report to the parties at least ten (10) business days prior the hearing in an electronic format for each party's review and written response.

The Investigative Report is not intended to catalog all evidence obtained by the investigator, but only to provide a fair summary of that evidence.

Only relevant evidence (including both inculpatory and exculpatory – i.e. tending to prove and disprove the allegations - relevant evidence) will be referenced in the Investigative Report.

The investigator may redact irrelevant information from the Investigative Report when that information is contained in documents or evidence that is/are otherwise relevant. See, 85 Fed. Reg. 30026, 30304 (May 19, 2020).

Hearing

General Rules of Hearings

SUNY Empire will not issue a disciplinary sanction arising from an allegation of covered sexual harassment without holding a live hearing.

The live hearing may be conducted with all parties physically present in the same geographic location, or, at the university's discretion, any or all parties, witnesses, and other participants may appear at the live hearing virtually through Microsoft Teams, the university's immersive cloud learning environments, or through the university's Cisco video equipment. This technology will enable participants simultaneously to see and hear each other. At its discretion, SUNY Empire may delay or adjourn a hearing based on technological errors not within a party's control.

All proceedings will be recorded through audio recording and/or audiovisual recording. That recording will be made available to the parties for inspection and review.

Prior to obtaining access to any evidence, the parties and their advisors must sign an agreement not to disseminate any of the testimony heard or evidence obtained in the hearing or use such testimony or evidence for any purpose unrelated to the Title IX Grievance Process. Once signed, this Agreement may not be withdrawn See, 85 Fed. Reg. 30026, 30435 (May 19, 2020).

Continuances or Granting Extensions

SUNY Empire may determine that multiple sessions or a continuance (i.e. a pause on the continuation of the hearing until a later date or time) is needed to complete a hearing. If so, SUNY Empire will notify all participants and endeavor to accommodate all participants' schedules and complete the hearing as promptly as practicable.

As a general rule, no new evidence or witnesses may be submitted during the live hearing.

If a party identifies new evidence or witnesses that were not reasonably available prior to the live hearing and could affect the outcome of the

matter, the party may request that such evidence or witnesses be considered at the live hearing.

The hearing board chair will consider this request and make a determination regarding (1) whether such evidence or witness testimony was actually unavailable by reasonable effort prior to the hearing, and (2) whether such evidence or witness testimony could affect the outcome of the matter. The party offering the newly-discovered evidence or witness has the burden of establishing these questions by the preponderance of the evidence.

If the hearing board chair answers in the affirmative to both questions, then the parties will be granted a reasonable pause in the hearing to review the evidence or prepare for questioning of the witness.

Participants in the live hearing

Live hearings are not public, and the only individuals permitted to participate in the hearing are as follows:

Complainant and Respondent (The Parties)

- The parties cannot waive the right to a live hearing.
- The institution may still proceed with the live hearing in the absence of a party and may reach a determination of responsibility in their absence, including through any evidence gathered that does not constitute a "statement" by that party. 85 Fed. Reg. 30026, 30361 (May 19, 2020).
  - For example, a verbal or written statement constituting part or all of the sexual harassment itself is not a "prior statement" that must be excluded if the maker of the statement does not submit to cross-examination about that statement. In other words, a prior statement would not include a document, audio recording, audiovisual reading, and digital media, including but not limited to text messages, emails, and social media postings, that constitute the conduct alleged to have been the act of sexual harassment under the formal complaint.
- SUNY Empire will not threaten, coerce, intimidate or discriminate against the party in an attempt to secure the party's participation. See 34 C.F.R. § 106.71; see also 85 Fed. Reg. 30026, 30216 (May 19, 2020).
- If a party does not submit to cross-examination, the decision-maker cannot rely on any prior statements made by that party in reaching a determination regarding responsibility, but may reach a determination regarding responsibility based on evidence that does not constitute a "statement" by that party.
- The decision-maker cannot draw an inference about the determination regarding responsibility based solely on a party's absence from the live hearing or refusal to answer cross examination or other questions. See 34 C.F.R. §106.45(b)(6)(i).
- The parties shall be subject to the institution's Rules of Decorum (Appendix B - Rules of Decorum (https://sunyempire.edu/media/administration/compliance/Appendix-B---Rules-of-Decorum.pdf)(PDF 28kB)).

The Decision-maker

- The hearing body will consist of a panel of 3 decision-makers.
- No member of the hearing body will also have served as the Title IX Coordinator, Title IX investigator, or advisor to any party in the case, nor may any member of the hearing body serve on the appeals body in the case.

- No member of the hearing body will have a conflict of interest or bias in favor of or against complainants or respondents generally, or in favor or against the parties to the particular case.
- The hearing body will be trained on topics including how to serve impartially, issues of relevance, including how to apply the rape shield protections provided for complainants, and any technology to be used at the hearing.
- The parties will have an opportunity to raise any objections regarding a decision-maker's actual or perceived conflicts of interest or bias at the commencement of the live hearing.

Advisor of choice

- The parties have the right to select an advisor of their choice, who may be, but does not have to be, an attorney.
- In addition to selecting an advisor to conduct cross-examination, the parties may select an advisor who may accompany the parties to any meeting or hearing they are permitted to attend, but may not speak for the party.
- The parties are not permitted to conduct cross-examination; it must be conducted by the advisor. As a result, if a party does not select an advisor, the institution will select an advisor to serve in this role for the limited purpose of conducting the cross-examination at no fee or charge to the party.
- The advisor is not prohibited from having a conflict of interest or bias in favor of or against complainants or respondents generally, or in favor or against the parties to the particular case.
- The advisor is not prohibited from being a witness in the matter.
- If a party does not attend the live hearing, the party's advisor may appear and conduct cross-examination on their behalf. 85 Fed. Reg. 30026, 30340 (May 19, 2020).
- If neither a party nor their advisor appear at the hearing, SUNY Empire will provide an advisor to appear on behalf of the non-appearing party. See, 85 Fed. Reg. 30026, 30339-40 (May 19, 2020).
- Advisors shall be subject to the institution's Rules of Decorum and may be removed upon violation of those Rules (Appendix B).

Witnesses

- Witnesses cannot be compelled to participate in the live hearing and have the right not to participate in the hearing free from retaliation. See, 85 Fed. Reg. 30026, 30360 (May 19, 2020).
- If a witness does not submit to cross-examination, as described below, the decision-maker cannot rely on any statements made by that witness in reaching a determination regarding responsibility, including any statement relayed by the absent witness to a witness or party who testifies at the live hearing. 85 Fed. Reg. 30026, 30347 (May 19, 2020).
- Witnesses shall be subject to the institution's Rules of Decorum (Appendix B).

Hearing Procedures

For all live hearings conducted under this Title IX Grievance Process, the procedure will be as follows:

- Hearing Board Chair will open and establish rules and expectations for the hearing;
- The Parties will each be given the opportunity to provide opening statements;
- Hearing Board Chair will ask questions of the Parties and Witnesses;

- Parties will be given the opportunity for live cross-examination after the Hearing Board Chair conducts its initial round of questioning; During the Parties' cross-examination, the Hearing Board Chair will have the authority to pause cross-examination at any time for the purposes of asking his/her own follow up questions; and any time necessary in order to enforce the established rules of decorum.
- Should a Party or the Party's Advisor choose not to cross-examine a Party or Witness, the Party shall affirmatively waive cross-examination through a written or oral statement to the Hearing Board Chair. A Party's waiver of cross-examination does not eliminate the ability of the Hearing Board Chair to use statements made by the Party.

Live Cross-Examination Procedure

Each party's advisor will conduct live cross-examination of the other party or parties and witnesses. During this live-cross examination the advisor will ask the other party or parties and witnesses relevant questions and follow-up questions, including those challenging credibility directly, orally, and in real time.

Before any cross-examination question is answered, the Hearing Board Chair will determine if the question is relevant. Cross-examination questions that are duplicative of those already asked, including by the Hearing Board Chair, may be deemed irrelevant if they have been asked and answered.

Review of Recording

The recording of the hearing will be available for review by the parties within 15 business day, unless there are any extenuating circumstances. The recording of the hearing will not be provided to parties or advisors of choice.

Determination Regarding Responsibility

Standard of Proof

SUNY Empire uses the preponderance of the evidence standard for investigations and determinations regarding responsibility of formal complaints covered under this Policy. This means that the investigation and hearing determines whether it is more likely than not that a violation of the Policy occurred evidence is clear and convincing, highly and substantially likely, to a neutral decision maker.

General Considerations for Evaluating Testimony and Evidence

While the opportunity for cross-examination is required in all Title IX hearings, determinations regarding responsibility may be based in part, or entirely, on documentary, audiovisual, and digital evidence, as warranted in the reasoned judgment of the Decision-maker.

Decision-makers shall not draw inferences regarding a party or witness' credibility based on the party or witness' status as a complainant, respondent, or witness, nor shall it base its judgments in stereotypes about how a party or witness would or should act under the circumstances.

Generally, credibility judgments should rest on the demeanor of the party or witness, the plausibility of their testimony, the consistency of their testimony, and its reliability in light of corroborating or conflicting testimony or evidence.

Still, credibility judgments should not rest on whether a party or witness' testimony is non-linear or incomplete, or if the party or witness is displaying stress or anxiety.

Decision makers will afford the highest weight relative to other testimony to first-hand testimony by parties and witnesses regarding their own memory of specific facts that occurred. Both inculpatory and exculpatory (i.e. tending to prove and disprove the allegations) evidence will be weighed in equal fashion.

Except where specifically barred by the Title IX Final Rule, a witness' testimony regarding third-party knowledge of the facts at issue will be allowed, but will generally be accorded lower weight than testimony regarding direct knowledge of specific facts that occurred.

The Final Rule requires that SUNY Empire allow parties to call "expert witnesses" for direct and cross examination. SUNY Empire does not provide for expert witnesses in other proceedings. While the expert witness will be allowed to testify and be crossed as required by the Final Rule, the decision-maker will be instructed to afford lower weight to non-factual testimony of the expert relative to fact witnesses, and any expert testimony that is not directed to the specific facts that occurred in the case will be afforded lower weight relative to fact witnesses, regardless of whether the expert witness testimony is the subject of cross examination and regardless of whether all parties present experts as witnesses.

The Final Rule requires that SUNY Empire allow parties to call character witnesses to testify. SUNY Empire does not provide for character witnesses in other proceedings. While the character witnesses will be allowed to testify and be crossed as required by the Final Rule, the decision-maker will be instructed to afford very low weight to any non-factual character testimony of any witness.

The Final Rule requires that SUNY Empire admit and allow testimony regarding polygraph tests ("lie detector tests") and other procedures that are outside of standard use in academic and non-academic conduct processes. While the processes and testimony about them will be allowed to testify and be crossed as required by the Final Rule, the decision-maker will be instructed to afford lower weight to such processes relative to the testimony of fact witnesses.

Where a party or witness' conduct or statements demonstrate that the party or witness is engaging in retaliatory conduct, including but not limited to witness tampering and intimidation, the {Decision-maker} may draw an adverse inference as to that party or witness' credibility.

Components of the Determination Regarding Responsibility

The written Determination Regarding Responsibility will be issued simultaneously to all parties through their institution email account, or other reasonable means as necessary. The Determination will include:

1. Identification of the allegations potentially constituting covered sexual harassment;
2. A description of the procedural steps taken from the receipt of the formal complaint through the determination, including any notifications to the parties, interviews with parties and witnesses, site visits, methods used to gather other evidence, and hearings held;
3. Findings of fact supporting the determination;
4. Conclusions regarding which section of the Student Conduct Policy and Procedures, if any, the respondent has or has not violated.
5. For each allegation:

a. A statement of, and rationale for, a determination regarding responsibility;

b. A statement of, and rationale for, any disciplinary sanctions the recipient imposes on the respondent; and

c. A statement of, and rationale for, whether remedies designed to restore or preserve equal access to the recipient's education program or activity will be provided by the recipient to the complainant; and

6. The recipient's procedures and the permitted reasons for the complainant and respondent to appeal (described below in "Appeal").

Timeline of Determination Regarding Responsibility

If there are no extenuating circumstances, the determination regarding responsibility will be issued by SUNY Empire within 15 calendar days of the completion of the hearing.

Finality

The determination regarding responsibility becomes final either on the date that the institution provides the parties with the written determination of the result of the appeal, if an appeal is filed consistent with the procedures and timeline outlined in "Appeals" below, or if an appeal is not filed, the date on which the opportunity to appeal expires.

Appeals

Each party may appeal (1) the dismissal of a formal complaint or any included allegations and/or (2) a determination regarding responsibility. To appeal, a party must submit their written appeal within 30 calendar days of being notified of the decision, indicating the grounds for the appeal.

The limited grounds for appeal available are as follows:

• Procedural irregularity that affected the outcome of the matter (i.e. a failure to follow the institution's own procedures);

• New evidence that was not reasonably available at the time the determination regarding responsibility or dismissal was made, that could affect the outcome of the matter;

• The Title IX Coordinator, investigator(s), or decision-maker(s) had a conflict of interest or bias for or against an individual party, or for or against complainants or respondents in general, that affected the outcome of the matter.

• Information/documentation presented at the hearing /decision that was disregarded

• Imposition of an unreasonable sanction.

The submission of appeal stays any sanctions for the pendency of an appeal. Supportive measures and remote learning opportunities remain available during the pendency of the appeal.

If a party appeals, the institution will as soon as practicable notify the other party in writing of the appeal, however the time for appeal shall be offered equitably to all parties and shall not be extended for any party solely because the other party filed an appeal.

Appeals may be no longer than 5 (including attachments). Appeals should be submitted in electronic form using ARIAL or TIMES NEW ROMAN, 12 point font, and single-spaced. Appeals should use footnotes, not endnotes. Appeals that do not meet these standards may be returned to the party for correction, but the time for appeal will not be extended unless there is evidence that technical malfunction caused the appeal document not to meet these standards.

Appeals will be decided before a panel, which may include one or more students, that is fair and impartial and does not include individuals with a conflict of interest and bias, and will not serve as investigator, Title IX Coordinator, or hearing decision maker in the same matter.

Outcome of appeal will be provided in writing simultaneously to both parties, and include rationale for the decision.

Retaliation

SUNY Empire will keep the identity of any individual who has made a report or complaint of sex discrimination confidential, including the identity of any individual who has made a report or filed a Formal Complaint of sexual harassment under this Title IX Grievance Policy, any Complainant, any individual who has been reported to be the perpetrator of sex discrimination, any Respondent, and any witness, except as permitted by the FERPA statute, 20 U.S.C. 1232g, or FERPA regulations, 34 CFR part 99, or as required by law, or to carry out the purposes of 34 CFR part 106, including the conduct of any investigation, hearing, or judicial proceeding under this Title IX Grievance Policy.

No person may intimidate, threaten, coerce, or discriminate against any individual for the purpose of interfering with any right or privilege secured by Title IX of the Education Amendments of 1972 or its implementing regulations.

No person may intimidate, threaten, coerce, or discriminate against any individual because the individual has made a report or complaint, testified, assisted, or participated or refused to participate in any manner in an investigation, proceeding or hearing under this Title IX Grievance Policy.

Any intimidation, threats, coercion, or discrimination, for the purpose of interfering with any right or privilege secured by Title IX or its implementing regulations constitutes retaliation. This includes any charges filed against an individual for code of conduct violations that do not involve sex discrimination or sexual harassment, but that arise from the same facts or circumstances as a report or complaint of sex discrimination or a report or Formal Complaint of sexual harassment.

Empire State University recognizes that students who have been drinking and/or using drugs, whether voluntarily or involuntarily, at the time that violence, including, but not limited to domestic violence, dating violence, stalking or sexual assault, may be hesitant to report such incidents due to fear of potential consequences for their own conduct. Empire State University strongly encourages students to report incidents of domestic violence, dating violence, stalking, or sexual assault to university officials. A bystander or reporting individual acting in good faith, who discloses any incident of domestic violence, dating violence, stalking, or sexual assault to Empire State University officials or law enforcement, will not be subject to the university's code of conduct for violations of alcohol and/or drug use policies at or near the time of the commission of the domestic violence, dating violence, stalking, or sexual assault.

Applicable Legislation and Regulations
Disability Accommodations

This Policy does not alter any institutional obligations under federal disability laws including the Americans with Disabilities Act of 1990, and Section 504 of the Rehabilitation Act of 1973. Parties may request reasonable accommodations for disclosed disabilities to the Title IX Coordinator at any point before or during the Title IX Grievance Process

that do not fundamentally alter the Process. The Title IX Coordinator will not affirmatively provide disability accommodations that have not been specifically requested by the Parties, even where the Parties may be receiving accommodations in other institutional programs and activities.

CHOSEN NAME POLICY

Purpose

This policy recognizes that members of the SUNY Empire community may choose to use names other than their legal names in order to identify themselves and ensures that the chosen name of students and employees can and should be used whenever possible, in the course of business, communication, and/or education. This policy is limited to first names and not surnames or family names.

Definitions

Chosen Name: For the purpose of this policy, the first name by which a student or employee choses to be known that differs from a person's legal first name. Please note: The GENDA legislation uses 'requested name' and this is synonymous with the definition of chosen name.

Institutional Identification Card: It is an identification document certifying the status of a student or employee.

Legal Name: The name that an individual is given at birth and which appears on a birth certificate recognized by a government or other legal entity, or the name which appears on a marriage certificate or other government-issued document (e.g. court order) on which a legal name change is recorded.

Student: A person who is enrolled at SUNY Empire for the purpose of taking courses and/or working towards obtaining a degree. This can include a matriculated undergraduate, graduate, international, and non-degree seeking student.

Employees: A person employed for wages or salary at SUNY Empire.

Statements

SUNY Empire acknowledges that a person's chosen name can and should be used whenever possible. When required for the protection of the individual, and as required by law, certain official correspondence will use a student or employee's legal name.

The Chosen Name policy applies to students and employees.

Prohibited uses of a Chosen Name

1. A chosen name shall not be used for the purpose of misidentification, misrepresentation, fraud, to avoid legal obligations, or in any other manner that violates SUNY Empire, SUNY, local, state, or federal policy, law, rules or regulations, including the student conduct policy and all employee-related rules and policies. Violations of

such policies, laws, rules, or regulations shall be addressed through established procedures.

2. A chosen name may not include words, symbols or numbers or be otherwise prohibited under the law and/or SUNY Empire policy or procedure, including the student code of conduct.

3. SUNY Empire reserves the right to reject the use of or remove from administrative systems or documents any chosen name that it deems in its sole judgment to be in violation of this policy.

For employees, requests will be reviewed by the Office of Human Resources. For students, requests will be reviewed by the Office of the Registrar.

SUNY Empire is obligated to use the legal name for many official records and reports, including, but not limited to, payroll records, billing records, tax forms, financial aid documents, official transcripts, medical records, enrollment reporting, and federal immigration documents.

This policy is consistent with current values and policies of SUNY Empire that protect students and employees against discrimination based on gender identity and expression, and aligns with state and federal regulations. This policy is drafted as a best practice for supporting transgender and gender non-conforming members of campus communities. The ability to use one's chosen name is not limited to use by transgender and gender non-conforming students and employees, however, and is available to anyone who uses a chosen name other than their legal/primary first name, on a daily basis.

Applicable Legislation and Regulations

The Gender Expression Non-Discrimination Act (GENDA) (https://www.nysenate.gov/legislation/bills/2019/s1047/)

Title IX of the United States

Related References, Policies, Procedures, Forms and Appendices Procedures

Students should complete the Chosen Name request form, which is found on the Office of the Registrar's page under personal identification change.

Employees should complete the Personal Information Form found in the Office of Human Resources website under Forms and reach out to the office for questions.

Students and employees should allow up to 10 business days for a response to the request.

Chosen name will appear in the following locations:

- Self-service Banner
- Learning Management System
- Email address/Office365
- DP Planner (excludes printed Degree Plans)
- PLA Planner
- Service Now
- MyESC
- ID Card
- Human Resources self-service and online time and attendance (for employees)
- SUNY Empire's directory (for employees)

Students who have registered a chosen name with SUNY Empire can obtain a new ID by visiting the Student Identification Number Card and Login (https://sunyempire.edu/begin/id/#IDCONTACTS) website.

Employees can obtain a new ID with their chosen name by sending an email to campus.safety@esc.edu.

While the chosen name will be on the front of the card, the legal name will be shown on the back. The first card for a chosen name change will be issued at no charge. Any card issued after this complimentary card will be charged a $10 replacement fee.

Students may choose to use their chosen name when requesting their diploma. However, students should be aware that some professional and licensing boards require use of legal name in the licensing process. As such, the use of a chosen name on the diploma may delay or complicate a certification or licensure process. In addition, some countries may require a diploma for various legal, immigration, or employment purposes. A student who has already graduated from SUNY Empire may contact the registrar's office to request a new diploma with their chosen name, however, a fee will be collected for reprinting.

Additional Information

SUNY Empire will make a good faith effort to update reports, documents, and systems that are designated to use one's chosen name. Adjusting the various information systems to include the use of the chosen name is a multiyear effort, due to the complexity and interrelated nature of systems and record sources.

Requests for chosen names should not be made more than once per academic year.

For Students Appealing a Denial for a Chosen Name
If a request for a chosen name was denied, a student can appeal the decision by email to titleIX@esc.edu (registrarsoffice@esc.edu). Please include any additional relevant information as to why the denial reason does not apply to this case. For example, a student requesting a change involving a common derivative for gender-affirming reasons should appeal their case to the Title IX Coordinator.

For Employees Appealing a Denial for a Chosen Name
If a request for a chosen name was denied, an employee can appeal the decision by email to titleIX@esc.edu. Please include any additional relevant information as to why the denial reason does not apply to this case.

STUDENT CONDUCT POLICY
Purpose
SUNY Empire State strives to maintain a community that promotes and values the academic experience, institutional and personal integrity, and justice, equality, and diversity. Members of the SUNY Empire community should be able to work and learn in an environment that is orderly, peaceful, and free of disturbances that impede individuals' growth and development, or their ability to perform their responsibilities. Respect for the rights of others and SUNY Empire property are essential expectations for each SUNY Empire student.

To maintain a fair, just, and safe community environment, this Student Conduct Policy defines the minimum expectations for behavior at SUNY Empire. It also provides for the procedures for responding to allegations of student misconduct, and the actions the SUNY Empire may take in dealing with policy violations, which are outlined in the Student Conduct System.

Definitions
A. **"Affirmative Consent"** is a knowing, voluntary, and mutual decision among all participants to engage in sexual activity. Consent can be given by words or actions, as long as those words or actions create clear permission regarding willingness to engage in the sexual activity. Silence or lack of resistance, in and of itself, does not demonstrate consent. The definition of consent does not vary based upon a participant's sex, sexual orientation, gender identity, or gender expression.

B. **"Business Day"** means a weekday or non-holiday when the SUNY Empire is open for regular business.

C. **"Bystander"** shall mean a person who observes a crime, impending crime, conflict, potentially violent or violent behavior, or conduct that is in violation of rules or policies of the SUNY Empire.

D. **"Complainant"** means any person or persons who have made a disciplinary complaint against a student and may or may not be the victim.

E. **"Faculty"** or **"Faculty Member"** means any employee of SUNY Empire engaged in teaching, learning, advising, or evaluation of learning.

F. **"May"** is used in the permissive sense.

G. **"Personal Property"** means anything of value to which a person has legal possession or title.

H. **"Reporting individual"** is the victim/survivor related to cases of rape, sexual assault, domestic violence, dating violence, and stalking. "Reporting Individual" status will also apply to cases where the respondent has been charged with conduct which violates the health and safety of an individual.

I. **"Respondent"** is used to describe an accused student.

J. **"Sanctions"** are educational and/or punitive measures assigned to a student after they have been found responsible for violating SUNY Empire policy.

K. **"Shall"** is used in the imperative sense.

L. **"Staff"** or **"Staff Member"** means any person employed by SUNY Empire.

M. **"Student"** means all persons enrolled in a program or engaged in credit or noncredit learning and/or assessment activities at SUNY Empire, both full-time and part-time, or those individuals who were students at the time of an alleged violation of the Student Conduct Policy, whether on SUNY Empire premises or remotely. Persons who are not officially enrolled for a particular term but who have a continuing relationship as a student with the SUNY Empire are considered "students." A continuing relationship exists for a student who has begun a first term of enrollment, has not

graduated, withdrawn or been expelled, and is within the 3-years of the end date of the last term of enrollment.

N. **"Student Conduct Body"** means any person or persons authorized by the Student Conduct Director to determine whether a student has violated the Student Conduct Policy and to recommend sanctions when necessary.

O. **"Student Conduct Director"** means the individual(s) designated to administer the SUNY Empire Student Conduct System.

P. **"Student Conduct Hearing Officer"** means any individual assigned to advise a Student Conduct Body.

Q. **"Student Conduct System"** means the procedures for responding to allegations of student misconduct and the delineation of actions SUNY Empire may take in dealing with policy violations.

R. **"Student Organization"** means any number of persons who have complied with the formal requirements for recognition by SUNY Empire and has official recognition.

S. **"Student Publication"** means written material including, but not limited to, brochures, newspapers, and special interest magazines published by students and distributed to the SUNY Empire community.

T. **"SUNY Empire"** means the Empire State University.

U. **"SUNY Empire Community Member "** means any person who is a student, faculty member, SUNY Empire official, or any other person employed by or affiliated with SUNY Empire. The Student Conduct Director shall determine a person's status in a situation.

V. **"SUNY Empire Official"** includes any person employed by the university.

W. **"SUNY Empire Premises"** or **"Campus"** includes all land, buildings, facilities, or other property in the possession of or owned, leased, used, or controlled by the university, including adjacent streets and sidewalks.

X. **"SUNY Empire Property"** means all items owned, leased, or on loan to the university.

Y. **"Title IX Coordinator"** shall mean the Title IX Coordinator or his or her designee

Z. **"Weapon"** any weapon or any device capable of use as a weapon by release of explosive material, noxious material, electric discharge, or projectile; any deadly weapon as defined in the NYS Penal Law Section 10.00(12); any weapon listed in NYS Penal Law Section 265; and as listed in the SUNY Board of Trustee Regulations 8 NYCRR Part 590 and SUNY Document #5403.

Statements

SUNY Empire strives to create an atmosphere of student success in direct support of its mission. Students, like all citizens, are afforded the right of free expression and advocacy and the SUNY Empire encourages and seeks to preserve freedom of expression and inquiry within the institution. Students are to conduct themselves civilly, lawfully, and responsibly. Students will not engage in disruptive, threatening, unethical, or abusive conduct toward other members of the SUNY Empire community, including other students, instructors, and staff.

SUNY Empire has a responsibility to maintain standards of student conduct essential to the orderly conduct of its function as an educational institution. Students are expected to be familiar with the Student Conduct Policy and the regulations included in the policy, and to abide by them.

Along with local, state, and federal laws and statutes, each student is accountable for his or her own behavior and for the behavior of their guests and/or those attempting to act on their behalf. Any violation of the Student Conduct Policy is strictly prohibited and may result in sanctions including, without limitation: disciplinary warning, disciplinary suspension, or disciplinary expulsion from SUNY Empire. The Student Conduct System is intended to be educational in nature and every effort is made to develop understanding and compliance with the SUNY Empire standards of conduct. However, occasions arise when disciplinary or punitive sanctions are necessary, and those actions are within the scope of the policy. Because disciplinary actions must be commensurate with the seriousness of the offense and the total conduct record of the student, each case is determined on its own merits.

A. Jurisdiction

SUNY Empire jurisdiction and discipline pertains to conduct which occurs on its premises, in/on properties or buildings it owns/leases/operates, through online tools and learning management systems provided by SUNY Empire, or off campus and which adversely affects the SUNY Empire community, including any of its members, and/or the pursuit of its objectives and mission. In addition, illegal conduct off campus or on external online platforms may be adjudicated on campus as a violation of the Student Conduct Policy, and students outside of the United States may be held responsible on campus for violations of the laws of the country where they are visiting/residing.

B. Due Process

The Student Conduct System is designed to support the right to due process, which is a process that is fair, consistent, provides adequate notice, and a meaningful opportunity to be heard. The student conduct proceedings provide the Student Conduct Body or officer a full opportunity to hear both sides of the issue in considerable detail. Except as otherwise provided in Section D below, no student shall be disciplined for a violation of this policy without being first given appropriate advance notice of the charges against him or her and a hearing before an appropriate body or officer. The student may waive in writing the requirement of a hearing when allowed by law or related regulations.

C. Violation of Law and Student Conduct Policy

Students may be charged with violations of both the SUNY Empire's Student Conduct Policy and the laws of the broader society. Proceedings under this Student Conduct Policy may be carried out prior to, simultaneously with, or following external civil or criminal proceedings for the same factual situation without regard to the status of civil litigation in court or criminal arrest and prosecution. Exceptions may be approved by the Student Conduct Director for temporary delays as requested by external legal or law enforcement entities. Temporary delays should not last more than 10 business days except when law enforcement specifically requests and justifies a longer delay.

When a student is charged by federal, state, or local authorities with a violation of law, SUNY Empire will not request or agree to special consideration for that individual because of the individual's status as a student. The alleged offense may also the subject of a proceeding before a Student Conduct Body under the Student Conduct Policy and SUNY Empire may advise off-campus authorities of the existence of the Student Conduct Policy and of how such matters will be handled within SUNY Empire. SUNY Empire will cooperate fully with law enforcement and other agencies in the enforcement of criminal law on campus and

in the conditions imposed by criminal courts for the rehabilitation of student violators. Individual students and faculty/staff members, acting in their personal capacities, remain free to interact with governmental representatives, as they deem appropriate.

D. Interim Suspension and Directives

The Student Conduct Director, or designee, may impose interim measures prior to and pending a hearing, and determination of said hearing, including interim suspension and loss of privileges, which may include no contact orders, and other reasonable measures, upon learning of a possible Student Conduct Policy violation. Students have the right to challenge the terms of the interim measure(s) or request a modification. Interim suspensions may only be imposed when, in the judgement of the Student Conduct Director, the continued presence of such student would constitute a danger to themself, to the safety of persons or property, and/or would pose an immediate threat of disruptive interference with the normal conduct of the SUNY Empire's activities and functions. Violation of any condition of the interim suspension shall be grounds for additional charges and sanctions up to and including expulsion from the SUNY Empire.

E. Amnesty In Sexual Misconduct Cases For Alcohol and/or Drug Use

The health and safety of every student at the State University of New York and its State-operated and community colleges is of utmost importance. SUNY Empire recognizes that students who have been drinking and/or using drugs (whether such use is voluntary or involuntary) at the time that sexual misconduct occurs may be hesitant to report such incidents due to fear of potential consequences for their own conduct. SUNY Empire strongly encourages students to report incidents of sexual misconduct to SUNY Empire officials. A bystander or Reporting Individual, acting in good faith, who discloses any incident of sexual misconduct to SUNY Empire officials or law enforcement, will not be subject to the Student Conduct Policy for violations of alcohol and/or drug use policies occurring at or near the time that the sexual misconduct occurred.

F. Prohibited Conduct

The following list of prohibited conduct is not exhaustive and is intended to describe minimum standards for specific and/or general types of behavior that may result in sanctions outlined in the procedures for this policy. These prohibitions apply both to student behavior which occurs on campus, at SUNY Empire-sponsored events off campus, in SUNY Empire-sponsored virtual and online activities, and may apply to off campus behaviors as noted in "Section A: Jurisdiction" of this policy. Prohibited behavior includes not only completed actions, but also attempted violations of the Student Conduct Policy.

1. Fire Safety

1. Causing or creating a fire, regardless of intent (except as authorized for use in class, in connection with SUNY Empire-sponsored research, or other approved activities).
2. Tampering with safety measures or devices, including but not limited to, alarm systems, fire extinguishers, exit signs, emergency phone systems, smoke or heat detectors, fire hoses, security systems, locked exterior doors, etc.
3. Failing to conform to safety regulations, including but not limited to, falsely reporting an incident, failure to evacuate facilities in a timely fashion in emergency situations or in response to fire alarms, inappropriate use of the fire alarm system, and inappropriate, negligent or reckless behavior which results in the activation of a fire alarm.

2. Weapons

- The on-campus possession or use of any weapon or any device capable of use as a weapon whether it is through the release of explosive material, noxious material, electric discharge, or projectile; or cutting, thrusting, stabbing, striking.
- The on-campus possession or use of a deadly weapon as defined in NYS Penal Law Section 10.00(12) or any weapon listed in NYS Penal Law Section 265.

Note: in addition to SUNY Empire policy restrictions, possession of a weapon on school grounds, including all SUNY Empire locations, is a felony under NYS Penal Law Section 265.01-a.

3. Threatening or Abusive Behavior

Intentionally or recklessly causing physical harm to any person, or reasonable fear of such harm, verbally or in written form. Students cannot justify such behavior as defensive if:

- the behavior is a physical response to verbal provocation
- the student has the ability to leave the situation, but instead chooses to respond physically, and/or
- such actions are punitive or retaliatory.

Additionally, it is prohibited to use a self-defense spray in circumstances that do not justify the use of such device.

4. Harassment

Engaging in behavior that is sufficiently severe, pervasive, and objectively offensive that it unreasonably interferes with, denies, or limits any SUNY Empire Community Member's ability to participate in or benefit from the SUNY Empire's education program and/or activities, threatens or violates the personal safety of any SUNY Empire Community Member, and/or creates an academic environment that a reasonable person would find intimidating or hostile.

Activity protected by the First Amendment will not constitute harassment.

Harassment may include:

- directing unwanted physical, verbal, or electronic conduct at an individual based on one or more of that person's protected characteristics or status, including age, color, race, disability, marital status, national/ethnic origin, religion, military/veteran's status, sex [including pregnancy], gender expression or gender identity, sexual orientation, domestic violence victim status, criminal or arrest record, political activities, or predisposing genetic characteristics; or
- subjecting a person or group of persons to unwanted physical contact or threat of such; or
- repeated contact with an individual or office after being instructed to cease.

5. Intimate Partner Violence

Intimate Partner Violence includes Dating Violence and Domestic Violence, both of which are further defined below. Intimate Partner Violence can occur in relationships of the same or different genders.

1. **Dating Violence** - Any act of violence, including physical, sexual, psychological, electronic, and verbal violence, committed by a person who is or has been in a social relationship of a romantic or intimate nature with the Reporting Individual. Dating Violence can occur as a single act, or it can consist of a pattern of violent, abusive, or coercive acts that serve to exercise power and control in the context of a romantic or intimate relationship. The existence

of such a relationship shall be determined based on the victim's statement and with consideration of the type and length of the relationship and the frequency of the interaction between the persons involved in the relationship. Two people may be in a romantic or intimate relationship, regardless of whether the relationship is sexual in nature; however, neither a casual acquaintance nor ordinary fraternization between two individuals in a business or social context shall constitute a romantic or intimate relationship.

2. **Domestic Violence** - Any violent felony, non-violent felony, or misdemeanor crime, as those terms are defined by the laws of the State of New York and/or of the federal government, committed by a current or former spouse or intimate partner of the victim, a person sharing a child with the victim, or a person cohabitating with the victim as a spouse or intimate partner.

6. Stalking

Stalking is engaging in a course of conduct (including, but not limited to, acts in which the stalker directly, indirectly, or through third parties, by any action, method, device, online tools, or means, follows, monitors, observes, surveils, threatens, or communicates to or about a person, or interferes with a person's property) directed at a specific person(s) that would cause a reasonable person(s) to:

1. fear for their safety or the safety of others; or
2. suffer substantial emotional distress (defined as significant mental suffering or anguish that may, but does not necessarily, require medical or other professional treatment or counseling).

Stalking does not require direct contact between parties and can be accomplished in many ways, including through third parties or through the use of electronic devices and social media.

7. Endangerment

Acting to create or contribute to dangerous or unsafe environments anywhere on- or off-campus or electronically. Reckless or intentional acts which endanger, or put at risk, the welfare of oneself or others are prohibited.

8. Sexual Harassment

Sexual Harassment is unwelcome sexual advances, requests for sexual favors, or other unwanted conduct of a sexual nature, whether verbal, nonverbal, graphic, physical, electronic, or otherwise, when the conditions outlined in subsections a. and/or b. below, are present:

1. Submission to, or rejection of, such conduct is made, either explicitly or implicitly, a term or condition of a person's employment, academic standing, or participation in any SUNY Empire programs or activities or is used as the basis for SUNY Empire decisions affecting the individual (often referred to as "quid pro quo" harassment); or
2. Such conduct creates a hostile environment. A hostile environment exists when the conduct is sufficiently severe, persistent, or pervasive that it unreasonably interferes with, limits, or deprives an individual's ability to participate in, or benefit from, SUNY Empire's education or employment programs or activities. Conduct must be deemed severe, persistent, or pervasive from both a subjective and an objective perspective.

9. Sexual Assault and Sexual Exploitation

1. **Sexual Assault I** - Intentionally engaging in any form of vaginal, anal, or oral penetration, however slight, with any object (an object includes but is not limited to parts of a person's body) without the person's Affirmative Consent

2. **Sexual Assault II** - Intentionally engaging in touching a person's intimate parts (defined as mouth, genitals, groin, anus, inner thigh, breast, or buttocks) whether directly or through clothing, without the person's Affirmative Consent. Sexual Assault II also includes forcing an unwilling person to touch another's intimate parts.

3. **Sexual Exploitation** - Intentionally engaging in, or attempting to engage in, abusive sexual behavior without Affirmative Consent that does not otherwise constitute Sexual Assault I or Sexual Assault II. Examples include, but are not limited to: intentional, nonconsensual tampering with or removal of condoms or other methods of birth control and STI prevention prior to or during sexual contact in a manner that significantly increases the likelihood of STI contraction and/or pregnancy by the nonconsenting party; nonconsensual video or audio recording of sexual activity; sharing and/or allowing others to watch consensual or nonconsensual sexual activity without the consent of a sexual partner; observing others engaged in dressing/undressing or in sexual acts without their knowledge or consent; trafficking people to be sold for sex; inducing incapacitation with the intent to sexually assault another person; creating, possessing, or distributing the sexual performance of a child (as defined in NYS Penal Code 263.00) ; and aiding, abetting, or otherwise facilitating sexual activity between persons without the Affirmative Consent of one or more party.

The following principles outlined in NYS Education Law Article 129-B apply to the SUNY Empire's interpretation of Affirmative Consent

1. Consent to any sexual act or prior consensual sexual activity between or with any party does not necessarily constitute consent to any other sexual act.
2. Consent is required regardless of whether the person initiating the act is under the influence of drugs and/or alcohol.
3. Consent may be initially given but withdrawn at any time.
4. Consent cannot be given when a person is incapacitated, which occurs when an individual lacks the ability to knowingly choose to participate in sexual activity. Incapacitation may be caused by the lack of consciousness or being asleep, being involuntarily restrained, or if an individual otherwise cannot consent. Depending on the degree of intoxication, someone who is under the influence of alcohol, drugs, or other intoxicants may be incapacitated and therefore unable to consent.
5. Consent cannot be given when it is the result of any coercion, intimidation, force, or threat of harm.
6. When consent is withdrawn or can no longer be given, sexual activity must stop.

10. Hazing

Hazing is any reckless or intentional conduct in connection with the initiation into, or affiliation with, any organization or group which degrades, humiliates, or endangers the mental or physical health of any person, regardless of the person's willingness to participate.

11. Forgery, Fraud, Dishonesty

Altering or misusing documents, records, stored data, or instruments of identification, or furnishing false information to any SUNY Empire, local, state or federal official. This includes possessing, creating, or using a fake or forged instrument of identification, or monetary notes, or knowingly making a false complaint to a SUNY Empire office. A good faith complaint which is later not substantiated is not considered to be a false complaint.

12. Property Damage
  1. Removing, destroying or damaging SUNY Empire property, or property under SUNY Empire administration or supervision.
  2. Destroying or damaging the property of others, on- or off-campus.

13. Theft
Stealing property and/or services; possessing stolen property. This includes identity theft (i.e., unauthorized possession or use of a financial instrument, SUNY Empire ID Card, etc.).

14. Unauthorized Entry, Presence, or Use

Entering, being present in/on, or using facilities or property on- or off-campus, belonging to individuals, SUNY Empire-recognized groups and/or corporate entities without proper authorization.

15. Drugs
Consistent with the federal Drug-Free Schools and Communities Act Amendments of 1989 (Public Law 101- 226), possessing, using, distributing, or intent to distribute, a controlled substance or dangerous drug, or any drug unlawful to possess, (i.e., marijuana) except as expressly permitted by law. Drug paraphernalia including, but not limited to bongs, water pipes, or hypodermic needles that are not specifically required for the administration of prescribed medications are not allowed on campus. Use of legal medication outside the parameters of the medical authorization is prohibited and prescription drugs must have an authentic medical prescription. Driving under the influence of drugs is prohibited. This applies to both on- and off-campus behavior.

While possession of marijuana by adults (21+) in New York State has been legalized, it remains prohibited on all state campuses as required by federal law. Possession while at a SUNY Empire location or event will result in a Student Conduct Policy violation.

16. Alcohol
Consistent with New York State Law, individuals under the age of 21 years are prohibited from using, possessing, or distributing alcoholic beverages. Individuals over the age of 21 may use and possess alcohol as permitted by the law and SUNY Empire policies. Open containers and public intoxication are prohibited. Students who are irresponsible in their use of alcohol or who provide alcohol to minors will be subject to this policy regardless of the student's age. Driving under the influence of alcohol is prohibited. This applies to both on and off-campus behavior.

17. Obstruction or Disruption
Impairing, obstructing, or disrupting the orderly conduct, processes, activities, and functions of SUNY Empire, including teaching and learning, or the community where the conduct occurs including, without limitation, teaching, research, administration, disciplinary procedures, or other authorized activities, including public service functions. It can include participation in campus demonstrations which disrupt the normal operations of SUNY Empire and infringe on the rights of other SUNY Empire Community Members by leading or inciting others to disrupt scheduled and/or normal activities within any campus building or area; and intentional obstruction which unreasonably interferes with freedom of movement, be it pedestrian, vehicular, or electronic on campus. It also includes, without limitation, excessive noise, abusive, or obscene language in a public place, littering, obstructing vehicular or pedestrian traffic, and boisterous, indecent, or threatening conduct that is unreasonable in the area, time, or manner in which it occurs. Behaviors, speech, or actions that interfere with the ability of the instructor(s) to teach or students to learn are considered disruptive.

Conduct protected by the First Amendment is excluded.

18. Student Group Violations
Students are expected to know and abide by the regulations governing their membership in a Student Organization. Prohibited conduct by officers/members of student groups and organizations may result in a referral to the Student Conduct System for individual students.

It is a violation of SUNY Empire policy for students to affiliate with organizations that have had recognition suspended or permanently revoked by SUNY Empire. The definition of affiliation includes joining or being involved in any activity that would normally be associated with being a member of such organization.

19. Misuse of SUNY Empire Name and Mark
Use of the SUNY Empire name, symbols, logo, and wordmark inconsistent with the university's Use of University Name and Wordmark Policy, available here: https://www.sunyempire.edu/policies/?search=cid%3D37966 (https://sunyempire.edu/policies/?search=cid%3D37966)

20. Aiding and Abetting
Aiding, abetting, or otherwise facilitating an individual to commit or attempt to commit a violation of the Student Conduct Policy.

21. Non-Compliance
  1. Failure to comply with SUNY Empire policy and/or any local, state, public health directive, federal law, rule, or regulation.
  2. Failure to comply with the directions of an authorized local, state, federal, or SUNY Empire Official acting in the performance of their duties, or any other person responsible for a facility or registered function acting in accordance with those responsibilities. This includes, without limitation: not appearing at meetings when directed to do so; not providing identification; not abiding by any temporary and/or administrative directive; and not leaving areas/events/offices when directed to do so.
  3. Failure to notify SUNY Empire of a felony or misdemeanor crime. It is the obligation of every student to notify the SUNY Empire (via e-mail – Collegewidestudentservices@sunyempire.edu) five (5) calendar days from the date of arrest of any felony or misdemeanor arrests at any time after a student pays their orientation fee through graduation or separation from SUNY Empire, regardless of geographic location of the arrest or specific crime alleged. Failure to do so may result in conduct charges by the SUNY Empire or administrative/registration holds placed on the student's account. SUNY Empire may review the facts underlying the arrest to determine if there is an associated SUNY Empire policy violation.

22. Electronic Use
Misuse or abuse of the SUNY Empire computer systems, voice mail, or telephone services. This includes, without limitation:

  1. Unauthorized use or abuse of your SUNY Empire computer account, including failure to safeguard or sharing of user IDs and passwords
  2. Sending abusive or threatening messages to students, faculty, or staff.
  3. Accessing a student or staff account without authorization.
  4. Using a SUNY Empire office email account to send messages without authorization.
  5. Failure to comply with any SUNY Empire technology policies.
  6. Illegal use including, but not limited to illegal downloading, uploading, or use of file sharing programs with regard to copyrighted materials.

23. Hate or Bias-Related Crime

Intentionally selecting a person against whom a criminal offense is committed or intended to be committed because of a belief or perception regarding the race, color, national origin, ancestry, gender, religion, religious practice, age, disability, or sexual orientation, or other classes protected by state or federal law regardless of whether the belief or perception is correct.

24. Abuse of The Student Conduction System

Abusing the Student Conduct System, including but not limited to:

1. Failure to obey the notice of a Student Conduct Body, Student Conduct Director, or SUNY Empire Official.
2. Falsification, distortion, or misrepresentation of information before a Student Conduct Body, Student Conduct Director, or SUNY Empire Official.
3. Disruption or interference with the orderly conduct of a student conduct proceeding.
4. Knowingly instituting a student conduct complaint without cause.
5. Attempting to discourage an individual's proper participation in, or use of, the Student Conduct System.
6. Attempting to influence the impartiality of a member of a Student Conduct Body or any other party/individual that may choose to participate in a student conduct proceeding.
7. Harassment (verbal or physical) and/or intimidation of a member of a Student Conduct Body or any other party/individual that may choose to participate in a student conduct proceeding.
8. Failure to comply with the sanction(s) or directives imposed under the Student Conduct Policy.
9. Influencing or attempting to influence another person to commit an abuse of the Student Conduct System.

25. Retaliation

Retaliation is adverse action taken against an individual or groups for making a good faith report of prohibited conduct or for participating in any investigation or proceeding regarding prohibited conduct. Retaliation may include intimidation, threats, coercion, or adverse employment or educational actions. Retaliation may be found even when an underlying report, made in good faith, was not substantiated. Retaliation may be committed by the Respondent, the Reporting Individual, or any other students.

RIGHTS OF STUDENTS WITH DISABILITIES POLICY

Purpose

The purpose of this policy is to assure university compliance with federal, state and local laws pertaining to the rights of prospective and current students with disabilities.

Definitions

Disability: A diagnosed physical or mental impairment that affects the performance of one or more major life activities. Individuals with a history of impairment or regarded as impaired are also protected from discrimination on the basis of that disability.

Qualified individual with a disability: A person with a disability, who with or without reasonable accommodation is able to perform the essential functions of his or her job.

Reasonable accommodation: A modification to an employee's work environment or tasks that does not reduce standards, fundamentally alter the nature of the employee's work or pose an undue burden on the institution.

Essential functions: Those tasks or functions that, if modified, would fundamentally change the nature of the job or occupation for which the position exists

Statements

Empire State University complies with Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act (ADA) of 1990. These acts " … no otherwise qualified handicapped individual … shall, solely by reason of his or her handicap, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance (29 USC Sect. 706)." Regulations implementing Section 504 and ADA establish standards for employment practice, accessibility of facilities, and education programs with which institutions receiving federal funds must comply (34 CFR Part 104).

In accordance with these regulations, a qualified person with a disability who meets the academic and technical standards required to enroll in and participate in the Empire State University program shall be provided an equal opportunity to obtain a degree in the most integrated setting

appropriate to that person's needs. Empire State University makes reasonable accommodation to meet the needs of students with disabling conditions. Reasonable accommodation does not include academic adjustments that would fundamentally alter the nature, essential requirements or academic standards of the program.

The university considers each student's individual needs through consultation with the student's center or unit and the director of Accessibility Resources and Services.

The director of Accessibility Resources and Services, coordinates the university's compliance with Section 504, ADA and their implementing regulations with respect to students. Questions concerning the university's policy should be directed to the director of Accessibility Resources and Services, Empire State University, 113 West Ave., Saratoga Springs, NY 12866-4390, 518-587-2100, ext. 2244 or email Disability.Services@sunyempire.edu (Disability.Services@esc.edu).

Applicable Legislation and Regulations
Section 504 of the Rehabilitation Act of 1973

Americans with Disabilities Act of 1990

Americans with Disabilities Amendments Act of 2008

New York State Human Rights Law

Related References, Policies, Procedures, Forms and Appendices
Empire State University provides educational services through regional enrollment centers throughout New York state and the Center for Distance Learning. Students with disabling conditions may work out informal accommodations with their mentors/tutors. To make a formal declaration of disability and request a student may contact the center's disability representative (see A below).

1. Requesting Accommodations
   a. The student may first contact the disability representative for his/her center or the disability specialist in the Office of Accessibility Resources and Services. A list of the disability representatives and their contact information can be found in the student services section of the undergraduate catalog or on the Accessibility Resources and Services website (https://sunyempire.edu/accessibility/).
   b. The student completes the Disability Declaration and Request for Accommodation form (available from a disability representative or on the Accessibility Resources and Services website, forms page (https://sunyempire.edu/accessibility/forms/)) to provide information about his or her disability and request accommodations. The student does not need to provide documentation of the disability at this stage.
   c. The disability services staff review the request and determine appropriate accommodations, consulting with the dean, the student's mentor, and other faculty and staff as needed.
   d. The student, his/her primary mentor, other mentors, tutors or instructors the student is studying with and the disability representative are notified of the approved accommodations. The student contacts his/her mentors or tutors to discuss implementing the approved accommodations.

2. ADA Grievances or Appeals
   Students who wish to file a complaint about their treatment at the university or the determination of their accommodation request are welcome to do so. Internally, students may access the university's Student Grievance Procedure to do so.

   a. Informal resolution
   The student is strongly encouraged to seek informal resolution of a grievance by bringing it to the attention of the relevant center, program or central office administrator in a timely fashion. An attempt at informal resolution should begin no more than 30 days after the concern arises.

   b. Written Grievance
   If the student is unsatisfied with the response, the student may make a formal, written complaint to the relevant administrator.

      i. Any formal complaint must be submitted within 60 days of the concern arising. The student must state the nature of the grievance and the remedy s/he is seeking and describe any previous attempts to resolve the issue.
      ii. The administrator reviews the situation and should provide a written response within 15 days of receiving the complaint.

   c. Appeal
   If the student is unsatisfied with the first level of administrative response, the student may appeal in writing to the appropriate Vice President.

      i. Appeals regarding academic services are to be submitted to the Vice President for Academic Affairs. Appeals regarding financial issues are to be submitted to the Vice President for Administration.
      ii. Any appeal must be submitted within 30 days of the transmission of the first level administrative response. The student must state the nature of the justification for the appeal and describe any previous attempts to resolve the issue.
      iii. The Vice President reviews the situation and should provide a written response within 15 days of receiving the appeal. The Vice President's decision is final.

USE OF UNIVERSITY NAME AND WORDMARK POLICY
Purpose
To protect the university's trademark for all logos, symbols, etc. that pertain to SUNY Empire State University

Definitions
Statements
The SUNY Empire State University name, symbols, logo and wordmark are protected trademarks of Empire State University. It is the policy of the university to permit the use of these trademarks by centers, Coordinating Center offices and alumni/student associations for purposes of public relations and fund raising, where the proceeds benefit the university and its students. Notwithstanding such policy, the university reserves its right, at its sole discretion, to revoke or restrict such use of its trademarks for commercial purposes and in any other circumstances.

Any group wishing to use the trademark(s) must receive written permission from the senior director of marketing. Such permission will set forth the name of the group, the nature of the use and restrictions regarding the standards and quality of the goods and services in connection with which the trademark(s) are used. The university reserves the right to approve samples showing the proposed use of the trademarked product or service prior to production and distribution.

The Empire State University trademarks should not be used in any manner suggesting advocacy or official position of the university regarding any issues including, but not limited to, political issues.

For further information to use the Empire State University trademarks, contact the senior director of marketing at 518-587-2100.

Applicable Legislation and Regulations

STUDENT EMAIL COMMUNICATION POLICY
Purpose
Empire State University assigns each student and employee an email account. The SUNY Empire email account serves as a primary method of communication between students and the institution. Use of the SUNY Empire email account and associated features provides a higher level of security and assurance of sender identity over correspondence through third party providers. This policy sets the requirements for official communication with students and students' responsibilities for the information sent through official university channels.

Definitions
Official communications are any communications related to matters concerning student, faculty, and staff interaction with SUNY Empire.

Student is defined as an individual who has enrolled in courses at/with SUNY Empire; has not graduated, has been dismissed or expelled, and/or has withdrawn from SUNY Empire; and it has been less than three years since the end-date of the last enrollment.

Statements
Email is an official communication channel at Empire State University and the institution provides all students with an email account. All faculty and staff shall use students' SUNY Empire email addresses when conducting official communications such university business via email. Other official channels and portals that require a login into university systems with students' credentials are also acceptable means of communication. Faculty and staff may require that students use other official channels and portals, such as those within the Learning Management System (LMS).

Students are accountable to SUNY Empire for information delivered to their SUNY Empire email and other assigned channels and portals. Thus, SUNY Empire expects students to receive and review official email communications in a timely fashion. As correspondence may be time-sensitive, students are encouraged to check their accounts daily. Communication prior to first enrollment as a student is not covered by this policy, however incoming students should begin using SUNY Empire email as soon as it is available. If a student has paused their enrollment during the three-year window in which they are defined as students, SUNY Empire may send emails to a student's non-SUNY Empire email addresses for re-enrollment activities provided that the communication contains no protected educational record information.

Students may request that their SUNY Empire email be forwarded to another service provider and do so at their own risk. Students are responsible for all information, including attachments, forwarded to any email account. SUNY Empire's responsibility ends with the proper delivery of the email to the official university channel. SUNY Empire does not guarantee delivery to forwarded addresses nor does it guarantee that documents attached to forwarded messages will function.

To ensure identity verification, students must correspond with SUNY Empire using their institution-provided email account or through other official channels.

Applicable Legislation and Regulations
34 CFR Part 99—Family Educational Rights and Privacy (https://studentprivacy.ed.gov/node/548/)

STUDENT GRIEVANCE POLICY AND PROCEDURES
Purpose
The purpose of the Student Grievance Policy is to provide equitable and orderly processes to resolve grievances by students.

Definitions
Grievance -- formal difference or dispute between a student and a university employee about the interpretation and/or application of the university's non-academic policies and procedures, or provision of services, by members of the university's faculty or staff, that negatively affects the student. A grievance may be based on one of the following claims: failure to provide services, arbitrary and/or capricious actions by a university employee or administrative office; policy or procedure applied unfairly and/or in a different manner than it was applied to others; administrative error in the application of the policy or procedure.

Days – Monday through Friday excluding university holidays

Relevant Administrator— Appropriate Office Director or School Associate Dean or Dean. The locus of grievance is with the unit where the service is delivered. Questions about the appropriate locus are resolved by the provost, vice president or designee.

Relevant Provost, Vice President or designee—The office responsible for the service area.

Statements
A grievance differs from an appeal of an academic decision, as it deals with service issues and not the actual outcomes of course work. A student may file a grievance in the cases of an unresolved difference or dispute between themselves and the university (office or individual) related to services rendered or non-academic decisions. The policy covers matters outside the scope of other policies of the university.

Complaints about sexual harassment and discrimination based upon protected class are addressed via the *Discrimination Complaint Procedure*; complaints about services related to disabilities are addressed through *Rights of Students with Disabilities Policy*, complaints about student behavior are addressed through the *Student Conduct Policy and Procedures* and student academic appeals including grading are addressed through *Student Academic Appeals Policy and Procedures*.

In cases where service issues underlie a disagreement about an academic evaluation, the service issue will be investigated and decided first.

Informal Resolution

The student is strongly encouraged to seek informal resolution of a grievance by bringing it to the attention of the relevant individual, administrator or office. An attempt at informal resolution should begin no more than 20 business days after the service or decision is rendered.

Formal Grievance

If the student is unsatisfied with the response, the student may make a formal, written grievance to the relevant administrator.

Any formal grievance must be submitted by the student within 40 business days after the service or decision is rendered . The student must state the nature of the grievance and the remedy s/he is seeking and describe any previous attempts to resolve the issue grievance.

The administrator reviews the situation and should provide a written response, including appeal information within 15 days of receiving the complaint, copying the primary mentor/academic advisor. Students will be informed if extenuating circumstances require additional time.

Appeal of Formal Grievance Decision

If the student is unsatisfied with the formal grievance decision, the student may appeal in writing to the appropriate vice president, provost or designee.

Any appeal must be submitted within 20 business days of the transmission of the the formal grievance decision. The student must state the nature of the justification for the appeal.

The vice president, provost or designee reviews the grievance and should provide a written response within 15 days of receiving the appeal. This decision is final.

PROTECTION OF HUMAN RESEARCH SUBJECTS POLICY
Purpose
To ensure the ethical treatment of human subjects involved with Empire State University research projects as well as to comply with federal and state regulations, the university has developed this policy as well as procedures with which to carry out the policy. Additionally, the university, in order to maintain its federal-wide assurance with the Office of Human Research Protections, which is necessary for federal grants, must have a policy for the protection of its human research subjects.

Definitions
Research: a systematic investigation including research development, testing and evaluation designed to develop or contribute to generalizable knowledge. Activities which meet this definition constitute "research" for purposes of this policy, whether or not they are conducted or supported under a program that is considered research for other purposes. For example, some demonstration and service programs may include research activities.

Human subject: a living individual about whom an investigator (faculty, staff or student) conducting research obtains; 1. Data through intervention or interaction with the individual, or 2. Identifiable private information.

Statements
All research involving human subjects conducted by university faculty, staff and students must be reviewed and approved by the Institutional Review Board prior to the start of the research. Those submitting protocols to the Institutional Review Board must have completed the CITI human subjects training within three years of the protocol submission or the protocol will not be approved.

STUDENT CLUBS AND ORGANIZATIONS PROCEDURES
PURPOSE
To enhance the co-curricular experience for students

DEFINITIONS
STATEMENTS
1. Only officially recognized organizations may use the name of the State University of New York or Empire State University (the university) for identification purposes, obtain organizational privileges in the use of the university's facilities and services, or imply university sponsorship or approval of their activities.
2. Recognition (or withdrawal of recognition) of a group as a university organization is an executive responsibility of the President, acting on behalf of the Chancellor and trustees of the State University of New York. Responsibility for the coordination of policy development and for the administration of recognition procedures in the case of organizations having students as full members is delegated to the Director of Alumni and Student Relations. The final decision to grant or withdraw recognition rests with the President or his/her designee.
3. Determination of criteria for membership and for active status is the prerogative of each organization, insofar as it is consistent with State and Federal law. No organization may restrict its selection of members or assignment of voting privileges, rank or office, based on illegal differentiation or based on an individual's previous affiliations. There will be no discrimination based on race, gender, color, religions, age national origin, disability or sexual orientation. The names, purposes and procedures of organizations must reflect this policy of nondiscrimination.
4. Local affiliates of national organizations must be entirely free to select individual members from among the generally qualified; outside approval shall not be required.
5. Gender associated or otherwise circumscribed names should not be interpreted as denying or prohibiting membership to any person wishing to join any registered organization, or to participate in its activities. Students are free to select any group of their choosing.
6. Each group applying for recognition must agree to abide by all regulations of the university and the State University of New York. Applications of original recognition or renewed recognition will be

submitted to the Director of Alumni and Student Relations. Each application for recognition must include the following information:

7. a brief statement of the organization's purpose and proposed activities

8. membership requirements

9. sources of income and costs to members

10. assurance of responsible financial accounting to its membership

11. a list of current officers with their addresses and telephone numbers, including national or regional officer, if applicable

12. name of university faculty/professional advisor

13. Any constitution approved by organization members must be submitted to the Director of Alumni and Student Relations. All information required in the application for recognition (as detailed above) must be furnished separately.

14. Student organization credentials are maintained by the Office of Alumni and Student Relations and must be renewed or updated yearly. Failure to renew credentials or to comply with other university regulations will result in temporary or permanent withdrawal of official recognition.

15. Recognition of student groups by the university will not extend beyond the university facilities. Any activities by student groups beyond university locations are the responsibility of individual students and not campus administration. Events and meetings held at university locations must be approved and registered with the Director of Alumni and Student Relations and the Center Dean. The Director and relevant Dean may approve, for posting purposes only, announcements of off-campus events.

16. Student organizations bringing discredit upon themselves or the university may lose their recognition at the discretion of the President.

17. Any organization that receives financial assistance from the Student Activity Fee fund must maintain all deposits in an account administered by the Office of Alumni and Student Relations. For further information on procedures, please contact the Office of Alumni and Student Relations.

***All informal groups meeting on a regular or ad hoc basis are not bound by this policy. Any group desiring official university recognition and financial assistance must submit an application and is subject to all policies described above.

APPLICABLE LEGISLATION AND REGULATIONS
RELATED REFERENCES, POLICIES, PROCEDURES, FORMS AND APPENDICES
TEACHER PROFESSIONAL EXPECTATIONS POLICY
Purpose
The main factor for having this policy is ethics. New York State teachers must be ethical and professional with regards to their encounters with school district personnel, program faculty and staff, and most importantly, with their students. This policy will allow us to review any candidate who demonstrates a lack of professional conduct and dismiss him/her from the teaching program.

Definitions
Disposition refers to professional conduct and judgment.

Statements
Empire State University expects teacher education students to teach effectively and to demonstrate behaviors and attitudes that are consistent with the ideal of fairness and the belief that all students can learn. Empire State University expects students in professional education to demonstrate a set of values and attitudes consistent with the highest professional standards and to comply with relevant local, state and federal law. Students who fail to meet professional expectations are subject to warning or dismissal from the program and those dismissed cannot be recommended for teacher certification. Further, the teacher education programs prepare students to function as professionals who serve pupils and clients who may be minors or individuals in circumstances of significant vulnerability. In pursuing their academic programs, students come into direct contact with such vulnerable pupils and clients as part of their field experiences, residency placements, and teaching roles. Empire State University has an obligation to protect those pupils and clients and cannot tolerate student behavior that exploits, endangers, compromises or threatens the welfare, safety or rights of those pupils or clients.

In deciding whether to admit, readmit, retain, or graduate a student from a program, or to recommend an individual for state certification, the teacher education program considers not only the university's admission and academic requirements but also the individual's competencies related to serving in the teaching profession, including, but not limited to, the individual's conduct, professional attitudes, values and attributes to the extent such traits impact the person's ability to serve effectively and ethically in the profession, and advancement in a teacher education program. The teacher education faculty and staff will conduct periodic reviews of students at key checkpoints, such as the time for certification recommendation, to determine whether or not the student will move forward in the process.

Professional Expectations and Criteria:
In deciding whether to admit, readmit, retain, or graduate students from a program, or to recommend an individual for a state teaching certificate, a teacher education program considers:

1. The individual's educational, work, and other life experiences related to the teaching profession.

2. The individual's ability to communicate and work effectively with students, families, colleagues, peers, university faculty and staff, and communities, including individuals from different backgrounds, individuals with exceptional needs or limitations, individuals from different religious, cultural, racial or ethnic populations, and individuals of different genders and sexual orientations.

3. The individual's fitness for the profession, including but not limited to any formal charge of professional misconduct or any felony conviction(s).

4. The individual's behavior in light of appropriate professional and ethical standards.

5. The individual's general and specific knowledge, skills, and dispositions needed to successfully complete the particular program and to function effectively in the profession. Dispositions for teaching are defined as those professional attitudes, values and attributes expected of an education professional by this policy and by New York State law and regulations. An instrument is used as a valid, reliable and objective tool for assessment in this process. There is a set process to review the results of this instrument.

6. The legal requirements and professional expectations as set out in the applicable laws and regulations governing state certification;

7. The standards and rules adopted or recognized by a teacher education program and applicable professional organizations; and

8. Whether the individual has met all the other program requirements for retention, graduation, or recommendation for state certification as set

forth in the Graduate Catalog and the program's written policies and procedures.

Procedures
Warning or Dismissal from a Teacher Education Program

1. Academic Warning or Dismissal

   The graduate student Evaluation and Grading policy, Satisfactory Academic Progress policy, and Academic Honesty policy contain university policy and procedures for academic warning and dismissal.

2. Professional Warning or Dismissal

   The dean of the School for Graduate Studies may issue a warning or dismiss a student from the program for failure to meet, satisfy, or demonstrate satisfactory performance with respect to one or more of the program's professional criteria (see Part I).

   a. Grounds for Professional Warning or Dismissal The dean of the School for Graduate Studies may issue a warning or dismiss a student from the program for failure to meet one or more of the following:
      i. A school or a school district decides not to hire or retain the student, dismisses the student from field experience, disciplines the student for misconduct, or determines that the student has behaved inappropriately with respect to any of the professional criteria.
      ii. The dean of the School for Graduate Studies determines that the student does not meet the professional criteria.
   b. Procedure for Warning or Dismissal
      i. Once notified of a complaint/incident, the division chair will notify the student and the student's advisor of the complaint/incident; schedule a meeting between the student, advisor, and chair; and conduct an investigation. The student will have 1 week from the date of notification to confirm a date for this meeting. In advance of this meeting, the student may provide a written response to the division chair concerning the incident. At this meeting, the student may provide information or documentation or be asked by the division chair to provide information or documentation related to the complaint/incident. Based on the investigation, the division chair will make a recommendation to the dean of the School for Graduate Studies and copy the student. The student has 1 week from the submission of the chair's recommendation to submit a written response to the dean of the School for Graduate Studies. In the absence of the division chair, the Office of Teacher Education will act in his/her place.
      ii. Upon receipt of this recommendation, the dean of the School for Graduate Studies may warn or dismiss the student from the program. In making this decision, the dean may obtain information, documentation, or consult with others as deemed necessary.
      iii. The dean notifies the student in writing. The warning or dismissal notice includes the effective date and reason for the warning or dismissal. The dean provides a copy to the division chair, Office of Teacher Education, the student's academic advisor and course instructor(s).
      iv. If the student is in a field experience or teaching role and is dismissed by the university, the dean also notifies appropriate school personnel of the dismissal. If the student has been issued transitional B certification and is dismissed, the Office of Teacher Education also notifies appropriate NYS Education Department personnel.
      v. In cases where the student's behavior appears to present an immediate danger to the welfare and safety or rights of pupils or clients, in accordance with the Student Conduct Policy and Procedures, the dean may place an individual on interim suspension.
      vi. A student who receives a warning or is dismissed may make an appeal following the university's policy on Student Academic Appeals.

Decision Not To Recommend For Certification

1. Grounds for Decision Not to Recommend a Student for Certification
   a. The program does not recommend any student for certification who has been dismissed from the program.
   b. The program does not recommend any student for certification who fails to meet NYS Education Department requirements.
   c. The division chair and/or Office of Teacher Education may decide not to recommend a student for certification who fails to meet, satisfy, or demonstrate satisfactory performance with respect to one or more of the program's academic and/or professional criteria.
   d. The division chair and/or Office of Teacher Education may decide not to recommend a student for certification if a school or school district disciplines the student for misconduct, dismisses the student from field experience, or determines that a student has behaved inappropriately with respect to any of the professional criteria.

2. Procedure for Decision Not to Recommend a Student for Certification
   a. The division chair and/or Office of Teacher Education may decide not to recommend a candidate for certification. In making this decision, the division chair and/or Office of Teacher Education may obtain information, documentation, or consult with others as deemed necessary.
   b. The division chair and/or Office of Teacher Education notifies the student in writing. This notice includes the reason for the decision not to recommend the student for certification. The division chair and/or Office of Teacher Education provides a copy to the student's academic advisor and the dean of the School for Graduate Studies.
   c. A student who is not recommended for certification may make an appeal following the university's policy on Student Academic Appeals.

Readmission Consideration
Students who reapply to the program or a different program in the School for Graduate Studies must do so in accordance with the procedures for readmission. In reviewing an application for readmission to the teacher education programs all previous work in a graduate program including the individual's competencies related to serving in the teaching profession and professional expectations and criteria defined in the policy is considered .

Incident Reporting
1. Violations of Criminal Law by Teacher Education Students

   a. Students charged with violations of criminal law must report such charges immediately to the division chair and Office of

Teacher Education. The dean is responsible for determining the student's status upon receipt of the information. The dean makes an evaluation and determination concerning the seriousness of the offense or offenses charged and the bearing, if any, that the criminal charges have on the student's fitness or ability to perform the duties and responsibilities of field experiences or teaching, until the charges have been dismissed.

b. Depending on the nature of the charges and the information available, the dean may immediately remove such students from participation in field experiences or teaching.

c. If further action is required, including interim suspension from the university, the dean follows the procedures outlined in the Student Conduct Policy and Procedures.

2. Legal Notice

a. Students in field experiences are covered by New York State Education Law §3023, which requires that each school district "save harmless and protect all teachers, practice or cadet teachers… from financial loss arising out of any claim, demand, suit or judgment by reason of alleged negligence or other act resulting in accidental bodily injury to any person, or accidental damage to the property of any person within or without the school building, provided such teacher, practice or cadet teacher… at the time of the accident or injury was acting in the discharge of his duties within the scope of his employment or authorized volunteer duties and/or under the direction of said board of education…." A student who is involved in any such accident must immediately inform the school administrator and the SUNY Empire division chair and Office of Teacher Education.

b. A student who is served with a summons, complaint or other legal process involving an incident which occurred during the course of their teaching or field experience while participating in a teacher education program must immediately forward a copy of the legal papers to the local school administrator, SUNY Empire division chair and Office of Teacher Education.

UNDERGRADUATE ENROLLMENT IN GRADUATE COURSES
Purpose
Provides for undergraduate enrollment in graduate courses with explicit controls for such enrollment and the uses of the credit.

Definitions
SGS – School for Graduate Studies

Statements
An advanced undergraduate student (within the last 32 credits of the bachelor's program) with a concurred degree program may apply to take up to nine credits of selected graduate course work as determined by the appropriate graduate program chair or coordinator (but only six hours during a single term), related to the student's undergraduate degree program. If the student is permitted to enroll, the graduate-level course(s) must be used in the undergraduate degree program and graduate-level course expectations and grading policies apply.

Students and mentors should consult with the appropriate program chair or coordinator as they develop a degree program plan that includes graduate study.

The appropriate program chair determines eligibility on a course-by-course basis, in consultation with the student's primary mentor and other mentors as appropriate. Decision criteria include (1) the student's preparedness for graduate study based on the academic record, (2) the student's rationale for enrolling in graduate courses, and (3) the availability of space in the course(s). The graduate course(s) will be used toward the undergraduate degree (subject to undergraduate degree program review). Additionally, if the student is accepted within two years to the graduate program to which the courses apply, those course(s) will apply toward that graduate degree.

Applicable Legislation and Regulations
Title 8 Chapter II Regulations of the Commissioner part 52.2 (c)(3) "Credit toward an undergraduate degree shall be earned only for college level work. Credit toward a graduate degree shall be earned only through work designed expressly for graduate students. Enrollment of secondary school students in undergraduate courses, of undergraduates in graduate courses, and of graduate students in undergraduate courses shall be strictly controlled by the institution."

Related References, Policies, Procedures, Forms and Appendices
Procedures for Undergraduate Students to Request Enrollment in Graduate Courses
Undergraduate Consultation with Primary Mentor

The undergraduate student consults with his/her primary mentor to determine if she/he is ready for graduate-level study, if graduate study is appropriate to his/her goals, and if so, what courses would be relevant to his/her degree program. Some indicators of readiness to engage in graduate study are that students will have been highly successful in upper-level courses/studies demonstrating strong writing and critical thinking skills, and have completed the any prerequisites required for a particular course.

The student completes and signs the application for enrollment in graduate courses, acknowledging the expectations of graduate level-study and grading.

Appeals

Appeals of decisions would follow the university's academic appeals process and some appeals would be referred to the appropriate division. For example, appeals of decisions not to allow a student to participate in a graduate course would be directed to SGS and appeals of decisions about the appropriateness of such a course to the undergraduate program would be directed to the student's undergraduate division.

WITHDRAWING FROM A COURSE PROCEDURE
If personal concerns or work demands make if difficult or impossible for a student to continue with a course after it has started, the student needs to alert his or her course instructor as soon as possible. Sometimes

alternative arrangements can be made, such as an incomplete. It is recommended that the student also consult with their academic advisor.

If alternative arrangements cannot be made, then the student will need to withdraw from the course. To withdraw from a course, the student will need to go to MySUNYEmpire (https://my.sunyempire.edu), click on **Registration and Course Offerings**, and then click on **Begin or Modify Registration**.

It is very important to note that a graduate student may withdraw from a course on or before the end of the 10th week of a 15-week term or the end of the 5th week of an 8-week term.

It is equally important for the student to note that they may be eligible for a refund for all or part of the tuition paid for the course depending on the date of withdrawal notification. (Please refer to the Withdrawal Liability Chart and Refund Policy.)

Effect on Enrollment Status
The effective date of the withdrawal may affect the full- or part-time enrollment status of the student. For the purpose of establishing enrollment status, enrolled credits are the number of registered credits after day 28 of the enrollment term. For example, a student who first enrolls for 12 credits and withdraws from one 4-credit study on or before day 28 remains enrolled for only 8 credits and is no longer considered full time. If the student withdraws after day 28, he or she is considered full time.

A withdrawal that results in a change from full- to part-time enrollment status can jeopardize the student's financial aid eligibility. See the Empire State University statements on Eligibility for New York State Financial Aid and Eligibility for Federal Financial Aid.

Effect on Satisfactory Academic Progress
The effective date of a withdrawal also affects the calculation of satisfactory academic progress. For purposes of calculating academic progress, "credits attempted" is the number of registered credits after day 28 of the enrollment term. Thus, the date of withdrawal affects whether the credits are counted in the number of credits attempted. For example, if a student first enrolls for 12 credits and then withdraws from one 4-credit study on or before day 28, satisfactory progress is calculated on 8 credits attempted. If the student withdraws after day 28, satisfactory progress is calculated on 12 credits attempted.

For information on the effect on financial aid eligibility, see the statements on Eligibility for New York State Financial Aid and Eligibility for Federal Financial Aid.

WITHDRAWING FROM THE PROGRAM PROCEDURE
For a number of different reasons, students occasionally find that their academic program is not appropriate for them and they decide to withdraw. Before withdrawing, the student is encouraged to contact their academic advisor to discuss the matter. The student may only need a leave of absence from the program so as to catch up on work responsibilities or respond to family demands. The academic advisor also may help the student if they want advice about other Empire State University graduate programs more suited to their particular interests or needs.

To formally withdraw, the student must submit the online Withdrawal from University form (https://secure.na3.documents.adobe.com/public/esignWidget/?

wid=CBFCIBAA3AAABLblqZhBKayD1J4DDQaBX-0bLYJxBkcB2W8_T6VzC_qJpeNrBa also available here - https://sunyempire.edu/registrar/forms-services/

LONG ISLAND BUSINESS INSTITUTE TEACH OUT

Due to the closure of Long Island Business Institute (LIBI), current LIBI students will be offered enrollment at Empire State University for the Spring 2024 academic term and subsequent terms. Students must start their enrollment at SUNY Empire no later than Fall 2024.

SUNY Empire will offer a teach-out pathway for current LIBI students enrolled in their accounting, business management, hospitality management, office technology (medical track), and office technology programs.

Program F.A.Q.
WHAT DO I DO WITH FINANCIAL AID?
Visit FAFSA® Application | Federal Student Aid to update your 2023-2024 FAFSA to add SUNY Empire State University's federal school code 010286 in order to have your financial aid results sent to us.

ARE YOUR CLASSES ONLINE?
Your courses will be delivered through a hybrid model that will use Brightspace, our learning management system, for assignment submission and discussion posts, and Microsoft Teams for virtual class sessions.

IF I'M AN INTERNATIONAL STUDENT AT LIBI, WILL I BE ABLE TO STUDY AT EMPIRE STATE UNIVERSITY?
Unfortunately, the university is not able to serve international students who are required to hold an I-20, F1 student visa to study in this country.

I DON'T HAVE A HIGH SCHOOL DIPLOMA OR GENERAL EDUCATION DIPLOMA (GED), CAN I STUDY AT EMPIRE STATE UNIVERSITY?
If you entered LIBI through Ability To Benefit testing and do not have a high school diploma or GED, you must complete a special course distribution requirement to qualify for a college diploma. This distribution requirement enables you to receive both a high school equivalency diploma (GED) and a college degree.

- You will be able to take your GED & LIBI courses simultaneously.
- All GED courses are LIBI GED courses.

GED special course distribution based on earned college credits:

- Mathematics (3 credits)
- English Language arts (6 credits)
- Humanities (3 credits)
- Natural Science (3 credits)
- Social Science (3 credits)
- College Degree Program Requirements/such as Electives (6 credits)

WHO WILL GRANT MY ASSOCIATES DEGREE?
SUNY Empire will grant your degree.

HOW LONG ARE THE COURSES EACH SEMESTER?
Each course is 15 weeks long.

WHAT TUITION WILL I BE PAYING?
You will be paying SUNY Empire tuition rates (https://sunyempire.edu/student-accounts/tuition-fees/undergrad-tuitionfees/).

Degrees Available
- Accounting (p. 751): A.O.S. (p. 751)
- Business Administration (p. 751): A.O.S. (p. 751)
- Hospitality Management (p. 752): A.O.S. (p. 752)
- Office Technology (medical track) (p. 752): A.O.S. (p. 752)
- Office Technology (p. 752): A.O.S. (p. 752)

A.O.S. - Associate in Occupational Studies

Accounting: A.O.S.

FACULTY

This listing is accurate at the date of publication. For the most up-to-date listing, please visit the college's online Faculty Directory (https://directory.esc.edu/faculty/).

SUNY Distinguished Faculty at Empire State University

Created by the State University Board of Trustees as a prestigious system-level distinction, the Distinguished Faculty Rank programs recognize and reward SUNY's finest and most accomplished faculty. The Distinguished Professorship (DP), Distinguished Service Professorship (DSP), Distinguished Teaching Professorship (DTP), and Distinguished Librarian (DL) designations constitute the highest system tribute conferred upon SUNY faculty. Distinguished Faculty at Empire State University are:

- **Elaine Handley**, Distinguished Teaching Professor, School of Arts and Humanities.
- **Alan Mandell**, Distinguished Service Professor, School of Social and Behavioral Sciences.
- **Ian Reifowitz** Distinguished Professor, School of Arts and Humanities.
- **Margaret (Peggy) Tally**, Distinguished Teaching Professor, School for Graduate Studies.
- **Tina Wagle**, Distinguished Teaching Professor, School for Graduate Studies.

Faculty at Empire State University

A

Abendroth, Mark
Professor, (Education).

Adler, Moshe
Visiting Associate Professor. B.Sc. (Mathematics) Tel-Aviv University, Ph.D. (Economics) University of California at Los Angeles.

Ait Si Mhamed, Ali
Associate Professor, (Education).

Allen, Lauren
Assistant Professor, (Education). Master of Arts (Psychology), Bachelor of Science (Psychology).

Amory, Deb
Professor, Social Science and Public Affairs. School Of Social And Behavioral Science. Ph.D. (Anthropology) Stanford University, B.A. (Scholar of the House Program/African Studies) Yale University.

Anadio, Anthony
Visiting Assistant Professor, Historical Studies. School Of Arts And Humanities. Ph.D. (History) University at Albany - State University of New York, M.A. (History) University at Albany - State University of New York, B.A. (History) University at Albany - State University of New York.

Anderson, James
Lecturer, Mathematics. School Of Science, Mathematics And Technology. B.S. (Physics) Stanford University, M.S. (Materials Science) Stanford University, Ph.D. (Mathematics) Stanford University.

Angiello, Joe
Associate Professor, (Graduate Liberal Arts & Sciences). Ph.D. (Philosophy) University at Albany - State University of New York.

Arnold, Tai
Associate Professor, (Education).

Avery, Kimberly
Lecturer, Educational Studies. School Of Social And Behavioral Science. Bachelor of Science (Early Childhood Education) Oakland University, Master of Science (Education of Young Children) Nova Southeastern University.

B

Balko, Kimberly
Associate Professor, School of Nursing and Allied Health. Ph.D (Nursing Education) Capella University, (Business Leadership) Capella University, RN (Registered Professional Nursing) Albany Memorial School of Nurisng.

Ball, Eric
Professor, Literature and Communication and Cultural Studies. School Of Arts And Humanities. B.S. (Mathematics) Clarkson University, M.S. (Applied Mathematics) University of Chicago, Ph.D. (Modern Greek Studies) Ohio State University, M.A. (Modern Greek Studies) Ohio State University.

Basile, Kristi
Lecturer, Psychology and Human Development. School Of Social And Behavioral Science.

Bassini, Judi
Lecturer. School Of Science, Mathematics And Technology.

Bates, Anna
Professor, Historical Studies. School Of Arts And Humanities. M.A. (Historical Studies) University of Houston Clear Lake.

Bates, Cynthia
Professor, Arts and Media. School Of Arts And Humanities. B.A. (Political Science) Siena College, M.A. (Performance Studies) New York University Tisch School of the Arts, D.F.A. (Dramaturgy and Dramatic Criticism) Yale University.

Beckem, John
Associate Professor, Business, International Business, and Marketing. School Of Business. B.S. (Industrial Operations Management) Lawrence Technological University, B.S. (Business Administration) William Tyndale College, M.Div. (Pastoral Care, Theology and Clinical Counseling) Ashland Theological Seminary, M.S. (Business Administration/Management Information Systems) Central Michigan University, Ph.D. (Educational Administration/Higher Education, General Business Administration and Planning/Policy Development).

Becker, Ann
Professor, Historical Studies. School Of Arts And Humanities. MAT (Social Studies) Stony Brook University - State University of New York, M.A. (History) Stony Brook University - State University of New York, Ph.D. (Early American History) Stony Brook University - State University of New York.

Bedenbender, Brandon
Visiting Assistant Professor, School of Nursing and Allied Health.

Bejou, David
Professor, Business, International Business, and Marketing, (Business, Management and Leadership). School Of Business.

Belasen, Alan
Professor, (Business, Management and Leadership). Ph.D. (Organizational Behavior) University at Albany - State University of New York, MPA (Public Management) Hebrew University.

Benke, Meg
Professor, (Education). B.S. (Business Administration) Youngstown State University, Ph.D. (Student Personnel) Ohio University.

Benno, Suzanne
Lecturer, Accounting, Finance, Economics and Management Information Systems. School Of Business. B.A. (History and Government) Russell Sage College, M.S. (Education) Russell Sage College, MBA (Business Management) University at Albany - State University of New York.

Bliss, Catherine
Assistant Professor, Mathematics. School Of Science, Mathematics And Technology. Ph.D. (Mathematical Sciences) University of Vermont, M.S. (Mathematics) University of Vermont, M.A. (Marine Affairs and Policy) University of Miami, B.A. (Psychology) Syracuse University.

Blitzer, Melinda
Associate Professor, Psychology and Human Development. School Of Social And Behavioral Science. Ph.D. (Clinical Psychology) Adelphi University, (Psychoanalysis) Adelphi University, (Group Psychotherapy) Adelphi University.

Blue, Jennifer
Assistant Professor, Mathematics. School Of Science, Mathematics And Technology. B.A. (Physics) Texas A&M University, B.S. (Mathematics) Texas A&M University, Ph.D. (Mathematics) Rensselaer Polytechnic Institute.

Boccolucci, Nicholas
Visiting Assistant Professor, Management and Human Resource Management. School Of Business. Ph.D. (Educational Administration, with a concentration in the Design and Management of Instructional Systems) University at Buffalo - State University of New York, M.S.Ed. (Student Personnel Services) Buffalo State College - State University of New York, B.A. (Liberal Arts with a major in Sociology) Buffalo State College - State University of New York.

Boddie, Terry
Lecturer, Arts and Media. School Of Arts And Humanities. B.F.A (Photography) New York University, M.F.A. (Combined Media) Hunter College - City University of New York.

Bonfiglio, Gennaro
Lecturer, Social Science and Public Affairs. School Of Social And Behavioral Science. B.A. (Economics/Education) Hunter College - City University of New York, MBA (Financial Management) Pace University.

Borden, MaryAnn
Visiting Assistant Professor, Arts and Media. School Of Arts And Humanities. B.A. (Art History) University at Albany - State University of New York, M.A. (History/Public History) University at Albany - State University of New York, Ph.D. (American History) University at Albany - State University of New York.

Borgos, Jill

Boyce, Frances
Lecturer, Accounting, Finance, Economics and Management Information Systems. School Of Business.

Bradley, Elizabeth
Professor, (Education). B.A. (Clinical Psychology, French) Tufts College, Ph.D. (School Psychology) University of Massachusetts Amherst.

Britton, Dee
Associate Professor, Social Science and Public Affairs. School Of Social And Behavioral Science. Ph.D. (Social Science (PhD)) Syracuse University.

Buzick, Joan
Assistant Professor, Educational Studies. School Of Social And Behavioral Science. B.A. (Music Education (minor in Early Childhood Education)) Kean University, Ph.D. (Higher Education Leadership, Management, and Policy: Concentration in Research, Assessment, and Program Evaluation) Seton Hall University, M.A. (Applied Psychology) New York University, M.A. (Educational Administration: Concentration in Curriculum, Instruction, and Supervision) Rider University.

C

Camacho, Luis
Assistant Professor, Business, International Business, and Marketing. School Of Business.

Cattron, Kelly
Lecturer, Psychology and Human Development. School Of Social And Behavioral Science.

Cera, Cinzia
Lecturer, Natural Sciences. School Of Science, Mathematics And Technology.

Cetiner, Mete
Associate Professor, Computer Science and Technology. School Of Science, Mathematics And Technology. B.S. (Industrial Engineering) Gazi University, M.S. (Information Systems) Middle East Technical University, M.S. (Management of Information Systems) Claremont Graduate University, Ph.D. (Management of Information Systems and Technology) Claremont Graduate University.

Chandra, Bidhan
Professor, Business, International Business, and Marketing. School Of Business. MBA (Industrial Geography) University at Buffalo - State University of New York, Ph.D. (International Business) University at Buffalo - State University of New York.

Chen, Jianhao
Associate Professor, Computer Science and Technology. School Of Science, Mathematics And Technology.

Chen, Ye
Assistant Professor, (Business, Management and Leadership).

Chukhlomin, Valeri
Professor, Business, International Business, and Marketing. School Of Business. M.S. (Mathematical Economics) Novosibirsk University, Ph.D. (Economics and International Political Economy) The Russian Academy of Sciences.

Cianfarani, Lynn

Lecturer, Computer Science and Technology. School Of Science, Mathematics And Technology. B.S. Cornell University, M.Ed. University at Albany - State University of New York.

Cirigliano, Marc
Associate Professor, Arts and Media. School Of Arts And Humanities. B.A. (Art History) Baldwin-Wallace College, M.A. (Aesthetics) Syracuse University, M.Phil. (Humanities) Syracuse University.

Clarkplaskie, Margaret
Associate Professor, Psychology and Human Development. School Of Social And Behavioral Science. M.S. (Developmental Psychology) Rutgers - State University of New Jersey, B.A. (Psychology) Barnard, PhD (Developmental Psychology) Rutgers - State University of New Jersey.

Clemans, Shantih
Associate Professor, Human Services, Academic Affairs. B.A. (Social Work) Hood College, M.S.W. (Social Welfare) University at Albany - State University of New York.

Cline, Barrie
Visiting Assistant Professor.

Coleman, Cynthia
Lecturer, Social Science and Public Affairs. School Of Social And Behavioral Science. M.S. (Social Policy) Cornell University, BS (Social Relations) Cornell University.

Conaway, Cindy
Professor, Literature and Communication and Cultural Studies. School Of Arts And Humanities. Ph.D (American Culture Studies) Bowling Green State University, Master of Science (Instructional Systems Design) Florida State University, Bachelor of Arts (English Language and Literature) University of Chicago.

Congemi, Robert
Associate Professor, Arts and Media. School Of Arts And Humanities. M.A. (English) University at Albany - State University of New York.

Covington, Herbert
Assistant Professor, Psychology and Human Development. School Of Social And Behavioral Science.

D

D'adamo-Weinstein, Lisa
Visiting Associate Professor, Arts and Media. School Of Arts And Humanities. M.S. (Language Education) Indiana University, Ph.D. (Language Education, Thesis: Kaleidoscope Tapestries: Weaving Patterns from First-Generation College Women's Telling-Stories) Indiana University.

Das, Ajay
Associate Professor, (Education).

DeJonge, Bernadet
Assistant Professor. School Of Human Services. M.A. (Rehabilitation Counseling), Ph.D (Counseling).

Dermody, Kate
Lecturer, Historical Studies. School Of Arts And Humanities. B.A. (History) Plattsburgh - State University of New York, Master of Science (Teaching) Plattsburgh - State University of New York.

Deshpande, Anant

Professor, Management and Human Resource Management. School Of Business. Ph.D. (Business Administration) University of Texas-Pan American.

DeYoe, Tammie
Lecturer, Human Services. School Of Human Services. B.A. (Sociology) Cortland - State University of New York, M.S. (Social Work) University of Pittsburgh, Ph.D (Social Work) Capella University.

Dilling, Petra
Associate Professor, (Business, Management and Leadership).

Domingo, Jelia
Professor, (Education). B.A. (Psychology, Spanish) University of Massachusetts Amherst, M.S. (Special Education) Virginia State University, Ph.D. (Education) Fordham University.

E

Eades-Baird, Michelle
Associate Professor, (Education). Ph.D. (Curriculum, Instruction and the Science of Learning, Science Education) University at Buffalo - State University of New York.

Edwards, Gregory
Associate Professor, Historical Studies. School Of Arts And Humanities. A.B. (Religion) Syracuse University, M.A. (History) St. Bonaventure University, Ph.D. (American History, European Military and Diplomatic History, 1914-1945) University at Buffalo - State University of New York.

Eisenberg, Barry
Associate Professor, (Business, Management and Leadership). B.A. (Political Science) Queens College - City University of New York, Ph.D. (Communication) Temple University.

Eliseo-Arras, Rebecca
Associate Professor, Child and Family Services. School Of Human Services. PhD (Social Welfare) University at Buffalo - State University of New York, MSW (Social Work) University at Buffalo - State University of New York, B.A. (Psychology and Political Science) University at Buffalo - State University of New York.

Engle, Collen
Lecturer, School of Nursing and Allied Health.

Epstein, Sue
Associate Professor, Management and Human Resource Management. School Of Business. B.S. (Business Economics) Cornell University, MBA (Marketing) New York University, Ph.D. (Organizational Studies) University at Albany - State University of New York.

F

Fernandez, Nadine
Professor, Social Science and Public Affairs. School Of Social And Behavioral Science. B.A. (Urban Studies, American History) University of Pennsylvania, Ph.D. (Cultural Anthropology) University of California, M.A. (Cultural Anthropology) University of California.

FitzGerald, Karin
Lecturer, Psychology and Human Development. School Of Social And Behavioral Science. B.S. (Psychology) Lafayette College, M.S. (Child Development, Early Childhood Education) Wheelock College.

Foncette, Leslie-Ann

Visiting Assistant Professor. School Of Social And Behavioral Science.

Forte, Michele
Associate Professor, Human Services. School Of Human Services. PhD (Humanities/Women's Studies and Social Welfare) University at Albany - State University of New York.

Fortunato, Michael
Associate Professor, (Business, Management and Leadership). Ph.D. (Economics) Harvard University.

Franz, Jonathan
Visiting Professor, Psychology and Human Development. School Of Social And Behavioral Science.

Frederick, Brian
Assistant Professor, Psychology and Human Development. School Of Social And Behavioral Science. Doctor of Philosophy (Cultural and Global Criminology) University of Kent (England) & Universität Hamburg (Germany), Master of Science (Criminal Justice) California State University – Long Beach, Bachelor of Arts (Criminal Justice) California State University – Fullerton.

Fuchs Abrams, Sabrina
Professor, (Graduate Liberal Arts & Sciences). Ph.D (English and Comparative Literature) Columbia University, B.A. (English and American Literature) Harvard University.

Fullard, Dave
Visiting Associate Professor, Social Science and Public Affairs. School Of Social And Behavioral Science. B.F.A. (Liberal Arts, specialization in photojournalism and studio photography) School of Visual Arts, M.A. (Criminal Justice) John Jay College for Criminal Justice, Ph.D. (Forensic Psychology and Forensic Behavioral Science) The Union Institute.

G

Gal, Diane
Professor, (Education). B.A. (Political Philosophy) Fordham University, M.A. (Area Studies, Politics) Hunter College - City University of New York, Ed.M. (International Educational Development) Teachers College at Columbia University, Ed.D. (Comparative and International Education) Teachers College at Columbia University.

Galuski, Tracy
Professor, Educational Studies. School Of Social And Behavioral Science. PhD (Elementary Education/Early Childhood Education) University at Buffalo - State University of New York.

Garner, Karen
Professor, Historical Studies. School Of Arts And Humanities. M.A. (Humanities) University of Texas at Dallas, Ph.D. (History) University of Texas at Austin.

Gechlik, Dave
Associate Professor, Human Services. School Of Human Services. Ph.D. (Health Psychology) New York University.

Giordano, Justin
Professor, Business, International Business, and Marketing. School Of Business. J.D. (Law) Touro College Jacob D. Fuchsberg Law Center, MBA (Masters of Busines Administration in Finance) St. John's University, Bachelor of Commerce (Major: Managemennt & Mnor: Marketing) Concordia University.

Gleason, Catherine
Lecturer, Natural Sciences. School Of Science, Mathematics And Technology. M.S. (Environmental Biology) George Mason University, B.A. (Biology) Oneonta - State University of New York.

Gliserman- Kopans, Dana
Professor, Literature and Communication and Cultural Studies. School Of Arts And Humanities. Ph.D. (Literary and Cultural Studies) Carnegie Mellon University.

Goldberg, Joel
Associate Professor, Management and Human Resource Management. School Of Business.

Goldberg, Ruth
Associate Professor, Arts and Media. School Of Arts And Humanities.

Goodwin, Valerie
Lecturer, Accounting, Finance, Economics and Management Information Systems. School Of Business. St. Bonaventure University.

Green, Cailyn
Assistant Professor, Human Services. School Of Human Services.

Grill, Christopher
Lecturer, Social Science and Public Affairs. School Of Social And Behavioral Science. B.A. (Political Science/History) Oneonta - State University of New York, Ph.D. (Political Science) University at Albany - State University of New York.
